LIST OF WITNESSES EXAMINED, IN THE ORDER IN WHICH THEY APPEARED
BEFORE THE COMMITTEE.

Day.	Name of Witness.	Status of Witness.
First ...	Mr. HUMBERT WOLFE, C.B.E. {	Principal Assistant Secretary, Ministry of Labour.
Second ...		
Third ...		
Fourth ...		
	Mr. JOHN CARR ...	Representing Manufacturers' Section, London Chamber of Commerce.
	Mr. HARRY TROTMAN ...	Representing Metropolitan Dairymen's Association.
	Mr. W. E. SMEE ...	Representing National Federation of Dairymen's Associations.
Fifth ...	Mr. M. F. CAHILL ...	Representing Employers' side, Grocery and Provisions Trade Board (England and Wales).
	Mr. J. H. BARNARD ...	Representing Drapers' Chamber of Trade.
	Mr. BEAUMONT WALLIS ...	
	Mr. J. A. BOARDMAN ...	
	Mr. H. B. FOWLER ...	
Sixth ...	Mr. J. D. MOUNSEY ...	Representing Isle of Wight Drapers' Association.
	Mr. J. C. EATON ...	Representing Unorganised Employers, Hat, Cap and Millinery Trade Board (England and Wales).
	Mr. D. BRODIE ...	
	Mr. P. B. ADAMS ...	Representing Scottish Federation of Merchant Tailors.
	Mr. J. GORDON ...	
	Mr. T. ERNEST JACKSON ...	Representing National Federation of Merchant Tailors.
	Mr. E. J. PEGG ...	
	Mr. A. H. WOOLLEY ...	Representing Incorporated Association of Retail Distributors.
	Mr. F. W. CHRISTALL ...	
	Miss SUSAN LAWRENCE ...	Representing The Lace and Net Finishing Trade Board (Great Britain), Employers' and Workers' sides.
	Mrs. A. ...	
Seventh ...	Mr. IVEY ROGERS ...	Middlewoman.
	Mr. ARTHUR E. BECK ...	Representing The National Union of Manufacturers.
	Mr. H. D. JACKSON ...	
	Mr. Wm. COOLING LAWRENCE ...	Representing The Association of London Master Tailors.
	Mr. C. CORELLI ...	
Eighth ...	Mr. GORDON T. H. STAMPER ...	Representing The National Union of Manufacturers.
	Mr. ASHLEY WARD ...	
Ninth ...	Mr. CHARLES AVELING, J.P. ...	Representing the National Chamber of Trade.
	Mr. JAMES WALKER CLARK, J.P. ...	
	Mr. PATRICK HOWLING, F.I.S.A. ...	
	Mr. E. J. W. BUCKPITT, J.P. ...	
	Mr. JAMES MILLER THOMSON ...	Representing Employers' side, Rope, Twine and Net Trade Board (Great Britain).
	Mr. JOHN CHALMERS ...	
	Mr. ALBERT SHAW ...	Representing Scottish Federation of Aerated Water Manufacturers' Associations.
	Mr. J. A. CUDLIFF ...	
Tenth ...	Mr. DAVID LITTLE ...	Representing National Union of Mineral Water Manufacturers' Associations.
	Mr. T. B. HARMER ...	
	Mr. C. W. WATTS ...	Representing Wholesale Clothing Manufacturers' Federation.
	Mr. CULROSS ...	
	Mr. FRANK NUTTER HEPWORTH ...	Representing Eastern Counties Wholesale Clothing Manufacturers' Association.
	Mr. W. A. J. PITMAN ...	
Eleventh ...	Mr. A. V. ALEXANDER ...	Representing British Tin Box Manufacturers' Federation.
	Mr. J. E. JOHNS ...	
	Mr. J. POLLITT ...	Representing Shirt, Collar and Tie Manufacturers' Federation.
	Mr. A. S. HUGGAN ...	
	Mr. D. GARDNER ...	Representing Parliamentary Committee of the Co-operative Congress.
	Mr. JOHN CAMPBELL ...	
	Mr. ARTHUR BALFOUR, J.P. ...	Representing Scottish Retail Drapers' Federation.
		Representing The Association of British Chambers of Commerce.

Day.	Name of Witness.	Status of Witness.
Twelfth	Mr. R. M. MAXWELL ... Mr. CHARLES WATT ... Mr. J. M. CROSTHWAITE Mr. C. T. STABLEFORTH Mr. W. T. SCOTT ... Mr. G. DONALD ... Sir WILLIAM HENDERSON ...	Representing Scottish Garment Makers' and Millinery Trades' Federation. Representing Milk Distributive Trade Board (England and Wales), Employers' and Workers' sides. Representing the Dundee Chamber of Com- merce. Representing Association of Jute Spinners and Manufacturers.
Thirteenth	Alderman HENRY ROBSON, J.P. Mr. FRANK IMPEY ... Mr. J. J. STARK ... Mr. ALEXANDER RAMSAY Mr. FRANK H. CHANDLER	Representing Federation of Grocers' Asso- ciations. Representing Pin, Hook and Eye and Snap Fastener Employers' Association. Representing Employers' side, Laundry Trade (Great Britain) and the National Federation of Launderers, Ltd. Representing Birmingham and Wolverhampton District Association of the Engineering and the National Employers' Federations Representing London Employers' Association.
Fourteenth	Mr. HERBERT KAY ... Mrs. LEONORA COHEN ... Miss ELEANOR STEWART Mrs. C. A. LOCKE ... Miss MARY QUAIL ... Mrs. L. E. SIMM ...	Representing National Women's Advisory Committee of the National Federation of General Workers.

COMMITTEE OF ENQUIRY INTO THE WORKING AND EFFECTS OF THE TRADE BOARDS ACTS.

MINUTES OF EVIDENCE.

FIRST DAY,

Wednesday, 12th October, 1921.

PRESENT:

The Right Hon. the VISCOUNT CAVE, G.C.M.G.
(Chairman).

The Right Hon. LORD WEIR OF EASTWOOD.

DAME ADELAIDE M. ANDERSON, D.B.E.

MR. W. T. LAYTON, C.H., C.B.E.

SIR ARTHUR F. PEASE, BART.

MR. E. L. POULTON, O.B.E., J.P.

MR. A. PUGH.

MR. A. MACCALLUM SCOTT, M.P.

MR. H. D. HANCOCK (Secretary).

MR. HUMBERT WOLFE, C.B.E., called and examined.†

1. *Chairman:* What is your position at the Ministry of Labour?—I am Principal Assistant Secretary at the Ministry of Labour, in charge, amongst other things, of the Trade Boards Branch, which includes the headquarters office and the office of the Trade Boards.

2. You are going to give us first a historical summary of the history of the Trade Boards question. First will you tell us what led up to the passing of the Trade Boards Act of 1909?—During the years 1885 to 1909, the date of the passing of the Act, there was a great deal of public attention directed specially to the question of sweating. There was a great deal of public feeling that in certain trades, notably in the chain-making trade, to which a great deal of attention was directed, wages were paid which were not reasonable, and on which no person could be expected to subsist. There was a report of a Select Committee of the House of Lords in 1890, of which Lord Dunraven was Chairman, and that Committee stated definitely that the evils of sweating could hardly be exaggerated. That was followed by a number of private Bills being introduced to deal with sweating, notably a Bill by Sir Charles Dilke, which was called the Sweated Industries Bill. In 1906 the Board of Trade (which was then in charge of these matters) made an inquiry into the rates of wages in a large number of industries.

3. Wages and hours?—Wages and hours, that is so.

4. *Mr. Poulton:* That the hours were unreasonably long?—In some cases hours were unreasonably long and the wages unreasonably low. I have a table here in which certain trades have been taken, not in order to single them out for unfavourable notice, but because they were the trades in which the inquiry showed that the wages were very low.

5. *Chairman:* Perhaps your table could be annexed to your evidence, but you might point out any figures in the table which are striking. (See Annex I, Chapter I, page 1)?—Yes, I think it would be worth while doing so, because it will illustrate what has perhaps, in a good deal of what has been written lately about Trade Boards, escaped notice, namely, that they really were introduced because wages were extremely low. These tables are divided into the earnings of adult men and adult women, they are put under the headings of the percentages of workers who were getting under 20s., between 20s. and 30s., between 30s. and 40s., between 40s. and 50s., between 50s. and 60s., and over. I think I will choose, to illustrate the position, three trades—tailoring, jute and linen. In tailoring the percentage of adult males who were getting less than 20s. was 5·1; the percentage getting 20s. and under 30s. was 41, which makes 46 per cent. of the whole trade getting under 30s.; and between 30s. and 40s. there were 31·8 per cent. Then it goes with very rapidly decreasing percentages to 60s. and over, under which heading there is only 5·4 per cent. Taking the females in the same trade—I am talking of tailoring bespoke—you find 15·4 per cent. of all the females employed in the trade getting less than 10s. and 42·4 per cent. getting between 10s. and 15s., making practically 58 per cent., or more than half of the females employed, getting less than 15s. Then another 29 per cent. were getting less than 20s. and 10 per cent. were getting between 20s. and 25s., leaving 2·6 per cent. to go on from 25s. to 30s. and 30s. and over. Even more striking figures, at any rate so far as the men are concerned, are shown by the returns relating to the jute trade.

6. Are you speaking of 1906?—Yes, 1906 all the time. In the jute trade no less than 49·1 per cent. of all the adult males employed were getting under

† For documents handed in by the witness and annexed to his evidence, see page 59 and following pages.

12 October, 1921.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

20s., 36 per cent. were getting between 20s. and 30s., none were getting over 60s.; but 2 per cent were getting between 50s. and 60s. Of the women in the jute trade, 5·2 per cent. were getting less than 10s., and 66·4 per cent. were getting between 10s. and 15s.

7. *Mr. Poulton*: That is for a full week, I suppose?—Yes, a full working week.

8. What were the working hours?—It is full time. I have not got the hours, but I am told that they were probably 54; but I can verify that.

9. I should be glad if you would.—Of course, it may not be the same number of hours in each of the trades.

10. No, that is why I interrupted you when you got to the end of the jute trade.—In the linen trade the number of adult males getting less than 20s. was 44·4 per cent.; the number getting between 20s. and 30s. was 36·7 per cent.; and the number getting between 30s. and 40s. was 13·6 per cent. So far as the females were concerned, 41·7 per cent. were getting less than 10s., and 49·1 per cent. were getting between 10s. and 15s.

11. *Chairman*: That is to say, 90 per cent. were getting under 15s.?—Yes, there were 90 per cent. under 15s. I will not go into the other figures, but I will hand them in as you suggested. It is obvious that as a result of these figures coming to the public notice, and also to the notice of the Government of the day, it was unlikely that Parliament could long abstain from taking some action. A league called the Anti-Sweating League was formed, which was prominently supported both by labour and by benevolent bodies of various kinds, and it started active propaganda. In 1908 a Committee of the House of Commons was set up on home-work, presided over by Sir Thomas Whittaker, and that Committee recommended something in the nature of Trade Boards being set up to deal with the sweated trades, and the first Trade Boards Act of 1909 was in fact modelled on the recommendations of the Whittaker Committee. Those are the facts which led up to the first Act of 1909.

12. There had been something of the kind in Australia and New Zealand, had there not?—Yes, there had. There was a conciliation and arbitration system in New Zealand which dated from 1894, but a closer parallel was presented by the Victorian Wages Boards, which date from 1896. An inquiry was made into the operation of the legislation in Australia and New Zealand in 1907 by the late Mr. Ernest Aves, and his report was before the Government when they introduced the Act of 1909.

13. That has been printed as a Blue Book, I think?—Yes, it has.

14. *Mr. Layton*: May I ask a question on these figures. I would like to be clear what is the purpose of these figures which you have put in. You have given a series of figures in the linen, jute and tailoring trades; you have not given us the others?—That is so.

15. Was your argument designed to show that wages generally were very low and that the Trade Boards Act was the result of an opinion that wages generally in the country were low or was it that wages in particular trades were low?—It was not intended as an argument. It was much more the latter than the former: that there were in existence a number of trades in which wages were "exceptionally low," which are the words of the Act, and I gave you instances of the trades in which wages were exceptionally low.

16. While you are putting in these figures, can you show some comparison between these trades and general wages in the country, because without those, of course, they do not form a very complete argument?—We could easily get the figures. I expect there are Board of Trade wages returns for the same period for the general trades of the country. (See Annex I, Chapter I, Table A.)

17. In particular I was looking at the first figures you gave for men in the tailoring trade. There was the proportion of men earning less than 20s. per week very much smaller than the proportion of railwaymen earning less than 20s. per week at that period, for

example?—In the tailoring trade, which was scheduled in the 1909 Act, in both bespoke and ready-made, the low wages were much more prevalent among the women than among the men. It was rather on the women that the weight fell than on the men in those trades.

18. I only raise the point to suggest that in putting in these figures you should show their relation to the general level of wages at that time in the country, so that we can see whether the argument was pointed at particular trades as being particularly below the level of other industries.

19. *Mr. Poulton*: Were not those figures of those early days which you have quoted—because you quoted them and restricted yourself on account of the suggestion of the Chairman, very properly—figures which were adduced regarding certain trades because it was said that they were below subsistence level?—That is so, yes.

20. And I believe in those early days the Sweating Commission attempted to give a definition of what they meant by the word "sweating"?—That I am not prepared to say, but certainly these trades which I have here—I will give you the list: tailoring (bespoke and ready-made); shirt, blouse and under-clothing; laundry (factory and workshop); jute; linen; cardboard, canvas, &c. boxes—were among the worst trades of all. Naturally there were one or two others, such as chain-making which could be added if desired; but I should say in general, in reply to Mr. Layton's question, that these trades were generally selected as being worse than other trades at the same time.

Mr. Layton: It struck me that certainly one of the figures which you produced did not prove it.

Chairman: As regards men?

21. *Mr. Layton*: As regards men. In fact did not the statistics as to wages which were used at that time relate to much smaller groupings than those which you have given us?—At any rate, to take your own case of the tailoring trade, as I suggested before, I think the answer is that the weight fell on the women there, and in the case of the others which I quoted, jute and linen, I think it would probably be generally admitted that the proportion of men receiving less than 20s. was higher than in any other trade.

22. Perhaps I might suggest this to you: would not your case be more precise if you singled out the wages in those branches of trade which were subsequently scheduled in the Act?—We could do that, certainly. Those trades were tailoring, chain making, paper box making and lace-finishing. Those were the first four, and we can give you the definite rates prevailing in those four trades. (Note prepared for Members of Committee—not printed.)

Mr. Poulton: But for what period?

23. *Dame Adelaide Anderson*: With regard to the word "prevailing," is it possible to say whether these low wages affecting women were stationary—prevalent throughout any length of time—when the men's wages were rising or falling, or whether the women's wages were rising or falling then?—I will inquire into that. I cannot be sure whether we have the material to enable us to answer it. (Note prepared for Members of Committee—not printed.)

Chairman: Of course we must not spend too much time over this, because it is historical.

24. *Sir Arthur Pease*: Were the wages much below those in the wool trade?—I will look into that. I think you will find that they were certainly below. (See Annex I, Chapter I, Table A.)

25. Some branches of it?—Yes.

26. *Chairman*: You are going briefly to describe the machinery of the Act of 1909?—Yes. It had three distinguishing features, and all three have remained a permanent part of Trade Board machinery. The first was the power to fix minimum rates; the second was that the power to fix these rates was not has been entrusted to a Government Department, and never has been entrusted to a Government Department, but rested with a body composed equally of employers and employed, fully representative, so far as they could be made so, of all the interests in the trade, together with a group of independent persons known as Appointed Members. The third striking feature

12 October, 1921.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued]

was that those rates were compulsorily enforceable. One feature of the 1909 Act, which was repealed by the 1918 Act, was that the rates fixed under the 1909 Act were in limited operation for six months; it was possible to contract out of them, and they were only confirmed after the six months if the Board of Trade so decided. That feature was repealed by the 1918 Act. It will be seen, of course, that in the original Act the length of time which was required to fix a minimum rate was naturally much longer in consequence of that provision. Under the first Act four trades were scheduled by Parliament in the Act; those were the ready-made and wholesale bespoke tailoring, paper box making, lace and net finishing, and chain making trades. Four Boards were established for Great Britain, and two for Ireland. The Act provided that if you wished to add further trades you could only do so by Provisional Order procedure. I need not explain to the Committee what Provisional Order procedure consists of, but it meant that you had to get a Parliamentary Bill before you could in fact add a trade. The procedure was very elaborate, and took a considerable time, and as a result under the 1909 Act only four more trades were added by Provisional Order procedure; those were sugar, confectionery, and food preserving; shirt making; hollow-ware; and tin box making (for which two Boards were set up under one Order), and linen and cotton embroidery. Seven Boards in all were set up, of which three were in Ireland.

27. Are those all trades in which the wages were thought to be exceptionally low?—Yes, all were trades in which wages were “exceptionally low”; those were the words of the Act. The only other trade the inclusion of which under the 1909 Act was contemplated was the laundry trade, and that trade was thrown out by the Select Committee, when it was brought before them, on a number of grounds, one of which was that the Trade Board as defined did not cover all sections of the trade.

28. It was thrown out on the Confirmation Bill?—Yes, on the Confirmation Bill. That brings me to the position at the outbreak of the war, when there were thirteen Trade Boards set up under the 1909 Act, covering, it is estimated, roughly half a million workers. Then, when we get to the war period the position is materially altered by the arrival on the scene of the Munitions of War Acts. The first Munitions of War Act of 1915 only indirectly affected the position, but the second Munitions of War Act of 1916 contained a provision by which the Minister of Munitions might make Wages Orders affecting women engaged on munitions work, and as the scope of munitions work spread and spread, the Orders of the Minister of Munitions covered areas previously covered by the Trade Boards, and to a certain extent the Trade Boards were superseded during the war by the Munition Orders. It is the fact that the first Order, which became celebrated as L.2 fixed as the minimum 6d. per hour for women, which is a very different rate from any which had been previously fixed by the Trade Boards.

29. Then I suppose the question became more active towards the end of the war?—Yes, that is so. Towards the end of the war it became obvious that all the war-time arrangements for dealing with wages would terminate with the termination of hostilities, and it was feared that, particularly if there were a slump in trade at the end of the war, there might be sudden and almost startling reductions in wages; and the position was considered by a number of committees and commissions. The first one was one of the Reconstruction Committee, a Committee of which Major Hills, M.P., was Chairman; this Committee issued a memorandum which said something to the following effect: That the conditions which might be expected to prevail at or soon after the close of the war were exactly those which were favourable to a sudden and considerable fall in the level of remuneration in semi-skilled and unskilled occupations, and they recommended the protection of a minimum wage for women workers for a two-fold purpose: One purpose was to safeguard the position of women in trades where a reasonable level of remuneration had already been reached, in order that they should not sink back to a condition which is socially undesirable; the other

was to raise, by such means as were possible, the conditions of those women workers employed in trades in which, notwithstanding the war conditions, the rates of wages were unduly low. They recommended for this purpose the use of trade board machinery, and suggested a number of trades in which Trade Boards should be set up at once. They also suggested some amendments in the Trade Boards Act of 1909, which were generally adopted in the Act of 1918. At the same time, or perhaps a little later, the Committee on Relations between employers and employed, of which Mr. Whitley was Chairman, also made recommendations with regard to the same matter. That Committee had for its principal object the establishment of industrial harmony, and it will be remembered that for trades which possessed the necessary degree of organisation it recommended the constitution of what were known as Joint Industrial Councils, but it equally recommended, with the same degree of emphasis, the creation of Trade Boards for the less organised trades.

30. That was in the second report?—Yes, in the second report. They said that Trade Boards should be set up pending the development of such a degree of organisation as would render feasible the establishment of a National Council or District Councils.

31. The Trade Boards were to be a preparation for the Industrial Councils?—Yes. I think their view roughly was that where you have organisation you should have a voluntary basis, but until you had adequate organisation it was desirable to have a compulsory basis; but they clearly envisaged Trade Boards as a step to Joint Industrial Councils. I think as part of that view, they recommended that the powers of the Trade Boards should be rather enlarged, and that they should be regarded as a means of supplying a regular machinery in those districts (that is to say, unorganised districts) for negotiation and decision in certain groups of questions dealt with in other circumstances by collective bargaining between employers' organisations and trade unions.

32. They meant that the Trade Boards might deal with hours as well as wages?—Yes, certainly.

33. But they were still to deal with minimum rates of wages?—Yes, clearly. They were to deal with other things than purely hours questions; but the Report went on to say that they should be further empowered to initiate and conduct inquiries on all matters affecting the industry. They contemplated, in other words, that even though they were a compulsory body they would have some of the scope of a voluntary body. Historically the 1918 Act followed after the Whitley Report, but there was a little later, in 1919, a further recommendation in respect of Trade Boards; but perhaps I had better come to that chronologically and not take it here.

34. No, take the 1918 Act. The 1918 Act was introduced at the beginning of 1918 and it was explained that one of its objects was to provide a steadying influence at a time when it might be expected that wages would become extremely unstable. It made certain definite alterations in the structure of the 1909 Act. The first and the most important was in respect of the scope. The 1909 Act was restricted to trades in which wages were exceptionally low. It is obviously a matter of some difficulty to decide whether wages are exceptionally low. If, for example, you get a position in which a large number of trades are “sweating,” then even a “sweated” wage would not be exceptionally low; or you may have, on the other hand, a wage which is between an exceptionally low wage and a reasonable wage, which should be covered but could not by those words. The 1918 Act therefore provided a broader basis; it had regard to two aspects, first, as before, the state of wages in the trade, and secondly, the degree of organisation in the trade; and it provided that where effective means of regulating wages did not exist, and having regard to the rates of wages prevailing in the trade, it was expedient to establish a Trade Board, a Trade Board might be established. To that extent, therefore, the field to which the Trade Boards Acts could be applied

12 October, 1921.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

was widely extended. In the second place a very important alteration was the removal of the Provisional Order procedure, in place of which a power was conferred upon the Minister of Labour to set up Trade Boards by Special Order. Elaborate machinery for securing that the Special Order was not unduly hurried was also set up, but this amendment removed the necessity of obtaining Parliamentary sanction.

35. *Mr. Poulton*: Did that go so far as to empower the Minister to go ahead, if, after inquiry, he was satisfied that a certain trade or certain trades were in need of such machinery as the Committee suggested?—Yes, subject to one qualification: that if when he decided to set up the Trade Board objections were made during the objection period and were not withdrawn, it might be incumbent upon him to appoint a special impartial Court of Inquiry to decide whether in fact the case was established. The final word, therefore, in that case, did not rest with him but with the Court of Inquiry.

36. *Dame Adelaide Anderson*: Unless the objections were found to be frivolous?—Unless the objections were found to be frivolous. As a matter of interest it never has been necessary to appoint such a Court of Inquiry, because in practically every case the Trade Boards have been secured with consent.

37. *Mr. Poulton*: But it remains, does it not, that the scope and the power of the Minister are such that he can set them up?—He can set them up provided he is satisfied that the conditions of the Act apply, certainly. I was going to say that the only other point of difference was that the provision in the 1909 Act making the first six months of the operation of the rates provisional, was also repealed. The result of the new provisions of the Act, of course, led to a speeding up in the establishment of Boards, principally because of the Minister's new power, and I think that we may say here that it is probably the case that in very few, if any, of the trades to which the 1918 Act was applied, would it not have been possible to act under the provisions of the 1909 Act?

38. *Chairman*: You mean it would have been possible?—It would have been possible in practically every case in which the 1918 Act has been applied, to have acted under the spirit, if not the letter, of the 1909 Act.

39. You mean that the Act of 1918 has only been applied to trades in which wages were exceptionally low?—That is our general view but, of course, you have to qualify that by the meaning which you attach to "exceptionally low" after the huge increases in the cost of living. In 1919, 14 Boards were set up. In the meantime the war had ended. As a result of a Committee appointed under the Chairmanship of Sir John Simon, I think, just at the end of the war, an Act called the Wages (Temporary Regulation) Act had come into force, the object of which was to keep wages practically at the point which they had reached at the end of the war. There are provisions in the Act to substitute rates arrived at by agreement, but the general object of the Wages (Temporary Regulation) Act was to sustain wages at the point which they had reached.

40. For a limited time?—Yes. Originally it was intended to be for 6 months.

41. *Mr. Poulton*: That was general wages?—But it included, of course, any cases in the Trade Board trades in which a Munitions Order had applied. The Act was passed for 6 months originally, and was extended and re-extended by agreement of both sides, I think, until September, 1920. Finally, when it lapsed in 1920 it was stated that its place would, to some extent, be taken in respect or unorganised trades to which the Trade Boards Acts applied, by the provisions of the Trade Boards Acts. As I say in 1919 while the Wages (Temporary Regulation) Act was still in force, 14 new Boards were added; in 1920, 34 Boards were added, which, with the 13 established under the 1909 Act made, I think, a total of 60 and I think there have been two Boards

established to date in 1921, making a total of 62. I put in a statement giving the names and dates at which all the Boards were set up. (See Annex I, Chapter I, Table B.)

42. *Chairman*: Does that list include the Irish Boards?—Yes, it includes the Irish Boards and that 62 includes the Irish Boards throughout. In addition to that notice of intention has been issued to apply the Acts to the following trade: Jute, flax and hemp finishing. Special Orders are outstanding applying the Acts to the following trades: Sack and bag, for which a Board will shortly be set up; fruit, flowers and vegetables; fish, poultry, game and rabbits; hairdressing; and whip. Later, I shall describe the way in which the Department sets to work in setting up a Board, but as a result of the inquiries which we made very widely during 1919 and 1920, we discovered that there were quite a number of trades which were more suitable for Joint Industrial Councils than for Trade Boards, because of their organisation, and quite a number of trades to which, for various reasons, it might have been premature to apply the Acts; but apart from that, on general grounds, as is common knowledge, towards the end of 1920 the trade slump had set in with unprecedented severity, and it became the general policy of the Government to proceed with caution, and that explains the much smaller number of Trade Boards set up towards the end of 1920 and during 1921.

43. Would you still say of the whole of the 62 Boards that they were confined to trades where wages were exceptionally low?—I say that with considerable qualification, because if you look at the actual wages which obtained in the trades when the Boards were set up, you might say "These are not even approximately sweated wages," but you would have to take two things into account: first, the increases throughout in all wages during the war, and secondly, the fact that a number of the wages were artificially held up at the moment by the Wages (Temporary Regulation) Act which kept alive the orders of the Minister of Munitions, and if you looked at the early history of most of the trades which have been covered, I think you would find, with perhaps one or two notable exceptions, that on the whole the 1918 Act has not been applied to a territory which was not envisaged by the 1909 Act.

44. *Mr. Poulton*: Having regard to the extraordinarily increased cost of living?—To that and the artificial methods which had propped wages up.

45. *Mr. Layton*: You mean that in 1919 and 1920 the wages were not exceptionally low, but that they had been in those trades before the war, and that the measures taken during the war had, in fact, affected the level of wages?—That is my qualification. There are some trades in which wages were exceptionally low even during 1919 and 1920—trades which had not been affected by war conditions in the same way.

46. *Mr. Poulton*: If you took the same basis of comparison, say, between the 1914 wages and the cost of living, and the wages and the cost of living when you set up these older Boards, would they not still be low wages?—Yes, they would still be low wages, although they would not, for example, compare in some cases with the chain trade. I do not think you would have got anything corresponding to a penny per hour or a penny to a penny-halfpenny per hour, which was the chain-making rate.

47. *Lord Weir*: You say that the Minister began to view the question of the institution of Trade Boards with caution when the depression started?—Yes.

48. I wonder whether you could make that a little clearer, because it is surely in a time of depression that questions of wage regulation become of the greatest importance, and when it is of the greatest importance that the most efficient machinery should be used to handle those questions?—That is a very fair point, to put, if I may say so, but as against that you have got to remember that it was represented by a number of people, who, presumably, were

12 October, 1921.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

speaking with authority and knowledge, that the effect of the setting up of Trade Boards was to increase unemployment; it was represented that the effect of setting up Trade Boards was to interfere with trade; it was represented that it was the continuance or the introduction of what was called the dead hand of Government control. It was not possible, having regard to the character of the persons who made those suggestions, to dismiss them lightly, and the Government, therefore, finding that there were these heavy criticisms of the machine, felt that it was necessary to consider the facts very carefully indeed before they took the risk of possibly extending the evils of which complaint had been made.

49. It was equally represented that these Boards were to improve, not only the conditions of an industry but industry itself, by bringing about a co-operative spirit and contentment.—The Government really were, I think, in this difficulty: They recognised to the full what you have said, that at no time is wages machinery so necessary as during a slump. That is the first point which they could not help recognising. The second point which they had to recognise with equal force was that, assuming the machine itself were wrong, assuming that under the Act it were not being properly administered because it could not be, the machine might do greater harm than good; and it was because they were receiving from substantial quarters these complaints (with which I hope to deal later) that they felt it essential to go slowly.

50. *Mr. Pugh:* Will you tell us precisely how the steps for setting up Trade Boards are initiated; or will you come to that later?—I was going to deal with that later.

51. *Mr. Layton:* Before you leave this can you give us the corresponding figure of the result of these extensions? You told us that in 1914 there were approximately half a million people covered by the operation of the Trade Boards.—Yes. I think it is approximately three millions.

52. Could you give the proportion of men to women before the war?—I can do that. It is a very rough figure, but it is about 70 per cent. of women to men, and I should be surprised if the proportion as between men and women pre-war and men and women post-war has much altered. If you want that verified I will have it verified.

53. *Lord Weir:* Can you also give us the figures in 1914 of the Trades that you cited in 1906, so that we may see the milestones of progress? (*Note prepared for members of Committee not printed*)—Yes, I can do that. I have those figures here for 1914, and I have, I am afraid, innumerable tables which I shall have to hand in, and that will be one of them.

54. It is simply to get a comparison of the same figures.

55. *Chairman:* We will come to that. Then, I suppose, we may pass to the question of the scope of the Acts?—Yes. The Acts, as I say, authorise the establishment of a Trade Board in any trade in which the conditions which I have mentioned above apply. On the word "trade" a number of difficulties arise immediately. The Minister has taken the following restricted view of what a trade is. He distinguishes, for example, between a trade, professions, and other occupations, such as commerce, which are not trades. Obviously there will be border-line cases, but, broadly, all professional occupations and commerce are out. For example, to take what might be a border-line case; in the view of the Minister, domestic service is not covered by the Trade Boards Acts as not being a trade. In the second place, charitable institutions are not covered, because we regard the Acts as applying only to employers engaged in trade; and, finally, they would not apply to an inmate of an institution even if the inmate were receiving some money payment, on the ground that the money was not passing by way of trade. Apart from those limitations the power of the Minister to prescribe what a trade is, is very wide indeed. Speaking generally,

the interpretation which he puts on his power is to say that it applies rather to a commodity than to a process; that is to say, to take a trade like the stamped or pressed metal wares trade (as to which I am afraid I shall have to say more later), he does not take the view that you can apply the Acts to stamping or pressing wherever carried on, which would take you into every trade in the country, but rather to specific articles manufactured in what is roughly known as the Birmingham trade. He may distinguish, therefore, between the commodity and the process; but provided that that general modification is accepted, the Minister's power is very wide, and subject to his exercising it reasonably, it is not, I think, open to challenge. He is not, for example, compelled to take in the whole trade if he does not think that necessary, if in the view of the trade, which he always consults, you can distinguish a particular part of the trade; for example, lace finishing cannot in any circumstances be described as the whole of the lace trade, and yet that had a Trade Board to itself; the Stamped or Pressed Metal Wares Trade Board as set up in 1920 certainly did not cover the whole of the Birmingham trade; and the original Tailoring Board did not cover a great deal of the clothing trades; but as long as the Minister is satisfied, either that he has isolated the whole trade or a substantial part of the trade, he is prepared to set up a Board if the conditions admit of a Board being established.

56. *Mr. Pugh:* On the matter of charitable organisations, do I understand that the Department has considered that they were entirely excluded from the operation of the Acts? Take as an example the Salvation Army setting up in different trades; so far as they were in the trade, would they come within the Acts, or would they be excluded on the ground that they were a charitable institution?—No. The point for decision would be whether they were engaged in trade or not, and whether they definitely had persons under contract of employment with them. Of course, the Salvation Army point is a well-known one. This has arisen far more acutely in Ireland with the convents, which maintain laundries which are not run by way of trade, at least, so it is held by the convent authorities.

57. *Mr. Poulton:* Yet they are taking outside materials?—Yes, they are, and they are actively in competition with the ordinary employers.

58. *Dame Adelaide Anderson:* Is it not found, as a matter of practice, that the contract of employment is the really essential point?—Yes, but of course there are two essential things; the person must really be employed, and it must be in an establishment which is definitely run for profit.

59. *Chairman:* But a charity may carry on a trade for profit. It is a question of fact?—It is a question of fact. Then, coming to the variety of trades to which the Acts have been applied, they can be divided into two main groups, manufacturing and distributive. The distributive trades were not touched before the 1918 Act. When you look at the manufacturing trades, you find all sorts of varieties; you get a purely manufacturing trade carrying on its work only in factories, such as flax and hemp spinning; then you get trades which are carried on on a large scale in factories and also in small work-rooms which may or may not be attached to a distributive establishment; you get cases of that kind both in the clothing and in the boot and shoe repairing trades. Then you come to the big distributive group, and there you find every variety, from the big departmental store, through the general shop, down to the shop which has one business only. Again, you have variations between trades which have foreign competition, both in the foreign and the home market, and trades which have no foreign competition at all. The first class, the tailoring trade, has competition in the foreign markets, and the Birmingham light metal trades, and match box manufacture, which is a part of the paper box trade, have it in

12 October, 1921.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

the home market; and finally, as a case where there is no competition from abroad whatever, you have the milk distributive trade. Then, finally, you would expect the Trade Boards to apply more to trades in which home-work is carried on than other trades, and you find that to be the case in practice. You would also expect them to apply more to the women's trades, because there again, owing to weak organisation, women are less able, or have been shown in the past to be less able, to protect themselves in wages matters; and, in fact, I think a large majority of the trades which are covered by the Trade Boards Acts are women's trades in a large degree. Further, there are one or two trades where you have a surprisingly large number of juvenile employees. In the button-making trade, for example, which was included in 1920, the proportion of girls to the whole number of female employees was 33 per cent., and in the earboard box trade it was 35 per cent. That is, roughly, the general variety of trades to which the Acts apply.

60. *Dame Adelaide Anderson*: May I just ask about factories where you have interlacing different trades?—I deal with that later.

61. I just wanted to be sure that it is dealt with.—That is one of the big difficulties.

62. There are difficulties of administration?—There are difficulties of definition and overlapping. I can deal with it now if you prefer.

Dame Adelaide Anderson: No.

63. *Mr. Pugh*: On the point which you have just been dealing with, I take it that it is almost a fundamental condition that the Trade Boards apply to the trades in which the workers are less able to take care of themselves through lack of organisation?—Yes, that is so.

64. And where they are a class of worker generally regarded as being less able to take care of themselves?—Yes, that is so.

Chairman: You mean they may be juveniles, they may be women, or they may be trades in which there is no organisation?

Mr. Pugh: Yes.

Witness: That is so.

65. *Chairman*: Before a Trade Board is set up there is an investigation made, I think?—Yes. We are often asked whether the Minister takes the initiative in setting up these Trade Boards, or where the initiative comes from. In the case of the earlier Trade Boards there was no doubt where the initiative came from: it came from an inflamed public opinion, particularly in respect of the chain-making trade. When the 1918 Act was set up, the cases which were brought to the Minister's notice were brought in three ways: a number of trades had been mentioned by the Hills Committee, to which I referred earlier; a considerable further number of cases were mentioned by the Anti-Sweating League; and finally, as always, we had a number of direct applications from the Unions concerned. I may say here that though it is infrequent, it is by no means impossible, to get an application from employers to have a Trade Board applied to their trade, as well as from the trade union. In fact, in two cases during last year we repeatedly refused a unanimous request from both sides of a Joint Industrial Council to be converted into a Trade Board.

66. There was in this case a Joint Industrial Council?—There was a Joint Industrial Council.

67. Therefore there was proper organisation?—We took that view, but the trade did not take that view themselves, and on that ground we were unable to meet their view.

68. *Mr. Poulton*: Did they take it upon that ground?—No, they did not; the ground upon which they took it was that wages agreements made by what they called, I think fairly, the best employers in the trade with the trade unions were only observed by the best employers, and in the absence of compulsion their competitors were paying lower rates.

69. They were falling back, then, upon the 1912 inquiry, which brought in a unanimous

report upon that, that the wages should he made to apply compulsorily?—That is right.

70. That was the finding of that particular Committee.

71. *Chairman*: Have you ever had an application from an employer in a non-Whitley Council trade?—Yes, we have at the moment an application still before us—I think it is from the Drug and Fine Chemicals Association. They asked for a Trade Board. I think we have had several cases, and notably before the present feeling was engendered the attitude of the employers to Trade Boards was by no means entirely unfriendly.

72. *Sir Arthur Pease*: I understood you to say at the beginning that these Boards were only set up where both sides were not organised?—That is so.

73. But now you say that the trade unions are applying for these Boards?—That is perfectly true, but the position is that it would be difficult to find any trade in the country where there is no organisation. It is a question of the degree of organisation. If I may give you an example, the distributive trades employ perhaps two million workers; that may be an over-estimate, but I do not think it is. The principal union which caters for that trade is the Shop Assistants' Union. I am not prepared in the absence of accurate statistics to give the figures, but there certainly will not be very many more than 100,000 in the Union. It may be more, but I should be surprised if it were. In that trade, therefore, the vast majority of people are unorganised. There are other unions, of course, applying to that trade, but the vast majority are unorganised, and therefore it would not be surprising if in that trade the application came, as it does come, from the Shop Assistants' Union that various branches of the distributive trade should be covered.

74. *Mr. Poulton*: But although the application may actually come from the union, it would not be at all inconsistent with the position that the employers were hatching up that union?—It might not be.

75. *Mr. Pugh*: Might you not have this position, if you regard a series of trades which largely operate together as representing an industry: you might still have a position where one trade was organised and another trade not, yet the relation between those trades might be of such a character that one might prejudice the other. In that case, therefore, you would get justification for the union asking for a Trade Board in what was an unorganised trade or an unorganised section of an industry?—Very often a trade is organised in patches. I mean it is organised in the big centres, and less organised, or even completely unorganised, in the smaller centres; and the Trade Boards Acts may be applied where there is no effective regulation in any part of the trade; so you might take it from that point of view. But assuming that the Minister has started to take action, his first step is to investigate conditions, and for that purpose he has a staff of investigators whose business it is to go round the country to inquire into the actual state of the trade, both as regards wages and organisation. Part of their duty at the same time is to discover the facts on which a definition of the trade may be based and to report upon that, and also to give some idea of the right persons, or rather the right interests, to put on the Board if the Board is ultimately to be constituted. It is a matter of the greatest possible difficulty to decide what the borders of a trade shall be. I will deal with that in a moment. It is much less difficult to determine *prima facie* whether there is a case for the application of the Acts on the ground of organisation and wages. So far as organisation is concerned, the obvious course is to consult employers' associations and workers' associations as to the degree of organisation. If we check that information it is not because we necessarily distrust what we hear, but there is often a certain degree of optimism in the figures supplied to us which is not borne out by actual investigation. We have to satisfy ourselves in fact, if we are told that there is an 80 per cent. organisation, that there is an 80 per cent.

12 October, 1921.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

organisation. It very often happens that it is true to say on the employers' side, that there is an 80 per cent. organisation of the big firms, but they have omitted from their calculations the small firms, who may in bulk form half the trade, and are probably in many cases the least well paying in the trade. In the same way on the trade union side the claim as to representation is sometimes over-estimated, not because it is incorrect, but because lately the figures of trade union organisation have been shifting very rapidly in one direction or another. There was a very rapid increase in, at any rate, nearly all the unions catering for unorganised or partially organised trades during the war, and I think it is probably true to say that that rapid increase has not been maintained lately. Therefore we have to investigate the figures supplied with care. Then as to wages—

76. *Mr. Poulton*: Before you get away from that, does that mean that inquiry and dissection of the figures takes place from this point of view: that you might have very few employers in a given district who were in an organisation which might, on the contrary, represent the overwhelming bulk of employers; or on the other hand, you might have a considerable number of employers in an organisation which represents only a minority of the employers?—That is right.

77. *That*, I take it, is what you mean?—Yes. You have to weigh the importance to be attached to the figures in that sort of way. Then the Act gives us no criterion any longer as to what the wages standard is to be. It is no longer "exceptionally low"; it is simply that we have to have regard to the wages, and therefore we have got no absolute standard now as to what the lowness of the wage must be. In effect we accept as our criteria the sort of minimum rates which are in operation in Trade Board trades, that is to say, rates fixed by competent bodies of employers and employed, and we look also at comparable trades like Joint Industrial Council trades.

78. *Chairman*: You still think it is your duty to be satisfied that the wages in a trade are exceptionally low before setting up a Trade Board?—I would not say exceptionally low, but certainly low. We have a number of cases under consideration now where it might be difficult to say that the wages are exceptionally low, but it would not be difficult to say that they are low.

79. *Mr. Poulton*: But that is not the only factor, is it?—No, there is the degree of organisation also.

80. And the question of hours and conditions?—Of course the hours naturally enter into the wages calculation. If you have a 60-hour week and a 30s. wage that may be a very low wage; if it is a 48-hour week it might be a good wage, so you have to take hours in automatically.

81. Do you mean low, having regard to what is necessary for subsistence?—Not entirely. I say this later in my evidence, but I may as well say it now, that the Trade Boards Acts are not based on the subsistence level primarily or only.

82. *Lord Weir*: Not now?—And never were. The object of the Acts was to protect workers, but it was never laid down, as, for example, it was laid down in the preamble to the Bill which was introduced as a result of the agreement of the Provisional Committee of the National Joint Industrial Conference, that an adequate living wage should be provided. That was never part of the actual provisions of the Acts. They provide that workers shall be protected trade by trade, and in our view the Acts therefore must have had two objects in mind: one is to give the workers protection, and the second is, in giving that protection, to have regard to what the trade could reasonably afford to bear. That must, in our view, have been the reason for providing for legislation trade by trade in preference to the setting up of machinery for the settlement of a single flat wage; and, therefore, though the Boards could never ignore the need of a subsistence wage, that must, in our view, be conditioned under the Acts by reference to what a trade can afford to bear.

83. *Mr. Poulton*: Is there a third factor which enters there; that regard also should be had to protecting the good employer against the unscrupulous employer?—I think that is true. That is why so many of the best employers in Trade Board trades, I think, would still be prepared to defend Trade Boards.

84. *Lord Weir*: That is really to provide effectual machinery for regulating wages and conditions?—Exactly.

85. That covers it all?—That covers it all.

86. *Mr. MacCallum Scott*: I rather thought from your introductory remarks that the first Act was passed having sweating in view?—Yes.

87. Does not that indicate rather a subsistence level?—No, because if you take chain-making, where I imagine the rate before the establishment of the Board must have been 1d. to 1½d. per hour, the first Trade Board rate, if I remember rightly—I am saying this from memory—was 2½d. Even for pre-war days it is difficult to urge that a 2½d. rate would have been a subsistence wage—I mean not what anybody would regard as a subsistence wage—but it was certainly a 100 per cent. increase; and it was also felt that it was the most the trade could bear. It compared with rates of about 3d. or 3½d. elsewhere.

88. Sometimes they might fix a rate which was not quite a subsistence rate?—I think so, certainly.

89. *Chairman*: And sometimes more?—Sometimes more, but certainly they might fix less.

90. *Lord Weir*: In all that investigation work prior to 1909, was any accepted definition disclosed of a sweated wage—anything that is generally accepted?—I should hesitate to answer that. I do not think so. The figures rather stuck out without any general definition being made.

91. One would have expected some definition.—I do not think there has been any.

92. *Dame Adelaide Anderson*: In the Report of the House of Lords Committee there is a sort of description of what they mean.—It is possible. I have not the point in my mind, but I can look it up.

93. Excessive hours and very low wages, or something of that sort?—Yes. Roughly, if you look at the facts, it meant trades where wages were round about 1½d. to 2d. per hour, so far as women were concerned.

94. *Mr. Layton*: What do you understand the phrase, "exceptionally low," to mean? Does it mean lower than the average wages in the country?—It is exactly on that point that we were in such difficulty. You may give so many interpretations to it. I think that the framers of the Act probably meant the words to mean very much lower than the normal rates prevailing throughout the country. I think that is the meaning which they attached to it.

Chairman: But the Act says "exceptionally low as compared with that of other employments."

95. *Mr. Layton*: Am I right in assuming that you say that the Board did not set itself to fix a rate which would bring the level up to that of other trades, but that it would be based upon what its own trade could bear?—Yes, clearly on what it could bear.

96. *Mr. Poulton*: That was in the early stages?—Yes, in the early stages.

97. *Mr. Layton*: In spite of the definition in the Act?—In spite of the definition; but you have to allow for the fact that it was legislation trade by trade, and that, in our view, indicated that it meant that you had to take that into account.

98. *Mr. Pugh*: Then if you follow that up surely on the principle which you contend you can take to apply, namely that you must fix your rate according to what the trade is able to bear, even if it means something below what might be regarded as a subsistence level, the proper application of that principle will equally entitle you to fix a very much higher rate if the trade will stand it?—That is perfectly true if the Trade Board takes the view that it is a wage-regulating authority and not a minimum-fixing authority.

12 October, 1921.]

MR. HUMBERT WOLFE, C.B.E.

[Continued.]

99. *Chairman*: That involves inquiry into profits,—it may mean a much more detailed inquiry than the other. Then if we have once made up our minds when we are making our investigations that the case for a Board has been established, both by lack of organisation and as regards wages, the next and the most formidable task is that of isolating the trade by definition. It is difficult to exaggerate how complex that is. As the Committee know, the trades of the country, at any rate in great part, are an organic whole; they do not grow in mechanical sections so that you can take one out of a box and put it there, and take another out of another box and put it there, but they intertwine; they grow up together; they grow up as a plant does, owing to all sorts of natural forces; and when you try to analyse and demarcate you are immediately faced with innumerable problems, and there are difficulties which can only be surmounted by the most patient consultation with all sections of the trade, and by a very determined attempt to get a real understanding of what the trade is. Some of the points to which we have to direct our attention in drawing up the definition are, first, the branches of work to which it is proposed to apply the Acts; those branches may all be, or a selection of the branches may be, carried on in establishments typical of the trades, or they may be some or all of the essential operations characteristic of the trade. Then you have to consider how far subsidiary operations should be regarded as forming part of the trade, and upon that point you may always be in difficulties, because what is a subsidiary operation for one trade may be itself another trade, and may also be a subsidiary operation of another trade. Then, again, you have to consider how far side-lines which may be manufactured in association with a certain article are covered by the original trade; for example, can fish curing be properly regarded as a part of the sugar confectionery trade? It does not sound at first sight as though it obviously were, but it is strongly contended by some of the unions that it is a part of the sugar confectionery trade, on the plain ground, of course—it is not as funny as it sounds—that some of the big sugar confectionery firms make potted meats and potted fish, and cure their own fish to make the potted fish, and therefore it is suggested that, as that is a side-line, it might just as well be covered by a Board for sugar confectionery, taking in Grimsby and Hull by the way. Then the next point to be considered is the claim made by various branches of the trade to be treated as separate from others. For example, to take a small case in the Birmingham stamped or pressed metal wares trade; the pen trade, which is carried on by about ten firms, claim that they are quite a separate trade, though they use the same sort of stamping and pressing machines as the rest of the trade, and hitherto they have established their case to remain outside the Trade Boards Acts.

100. *Sir Arthur Pease*: May I just ask this: if fish curing or one of those trades was included in confectionery, would that cover the whole of the fish curing trade of the country, or only the fish curing which was carried on in connection with the confectionery?—That would be exactly one of the points which would have to be determined, and it would probably be so difficult to determine it that the conclusion would have to be the conclusion which we have reached so far, that fish curing must be left out; because you would find that you would run in from a big firm doing a little fish curing under exactly the same conditions as the firm next door doing only fish curing, and you would have the anomaly that one had to pay a certain rate of wages and the one next door had not.

101. *Dame Adelaide Anderson*: And the whole of the fish curing trade which travels round the country might swallow up the confectionery?—I do not think so, because you have large resources unsuspected in confectionery including jam and pickles, and innumerable other branches. It is a complicated trade. Then you have the point which Dame Adelaide

Anderson raised earlier; you have to consider the treatment of an establishment in which more than one trade is carried on, or in which more than one class of commodity is sold. I appear to be always mentioning the stamped or pressed metal wares trade, but it is an extraordinarily good one for the purpose of illustration. In that trade, to begin with, it was urged that you should have a single Trade Board covering a great deal of the trade. The stage had not yet been reached when, as now, some sections would like every stamping and pressing machine, wherever it is operating, to be included. But at that stage it was thought that one Board should cover a fairly wide group, and originally it was proposed that it should cover buttons, pins, hooks and eyes, and coffin furniture—coffin furniture is the metal parts of coffin—general stamped or pressed metal work; but the first three mentioned trades, buttons, pins, hooks and eyes, and coffin furniture, put up such a strong case, on the ground that they had their own trade associations on both sides, that we were compelled to admit that they should have their own Boards, although in fact in that case we had to set up four Boards for a trade which, on one interpretation, could be described as one only, though on another interpretation it could be described as four or even more.

102. *Chairman*: What happens in the big shops?—That is one of the burning points at the moment. A great deal of apprehension has been felt by the big stores as to what will happen to them under these Acts, and I imagine that they will put their case to you with great force; but if you take the case of the big London stores, what you have in fact is 40 or 50 shops under one roof. It is perfectly true that there is one general management, but there are 40 or 50 shops. It has been suggested that they should be treated, if we covered all the distributive trades, as one—take a departmental store and give it one rate; and obviously there is a great deal of sense in that suggestion. On the other hand, what is put forcibly by other distributive employers is this. Take the grocers; they say, "We are grocers; we buy in certain markets, and we have to sell to customers; we are in no sense different from the departmental stores; they buy in the same place, and they sell to the same people, and we know no reason why they should be differently treated from us." If there is to be a Grocery Trade Board, then (to mention the names of firms, if I may) Messrs. Harrode, Messrs. Whiteley's and Messrs. Barker's are grocers as much as we are, and in so far as they are grocers, they must be treated as grocers. You might, therefore, if you covered the whole distributive trade, have to have a considerable number of Boards operating in one establishment, and you might, therefore, have a considerable number of rates operating in one establishment.

103. One rate at one counter and another rate at the next counter in the same room?—Yes, that is quite conceivable. As against that, of course, you have the point that probably, although I cannot say for certain, there are considerable variations of rates now, or there have been, in the big concerns as between one department and another. It may well be that some of the stores have a uniform flat rate which they pay throughout; they will tell you about that; but it may also be—it may be worth discovering whether it is so—that they have different rates of commission in each department, so that even though the minimum rates were the same there would be a difference from department to department in the actual earnings. I do not say that specifically or definitely; I simply think that it is a thing which might be worth exploring. We have not explored it; but it remains a substantial point that you might have a big store with a number of different rates operating. The only mitigating circumstance in that is—I think it will be familiar to all members of the Committee who have had to manage big businesses—that you do in fact in the manufacturing business get a number of rates for different classes working side by side.

12 October, 1921.]

MR. HUMBERT WOLFE, C.B.E.

[Continued.]

104. Are there many Trade Boards in the distributive trades?—At present only in two trades—the milk distributive, which is practically the dairies, and the grocery, which is a very big one; but Special Orders have been made in respect of fish, poultry, game and rabbits; hair dressing (which is partly distributive, as much as it is anything), fruit, flowers and vegetables, and whips. Those are the ones we have dealt with, but those which I have just mentioned have not got Boards set up.

105. *Dame Adelaide Anderson*: Would it be any more difficult than it is in a large factory, say a food-producing factory, which makes its own tin boxes, its own cardboard boxes, and its own paper bags, and prints its own labels and does a number of other things?—No, I do not think it would. When a firm, as often happens, tries to follow an article from the beginning to the place where it is delivered as a finished article, it contemplates taking on a number of businesses, and it naturally does not, I imagine, decide that it is going to make all its workpeople uniform; it continues to treat them as belonging to the business it has taken over; and therefore these varieties do exist, and are bound to exist, in the large manufacturing establishments as between one class and the next. But, of course, a point which would be urged with great force here is that in the manufacturing establishments they are probably engaged on different classes of work. Here the counter assistant is a counter assistant throughout, and the degree of skill varies very little from counter to counter. Possibly the grocery trade is the most skilled, because it involves actual mechanical operations.

106. *Chairman*: The cost of living is the same?—The cost of living is the same, yes.

107. *Sir Arthur Pease*: Might not a man be employed partly in different departments, and by which wage would he be regulated then?—That is not a departmental store question. I think you will find, if they do give evidence, that they do keep their departments fairly distinct. It is a question which applies to a general shop, the sort of county town shop; and in that case an attempt is made to isolate the principal business of the establishment and so to make possible the application of the rate fixed for the principal business of the establishment throughout.

108. *Mr. Pugh*: What do you think of the practicability of establishing a Trade Board for the distributive trades as such, fixing a general minimum and leaving any differentiation to be arranged according to any difference which there may be in the character of the work of the different departments? If that were done, would it not cover the difficulty between a man who is simply a grocer and a man who is a grocer and a great many more things?—Of course, the answer to that question goes to the root of the whole question whether you are going to fix minima or have a wage-regulating machine. If you are only going to have minima you can have a flat minimum, but if you are going to regulate wages throughout then I think you will be told quite sternly, by the drapery trade for example, that the rates have been different in the past from the rates, say, of the fruit, flower and vegetable trade, and the grocers would tell you the same, and to try to set up a single Trade Board for wage regulation would, I am afraid, involve a gigantic body. When you remember, for example, that the Grocery Trade Board (E. and W.), which deals with our trade only, has 85 members on it, you will see that if you try to bring in the butchers and the fishmongers and all the other trades, without attempting to be factious, you probably would want a very large building to hold your Trade Board.

109. Is it not possible to go on the same lines as the other organised industries do? Take my own case, I am in steel. We have a very large number of trades, but it is possible for us to deal with our industry on a national basis, but making provision for differentiation in the different trades according to their conditions. It is true that you may

have, as you say, a large number if you take the aggregate number of the whole of your Boards, but is it not possible to have a Trade Board, say, with a central body, and then arrange for your Trade Board to deal with specific trades where an adjustment in wages has got to be made above your minimum?

Chairman: Do you mean by agreement or by compulsion?

Mr. Pugh: Under the machinery of the Board.

110. *Chairman*: By compulsion?—I feel that I should be very glad to deal with Mr. Pugh's point, but I think it would mean entering at this stage into an argument on the whole basis of the Trade Boards Acts, because I think it goes to the very root of the whole thing.

111. It is a very important question?—Shall I take it now?

112. Just as you please. Either take it now or consider it and deal with it later.—I did mean to deal with it later on the question of national minima, the question of wage regulation and the question of district committees.

113. *Mr. Pugh*: If you are going to deal with it, I am quite satisfied.—I was on the difficulty of definition. I mentioned some of the difficulties in the stamped or pressed metal wares trade, and I said that there we had to set up four different Boards. On the other hand, the sugar confectionery trades, which I have mentioned before, were centrifugal rather than the opposite, and they insisted on having one body for sugar confectionery, chocolate, jam, preserved fruits, tinned and potted meats and fish, meat extracts and essences, sauces, and pickles, because it was found difficult to draw a line between the various articles; and now they are asking to have that made much wider. Then you get a different class of case in the sack and bag trade. Very large numbers of new jute sacks are made in Dundee. The wages paid in Dundee are governed by the jute spinning and weaving trade. The employers in Dundee did not wish for this reason to be covered by a Trade Board on which the conditions outside Dundee might play an important part in fixing rates, and the employers in the rest of the country, of course, did not want to have their rates settled by the Dundee weaving rates, and so it was decided to exclude the manufacture of jute sacks and bags in Dundee altogether from the operation of the Sack and Bag Trade Board, and it was proposed that the Dundee section should be covered by another Trade Board which was in contemplation for Dundee, for the dyeing, bleaching and finishing section of the jute trade.

114. *Chairman*: Has that been done?—The Sack and Bag Trade Board is rather suspended between heaven and earth, but it ought to be up in about a fortnight or three weeks.

115. Is Dundee excluded?—Dundee will be excluded definitely, yes.

116. *Sir Arthur Pease*: And Dundee is the principal place?—No, not for the manufacture of sacks and bags; it is not the principal place. It makes a considerable proportion of them, but by no means the majority, I think. Cotton and other materials are involved, too, not only jute.

117. *Mr. MacCallum Scott*: Is that trade well organised in Dundee?—The difficulty about Dundee is rather that though the figures of organisation are very high, the effects of the organisation do not appear to indicate that in fact an effective means of wage regulation exists. It sounds a paradoxical thing to say, but it does not look as though there was sufficient power behind the organisation to enforce its demands.

118. *Mr. Pugh*: That means that, although you have organisation, you have not got negotiating machinery?—I think it roughly means that, and it means rather, perhaps, that the jute trade is very specialised, and the workers are rather limited to their particular knowledge, and were, perhaps, in difficulties in finding employment outside Dundee if there were difficulties at Dundee. I think that was probably the case there. There are certain other obvious points which, in making a definition, lead to very

12 October, 1921.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

great difficulties. I should explain that, under the old Act of 1909, the definitions were rather broader, wider and simpler than they have become later, and the reason for the adoption of more detailed definitions was that the number of questions arising upon the definition of a trade were so numerous and so difficult that it was felt better to attempt to answer the questions in advance in the definition, if possible, rather than to leave them to be replied to afterwards when delays are inevitable.

119. *Chairman*: I think we understand that there must be great difficulty. That is really the point you are on?—That really is the point.

120. Will you go on to the question of notice?—What happens is, after we have got all this information together—and it is of a very complex character—we have had at every stage consultation with the employers and employed to try to get their views, and ultimately we draft a provisional definition which we circulate to all parties for a final expression of opinion. If they take the view that it is a reasonably sensible definition, we then, in accordance with the Act, give notice of intention to apply a Trade Board to that trade as defined.

121. *Mr. Poulton*: As to that consultation, do you mean that it is an informal or a formal consultation?—It may be either, and generally is both. We generally have a conference, and we go and see individuals privately, or they come and see us specially. We give Notice of Intention, and, according to Statute, 40 days must elapse during which objections may be lodged. In most cases, at any rate before the feeling towards Trade Boards suddenly and drastically changed, when the Notice had been issued, so much had been done by way of consultation that very few objections were received. Since the change of feeling has manifested itself, even after agreement may have been reached in earlier stages, objections have come in during those 40 days, and in one or two cases have led to no further action being taken; but there has been no case up to the present, as I said before, in which it has been necessary to take advantage of the powers to carry out a statutory inquiry. In every case, therefore, in which a Trade Board has been set up it is true to say that it was done with the knowledge and with the consent of the principal organisations on both sides. Of course, the consent was not always a very willing or very enthusiastic one, but the objections were never adhered to to the end.

122. *Mr. Pugh*: Would you mind making that position quite clear? I gather that, as the result of consultations, inquiries, and one thing and another, before you set up the Board, you have obtained more or less the approval of the main portion of those concerned in a particular trade. If that is so, do the objections come from those who are outside, or where do the objections come from—not from the persons with whom you have been in consultation, surely?—What I said was this: I put it in as guarded language as I could, because I did not want to give any offence, but in the earlier days we got no objections; we had agreed the terms of the definition with the parties, and when the notice of intention was issued there was nobody to object except isolated people who were outside; but the position has changed latterly, because we might have had extensive consultations before the slump had shown itself, and then the objections which came in might be from people with whom we had consulted, and with whom we had agreed, and who took the view (which was not an unfair one to take) that owing to the alarming change in the national industrial position they could no longer be held as agreeing.

123. *Lord Weir*: Do you quite definitely associate the change of view with the depression?—Quite definitely. There has been a change of view among employers since the depression.

124. Only among employers?—Not among the trade unions.

125. When you speak of this change of view, on whose part do you mean that there is a change of view—on the part of the employers, or the trade unions, or the workers, or whom?—The employers only. I must not speak on behalf of the employers, because they will speak on their own behalf, but I think it will be fair to say that there was a change of

view, not among all employers and certainly not among many employers in the Trade Board trades; it was very often among employers who had had no experience of the Trade Boards.

126. *Mr. Poulton*: Was that objection an objection based upon the principle of the Acts, or was it an objection which had been brought about by economic circumstances?—The objection was generally based on the assumption that the application of the Acts would cause unemployment in the trade, and that it was not the moment to make any more experiments.

Mr. Pugh: I take it that we are likely to have this matter developed by other witnesses?

Chairman: Yes.

Witness: After the 40 days have elapsed, and objections have been cleared out of the way, a Special Order is made applying the Acts, which sets out the definition, and then the necessary Regulations are made constituting the Board; and before the Board is constituted we have already had the information which the investigators, to whom I referred above, obtained as to the strength of organisation in various quarters. I will deal later in my evidence with the actual method of constituting the Board.

127. *Chairman*: The Order has to be laid before Parliament, I see?—Yes.

128. It need not be confirmed by Parliament?—No, it need not be confirmed.

129. It may be set aside by Resolution?—By Resolution of both Houses.

130. *Sir Arthur Pease*: Has it to be confirmed by both Houses?—No, it is simply laid on the table. There is a well-known procedure, which is to lay an Order on the table, and it is open to either House to move an Address to have the Order cancelled.

131. *Dame Adelaide Anderson*: Up to a limit of 40 days?—Yes, 40 days. I think it must be by consent of both Houses—no, I am told that it is either House. After the Order has been made, even now, with the extended definitions, a large number of questions arise as to interpretation, and they arise in two ways: one is that employers in genuine doubt write to ask whether they are covered or not, and the other is that, as a result of inspection, evasion is discovered, which in many cases is due to genuine doubt whether workers are covered. The result of the inquiries and of the inspection may be not to suggest that the employers are deliberately evading their obligations, but that the Order ought to be amended. When a Special Order has been made, the possibility that amendments may be required is constantly kept in view. The enquiries prior to revision, which have frequently to be almost as exhaustive as the enquiries made before the Order was drawn up in the first place, are carried out by the investigating staff which obtained the information on which the Order was originally based.

It is in that connection that the Minister has the responsibility of advising employers whether individuals in their employment are covered by the Order. It is a curious statutory position, because at the present moment there is nobody able to answer a question with authority except the Law Courts. If an employer writes to the Minister or to the Trade Board and says, "Am I or am I not compelled to pay?" nobody can give an authoritative opinion. In point of fact, the Minister, as the prosecuting authority under the Act, writes a very guarded letter, in which he says: "If you do or do not pay, I shall or shall not prosecute"; which is rather a terse answer to give to a question which is very often, and generally, sent in good faith. Any other answer would be exceeding our statutory powers; and there is no doubt that the absence of a decisive power to settle whether a given person is within or outside the Acts has caused real difficulty in the operation of the Acts. To give just one instance before passing from this, as to the way in which the Special Order is revised as the result of experience—

132. *Chairman*: Does the Minister, before giving his decision, consult the Trade Board which was concerned with the matter?—Yes. There is a good deal that arises upon that particular question. I can

12 October, 1921.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

answer it now if you prefer. He does, in fact, consult them, but of course there are mixed questions of law and fact in nearly every case.

133. He would not be bound by their advice?

134. *Mr. Poulton*: Do you mean that the Act is not sufficiently explicit to allow the Minister to take that responsibility?—On the contrary, it does not give him the responsibility at all; it is simply by implication that he exercises it. Anything that the Minister writes to an employer can be upset by a Law Court.

135. *Chairman*: In so many Government offices, when they are asked for advice, they say, "We have no authority to advise, but we think so and so."—Precisely; but in this case actual wages depend upon the advice given, and often large sums of money, and it is rather anomalous that it should be at the best but inspired advice, and not really legal advice.

136. *Mr. Poulton*: Do you mean, then, that when the Acts have been made applicable to an industry, or part of an industry, even then the Minister cannot say whether it applies to a workman or a workwoman, as the case may be, actually working in that industry?—No. The only way in which the Minister can test it is to say that the workman is in, and then prosecute the employer for failing to pay.

137. *Chairman*: I suppose the question is, whether he is working in that industry?—Whether he is working in that industry.

138. Whether the definition of the Trade in the Special Order applies to his particular occupation or not?—Precisely.

139. *Mr. Pugh*: Surely that is not a question of law, but of fact?—I think you will find that in nearly every case it involves law and fact.

140. *Chairman*: It is construction?—It is construction, yes.

141. *Mr. Pugh*: Have the Trade Boards themselves no function or authority with regard to a matter of that kind?—No, they are in exactly the same position as the Minister; they can no more decide than the Minister. They can have a view, but you will see that when you have three overlapping Trade Boards, as you may have, they may all three, for example, decide that the same person is covered by each of them, and therefore in the absence of some decisive power the position is very difficult.

142. *Dame Adelaide Anderson*: Nothing but a test case can settle it?—No. Of course in point of actual fact the Minister gives these rulings constantly and regularly, but they are never challenged. Probably if the power existed somewhere they would be very much the same; but though they are not challenged, the fact that he or somebody else has not got the final authority has led to real difficulty of a substantial character between the Minister and the Trade Boards.

143. But there must be some real intention in drawing up the order and the definition. It would have reference to the reports of the investigators and the inspectors?—Yes, but it has become a legal document and you cannot interpret motive.

144. No, but it is the fault of the definition not being sufficiently precise?—If you will forgive my saying so, you will never get a definition between heaven and earth which will cover a trade.

145. *Chairman*: I think we have followed that. Have we come to the end of that part of the evidence?—Yes, I have come to the end of that particular part. I could say a good deal more, but I think probably I have said as much as you wish me to say. That is the end of the preliminary investigation.

146. Orders may be revised, if necessary?—Yes, they may be revised. You have one or two cases, notably in the tailoring trade, where you exchanged one Board for two and added three new Clothing Boards. The trades shift and change, apart from the fact that the first information is not necessarily conclusive.

147. *Sir Arthur Pease*: There is one question which I wanted to ask. Have you had any cases where you have had a Board originally, and then the sides have become organised so that the need for a legal Trade

Board disappeared, and the employers and trade unions were meeting each other in the ordinary way?—We have not actually had a case in which we have withdrawn a Trade Board; but we have had cases where applications for withdrawal on that sort of ground have been made. The jute and the linen trades have both applied to be withdrawn, and I think the merchant tailors of Scotland have also applied. Later in my evidence I explain why we refused in the former cases to withdraw them from the Trade Board; but in the case of the tailoring trade there is no doubt that the organisation is becoming far more effective than it was, and it might be open to question whether the Trade Boards, at any rate, as regards part of the retail bespoke, were really any longer necessary. It is open to question; I do not say that it is in the least settled, but it is open to question.

148. *Lord Weir*: The organisation has grown and developed, so that it would be reasonable that voluntary bodies should take over the duties of the Trade Board?—The difficulty qualifying that in tailoring is always the East End element.

149. But in those other two cases they applied?—Yes.

150. I suppose the application has been made on the ground that their organisation is now good enough to undertake the work?—Yes. The employers say, quite definitely: "We have 90 to 100 per cent organisation," and the workers on their side claim 80 per cent, at least. If so, where is your lack of organisation? They point to the wages, and they say the wages are not low and that neither of the conditions applies any longer.

151. *Mr. Poulton*: Are they joint applications?—No, they are very much not so.

152. *Lord Weir*: I thought they were?—No, they are strongly opposed by the workers.

153. *Dame Adelaide Anderson*: Are the outworkers represented?—I am talking about jute and linen. I do not think there is any out-work.

154. I thought you were speaking of the tailors?—No, in the tailoring it has not gone that length; it has only come up just lately. In the others it was a formal application formally considered.

155. *Chairman*: I think you might now tell us something about the constitution of the Trade Boards.—The first point on that, I think, is the question of the sub-division of trades. I think I said this morning that you can under one special Order set up more than one Trade Board. Normally the procedure is to set up a single Trade Board by one Order, but there have been four cases where the Order specified a trade, and then separate Trade Boards were set up under that.

156. That is merely machinery?—Yes, that is merely machinery. The cases in question were the retail bespoke and wholesale tailoring, the tin box and hollow-ware, the wholesale mantle and dress-making and the general waste and cotton waste reclamation. Another thing is that you may have separate Boards for separate parts of the country. As a matter of fact, so far as distributive trades are concerned, you have separate Boards for England and Wales and Scotland, and in many cases you have separate Boards for Ireland and Great Britain. The provision in the Acts as regards Ireland is that if you set up a Trade Board for Great Britain you must set one up for Ireland if the trade is carried on to a substantial extent in Ireland.

157. Are we concerned with the Irish Trade Boards?—It is rather difficult to answer that question. The Minister of Labour for Northern Ireland is setting up a Committee to advise him as regards the application of the Acts in North Ireland. As regards the southern part of Ireland, the position is difficult at the moment. The actual position is that we have not transferred the Trade Board powers from Great Britain to Ireland yet. But under the Act there is a transfer section, and I should imagine, therefore, except as regards the possible competition

12 October, 1921.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

between Ireland and Great Britain, it does not directly concern the Committee.

158. Then the question of District Committees is in the hands of the Trade Boards themselves?—Yes. So far as that is concerned, it is entirely a matter for the Trade Board. The Minister is empowered to constitute the Committees at the request of the main Trade Board. The number of cases in which that has been done is comparatively few. The only Trade Boards which have set up District Committees are the Tailoring Board, whose committees were automatically dissolved in 1919, when the Board was dissolved and reconstituted; the Paper Box, Sugar Confectionery, Shirt-making, Boot and Shoe Repairing, Cotton Waste Materials Reclamation, and Made-up Boards. So that very few Boards have taken advantage of the provisions of the Acts under which District Committees may be set up.

159. How are the districts divided in those cases?—I have an actual table which I can hand in (not printed), showing the division, but if I take one instance perhaps that will be sufficient to illustrate it. The Shirt-making Trade Board has four Committees; they are divided into Northern, South-Western, London and South-Eastern, and Scotland. One for the whole of Scotland. The Northern includes the area north of a line drawn across England, really right across the middle of England, and takes up the whole of Northumberland, Durham, Yorkshire, Lincolnshire, Nottinghamshire, Derbyshire, Staffordshire, Shropshire, Montgomeryshire, Merionethshire, Carnarvonshire, Anglesey, Denbighshire, Flintshire, Cheshire, Lancashire, Westmorland and Cumberland; it takes in Wales and the middle of England. Then the South-Western takes in the south-west part of Wales, Wiltshire, Dorsetshire, Devonshire, Cornwall, Somersetshire, Gloucestershire, Worcestershire and Herefordshire; then you have the London and South-Eastern, which includes all the Home Counties.

160. Does the District Committee fix the rate of wages?—The position is that if there is a District Committee the Board cannot fix a rate without having taken the view of the District Committee; but the District Committee are not an executive body. In point of composition at present they are generally composed of a certain number of members of the main Board on both sides, with an Appointed Member in every case who is either the Chairman or Vice-Chairman of the main Board.

161. Do the rates differ much in the Districts?—In the particular cases where District Committees have been set up there is only one Board that has fixed district rates, the Cotton Waste Board, which has different rates for females in England and Wales and Scotland. There have been other Boards which have fixed district rates without District Committees.

162. Is that in the printed list of Trade Boards?—I have the actual statement where district rates have been fixed. The Rope, Twine and Net Trade Board was the first to fix a district rate, in 1920; they fixed special rates for Dorsetshire and Somersetshire which were in fact rather higher than the rates for the rest of the country. Then the Ready-made and Wholesale Bespoke Tailoring fixed a higher rate for cutters in London than in the rest of Great Britain.

The Laundry Board have made special provision for Cornwall and the Orkneys and Shetlands, where slightly lower rates are in operation for female workers than in the remainder of Great Britain.

The Milk Distributive Board (England and Wales) have taken a population basis through the country and fixed a flat rate applying to the population in those cases; they have fixed a London rate, a rate for towns over 10,000, and a rate for towns under 10,000, so that they have three minima. The Grocery Trade Board (England and Wales) have issued proposals on much the same basis.

163. Mr. Pugh: On what ground would the difference of rates between districts be based?—Normally.

164. Yes.—Of course, that would be open to the Central Board and the Local Committee to decide.

Partly, of course, differences in the cost of living, although there are no certain figures in existence to show what that is; partly differences of local practice, and differences of local tradition, transport facilities, and things which go to make the rates different from district to district.

165. Affecting the cost of production?—Yes, affecting the cost of production. I think, on the whole, it is fair to say that the tendency has been throughout to fix national rates.

166. Mr. Poulton: I presume later on we shall go into this question of the District Committees, as to whether it is advisable that they should be continued or not?—Yes, certainly; I have some further points on it in evidence.

167. Chairman: Are you coming to it later?—Yes, I was coming to it later.

168. Will you now deal with the question of the membership of the Trade Boards?—The membership of the Trade Boards consists of three parts. It consists of an equal number of employers and employees, and appointed members. The representative members can either be elected or selected; in point of fact, they have only been elected in a few instances, with rather unsatisfactory results on the whole, and they are now selected. The Boards vary in numbers from a total of 15 on the Chain-making Trade Board to 83 on the Grocery Board, which is the biggest, with five appointed members.

169. That is an enormous number.—Yes, it is an enormous number.

170. Mr. Poulton: Having regard to that point, with regard to the old Boards, which were few, but of which I have had experience, will you give us an opinion upon the matter as to whether the smaller sized Boards or the bigger ones are the most effective?—It is very difficult to answer that question. There is no doubt that the bigger the Board the more discussion there is, but in the case of the Grocery Board, which is a single instance of a very large Board, you had 130,000 employers in the grocery trade; you had a large number of Associations, and you had the whole of the country, so far as England and Wales is concerned, to cover, and one of the big objections which is always made to Trade Boards is that they are not sufficiently representative of all parts of the country; it is suggested that they are purely Metropolitan in interest. Still, in order to ensure that you got every part of the country and all branches of the grocery trade of the country represented, you had to make it a very large Board indeed. If you look at the history of what has happened on that Board, you might say that perhaps a Board of 83 never comes to a conclusion, because although they have been in existence for more than a year they have not yet achieved a first rate. But I do not think that would be a fair thing to say; they have had very great difficulty, because of the rapid changes in the cost of living, and I think they have recently, at their last meeting, after great difficulties, actually agreed on rates. So that I do not think it has been proved that a large Board is necessarily a failure.

171. Lord Weir: Can you give us the number of members on the old pre-war Trade Boards?—I happen to have only the Chain-making, which is 15. I can get you the numbers of the others; there are none of the others approaching 83. (Note prepared for members of Committee—not printed.)

172. Sir Arthur Pease: Do a big Board like that act all together in a room, or do they delegate some of their work to committees?—When I come later to the way in which the Boards do their work, I can answer that question, but as a matter of fact each side withdraws to consider its case, and they may set up, as Boards generally do, an Administrative Committee which is a General Purposes Committee.

173. For both sides?—For both sides, for transacting current business; not for settling rates, because rates are always settled by the whole Board; but they may have administrative consultations by the whole Committee.

12 October, 1921.]

MR. HUMBERT WOLFE, C.B.E.

[Continued.]

174. But if there are 40 people on both sides, it is practically impossible for 40 people on each side to have intricate negotiations. In that case would they appoint, say, five or seven on each side to carry the matter to a certain point, subject to the confirmation of the whole Board?—It has been done in that way, but I think if one goes into the position it is rather more like this: each side elects a chairman and secretary who are competent to voice their views, and each side decides on its policy separately. Then they come to the Board, generally with a chairman authorised on each side to express the view of all the members. There may be a few people who speak as well, but generally the chairman for each side is there to represent the general view. Then if it looks as if there is no chance of an agreement being arrived at by open discussion, the sides tend to withdraw, and then the appointed members, whose position is largely that of conciliators, go from one side to the other and take the matters backwards and forwards, and very often in side meetings an atmosphere of practical agreement is arrived at, and then they come back into the main boardroom with the two leaders prepared to make propositions which will probably be accepted.

175. *Mr. Poulton:* But still there would be the full number present at some of the meetings; they would be summoned?—That is so.

176. And that is one of the objections on the part of the public, that the Boards are so expensive?—Yes, they are all summoned, but it is arranged on occasion that the position is negotiated by a Committee. To take a case in point, the Scottish Grocery Board definitely appointed a Committee from the two sides to draw up a list of rates to submit to the whole Board for discussion later, and that was a great success; I mean their first rates were not successful, the second were agreed on the Committee, and I am not sure that they have been confirmed yet, but at any rate, they were agreed, I believe, by the Board.

177. *Sir Arthur Pease:* But would you not agree that where you had a very large Board, it rather tended to set speeches on both sides, and not getting down to real practical discussion with regard to settling the rates?—I think that is true, unless the sides are prepared to leave the negotiations substantially in the hands of their leaders, which is generally done on these Boards.

178. But the leaders' hands would be tied if they come with resolutions to the meeting on both sides?—I agree.

179. Whereas if you had a small Committee on each side they could, to use an expression, explore the position without actually committing either side?—There is nothing in the Acts to prevent that being done; in fact I think it is done, and I think it would probably be a very useful thing to do.

180. *Chairman:* They are appointed in the first instance, I think, for a year?—Yes, in most cases the Board is appointed for a year, and in appointing it, as I say, the Minister takes the greatest possible care to try to get equal and fair weight given to all associations on both sides and to the various parts of the country. Of course it is very plain that you cannot cover every town and every part of the country, and you cannot get in every association which wants to come in. But there are three important points on membership which I ought to put; the first relates to the appointed member. The appointed member is an impartial person appointed by the Government, and in all cases at present there are three appointed members, a chairman and two others, except on the Grocery Trade Board (England and Wales) and the Retail Bespoke Tailoring Trade Board (G.B.), where there are altogether five. The origin of the appointment of appointed members is not quite clear; I mean what the real object was. It was partly, no doubt, to prevent the possibility of a deadlock. Also in part, I think, it can fairly be ascribed to the desire to have somebody who could get the unorganised view represented. The old

trades were, of course, very largely unorganised, and it was very difficult to get people who could put their point of view.

181. Also, I suppose, that some regard should be had to the interests of the consumers, the public?—They may have got into that position now, but I am not sure that it would be fair to say that they were originally appointed with that object. I think it was always felt that that duty lay on the Minister: it was his business to protect the public. Naturally, for such an office it has been very difficult to get people to serve, because you are very strictly limited. It is difficult to appoint either an employer or a worker, because each side will say: "He represents the other side's point of view." Therefore you are precluded from appointing people with technical knowledge of any kind to take up the position. Then you are left with the professions, practically, and you will see a table is attached showing the distribution of the professions. I will hand in the table (see Annex I, Chapter III, Table A), and you will see that it shows that of the 55 Appointed Members 17 are university professors or lecturers, 16 members of the legal profession, 10 social welfare workers, and 6 ex-Civil Servants, and then there are one or two others. Practically they are divided between the Law and the Universities. There you get, of course, people in the one case with economic knowledge, because a number of them are professors of economics; and in the other case you get people with an actual knowledge of the law and accustomed to deciding cases. There has been some criticism of the Appointed Members; but at any rate it is difficult to see how the business of the Boards would have been carried on without them.

182. Some of them sit on more than one Board, do they not?—Yes, that is so; several of them are members of more than one Board, and that was done deliberately in order to get a uniform point of view in related Boards. As far as possible we tried to get a Chairman to take a number of related Boards.

183. *Sir Arthur Pease:* Are they paid?—Yes. 184. How are they paid?—They are paid five guineas a day, including a subsistence allowance, that is to say, including a payment for being away from home. The subsistence allowance is, I think, 25s. a night, so that in fact their fee is £4 a day for sitting, and, naturally, that is not regarded in the professions as a very attractive fee. I am reminded that that is the Chairman's fee. The Appointed Member who sits with the Chairman gets three guineas, including subsistence.

185. *Chairman:* What does the ordinary member get?—The ordinary member is not paid. He gets a subsistence allowance and travelling expenses, and about half the total expense of Trade Boards is due to the payment of travelling expenses and subsistence allowances, both of the Boards and the inspectors.

186. *Sir Arthur Pease:* Do all the Boards sit in London, as a rule?—No; a great number do, because that is more convenient, but the Metal Boards, for instance, meet in Birmingham, and, of course, the Scottish Boards, those which are purely Scottish, meet in either Glasgow or Edinburgh; the Jute Board, which is not a purely Scottish Board, meets in Dundee generally, and if there are other people in it they go up to Dundee. The same applies to flax and hemp. The majority of Boards meet in London. The Cotton Waste Board, I believe, meets in Manchester. Then there are two other points with reference to the representative members, if I may take them. One of the difficulties in constituting your Board is to get a fair representation as between the organised and the unorganised. In the ordinary way, the great majority of the representative members on the workers' side and on the employers' side are representatives of Associations. On the other hand, where there is a considerable body of unorganised employers or workers who are not covered, an attempt is made to give them some sort of representation. Of course, that involves diffi-

12 October, 1921.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

culties. It is very often difficult to select the right unorganised worker or employer, and, if they can be selected, it is very difficult sometimes to persuade them to go on. Obviously each of them only speaks for himself or herself. But still, as the unorganised worker is entitled to representation just as much as the organised one, an attempt is made to secure unorganised representatives on both sides.

187. *Chairman*: I suppose the home workers are represented where there are any?—Yes, of course; occasionally they are members of Trade Unions, but they are generally unorganised altogether, and what is done in that case is to send one of our officers down in order definitely to try to get up a meeting of unorganised workers to choose a representative, or to take one with the advice of the local Trade Union Secretary.

188. Where there are women employed, I suppose there are women on the Trade Board?—Yes; it is provided by the Acts that if there are women employed in the trade, one of the Appointed Members must be a woman.

189. *Mr. Poulton*: That only applies where there is a considerable proportion?—Yes.

190. *Mr. Pugh*: Is it necessary, after the initial stage, when the workmen's representatives and employers have got to business, to continue your Appointed Members, do you think?—I would like, if I may, to take that point later, because it is rather a broad issue on the whole amendment of the Acts.

191. You are going to deal with it later?—Yes, I am. In the ordinary way when we are setting up a Trade Board we write round to the Employers' Associations and Trade Unions and ask them to give us nominations, and we always put it to them that we should like them properly distributed all over the country with proper regard to various branches of the trade. We tell them the number the whole Board is going to consist of and the number suitable to their organisation, and unless there is some difficulty we nearly always accept the nominations submitted, and add ourselves one or two unorganised people on both sides if the state of the trade requires that. One point we always make is that we do not, if possible, have an employer and a worker from the same firm on the two sides of the Board.

192. Why not?—We think it may lead to difficulties if you have them on the same Board. I mean there is such a wide range of choice that there is no need to risk the possibility.

193. That is only in regard to the unorganised?—I am talking mainly of the unorganised.

194. *Dame Adelaide Anderson*: Those chosen Members or Representative Members are quite distinct from the Appointed Members, are they not?—Yes. The Appointed Members are definitely appointed by the Minister. As a matter of fact, lately we have revived a practice which we used to have, which was to circulate to the Boards before making changes, or to the Associations before making appointments, the names of the proposed Appointed Members, but in the large majority of cases we have either had no reply or a reply to say that they had no observations to make. I do not think from the Associations or the Boards themselves very much arises on that point.

Then I come to the District Trade Committees, which you have already mentioned, Mr. Chairman. Mr. Poulton did ask whether the thing was to be discussed more generally. In this part of my evidence I simply put in the mere statement of facts, the number of Boards which have appointed District Committees, and I was prepared to put in the actual detailed statement of where the Committees were. I am perfectly prepared, if you like to take it at this stage, to put the reasons why I understand the Boards have not taken advantage of the provisions in more cases. I do not know whether you would like me to do that at this stage.

195. *Chairman*: I think it would be rather interesting, if it is not putting you too much out of your stride, if you did deal with that question now?—The position is this: I think it would be admitted it is rather linked up with the point of view that it is an advantage to have a flat national minimum. I think it is a view that has commended itself to a number of representative people in the Labour world, and it has been rather reflected in the Labour view on the Trade Boards. The line which they would take, I think one would be entitled to say, would be that as it is a minimum wage there is no reason why it should not be the same throughout the country. They might be prepared to say that if it were a standard wage it might be varied, but being a minimum it may just as well be a flat rate, and I think partly on that ground and partly because in a number of trades in which Trade Boards have been set up, the Employers' Associations are not completely representative of all districts in which the trade is carried on, and perhaps are not able to take the view of the district as well as they might otherwise be, the employers have not been very anxious to have a district rate; they have felt it easier to settle the thing on a national basis.

196. What do you say about the difference between the general and the special rate, because that seems to bear upon that fact?—Yes. Of course, at the present moment it would be difficult to deny that a lot of the rates fixed by Trade Boards are in effect a price list—I mean an ordinary list—and it would be possible to argue with force that those could be settled by districts quite reasonably having a flat minimum settled nationally. But at the present moment the tendency is to settle all rates, whether minimum piece-rates or time-rates, by a national arrangement rather than by a district arrangement.

197. *Mr. Layton*: I did not quite follow the reason why the employers did not put forward the case for variation?—For district variation?

198. Yes.—It is something of this kind: the Employers' Associations perhaps in some cases are not there; they are scattered throughout the country, and they are not quite sure of their relationship to their district branches and their district committees, and they feel that perhaps it would be better in the interests of the employers as a whole that the settlement should rest with the head body rather than that it should be delegated to the districts.

199. *Lord Weir*: That is that the district rate should be settled centrally?—No, they do not have district rates at all. They feel that if they leave it to the districts (this is conjecture, and it may be a wrong conjecture), it seems to me that they might feel that the local employers might embarrass the trade as a whole by making wrong arrangements locally.

200. *Sir Arthur Pease*: When you mentioned a flat minimum rate for the whole country, do you mean a flat minimum rate for, say, all adults, men and women, in the trade, or do you mean a minimum rate for each grade?—I meant a flat minimum, lower than which nobody, either male or female, should be paid. I did not mean a flat minimum for each grade.

201. *Mr. Poulton*: It works out so at present, does it not?—Yes.

202. *Sir Arthur Pease*: That is a very different thing?—Quite. One is fixing a minimum and the other is regulating wages.

203. *Dame Adelaide Anderson*: When you come to special rates in craft trades, it sometimes becomes, I suppose, a different rate in different districts. Craft in some places would be specialising in some way?—Quite. You might fix a national rate which would only apply to certain areas because the work was only carried on in those areas; but when you come to the craft rate, it is much easier to distinguish by districts than when you have a flat rate.

204. *Sir Arthur Pease*: Does a minimum rate always become the maximum, or are there many cases where the actual wages paid are largely in excess of the minimum rate?—I do not think I can answer

12 October, 1921.]

MR. HUMBERT WOLFE, C.B.E.

[Continued.]

that question with any certainty. I should think that in some trades the minima tend to be the maxima, but there are cases, notably in the sugar confectionery trade, where a lot of rates are paid by some of the big firms well in excess of those fixed by the Trade Board.

205. *Chairman*: Do they do that by districts?—No, I think throughout. You find throughout, I think, that the Co-operative Societies, in so far as they are covered by Trade Boards, tend to pay rates higher than the rates laid down by the Trade Boards.

206. *Sir Arthur Pease*: If employers know that the rate was fixed at 6d. per hour, and they all, or nearly all, of them paid 7d. would you think that then the Trade Board would raise the minimum to 7d.?—That it would automatically do that?

207. *Mr. Wolfe*: It would influence it to a certain extent?—It might; on the basis of wage regulation it probably would. If it was adhering to the basis of a minimum, it would make no difference.

208. *Mr. Layton*: Do you suggest that those are two different conscious policies of the Trade Board?—I do not think it is conscious, but I think it is possible to analyse the movement, from the time when it was directed to fixing a minimum, to the time when it was changed perceptibly into the fixing of a basis throughout the country.

209. Is not your answer simply saying that if they are not doing it consciously, if they put it up they are following the rate? I really press the question, because I wanted to know whether there was any conscious differentiation between the Boards.—No, I do not think there was any conscious differentiation, but I do believe that the general tendency has been to regard the Trade Board latterly as a wage-fixing authority, and not as an authority limited to fixing a minimum.

210. *Chairman*: Does the minimum tend to become the standard?—Yes, I think it has, certainly in the higher classes.

211. *Mr. Layton*: If that is the case, and if the policy has been broadly to have a national rate and not to have district variations, would you say it was one of the effects of the Trade Boards to remove the different variations?—It certainly has; assuming that in the trade there were variations, the result has been to flatten them out, I cannot tell you whether in fact there was in the past a large differentiation, but I imagine so far as the country districts are concerned, where the rates certainly were lower, the rates have been evened out, and in one or two cases, for instance in the Retail Bespoke Tailoring trade, we have evidence to show that local variations have been flattened out by a national minimum.

212. With what economic effects?—I will deal with the economic effects later, but, speaking here, not the economic effects that have been generally advertised.

213. *Lord Weir*: The tendency has always been, has it not, towards wage standardisation?—Yes; I think that is fairly true. On the other hand, there has been a corrective tendency observed in the policy of the Grocery and Milk Distributive Trade Boards, to have national scales on a different population basis, thereby recognising the fact that there ought to be a population basis.

214. *Mr. Poulton*: Have you any evidence to show that there is a tendency to make the minimum the maximum?—You mean in the intermediate area?

215. Yes. That is a place where obviously the minimum is the maximum.

216. *Dame Adelaide Anderson*: Is it not the fact that for a considerable time in the Tailoring trade, the Leeds' rate generally paid was decidedly above the minimum rate which prevailed throughout the country?—That is true.

217. And for a considerable time?—Yes, I think that is true.

218. *Mr. Poulton*: Have not some of the Boards two rates; that is to say they have a minimum time-rate and they have a minimum piece-work rate?—That is so,

219. Is not the piece-work rate one of the determining factors in getting altogether away from the minimum; that is to say the employers measure the value of the work by the piece-work rate which is set up?—That is so. Of course it does not follow that you have a separate piece-work rate in the trade; you may calculate your piece-work on the piece-work basis. Of course you must bear in mind that a great proportion of these trades are piece-work trades, and therefore the piece-work basis is at any rate as important as the time-work basis.

220. *Lord Weir*: Is it the case that in the industries brought under the Trade Boards Acts substantially over 50 per cent. are remunerated on piece-work?—I have not worked it out, but it is a very high proportion. It was before we took on the distributive trades; certainly most of the old trades were piece-work trades, to a large extent. I think probably you will find still that the majority of the work is piece-work. I think the Boot and Shoe Repairing trade is a piece-work trade.

221. *Mr. Poulton*: They measure their value by it?—They do.

222. *Chairman*: You have dealt with the constitution of the Boards and now will you come to their powers?—Their rate-fixing powers?

223. Yes.

224. *Mr. Pugh*: I do not know whether Mr. Wolfe will be dealing further with this matter, but it seems to me to be rather an important point as to the machinery of the Boards, particularly in regard to these very large Boards, the one which was cited as having 83 members. I do not know whether you have any view as to the arrangement of the machinery. Sir Arthur Pease put a question as to whether you think that assuming you adopt something in the form of a standing committee which would be a body which would meet continually to negotiate, or to arrange wage standards, the main body meeting, say, twice a year, or something like that, that would not be practicable on your Trade Boards?—All or most of the Boards have at this moment an Administrative Committee which is a General Purposes Committee. It deals mainly with permits of exemption and learners' certificates; in some cases a Special Committee has been set up to deal with wages—especially piece-rates. Answering your question in two stages, I do not think that as a whole the Boards have resorted to the method of settling wages by small committees up to the present. I do not think it would make a very substantial difference if they did, though it might be a help; lately, during the fluctuations of the cost of living there have been, of course, a great number of meetings of the Boards, but pre-war the number of times the Boards met was very few, perhaps once a year, or twice a year; and even now I do not think that the Boards meet on the average, as Boards, more than three or four times a year—I think that is a fair average—and when they meet there are so many interests on both sides, and the trades are so unorganised that it is more difficult to constitute a small Committee than it would be in a highly organised trade.

225. I was making a comparison between better organised trades where there are wages Boards, where the business is conducted by the establishment of a standing committee, which is a committee that meets throughout the year, as may be required, the Board itself frequently meeting only once a year as a minimum, but on special occasions by special notice; but the standing committees of the bodies conduct all the negotiations with regard to wages or any other questions which arise in the trade. I wanted to know whether it would not be practicable to apply that to your Trade Boards?—I honestly think the difficulty would be greater in this respect than in your trade, if I may glance for a moment at the steel trade. The Associations are old, comparatively; they know each other on both sides, and they work together. In the Trade Board trades we start with a trade which is only partly organised, where the Associations are very often new, and new to each other, on both sides, it may be, and it is not easy

12 October, 1921.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

to form any sub-committee which would command the confidence of both sides. It may well be that as the Boards grow older and more experienced, and with more organisation, they may do what you suggest. As a matter of fact in the early days it is very difficult.

226. *Lord Weir*: They would do it now if there was not that difficulty?—I think so.

227. *Sir Arthur Pease*: You gave us the Grocery Trade Board as being the largest, consisting of 83?—Yes.

228. Are there any others approaching that number at all?—I do not think so.

229. That is an exceptional case?—Quite exceptional. I think the average is between 20 and 30. On the question of the rate-fixing powers of the Board, the Board is bound to fix a minimum rate of wages for time-work. It will be observed that it fixes always an hourly rate; it has no power to fix a guaranteed weekly rate; that is to say, it cannot say that if a worker works 30 hours he shall be paid for a 48-hour week. In addition, there are five other classes of rates it may fix: general minimum piece-rates; special minimum piece-rates; a guaranteed time-rate, which is quite different from the time-rate which I have just mentioned; a piece-work basis time-rate, and overtime rates. I ought to say that the Trade Board may fix any of the above rates so as to apply universally to the trade or so as to apply to any special process in the work of the trade, or to any special area, or to any class of workers in the trade, or to any class of workers in any special process, or in any special area. Those last words which I have read are the words of the Acts. Taking first the general minimum piece-rates, that is a very elaborate business; it means practically fixing a piece list for the whole trade; 10 British Boards have fixed piece-rates hitherto. The Boot and Shoe Repairing Trade Board have 500 items in their piece list, and the Brush and Broom Trade Board have got over 1,200 items. So that you see that the Boards have had a rather considerable task before them. But several other Boards, undeterred by this, are proposing to do the same.

230. *Chairman*: That means there are 500 or 1,200 processes in the Trade?—Yes, that is right. It practically means that you have contemplated every little operation in the trade and fixed the price for the job.

231. *Mr. Pugh*: Is that piece-work?—Yes, that is piece-work. The Brush and Broom have over 1,200 rates in their list.

232. *Lord Weir*: On standardised processes?—Yes, on standardised processes.

233. And standardised methods?—Yes, I should think probably so.

234. *Sir Arthur Pease*: Is that a post-war development?—Before 1918 the Chain-making and the Lace-finishing Boards had made their lists. I do not know what number of items they had in their lists, but the greater development has been since 1918.

235. What would be the relationship between your piece-work list and your minimum wage; because I assume it does not follow that a man is engaged on one item in one of these particular lists only?—If nothing on the list applies, he must have the time-rate; I mean, you do not fall between the two. If there is nothing in the list providing for a worker then the time-rate applies.

236. *Dame Adelaide Anderson*: That would apply to an unstandardised industry like dress-making?—As a matter of fact, in the dress-making industry I do not think any attempt has been made to fix general minimum piece-rates. But I will come to that in a moment, because I have the details of what their arrangements are. When no general minimum piece-rates have been fixed the remuneration of piece-workers must be calculated on a basis-rate, which is either the general minimum time-rate or a piece-work basis time-rate.

237. *Sir Arthur Pease*: When you talk about overtime, as you did a moment ago, how can you deal with

overtime where it is home work? Is there any overtime rate for home work?—I do not think there is any overtime rate.

238. *Chairman*: May I ask for an explanation of these terms which you have used? I understand the general minimum piece-rate and special minimum piece-rate. What is the guaranteed time-rate?—The guaranteed time-rate—

239. *Mr. Pugh*: Does it mean that if the production does not amount to sufficient to give certain earnings the guaranteed time-rate operates?—Yes.

240. Then the production over and above that which is necessary to give him the minimum is something in addition?—Yes, that is right; this power has only been exercised by the Brush and Broom, the Boot and Shoe Repairing, the Laundry, the Linen and Cotton Handkerchief, and the Tobacco Trade Boards.

241. If he only works half the time on piece-rates he cannot have it?—No, it is all on an hourly basis; that is the point which I distinguished at the beginning. You fix an hourly minimum, and if he works 10 hours he must not get less than the hourly minimum.

242. *Chairman*: But what is the piece-work basis time-rate—a time-rate?—The piece-work basis time-rate is a general basis-rate. You can either pay for piece-work on the basis of a minimum time-rate, or the Board can fix a piece-work basis time-rate on which to calculate individual piece-rates. You can either use the general minimum time-rate as a basis, and say that an employer who pays piece-rates is to calculate piece-rates on that basis, or the Board can fix a special basis-rate upon which piece-rates are to be calculated.

243. *Mr. Layton*: Is this another form of time-rate?—No, it is for piece-work.

244. Would you call it a piece-work basis time-rate? Is it not a time-rate?—It really is a rate laying down the minimum which an ordinary worker ought to earn on piece-work.

245. *Dame Adelaide Anderson*: Would it be fair to say of both the guaranteed time-rate and the piece-work basis time-rate, that they are really to protect the living wage of the ordinary worker?—Yes, that is their object.

246. *Lord Weir*: One is more; a guaranteed time-rate must be at least the minimum time-rate, but the piece-work basis time-rate, in every case that I know of, is something higher?—Yes.

247. *Dame Adelaide Anderson*: That is in order to ensure that the piece worker gets something more than the time-rate?—Yes. The whole basis of piece-work, after all, is to give slightly more than is given on a time-work basis. There are various ways of arriving at the amount of the piece-rates to be paid: one is to fix the actual list; another is to take the general minimum time-rate and calculate on the basis of that; the other is to fix a piece-work basis time-rate and calculate on the basis of that. In addition, in one or two cases you have a guaranteed time-rate to fall back upon.

248. *Lord Weir*: The general idea with regard to a workman on piece work is that the rates will make something like time-and-a-third to him?—That is so.

249. *Mr. Poniton*: I should like to be quite clear about that, because I should like to read a paragraph from the general Agreement of the Boot and Shoe Industry itself which is rather interesting: "This is to guarantee the piece-work man that he should have wages when he is on the firm's premises, even although they keep him standing still." It is an agreement, and I know it is put into the Trade Board's Agreement.—Is that waiting time?

250. It is not called waiting time. We have never referred to it as waiting time; it is simply time when a man might be kept without work for the moment, and it develops into a gross injustice, and we said that if they kept a man waiting and he went to work next morning and they had not told him the previous evening they did not want him, they should pay him for at least two hours in the morning and three hours in the afternoon at the minimum rate, although he was a piece worker and could obtain a great deal more.

Mr. Layton: A minimum data rate.

Mr. Poulton: Yes.

12 October, 1921.]

MR. HUMBERT WOLFE, C.B.E.

[Continued.]

Witness: There is a special provision in the 1918 Act dealing in special circumstances with a class of waiting time.

251. *Chairman:* I do not find the Act has a special minimum rate called the piece-work basis time-rate.— Might I take Mr. Poulton's point first. In Section 6 of the Act of 1918, it is provided: "For the purpose of calculating the amount of the wages payable in the case of a worker employed on any work for which a minimum rate of wages has been fixed under the principal Act, the worker shall be deemed to have been employed during all the time during which he was present on the premises of the employer, etc." That is the provision, I think, which meets your point. Then on the question of the fixing of rates, the only power under the Act of 1909 was to fix time-rates or general minimum piece-rates or special piece-rates. The Act of 1918 extended the powers so that a Board could fix all the rates commonly recognised in the industry. Section 3 provides that a Board may fix, in addition to the rates which it could fix under the Act of 1909: (a) "A minimum time-rate (which shall not be higher than the general minimum time-rate) to apply in the case of workers employed on piece-work for the purpose of securing to such workers a minimum rate of remuneration on a time-work basis (in this Act referred to as 'a guaranteed time rate')." That is the guaranteed time-rate. (b) "A minimum rate (whether a time-rate or a piece-rate) to apply, in substitution for the minimum rate which would otherwise be applicable, in respect of hours worked by a worker in any week or on any day in excess of the number of hours declared by the Trade Board to be the normal number of hours of work per week or for that day in the trade (in this Act referred to as 'an overtime rate')." The power to fix a piece-work basis time-rate is conferred by Section 6, of the 1918 Act. "A Trade Board may fix a piece-work basis time-rate in any case in which, having regard to all the circumstances of the case, they are of opinion that the general minimum time-rate does not form a proper basis for the purposes of paragraph (b) of sub-section (1) of this section, and a piece-work basis time-rate may be higher or lower than the general minimum time-rate and may be fixed so as to apply universally to the trade, &c." Then it repeats the same general provision which I have quoted previously.

252. *Mr. Layton:* You have not referred to the special minimum piece-rate?—It is possible on the application of a firm where no general minimum piece-rates are applicable to fix a special piece-rate for the workers in that firm. This power has been exercised only by the Paper Box and the Readymade and Wholesale Bespoke Tailoring Trade Boards.

253. They apply to an individual firm?—Yes.

254. You would not call it a district rate?—No, it has only reference to individual firms.

Dame Adelaide Anderson: May we have the reference to the section giving that power?

Chairman: It is Section 4, sub-section 5, of the Act of 1909.

Witness: With regard to the overtime provisions, a Board cannot, in declaring the normal number of hours of work per day or per week, depart from the actual number of hours worked in the trade; it can declare what the normal hours of a trade are and it can fix overtime rates for time worked thereafter. The overtime rates fixed are very much the usual; time-and-a-quarter for the first two hours, then time-and-a-half, and double time on Sunday.

255. *Sir Arthur Pease:* Do you mean per day?—Per day or per week. The actual rates are usually time-and-a-quarter for the first two hours' overtime per day, and time-and-a-half for subsequent hours; double time for all time worked on Sundays or holidays.

256. *Mr. Layton:* It is on the day?—You can either calculate it on the day or the week.

257. But do you mean that in a week the higher rate comes into operation if you work double hours?—Yes. You see, the whole of the basis of payment is on hours in the Trade Board trades; therefore on any given day in which a worker works more than

the number of hours normally worked in the trade, overtime starts.

258. *Mr. Pugh:* If the time-and-a-quarter is for the first two hours, say that a worker works two hours' overtime every day, if he were paid on the daily basis he would get time-and-a-quarter for all the hours?—Yes.

259. And then he would get time-and-a-half for the hours following. How is that arranged?—The Board can choose whether they do it on a daily or weekly basis—if they do it on a daily basis on the lines you stated, it would be on the number of hours per day.

260. *Lord Weir:* There is no rigid policy with regard to it?—No; in any case it is a matter determined by the Trade Board.

261. *Mr. Pugh:* As a general rule it is on the daily basis?—I think that is so.

262. *Sir Arthur Pease:* Are there cases where there might be overtime worked on one day and short time the next, and nothing the next week?—I should think that is very unusual. Anyhow, that would be a matter which the employers on the Board would consider, in deciding which of the two methods they would go for.

On the question of special rates, as I said, the Trade Board has power to fix different rates for different processes, or for different classes of workers in the trade. This gives no power to the Trade Board to introduce new principles of classification in a trade; it can only fix rates for classes which already exist in the industrial structure of the trade. I mean the Trade Board is not permitted to invent a new class of worker; it has to adapt itself to the trade conditions and fix its rates for those. In dividing workers into classes, many different principles may be followed, and principles which apply to one trade will not apply to another. The distinction between skilled, semi-skilled and unskilled workers is one of wide application; thus in the Retail Bespoke Tailoring Trade there is a sharp distinction between the skilled journeyman and the unskilled worker. On the other hand, in the Textile Industries, the primary division is vertical, into a number of crafts; and other trades similarly have vertical sections. If one went into this, one would be simply describing the structure of the different trades covered by the Trade Boards. In fact, regard is had to the structure; and it is on that basis that the rates are fixed; no new classes are created. (See Annex I, Chapter IV, Table A.) I do not think you want to hear any more on district rates; I have referred to them once or twice.

263. *Chairman:* I do not know whether this is the point to ask you, but the general minimum time-rate, I suppose, is fixed with reference to the ordinary worker?—Yes.

264. Supposing you have a slow worker, a man who is too old, and who is constitutionally incapable of doing his work, what happens?—Of course, that is one of the difficulties of a time-rate. The basis of the rate is the capacity of a worker who is neither exceptionally good nor exceptionally bad. If you have a worker who is unable to earn the rate, not because of infirmity, but because of inability or incapacity, if it is a time-rate, he has either to be paid it or has to go. On the other hand, if it is a piece-rate, the rate must be such as would give an ordinary worker a reasonable return; that is to say, give him the basis time-rate at least. If he is a sub-ordinary worker on piece-rates, he earns what he can; and if it is shown to the satisfaction of the Department that the rate is the correct one, and that it is the worker's failure and not the rate that is wrong, that ends the matter. But on time-work the sub-ordinary worker must be paid the full rate or go.

265. *Mr. Poulton:* Or get a permit?—No, he cannot get a permit. The only person who can get a permit, as it stands at present, is an infirm worker. A permit can be given to persons who are physically incapable, and that provision is applied, for example, to a large number of men who were disabled during the war.

12 October, 1921.]

MR. HUMBERT WOLFE, C.B.E.

[Continued.]

266. *Dame Adelaide Anderson*: There are some places which are run with sub-ordinary workers, or have been. What happens in those cases? The work of the place simply goes to pieces?—If there is a workroom which depends on inefficient workers for its existence, it clearly would disappear, supposing the payment is by time.

267. And that, of course, is what is happening?—That does not arise. If I may take the point here, it is inevitable that the creation of a national rate, or a Trade Board rate, will affect employers in some cases where the employer is notoriously inefficient. If he cannot afford to pay a reasonable rate, and he is compelled to pay it, the result is that he will disappear.

268. *Mr. Poulton*: Who is to be the judge of that?—The Trade Board fixes the rate, and the Department is then complained to afterwards if the rate is not being paid. Presumably if the employer loses his business, if it is essential, it goes elsewhere.

269. What I mean is this: an employee, Smith, cannot earn the rate, and they dismiss him. As a matter of fact, there may be reasons due to circumstances over which he himself had no sort of control, why he could not earn the rate, and when those circumstances are removed he might easily obtain the rate.—If you are asking me what happens in the case of an inspection, the inspector goes down to the employer's works, and he finds that it is perfectly straightforward so far as time-work is concerned; when he goes to the piece-work he sees that some of the workers have been getting less than the minimum, and he says to the employer: "Why is this?" The employer says it is the worker's fault. It is then the inspector's business to go and test that by his knowledge of the machinery and of the output in other establishments, and if the inspector is of opinion, by virtue of his knowledge, that the rate was fixed too low so as not in fact to produce the minimum, then he makes suggestions to the employer. If the employer either refuses to make any change, or disagrees, if necessary the matter is tested in Court by a prosecution for failure to pay the right rate.

270. *Sir Arthur Pease*: Could old age be called physical infirmity?—Only if old age had caused physical infirmity.

271. I mean a man who could only do about half his job.—Only if you could show that physically he could not do more. If you could show that an old man of 65 or 70 was crippled with rheumatism, or something of that sort, that would be a basis, but if the only thing that you could say was that he was old, you could not let him off on that ground alone. You must show physical infirmity or injury.

272. *Dame Adelaide Anderson*: But in fact, in the long run the sub-normal worker will be pressed out, because the employer cannot afford to go on paying the minimum time-rate to someone who is more or less sub-normal?—You can always meet the sub-normal case in a piece-work trade by putting the worker on to piece-work. Either he or she earns what she can get, and if you are satisfied that the ordinary worker on the same rate is earning the minimum, or more than the minimum, the sub-normal worker remains in the trade.

273. *Mr. Poulton*: Do you mean that there is no provision made for those particular trades which have no piece-work basis; that is to say the day work?—No; on time-work, the sub-normal worker must get the same rate as the others.

274. There is no provision made?—No, unless he is physically infirm, or has suffered some injury.

Mr. Poulton: There is, of course, quite an easy way of doing it, because I have been doing it now for men for 30 years past in my trade on purely time-rates.

275. *Mr. Layton*: To clear up your answer to Lord Weir, as I understand, the regulations under these Acts with regard to Trade Board trades are not the same in those trades as in mine. A man may be under a general minimum piece-rate or working on a general minimum time-rate?—That is right.

276. If he is on a general minimum piece-rate the general minimum time-rate does not apply to him. Therefore, if he is on piece-work he does not in fact get any guaranteed minimum hourly earnings. I think Lord Weir was suggesting that in other trades he does get that, and in fact it is general.

Lord Weir: I thought it was general.

Mr. Layton: But I understand from the wording of Section 6, Sub-section (1) (b), of the Act of 1918, that the Act contemplates there will be some people who will actually earn less on piece-work than the general minimum time-rate.

Witness: There may be.

277. I mean it is not an offence for an employer to pay less than the minimum time-rate.—If I may be allowed to ask a question, have you in mind a case where there are no general minimum piece-rates for the trade?

278. I have in mind a case where there is a general minimum time-rate and no general minimum piece-rates. The slow piece-worker can earn less than the general minimum time-worker. That is not an offence?—No.

279. It is a good defence for the employer to say that if this worker had been up to the ordinary he would have earned the general minimum time-rate, but actually he did not?—That is perfectly right. I did not understand that Lord Weir was putting that case. But if there are general minimum piece-rates fixed for the trade, the actual process is specified.

280. But a general minimum time-rate does not apply to him?—No.

281. It is not, for instance, the same as in mining, where you have a piece-rate, but a minimum per day?—Clearly not.

282. *Mr. Pugh*: We understand generally that where there is a general minimum piece-rate, each worker is on his own merits, and it depends entirely on his own exertion what he gets, and there is no minimum?—That is so, except that the Board has settled the question in advance by saying that the worker must be paid no less than this for a particular job. But it is the minority of cases where that exists.

283. *Mr. Layton*: A guaranteed time-rate for piece-workers may also be fixed?—Yes.

284. *Lord Weir*: That is not always so?—No, it is not.

285. *Mr. Layton*: Where that is fixed you cannot have sub-normal piece-work?—It depends on the amount of sub-normality. If it were very sub-normal you could not.

286. *Lord Weir*: If he fell below, then you would have to make it up on time?—Your assumption is when you fix your piece-work basis that you will get so much over your guaranteed time-rate, and that allows you that much margin for your sub-normal man.

287. *Mr. Layton*: I will put it this way. In the case where the piece-work basis time-rate is fixed you certainly cannot have sub-normal men?—You can have a sub-normal man if he likes to earn little. I mean we cannot proceed against the employer in that case. It is only the other case where the sub-normal man becomes difficult, where there is a fall-back rate. If there is no fall-back rate, and you have a job rate, however little a man earns it is legal, and therefore there is no reason for dismissing him from the employer's point of view. The only ground for dismissing a sub-normal man is where you have to pay a rate in excess of his value.

I would like to say on the general point which Mr. Layton is now raising that when the Trade Boards Acts were passed it was recognised, I think, by Parliament and faced, that you would, by virtue of giving protection to the majority, possibly inflict some hardship on the minority. That was faced, and it was felt that in the long run the effect of the Acts would be possibly to wipe out the inefficient employers and to wipe out casual workers or less efficient workers, but not in the long run to injure the trade as a whole. If it injured the trade as a whole, then the whole basis of the Acts was wrong, or they were wrongfully applied in the particular case. It was contemplated

12 October, 1921.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

and expected that in any event some measure of unemployment, probably of a temporary sort, would result from the fixing of a statutory rate. It could not be avoided.

288. That was before the war. These variations are subsequent developments?—Under the 1909 Act you could fix general minimum time-rates and piece-rates and special minimum piece-rates, but the 1918 Act gave the piece-work basis time-rate and the overtime rate for the first time.

289. Would it be fair to say, following that out, that the conception of the new Act, was wage regulation, and not the fixing of minimum rates?—I think it was probably part of the policy to make the Boards more complete wage fixing authorities than they had previously been and to that extent to make them more useful.

290. *Sir Arthur Pease*: Let us be clear. The guaranteed time-rate means a figure which the worker gets, whether his piece-work earnings touch it or not?—That is right.

291. What does the piece-work basis time-rate mean? Does not that mean the same thing?—No, that is the figure which he ought to get if he is an ordinary worker. If he is a sub-normal worker, and does not get it, then he has to bear his loss.

292. *Chairman*: If he was working by piece-work under the piece-work basis time-rate he would get what he earned?—Take a simple case: you can say, the basis on which we are going to fix this man's remuneration is the time-rate. If, when his earnings are shown week by week, it is proved that he has not got that, if he is unable to earn it because he is a sub-normal worker there is no ground for action against the employer. But you can have an alternative to that. I am afraid I had not understood Mr. Layton's question, and therefore we got at cross purposes. The other thing you can do is not to take time basis. You can take a piece-work basis, and say: This is the basis on which we are going to work; if the worker earns that, he will get it; if he falls through his own fault, he is a sub-normal, and then he has to bear it. There is no grounds for action against the employer.

293. *Mr. Poulton*: Provided he is paid the full price for the operation.—Yes.

294. *Sir Arthur Pease*: It is merely a standard laid down by the Board of what an ordinary worker should be able to earn on piece-work?—Yes.

295. As is usual in the practice of engineering shops, as Lord Weir mentioned, it is estimated that a man can earn time-and-a-third on piece; it is only a general guide, but it is no guarantee?—Yes. The average difference in the case of Trade Board rates is about 1½d. per hour for men and 1d. per hour for women. The worker need not earn that, provided he is paid the correct price for each job. The only sub-normal case where the man has to be thrown out on piece-work is where there is a guaranteed time-rate, and in that case if he does not earn it he has to go.

296. *Lord Weir*: Is that rate usual?—No, it is very unusual. Five Boards in Great Britain have fixed this rate: the Brush and Broom, the Boot and Shoe, the Linen and Cotton Handkerchief, the Laundry and Tobacco Boards. I am very sorry to have been so obtuse. I do not know whether Mr. Layton is satisfied now.

297. *Mr. Layton*: Yes, you have cleared it up. But may I put this to you: Does it not still follow that the fixing of this piece-work basis time-rate at the higher figure than the general minimum time-rate still means that it is more difficult for a sub-normal piece-worker?—No.

298. Attention is drawn to his position on a more stringent standard?—If the employer thinks that he is not getting enough week by week he may think he is an inefficient worker. An inspector has no complaint if the rate for the job is right. If the earnings fall below the basis, he has to clear it up with the employer.

299. *Mr. Pugh*: Would it not be the fact that the worker we are discussing would be one possibly in a hundred, and that the fact that the major portion

of the people would be able to earn what they were intended to earn on the piece-work system would settle the thing?—That is the normal case, but you do get difficult cases where a whole class of workers appear to be getting less than the rate, and that has to be cleared up.

300. *Lord Weir*: I am not sure, so far as the Acts are concerned, that they always contemplated piece-work or time-work. Have you any other forms of payment by results?—Do you mean premium bonus? There are, of course, as you know, collective bonus and premium bonus, and half a dozen other variations, but so far as I know no Board has ever gone for anything except what we call straight piece-work.

301. It has not arisen yet?—It has not arisen yet. I should like at this point to clear up, if I may, the position as to the basis rates which can be fixed by a Board. Three questions have been put to me, and I should like to deal with them in turn. The first was how far had the powers of the Boards been increased under the 1918 Act as compared with the 1909 Act. The answer to that question, which I do not think has been given clearly before, is that under the 1909 Act the Board had three powers; the first was to fix minimum rates for time-work; the second was to fix general minimum piece-rates, and the third was to fix special minimum piece-rates on the application of a firm. These were the only kinds of rates which the Boards could fix at that time. The 1918 Act added to those powers the power to fix a guaranteed time-rate, the power to fix overtime rates, and the power to fix a piece-work basis time-rate. On that the point was made that the 1918 Act changed the Boards rather into wage regulating authorities by extending their powers with respect to piece-work. On that, I think one might say that the most detailed power possessed by the Boards is the general minimum piece-rate power, which means making a very long list indeed, and that power was given by the 1909 Act and was, in fact, used by the Boards under that Act. The second point that I would like to clear up is the actual meaning of these rates; I am afraid I have left that rather unclear. The first power of a Board is to fix minimum time-rates; that is perfectly clear and perfectly straightforward.

302. *Mr. Poulton*: On day work?—Yes, on day work, but of course it is always on an hourly basis.

303. That is the separate hours?—Yes, the separate hours; there is no power to fix a weekly rate; it is only an hourly rate that the Board can fix. If the Board fix no piece-rate at all, then any firm which works piece-work has to pay piece-prices which will yield to the ordinary worker, having regard to the conditions of the establishment, the minimum time-rate.

304. Per hour, or per week?—Per hour; there is no weekly time-rate.

305. I know, but there is a difference between the two points, that a man in the aggregate might earn the amount?—Yes.

306. But in an hour he might not be able to?—Each piece-rate must be such that an ordinary worker would for each hour spent on the job earn as much as the hourly basis-rate. You understand that if a workman fails to achieve the hourly rate, it does not necessarily mean that the employer has evaded the Acts. What you look at is what an ordinary workman would earn. The second power possessed by a Board is to fix general minimum piece-rates. That particular power has been exercised twice under the old Act, and eight times under the new Act, as I remember the position, and in those cases the Boards fixed in detail the prices for various processes. In one case no less than 1,200 rates have been fixed, and in another case 500. In that case, when you inspect, all you have to assure yourself of is that the actual prices fixed by the Board are observed. If on inspection it appears that the workers are in fact getting low earnings throughout, that is not a case against the employer, though it may present a case which should be put to the Board for a revision of the rates. The third power is in

12 October, 1921.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

respect of special piece-rates which may be fixed by a Board if any firm asks for them, and that power is used in cases where a particular firm is different in character from the general run of firms. Then there is a fourth type of rate, which is the one fixed under powers conferred by the 1918 Act, the piece-work basis time-rate, and that I am afraid I have not made quite clear. There is no distinction in principle between that and the minimum time-rate at all. It is generally a rather higher rate, and it is that rate, which, it is calculated, the ordinary worker should reach if the piece-rates are properly fixed. It is fixed higher than the ordinary time-rate, in order to encourage piece-work production. But in all these cases that I have mentioned, if a sub-normal worker's earnings do not reach the basis, provided the price for the job is right, there is no cause of complaint against the employer at all. If the employer thinks it shows great inefficiency in the workman, he may dismiss him, but the employer is not compelled to make up the man's earnings. The only case in which the employer is compelled to make up the man's rate, and therefore in which the man might be dismissed, is where a guaranteed time-rate exists, which is an addition under the 1918 Act; and the guaranteed time-rate can never be higher than the general minimum time-rate. In fact the position in a case where a guaranteed time-rate has been fixed is exactly the same as in a case where a man is employed on straight time-work. Where a guaranteed time-rate operates a man employed on piece-work must be paid the full amount of this rate (unless he is the holder of a permit of exemption). In all other cases of workers employed on piece-work, however, a man can earn as much or as little as the piece-rates produce provided always that each piece-rate is sufficient to yield to an ordinary worker at least the amount of the basis rate. The only other addition to the 1909 Act is the overtime rate, and I believe I need add nothing on that. As I have already explained, the Board have not the power to fix the hours in the trade; they can simply declare what the normal hours are, and after that they fix the amount of overtime. Finally, Lord Weir asked me whether any of the premium bonus or collective bonus systems had been introduced by the Board, and I said no; and that is true; they have not. The reason probably is that it is very difficult to do it under the Acts as drawn, and it has been suggested to us from various quarters that if it is desirable to have that basis introduced, the Acts should be amended.

307. *Mr. Poulton*: With regard to the guaranteed time-rate, assuming that the guaranteed time-rate was 60s., and that the worker was receiving under an agreement 65s., that is to say 5s. above the minimum, and the employer for his own reason told that man at the end of a particular week that he should only pay him 60s., although the agreement was for 65s., would that be considered to be a breaking of the Trade Board regulation, so long as he did not go below the 60s.?—No, it would not be a breach of the Acts; it might be a breach of the agreement.

308. You would say from your standpoint that you would not interfere?—We could not interfere.

309. *Mr. Pugh*: The piece-work basis time-rate is only a piece-work rate, is it not?—It is.

310. There is no guaranteed time-rate underneath it?—There is no guaranteed time-rate underneath it at all.

311. It is a piece-rate without a time-rate guaranteed, or any time guarantee behind it?—That is true, if you distinguish between rate and price; it is not a price, but it is a rate.

312. *Mr. Layton*: I was not quite clear what you said, that the guaranteed time-rate was never more than the general minimum time-rate?—It is laid down in the Act of 1918. It cannot be more; it might be less; in some cases it is the same.

313. There are only two cases of that kind?—Yes.

314. *Dame Adelaide Anderson*: Which are those two cases?—I am sorry, there are five—Brush and Broom, Boot and Shoe Repairing, Laundry, Linen and Cotton Handkerchief, Tobacco.

315. *Mr. Pugh*: I do not know whether we are likely to hear anything with regard to war advances in their applicability to workers coming under the Trade Boards?—A number of trades were covered by the Ministry of Munitions Orders. The Trade Boards were set up to a certain extent to take over the position as it was left by the Munitions Orders; that is to say, suppose the rate fixed for women regulated by the Munitions Orders was, as I think you remember it was, between 30s. and 35s., that is the way it was left. If a Trade Board was set up in the trade, covering part of it, it would no doubt have regard in settling its first rate to what the rate was under the Ministry of Munitions Orders.

316. For the moment we are hearing of difficulties arising from reductions in wages or arrangements to reduce wages, and whether those reductions relate to what one might term war advances or to the established basis-rates which have been fixed by the Trade Boards?—I am going to deal with that point, but what I hope to do later in my evidence is to show the comparative advances in rates in Trade Board trades, and to give some indication of the way reductions have come, and I think that will probably meet the point. Unless there are any other points on rates, I will now, if I may, pass to the question of juveniles.

317. *Chairman*: You said that you were putting in the table?—Yes, a table showing the basis of classification of the rates fixed by the Trade Boards. (See Annex I, Chapter IV, Table A.) Then I did refer again to district rates, but I do not think you want to hear any more about them.

318. Will you now deal with juvenile workers?—Under the provision which I have referred to more than once, juvenile rates are fixed—that is the power to fix different rates for different classes. In regard to juveniles, of course, the Trade Boards have a difficult problem. In the first place, they must take care not to fix rates so low as to prejudice the employment of adults, and, conversely, they must not prejudice the employment of the younger workers, and the recruitment of the trade, by fixing the rate too high. I mean on the one hand you would upset the adults and on the other hand you might get no further entrants into the trade. As will appear later in my evidence, rates fixed in one trade for learners were so high as really to discourage entrants. But that has been partly remedied since then. Of course, one of the things which the Trade Board has to take into account is the prevention, so far as possible, of blind-alley employment. The problems vary from trade to trade, but in deciding upon how to deal with the young worker you have to consider some or all of the following points. The system of training in some trades is longer, more complete, and less remunerative to the employer than in others. In some a learner is only taught, as a rule, to do a single operation, or series of operations, whereas in others he or she is taught the whole trade throughout, and therefore requires more careful and individual training. Then you get variations between trade and trade as to the cost of the material spoilt by the juvenile while learning. Then you get the fact that the remuneration during training varies according to the nature of the operation for which the person is trained. For example, if as a result of training the worker is going to become more skilled, the remuneration during training would be lower than if it is for unskilled or semi-skilled work. Again, in the dressmaking trade, for example, particularly in the rural districts, it has been the practice for the small farmers and the shopkeepers to send their daughters into that trade as the only chance of an opening. They have been accustomed to send them for nothing, and in some cases at a premium; so that the Trade Board has to bear that in mind. Then they have to bear in mind the danger of fixing rates on a basis which

12 October, 1921.]

MR. HUMBERT WOLFE, C.B.E.

[Continued.]

would kill the old craft spirit; in other words, they have had before them the apprenticeship problem. Taking that into account, there are three ways in which the Boards have approached the problem of dealing with juvenile rates. In some cases they have fixed them purely and entirely on an age basis; in others they have fixed rates for learners to which conditions for learnership have been applied; and in a few cases they have laid down an apprenticeship scheme. Rates have been fixed purely on an age basis where the skilled workers are not particularly regarded as requiring the protection of the Board, or where the work is mainly unskilled. The trades which have adopted this basis are in the majority: they are the Aerated Waters Trade, the Cotton Waste Trade, the Flax and Hemp Trade, and so on. I will hand in a list of those. (See Annex I, Chapter IV, Section A (5)). In those cases the advances are fixed on a perfectly regular ascending scale, so much advance each month or each year—whatever the period is; it is generally a year. Special arrangements are made for the rates applicable to late entrants. Obviously, of course, that is one of the difficulties of fixing rates on a flat age basis for juveniles, namely, that a person coming in, say, at 16 years of age may not be worth a penny more to the employer than one coming in at 14 years of age; but if it is on a perfectly rigid scale, he or she has to be paid more at 16 years of age. There is a provision made by some of the Boards to meet that point by providing that a late entrant does not come in at the rate which he or she would have had had he or she come in earlier. There is nothing remarkable about these rates. When you come to special rates for learners, those have been fixed by certain Boards, and they have distinct features. The first is that the learner shall be between certain ages and certain limits of experience; but the second, which is the more important one, is that he or she shall be learning a branch or process of the trade; and the third that the learner shall be registered with the Board and have a certificate of registration. Several of the Trade Boards have fixed rates for female workers in scales according to age and length of experience. The length of learnership ranges generally from four years in the case of workers of 14 and under, to one year in the case of those commencing at over 21 years of age. The conditions which are attached to the rates range from a nominal one provided by the Hollow-ware Trade Board, and the Sugar Confectionery Trade Board, that the workers shall be employed under conditions which, in the circumstances of the case, afford a reasonable prospect of advancement to the general minimum time-rates for adult workers (which is rather wide, and has not really very much effect), to that of the Chain Trade Board, which has a very specific condition that the learner must be definitely and effectively employed, under an agreement in writing, in the practical learning of some branch of the trade, and that the Trade Board in granting the certificate may take into consideration whether, having regard to the number of learners employed in any factory or workshop, or under any journeyman or worker, the learner proposed to be certificated has a reasonable prospect of receiving due instruction. That is coming very close to an apprenticeship indenture. It does not reach that point, but it makes a very specific provision only one degree less definite than that, and, if I may call attention to this, I would like to point out that the Boards which are doing this are in fact making considerable provision for the improved position of juveniles in the trades to which they apply. So far as apprentices are concerned, only four Trade Boards have so far fixed rates for apprentices, and, if I may, I will put in in respect of those four trades the sort of conditions that they fix. They are rather lengthy. The four trades are the Boot and Shoe Trade Board, the Fur Trade Board, the Tobacco Trade Board, and the Brush and Broom Trade Board. But they are very effective and they indicate that the individual Trade

Boards have given very grave consideration to that part of their work. (See Annex I, Chapter IV, Section A (5)).

319. Are they employed under indenture, too?—Yes. For example, the Boot and Shoe Trade Board have fixed two sets of rates applicable to apprentices—(a) for those who are employed under an indenture providing for their effective instruction in boot and shoe repairing in all its branches. These rates are fixed on an age basis, commencing at the age of 15 and under up to the age of 19. They are lower than those fixed by the Trade Board for younger workers who are not apprentices, and are only applicable provided the apprentice is employed under an indenture providing for his effective instruction in boot and shoe repairing. Then there is another rate applicable to (b) those who are employed under an indenture providing for their effective instruction for a period of five years in hand-sewn boot making or in hand-sewn making and repairing. The rates in this case are fixed on an age basis and not on an experience basis, namely, for the first, second and third years of the apprenticeship, and so on. I do not know whether you would like me to give you any more details as to learners or apprenticeship schemes?

320. We shall be glad to read your details?—Yes, I can put them in. (See Annex I, Chapter IV, Section A (5)).

321. Lord Weir: In any one trade you will have juvenile learners and apprentices, will you?—Yes, you could have. I do not know whether there is a case where you have all three. Probably they all three exist in the tailoring.

322. Chairman: Before you leave the functions of Trade Boards, are there any other powers you wish to refer to?—There are three minor powers. There is the issue of permits of exemption to which reference has already been made. The Section of the Act reads as follows: "That where a worker is unable through infirmity or physical injury to earn the minimum rate applicable to him, the Trade Board may issue a permit of exemption, laying down conditions under which he may be employed at less than the minimum rate." The procedure is that application is made to the Trade Board for individuals to be paid at less than the rate. In some cases the Trade Board leaves to the employer the option of settling the rate with his worker. In some cases the Trade Board makes a definite decision as to the rate which should be paid. The method of carrying out the investigation to ascertain whether the employer's statement is true is partly by getting a medical certificate covering the original application, and partly by local investigation. When there were only 13 Boards, and the inspecting staff was comparatively well able to keep up with the work, the investigation was made locally by inspectors of the Department. Lately the Boards themselves have made investigations through their members in these cases, and on the whole that has perhaps been more economical and as satisfactory as the other method.

323. Sir Arthur Pease: Can such a man be employed before he has a permit, or must it be whatever time it takes, a month or six weeks?—No, he can go on being employed, and if he is employed at a lower rate no action is taken against the employer at the time. No action would be taken pending a *bona fide* application if the employer cares to go on employing him at less than the rate.

324. Mr. Poulton: You say that the Boards can make an investigation, but they have no staff?—No, it is the actual members of the Board.

325. The members of the employers' side, for example, would undertake to go into the various works?—It might be one on each side, an employer and a worker.

326. Two on each side?—Yes, and they would ask the employer what the circumstances were, and probably see the man, and if they were satisfied would recommend the granting of a permit.

327. Have the Boards undertaken a systematic inspection in each trade of that kind?—No. It does not arise on inspection; I may have misled you. The

12 October, 1921.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

Boards have only undertaken to do it when a specific application is made, but it is still the Minister's business to detect evasion.

328. But that must be a very big business?—Do you mean the inspection?

329. No, the number of permits.—Yes; of course, they were very largely increased by post-war conditions. But on the particular point of the disabled soldier that was comparatively easy, because you had his pension papers. I mean you had not to do as you so often have to do in the civilian case, namely, to test the *bona fides* from the beginning. You knew what his case was, and it was before you.

330. But does the Board, in other cases where this procedure is not applicable, call upon the staff of the Ministry of Labour to inspect for them?—I am afraid it is not a matter of complete agreement yet. The Boards rather think still that we are under the obligation to do this, and we are still doing it to a limited extent; but it is perfectly obvious that we cannot go on doing it with the staff at our disposal.

331. *Dame Adelaide Anderson*: Is it not rather a skilled piece of work, and unless you carry out the regulation by the Trade Board you may have unsatisfactory results?—It is very largely an automatic thing; if the members of Trade Boards can spare the time, it is a thing they would do better, probably, than an official. Very often it is a time-rate case, just as often as a piece-rate case. Of course, if it is a difficult technical piece-rate case it is a matter of local knowledge and experience.

332. *Chairman*: It is for the employer to make out a case for the granting of the permit, is it not?—Yes.

333. *Sir Arthur Pease*: How many cases altogether do you suppose there are?—A very large number. I have tried to get them out. I am told that there are 3,000 in the Boot and Shoe Repairing Trade alone. But I expect you will find the numbers are very considerably swollen since the war. The Boot and Shoe Repairing Trade, for example, is particularly helpful in taking on disabled men. Then you have two other quite minor functions, which are the registration of apprentices and the certification of learners. Both of those are similar; I mean there is no inquiry; the firms apply to the Boards and the certificates are issued. In the case of the certification of learners, it is a comparatively formal matter; the Boards do not make enquiries themselves, but they instruct the Secretary to grant certificates in all cases in which the applicant is within the prescribed limits of age and experience, unless there appear to be special reasons against this course, on the ground of doubt as to the other conditions of learnership being complied with; in that case they refer it to the Administrative Committee to which I have referred before, and, in fact, the Administrative Committees have had, I should think, very, very few cases ever put to them. The certification system—this is a point which is worth noting—has come to be a means of providing an accurate record from which the rate payable to a learner at any stage in her learnership can be accurately determined, and so of safeguarding the employer in cases where learners change their employment, and of enabling the Department to enforce the rate. That means that you have not to get a new certificate every time, but you do have to endorse the old certificate, and you have not to go round bothering the employer enquiring whether the rate is right or wrong; you have a fairly efficient system of registration. There are only two other points; the first is the question of scope, that is to say, demarcation; and the second is the power to make recommendations to Government Departments. You asked me, Mr. Chairman, earlier on, who had the power to decide whether a given man was or was not covered by the Boards, and I then explained to you that the position was not satis-

factory, because, nobody had the definite power. It will appear in evidence a little later that there has been some controversy between the Ministry of Labour and the Trade Boards on this question of scope. The questions which arise are nearly always questions which on the surface appear to be questions of fact, but are questions really of construction as well; therefore they are mixed law and fact. The result, therefore, is that to get a decision right, you want the special knowledge of the circumstances and you want to apply that knowledge within the four corners of your Order by legal methods. The present arrangement accordingly is that the Minister, as the prosecuting authority under the Act, reserves to himself the right to express his opinion to an *esquire*, but before expressing that opinion he submits the actual case to the Trade Board in every instance for their view. He does not undertake to be bound by it, but he hopes to be able to accept it. But that reference to the Trade Board is an innovation. That has resulted from the recommendations of a Committee which was appointed last November, of which I was Chairman, to inquire into the domestic relations between the Ministry of Labour and the Trade Boards. There had been considerable difficulties, and that Committee was appointed to attempt to solve them, and on this question of demarcation it came to the conclusion that whilst the Minister should retain the right to give a view, he should not give it without reference to the Trade Boards. That is the present position. Of course it does not settle it, because unhappily neither the Minister nor the Trade Board is able to pronounce a final view.

Finally, Section 10 of the Act of 1918 gives the Trade Boards the right to make recommendations to any Government Department on matters affecting its trade. I will hand in a table showing the sort of things on which recommendations have been made. (*Not printed.*) I think it is true to say the most important work under that sort of heading that the Trade Boards have done is to assist in training disabled men, in which they have done notably good work, and also in the Roll of Honour scheme for the employment of disabled men. I could mention one or two recommendations they have made. You will find a number of them deal with the Key Industries Act. For instance, the Brush and Broom Trade Board urged the prohibition of the import of brushes made in foreign countries where the low wages and the low rate of exchange produced conditions under which the British manufacturers cannot compete. The Button-making Trade Board made a recommendation to the Ministry of Health on the subject of out-workers engaged in the carding of buttons; the Fur Trade Board suggest that a duty should be placed on imported skins. They are all general trade recommendations which I will hand in. I do not think it is unfair or ungenerous to say that that particular section has not been very widely used, except in two directions in which there has been a very material work done in supervising the training of disabled men and in dealing with the Roll of Honour scheme.

334. *Mr. Poulton*: I take it you are going to deal with this report which was issued in the early part of the year?—Yes, I was going to deal with it separately.

335. Would the second recommendation in that Report with regard to the Boards having the right to get legal advice and then to have an opportunity of expressing their views to the Minister, come under the provisions of Section 10?—I do not think so. That proposal was quite definite, if you would like me to deal with it now.

336. You say that it does not come under that?—No, it is not under Section 10.

337. *Chairman*: We can deal with that later.—Yes.

SECOND DAY

Thursday, 13th October, 1921.

PRESENT:

The Right Hon. the VISCOUNT CAVE,
G.C.M.G. (*Chairman*).
The Right Hon. LORD WEIR OF EASTWOOD.
DAME ADELAIDE M. ANDERSON, D.B.E.
Mr. W. T. LAYTON, C.H., C.B.E.

Mr. E. L. POULTON, O.B.E., J.P.
Mr. A. PUGH
Mr. A. MACCALLUM SCOTT, M.P.
Mr. H. D. HANCOCK (*Secretary*).

Mr. HUMBERT WOLFE, C.B.E., recalled and further examined.†

338. *Chairman*: Now we might proceed with your evidence.—I described to you yesterday the steps that were taken to set up a Board. When a Board has been set up, its first business is to fix a general minimum time-rate. The actual statutory steps are the following: the Board have a meeting to propose the rates—they are required by Statute to propose the rates in the first instance. When the rates have been proposed, notice is given of the proposal, and two months elapse during which objections may be lodged. At the end of that period, as soon after the expiration of the two months as may be, the Board meet again for the purpose of fixing the rates. Before they fix the rates they are required by Statute to consider any objections which may have been lodged. If the Board are disposed to think that the objections are not substantial enough to make them modify the rates proposed, they fix them as was proposed, and forward them to the Minister of Labour for confirmation, and the Minister of Labour is required to confirm or refer back within a month, unless special circumstances exist. That is the statutory framework.

339. That applies to alterations as well as to fixing?—Yes, that applies to both stages, fixing and varying.

340. Let us have it once more: Supposing the Board have a rate which might have to be altered, then all the time is occupied again. First of all the Board must meet, of course?—Yes, the Board must meet in the first place.

341. Then it must make a proposal?—Then it must make a proposal of a rate which probably is a series of rates.

342. Notice has to be given of that; of course that takes a little time.—Yes. As the Acts stand, until the notices have been actually issued, that is to say, posters have been issued, the time does not count; therefore, if it takes a fortnight or three weeks, as it may very well be in the case of the Grocery Trade, for example, then it is two weeks before you start.

343. *Mr. Poulton*: Who has to give notice that they want a variation?—Anybody on either side in the trade may object to the terms of the notice of proposal.

Chairman: Mr. Poulton means earlier than that, to begin the proceedings for alteration.

344. *Mr. Poulton*: Yes. A rate has been fixed. Who has the authority to give the proper official notice to say that they want that rate varied?—You are at a later stage now; you are at the stage when a rate has been fixed and confirmed. Is that your point?

345. Yes.—Any person on either side of the Board, or any member of the Board can report to the Secretary that he wishes a meeting to be held in order to consider a variation of the rate.

346. Can anyone in that particular trade or industry or calling?—Anybody in the industry can state their case to the Board, and then it is for the Chairman of the Board to decide whether he will summon

a meeting to consider the variation. In most cases, if it is a substantial application, the Chairman would summon a meeting of the Board.

347. They have to consider whether it should be?—They have to consider whether a case has been made for variation. In the normal case, if I may revert to your question, Mr. Chairman, it would take a fortnight to three weeks in any event, before the actual statutory period of proposal starts. In the case of the Grocery Trade Board there are 130,000 employers, and 130,000 notices have to be printed, posted and delivered; and three weeks is not a very long time for that to be done.

348. *Chairman*: You say the proposal after application must remain for two months?—Yes.

349. That is the statutory period, I think?—Yes, that is the statutory period.

350. Is that two calendar months?—Yes, it is two calendar months.

351. Then during that time objections may be received and the Board must meet again to consider the objections?—That is right. And of course the Board may not always find it convenient to meet; the date for objections may have expired; there may be a further week or a fortnight there.

352. When they have considered all the objections, they may fix the rate?—Yes.

353. Has that to be published?—No. They fix the rate and forward it, as fixed, to the Minister, and the next publication is the Notice of the Order made by the Minister confirming the rate, if he confirms it.

354. Is there any time occupied between the fixing of the rate and the confirming?—Yes. You are referring to a case where they have fixed the rate?

355. Yes. I want you to state it in detail.—In a case where they have fixed, the Minister has a month in which to decide whether he will confirm or refer back, and that month may be extended in special cases. The average time taken by the Minister is, I believe, about 16 days; but I should say that the Minister regards it as extremely important that he should have the full month, because it may well be that after the fixing stage a number of objections may still exist, and it is very important that he should still be able to hear any further things that may have to be said.

356. Has notice to be given of the fixing publicly?—There is no statutory notice, but there is an announcement sent to the Press that the Board has fixed the rate.

357. Otherwise people would not know that it was necessary to object.—The associations who form part of the Board would know, and very often if one side of the Board has objected to the fixing, it asks to be heard, or the constituent associations ask to be heard.

358. *Mr. Poulton*: Did I understand that in the case of the grocery trade every individual grocer has to be notified?—Yes, that is the provision of the Regulations.

† For documents handed in by the witness and annexed to his evidence, see page 59 and following pages.

13 October, 1921.]

MR. HUMBERT WOLFE, C.B.E.

[Continued.]

359. *Mr. Layton*: What is the nature of these objections which come to the Minister? Are they some objections that have been turned down by the Board, or are they usually from people who have not read the notice, or are late?—No, very often they are the same people. The Minister principally gets objections where the one side or the other has been defeated on the Board, and when that side wishes to put the same points to the Minister which they failed to make good on the Board.

360. He is a sort of Appeal Court?—He is an Appeal Court at that particular moment.

361. Is there any tendency for people to prefer to put their objections to the Minister?—I do not think so.

362. *Chairman*: The Minister gets these objections, and he has to consider them?—That is so.

363. If they are serious, he may order an Inquiry, but you say that that has not been done?—If they are serious he has to decide it himself. The Inquiry I mentioned previously is in respect of objections to the setting up of a Board in the first instance, or to withdraw the Board from the scope of the Acts.

364. He has to decide himself?—Yes.

365. Supposing he thinks that the objection is serious, and is not prepared to confirm the rate, he refers it back?—Yes, that is his only power. He cannot vary the rate.

366. Then if he wants to vary the rate he cannot do it?—He cannot do it.

367. The thing must be taken over again, so to speak?—Yes, it must be taken over again. In one or two cases he has referred the rate back, and the Board, on reference back, have refused to reconsider their decision, and it has come back to him again in the original form, and he has then had to consider whether he can refer back a second time. But normally, if he refers rates back, the Board reconsider their decision, and generally make a change.

368. Can the Board make a change?—The position is that there is no specific statutory provision with regard to departures from the terms of proposals; all that the statute says is that notice must be given of the rate which is proposed. If a Board in fact make a substantial variation of the proposed rate it is held legally that that is not the originally proposed rate, and that notice has not been given, and fresh notice must be given, and it may therefore be necessary to go through the whole procedure of notice of proposal again.

369. To go through all the preliminary steps and to take two months again?—Yes. I have figures to show the length of time that normally elapses. Of course, you understand that the whole period has been reduced by the 1918 Act, as opposed to the 1909 Act, but in any case I have tables (see Annex I, Chapter V, Table B) analysing for the second half of 1920 and first half of 1921 the period that elapsed after the decision of a Board to issue proposals (which may have, of course, involved more meetings than one), before the rates came into operation. There is also another table (see Annex I, Chapter V, Table C) which shows the time that elapsed between the date of establishment of Boards and the date of entry into operation of their first rates. The average time that elapsed during the period in question between the decision to propose and the effective date of the rates, was twenty weeks. The longest period was 40 weeks and the least 15 weeks. That is the period under present procedure. The average time between the establishment of a Trade Board and the coming into operation of the first rates was, under the Act of 1909, 23½ months, the longest period being 29 months and the shortest 15 months. Under the Act of 1918, it is six months, the longest time being 10½ months and the least 15 weeks. It is only fair to explain, of course, that under the 1909 Act there was the provisional period of six months, when the rates were in limited operation only, which was laid down by that Act; that, of course, explains the much longer time. But in any event it is not necessarily a criticism of the Acts

or of the Boards to say that the first rate takes a long time to come into operation. It may be a trade which has never had a general rate before, and the Board may have to negotiate and to go into all sorts of new territory. It may be better that it should take a considerable time in fixing its first rate rather than that it should rush into any initial mistake. But if that is true about the first rate, it is not as easy to defend the period which is required for subsequent variations. After the first rates have been settled it is difficult to defend taking three or four months to alter a rate.

370. *Mr. Pugh*: I would like to pursue that point. Take perhaps an extreme case, but at any rate it deals with the machinery of the Board; take the grocery trade. I understand that it is open to any individual grocer throughout the country to raise an objection to a proposed rate or revision of rate?—That is right.

371. Are there equal facilities, so far as the workpeople are concerned who are employed by that particular grocer, and how would they express themselves?—I do not follow your question.

372. Supposing there was an objection on the other side by the workpeople employed by that particular grocer, what facilities have they for expressing their views?—First of all, the notice has to be posted by statute in every shop, and therefore every worker in every grocer's shop knows what the rate is. If he thinks it is too low he can do one of two things: he can either write direct to the Board, which he seldom does, or he can write to his union branch, and the objection would come from the local branch.

373. Is there a substantial measure of organisation in the grocery distributing trade?—No; that is one of the reasons why the Acts apply.

374. Is not there sufficient organisation for the organised body to be representative of the trade to an extent that would enable them to speak?—Certainly in parts, but there is a very large unorganised body.

375. What I am trying to get at is whether it is possible to make better arrangements to facilitate the procedure and to prevent this apparently unreasonable delay in coming to a decision?—I think it is possible to cut down the time considerably. I mean it would not be at all difficult.

376. *Lord Weir*: With regard to the variations?—Yes. I should like, if I may, to emphasise that point—the distinction between the first rate and the subsequent rates. I think if anybody looks at the history of his own trade, even a well-organised trade, he will remember that it is not a question of three months or six months; it is a question often of years before you get to your first rate. You have to consider that here you are imposing on an unorganised trade a new system entirely, and I suggest that if you take 18 months or two years even, that is not an exorbitant time for your first rate; but after that, if you once have the trade in a condition that it can make rates, the period of two years is too long. I can only say on that that it is largely at the door of the employers that that delay must be laid, because they put great pressure on the Minister of Labour who was passing the 1918 Act to keep the period as long as possible, and the reason for that was quite obvious. Prices were bumping up, and they wanted to have, quite reasonably, some security when they were making their contracts. I will put in some tables showing the time taken in every case of the fixing of a first rate. (See Annex I, Chapter V, Table C.)

377. And also of the varying?—Yes, I have complete tables. I think I should just like to press one point about the time that the Minister takes. I gave you the average time taken by the Minister; I think it is about 15 days.

378. *Mr. Layton*: You gave 29 months for the first rates under the 1909 Act?—Yes, that was the longest time, not the average.

379. What was the average?—23½ months.

380. And under the 1918 Act?—The average time is six months under the 1918 Act.

13 October, 1921.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

381. The only difference which you mentioned in your evidence was that the six months' probationary period has disappeared?—Yes.

382. How do you account for the difference of 17 months, apart from the six months probationary period?—The thing was much newer then; the trades were much more unorganised; it was an experimental stage, and the Boards went deliberately much slower than they have done lately.

383. *Chairman*: Was not the length of notice cut down?—Yes, the length of notice was cut down, which makes a difference of a few months. I think the length of notice was three months, as opposed to two months.

384. *Mr. MacCallum Scott*: Did you not say that the average was 23½ months?—That was the period for the fixing of the first rate.

385. *Mr. Layton*: But there is a very considerable difference, even when allowance is made between the two?—There is.

386. To what do you attribute that—to the improved mechanism of the Act or to the difference in the economic conditions?—Clearly to the second, and to the fact that before the war people were more content to have wages alterations settled more slowly than they are after experience of war conditions.

387. *Dame Adelaide Anderson*: What was the limit before the war, the effective period for a first rate?—Do you mean the limit of the probationary period?

388. A rate may not be altered now, unless it has been in operation for a period of six months?—That provision is a new one entirely.

389. And there was no limit before?—There was no limit before. Perhaps I had better explain that provision to the Committee. Under the 1918 Act when a rate has been fixed and confirmed it cannot be altered for six months without the consent of the Minister. As a matter of fact, if I may say so, it is a power which is not used to the Minister at all, because when the proposal to alter is put to him he cannot know what the view of the trade is at that stage, because their objections have not been heard. Therefore, he is asked to decide the question before it has been actually submitted to the trade, and he has therefore no alternative but to give his consent.

390. *Mr. Poulton*: Do you mean by that attempts are made to alter regulations oftener than once in six months?—Very frequently; the position now arises, and we have had it in the last three or four months four or five times, that we get a rate from the Board, and accompanying the rate which is being fixed a request to the Minister that they may immediately proceed to reduce it at the same time.

391. *Chairman*: A request by the Board?—Yes, a request by the Board, and in nearly every case we have refused it.

392. *Mr. Poulton*: At the same time that they are setting it up?—Yes.

393. *Mr. Pugh*: How do you deal with frivolous applications?—That sounds frivolous, but it is not, because if you consider for a moment they are fixing the first rate. They see the cost of living tumbling about, and they say: "We want to get a datum line which will be fair to work upon under the Acts, but that datum line must not remain in existence for a long time because it may affect the trade prejudicially." Therefore, they say: "We will fix 8d. per hour, to take a figure, as a figure on which we will work, but for the immediate purposes of the moment, having regard to the cost of living, we will fix 7d."

394. *Mr. Poulton*: Is not that a recent development since there has been a sort of downward tendency?—Clearly, when things were going up—we never had a proposal to fix a rate and another one to increase it at the same time.

395. *Mr. Pugh*: May we take it that the workman did not seek changes in that way when the trade was going up?—I am not prepared to give a general answer.

396. *Mr. Poulton*: But that is the effect, is it not?—As a matter of fact, if you will look at the Trade Board rates, as I shall hope to show you later

on, you will see that they have not increased disproportionately to the increase in other trades, and that they have been reduced pretty equally with the reductions in other trades. In other words, the Trade Board has supplied the organisation to fix and reduce wages which exists by agreement in more fortunate trades.

397. *Mr. Layton*: Is it not also the fact that it is the minimum rate you are discussing?—Yes.

398. And that you may get the actual standard rate above the minimum time rate; you cannot get it below.—That is true.

399. *Mr. Poulton*: But as a matter of fact they have in many of these trades a standard rate; that is understood.—I am not prepared to answer that, because I am afraid I do not know what a standard rate is.

400. In other words, the Trade Board set the minimum rate?—That is what they are supposed to do by the Acts. There is only this much more to be said on this point, that what I have said now is what the Minister knows what the Boards do. Naturally, the Minister's officers are not present at the meetings of the Board. It is true that the Minister supplies a Secretary or Secretaries for the Boards according to statute, but in so far as they act as Secretaries of the Boards they are the officers of the Boards and responsible to the Boards and not to the Minister. If the Committee would like, I can read to them a statement which the Secretary of the Boards has supplied to me, showing what the Appointed Members do during the meetings of the Boards, and what the Secretary does. I do not know whether you would like to have that from the Boards themselves or not. I mean this is not first-hand; it is second-hand; it has been supplied to me by the Secretary of the Boards who is an officer in my department, but in this particular regard is under the orders of the Boards.

401. *Chairman*: I think we should like to have it unless the Boards would object.—I do not think so. It is not controversial in the slightest degree.

402. *Mr. Pugh*: Is it intended to put in any witnesses who are Secretaries of Boards, or are you going to cover the whole ground?—I am going to cover the whole ground as far as the department knows it, and I have a full statement from the Secretary of the Boards setting out what his work is. He is required to tell me that as my officer. On the other hand, he is not required to tell me, and it is not right that he should, any private concerns of the Boards; that would be for the Boards to tell the Committee in such a way as they thought fit.

403. *Chairman*: Is it a perfectly general statement?—Yes, it is perfectly general.

404. I think we should like to have it.—Before I come to that, I should like to explain that there are two methods of voting on the Boards: one is one man one vote; that is to say, each member on both sides has a vote.

405. *Mr. Poulton*: Supposing there are unequal numbers, then one drops out?—Yes, there is a provision by which, if there are unequal numbers present on the two sides, the Chairman may invite the preponderating members of the side to withdraw, and if that is found to be impossible the Chairman may adjourn the meeting. On the Ready-made Tailoring Trade Board a method of side voting has been adopted; that is to say, each side has one vote. The object of that originally was to prevent divergent interests on either side, as it were, giving away the position to the other side. I do not think that is an unfair way of putting it. It is a system which the Minister does not like at all.

406. It is a block vote?—Yes, it is a block vote, and he has taken the view that any Association on either side of the Board should be entitled to its vote, and should be able to record its vote by voting, and not merely by speeches. There was one Board under the old system, the old Tailoring Trade Board, which had this voting system, and when that was dissolved and made into two Boards the Minister

13 October, 1921.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

was strongly pressed by both sides of the Board for the ready-made tailoring trade with equal vigour to allow the principle of side voting to continue on the reconstituted Board, and in the circumstances he said he was prepared to do that, but it was not to be regarded as a precedent.

407. *Chairman*: It seems a pity to have side voting, because it drives a member to take a party view.—Not only that, but if there is a divergent interest on either side the majority can always submerge the minority. As to the actual procedure, I have told you that the Acts provide for a Chairman and Appointed Members, and I have told you that the function of the Appointed Members is largely the following: first, to bring the two sides together by conciliation, to see that the facts on both sides are properly placed before the Board, and, in the last resort, to cast their votes according to the facts elicited in the course of discussion. The Appointed Members do not belong to either side, but they each of them possess a vote—not a casting vote, but just an ordinary vote like any other member of the Board, and if they care they can vote on opposite sides. As a matter of fact, in almost every case they vote together.

408. *Mr. Poulton*: Have they ever had a block vote?—Yes, I think so. Then you come to the question of the Secretaries, and later on in my evidence I shall have to discuss the position of the Secretary, because it clearly is a difficult position for any officer to have two masters, and such is the present position of the Secretary. But all I wanted to do here was to set out definitely what the Secretary tells me he does on the Boards, not under my instructions, but under the instructions of the Boards. As a matter of history, from 1909 to 1919 there was a single Secretary to all the Trade Boards; since that date there has been a separate Secretary appointed for the Irish Trade Boards. These officers have always been full-time officers. In 1919, in view of the increase in the number of Trade Boards, in addition to a Secretary and Deputy Secretary, the Treasury authorised on a sliding scale a number of additional secretaries and assistant secretaries, so many to each ten Boards. There is no statutory definition of the duties of the Secretary. In practice, the functions of the Secretary include the work of arranging for and summoning meetings of the Boards and Committees, preparing the agenda and other papers for the meetings, attending the meetings and taking notes of the proceedings, drafting and circulating the minutes, drafting and issuing notices proposing and fixing minimum rates, issuing communications as to the Boards' proceedings to the Press, dealing with correspondence, the periodical amendment of the list of employers and issue of permits of exemption, the issue of learners' certificates, the registration of apprentices. As regards the more important matters, such as the issue of notices relating to minimum rates, the procedure in respect of which is prescribed in the Acts, the Secretary receives formal instructions by resolution of the Boards or Committees. As regards the other matters including the great bulk of the correspondence, the Secretary receives no detailed instructions from the Boards. It is the practice of the Secretary, in so far as he is able, to advise the Boards as to their powers under the Acts, and any other legal questions arising. He is at the disposal of the Boards, or of any section of the Boards, for advice and assistance when called upon, and he endeavours to keep the Boards right in the matter of procedure, and to suggest methods whereby effect can be given to their intentions. He frequently suggests, from his experience on other Boards, methods of overcoming difficulties which arise in the course of proceedings. He is especially at the disposal of the Chairman for any assistance which he can give throughout the negotiations. Thus, on most of the Boards the Secretary is something more than a mere clerk recording decisions, and takes a greater or lesser share in shaping the form of the

notice in which the policy of the Boards is ultimately embodied. That is a statement by the Secretary of what he in fact does.

409. *Mr. Poulton*: There is nothing in that to indicate under whom he acts. Does he act under the authority of the Chairman when the Board is not sitting, or does he do the work which he considers right?—In fact technically he is under the authority of the Chairman; in actual practice the Boards instruct him, and give him a sort of general commission to act on their behalf in a large number of minor matters, notably in dealing with correspondence, learners' certificates, and so on. If he is in doubt, he can refer to the Chairman; if the Chairman is in doubt, he can refer to what I called yesterday the Administrative Committee, which is the general purposes committee of the Board.

410. *Mr. Pugh*: I do not know whether this is the right place to raise the question of the Report of the Trade Boards Administration Committee, but I rather think the witness proposes to deal with that report later?—I do.

411. I would remind you that a very definite question was raised in the Report of that Committee.—That is so. If it would not be inconvenient to you, I would rather take it later. I will if I may return to the question of the procedure of Boards. Anybody who has seen an ordinary joint body making a wage settlement, or arriving at a wage agreement, knows exactly how these Boards work. There is no difference, though the Trade Boards' rates are compulsory, except in this respect, that as the three appointed members may solve a deadlock by their votes, naturally their views command considerable attention on both sides. But otherwise there is the ordinary backwards and forwards negotiation.

412. You say there is the ordinary backwards and forwards negotiation. Does that mean that you have the position raised on the Trade Boards where the parties may be separated and the appointed members act as a sort of medium of negotiation between the two sides?—Yes.

413. The whole procedure is not necessarily carried out round the table?—Not at all. To take a specific case, it may have been proposed by one side or the other that a rate should be fixed on a national basis. Both sides accept that national basis. Then the national basis is proposed, and perhaps somebody on the employers' side proposes 6d., and someone on the workers' side proposes 9d., just taking those figures for the purposes of illustration. Speeches are made on both sides which indicate no possibility of a settlement. Then perhaps one of the employers suggests that he will go to 7d. The workers then withdraw to consider the 7d. The employers on their side withdraw to their room. The appointed members may be considering by themselves, what they think would be a fair rate; perhaps they say: "Well, 7½d. will be fair". Then they may go to the workers' side and say: "We think that 7½d. will not be a bad rate". The workers say: "No, we think it is too low; we say 8d.". Then the Appointed Members might go back to the employers and say: "What do you think of 8d.?", and if the employers do not convince the appointed members, then the appointed members can say: "Well, we think it should be 8d., and if you cannot make an agreement we shall vote for 8d.". Then the employers will say: "We will agree to 8d. if you can persuade the workers that 9d. is too high", or they may say that it is too high, and then of course they have their remedy.

414. Then might we take it that appointed members are essential to Trade Boards as a mediating factor; because if so, why should there be that difference between the exercise of the functions of similar Wages Boards in other trades and the exercise of the functions of Trade Boards? Is it because there is not the same relationship, or the same traditions?—No, because there is not the compulsory element. These wages are compulsory, and everybody has to pay them, whether they like them or not.

13 October, 1921.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

415. *Mr. Poulton*: I did not quite follow where the Chairman came in.—I was saying of the appointed members, that they generally act together. Perhaps they divide; the Chairman has a discussion on the one side, and two of the appointed members on the other, and then they meet and compare views.

416. *Chairman*: The Chairman is the principal appointed member?—Yes, he is an appointed member; the term "appointed member" covers the Chairman.

417. *Mr. Layton*: Is it reported to you whether the decision is arrived at by the votes of the appointed members or otherwise?—Always.

418. Is that often the case?—I have an account of the number of cases in which it has been arrived at by agreement. In a number of cases a decision has been arrived at by the votes of the appointed members. The vast majority of rates are settled by agreement. I will find the figures presently and give them to you. (See Annex I, Chapter V, Table A.) It is only lately that the proportion of decisions by appointed members has increased, owing to the greater difficulties.

419. *Chairman*: A decision which is reported to you by agreement may really have been brought about by the intimation of the appointed members as to how they would vote?—Constantly, and we have had cases in which the workers or employers have said to us: "It is quite unfair to describe this as an agreement; we only did it by force majeure because we knew we should be beaten." But on the whole that is not a frequent allegation, although we had it in the case of the Grocery Board.

420. It has frequently happened that the intimation by the appointed members of their opinion, would lead to what on the face of it was an agreement, but it was really a forced agreement?—I think that very often does happen, but it does not often rankle with either one or the other of the parties.

421. *Mr. Pugh*: The appointed members really represent an internal arbitration court between the two parties?—Not quite arbitration, because their principal function is to attempt to get the parties to agree.

422. *Chairman*: Arbitrators do that?—Very often it happens that they have not to do anything; I mean, you get cases where parties agree without any intervention at all by the appointed members. It is not always, as the Chairman suggests, that there is a hint from the appointed member. On the Tailoring Board we had a curious position; the employers and workers made an agreement outside the Board; the Unions and the principal Employers' Associations brought it to the Board for registration, and the appointed members heard nothing about it till the sides arrived with a duly signed and delivered agreement. We were rather shocked by that, and said we were not clear that there was any reason for the continued existence of the Board, if they could make their agreements outside.

423. I was just wondering whether the fact that the decisions are compulsory is sufficient justification for the existence of your appointed members. I do not want in any way to depreciate their services, but I just want to get at what is their special function and the grounds for their existence on the Boards. You speak about the thing being compulsory. It is true that you can get a legal decision upon it, but if we take the ordinary Wages Boards the decisions are equally compulsory; nobody there would refuse to carry out the agreement. That is broadly so, is it not?—I was going to argue this point generally later from the point of view of the public interest—the interest of the consumer—but putting it here, the main point that I would say in answer to you at this moment is that it is a compulsory body, and there is only one way of preventing a deadlock on a compulsory body, and that is to have an intermediate party. Voluntary negotiations may break down; there is no statutory compulsion behind. But here the object of the Acts is to protect the workers and to get a rate

for the workers. If there are no means of solving the deadlock, then the rate for the workers may never come, unless you have an intermediate body.

424. *Mr. MacCallum Scott*: You would never get a decision?—You would never get a decision, and if the Acts insist that you shall get a rate for the workers, you must have somebody there who can try to bring the parties together.

425. *Mr. Pugh*: I do not say that the appointed members are not necessary; I would rather put it that their existence is necessary?—I do not know whether the Chairman would prefer me to develop the argument now, or whether I should defer it; I would rather defer it myself.

Chairman: It is a very important point, and I think we should like you to deal with it.

426. *Mr. Layton*: Have the objections of either side ever reached the length of a trade dispute?—No. I do not think I know of a single instance of a trade dispute in the sense of either a lock-out or a strike resulting from a decision of a Board. On the other hand, you have something tantamount to a strike, in that we have had in a number of cases one side or another withdrawing from the Board as a protest against a decision.

427. In that case the decision stands?—Yes, the decision stands. I mean as long as there is a sufficient number of representative members and appointed members, the action of the Board is not invalidated by the withdrawal of one side or another.

428. *Chairman*: Although you do not know of a lock-out, do you know of any case where an employer has said: This rate is too high for me to pay; I cannot continue my business if it is enforced?—We have often had the allegation made, and later in my evidence I will give you the cases which we have investigated in which the allegation has not been borne out.

429. I should very much like to have that information.—I do not wish you to suppose that because I say our investigations have never borne out the allegation such results have not followed from the imposition of minimum rates, but in a number of cases which have been brought to our notice the investigations have not brought such results to light.

430. *Chairman*: Will you now go to the next point?—The next point is the confirming power of the Minister. I have already told you that the Minister cannot alter a rate submitted to him by a Board. I cannot insist too often that the rate is proposed and fixed by a joint body of employers and employed, and is not settled by a Minister or a bureaucracy. It is a trade act, decided by representative persons in the trade. The only business of the Minister is to consider the rates as fixed by the trade and to decide whether he will give them the force of law or refer them back to the Board for further consideration. He has a considerable discretion in that matter. The grounds on which he refers rates back are three: there are cases in which the procedure of the Board, or the actual Notice, is in itself *ultra vires*; it is technically incorrect, and the Minister cannot confirm it, even if he wishes to. We had a curious case of that sort which was not perhaps quite an *ultra vires* case; that is a case where the Grocery Trade Board considerably altered the terms of their Notice of Proposal at the fixing stage, and demanded that the rates should be confirmed as a whole. They left about seven-eighths of their proposals unchanged, and materially altered the other eighth, and they said: "We want the whole of these rates confirmed." The Minister said: "It is improper to confirm the one-eighth, because you have so radically altered it." The Minister said that he was not prepared to agree to the one-eighth being confirmed, therefore he had to refer all the rates back as *ultra vires*. Secondly, there are cases in which, although the procedure is technically correct, the Minister is not satisfied that sufficient weight has been given to the views of a minority of the trade, either on or off the Board; and finally there are

13 October, 1921.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

the cases which have been more frequent lately than ever before, in which the Minister refers the matter back to the Board in order to be perfectly sure that no hardship would be caused to the general community, or to the persons employed in the trade, by reason of the fixing of the rate.

431. *Mr. Poulton*: On that second point, how is the Minister apprised of the injustice that certain people claim? Is notification sent to the Board, or is it sent to the Minister, or is it sent from the Board to the Minister?—During the proposal period, if objections come to the Minister he simply sends them on to the Board; he takes no official notice of them at that stage. But after the period of notice is over, and after the Board have fixed the rate, then the same persons who objected to the Board may object to the Minister, and may say that their objections have not been sufficiently considered by the Board. In that case the Minister has to hear them.

432. In that case the Minister acts as a sort of appeal from the decision of the Board?—Yes, in the sense that he weighs the evidence further than the Board has weighed it, if he thinks that necessary. I have a complete list of all the cases in which rates have been referred back since 1920. I do not know the exact number, but it is not very numerous. There only seem to be 12 cases of reference back since 1920, and in each case I have set out the reason for the reference back.

433. *Chairman*: Will you annex that to your statement?—I will hand that in. (See Annex I, Chapter VI, Table A.) I shall deal with it a little further, if I may, when I come to the Minister's powers, under Part II of my evidence, because there are certain controversial questions which arise on his powers in respect of the confirmation of rates.

434. *Chairman*: Then you were going to deal with enforcement and inspection?—If I may, I will just read the actual statutory provisions as to the sanctions provided by the Acts. Payment of the minimum rates may be enforced by criminal proceedings. Any person who fails to pay wages at not less than the minimum rate is liable on summary conviction to a fine of £20 and £5 a day for each day on which the offence is continued after conviction. The Court may, in convicting, order the payment of arrears. The Acts place upon the defendant the onus of proving that he has not paid wages at less than the minimum rate. Civil proceedings can be taken by an aggrieved worker for recovery of the sums due. These sanctions also cover (a) breach of the conditions upon which a permit of exemption has been issued; (b) failure to register apprentices or learners; (c) failure to give effective instruction to a learner or to comply with other conditions laid down by a Trade Board. In these three cases failure to comply with the conditions under which alone the lower rate for these special classes is payable means that the employer is liable to proceedings for non-payment of the ordinary rate, i.e., usually the ordinary rate for adults. Other incidental obligations on employers, which are enforceable, are as follows:—(a) Deductions from wages, even deductions which would be lawful under the Trade Boards Acts, are forbidden if they bring the rate below the legal minimum. The only exception is for deductions under the Insurance Acts or similar Acts. (b) "Contracting-out" is forbidden, and any agreement for the payment of wages in contravention of the provisions of the Acts is null and void. (c) No premium can be received in respect of an apprentice or learner except a premium under an instrument of apprenticeship. Then there are certain other minor provisions in respect of which proceedings can also be taken.

The Acts lay on the Minister the duty of prosecuting although in certain circumstances the Boards themselves may prosecute. In fact, throughout the history of the Boards I do not think there has been a single case in which a prosecution has actually been initiated by a Board. The Minister has to appoint inspectors for this purpose, and the work

of inspection divides itself into four main heads: the first is the ordinary non-compliance inspection, that is to say, inspection either on complaint or by routine to see that the Acts are in fact being observed. Clearly, when you consider the number of workpeople covered, and the number of inspectors available, it becomes obvious at once that 100 per cent. inspection is entirely out of the question. We have at the present moment some 3,000,000 workpeople covered by the Act, and we have at the moment not quite 33 full-time inspectors for the purpose. You will therefore see that on that basis we are not likely to do more than a 2 per cent. inspection throughout the year. But I do not want to suggest to the Committee that 100 per cent. inspection is right, nor that it is claimed by anybody. When you first inspect a new trade which is not accustomed to the Acts, you have to have a pretty thorough inspection in order to instruct the trade rather than to bring criminal proceedings. But when once the trade is familiar with the Acts, it is true to say that with very minor exceptions the employers tend to observe the Acts. In trades like the chain-making trade and hollow-ware trade, inspection is very infrequent and not very necessary, because you hardly ever come on any evasion except through a *bona fide* mistake. In the new trades the position is quite different, and on some occasions, in one or two of the trades to which I will refer, there is widespread and wholesale evasion which was due to the belief, with which we did not altogether disagree, that the rate fixed was too high and the trade could not pay it. I will mention them later, but there actually was a case where we did not enforce the rate because we felt that they had been fixed too high.

435. *Mr. Pugh*: On that point did the department decide that, or did they give their reasons and refer the matter back to the Trade Board?—Yes, we did. I went myself and explained to the Board. I appeared before the Board and told them quite frankly that evasion was very widespread; that it was something like 60 or 70 per cent. in the case of the learners' rates; that we were convinced that if we enforced them, unemployment would result, and in the circumstances we thought the Board might be prepared to reconsider the rates; and in fact they did; they reduced the rates considerably.

436. *Chairman*: It took them some time?—Yes, it took them some time, but in the meantime no great harm was being done, because the rates were not being paid.

437. But the law was being broken?—Yes, the law was being broken, and that put us in a difficult position. The Trade Board said: "Are you going to say to us that you will connive at a breach of the law?" I said: "Not at all, I am simply stating the facts and telling you what the position will be if I do advise my Minister to proceed further." I think the situation was met in a common-sense way by the Board themselves when they decided that they would prefer to reduce their rates.

438. *Mr. Pugh*: Surely that would be a very difficult position. You have representative people on both sides of the trade, employers and workpeople, meeting together with other persons who have experience of Trade Board matters, and they come to a conclusion, and after the thing has been decided it is found that it is altogether unsuitable for the Trade. Is there not some explanation for that? Did some new condition arise after the fixing of the rate which made it entirely unsuitable, or was that condition in existence when the rate was actually fixed?—I will give you the case; it was the Dressmaking trade, and the main trouble arose on the learners' rate. The Board had fixed that at 9s. in the country districts. No rate had ever been paid to learners at all at that age, or, if anything, only 2s. or 3s. per week. Many of the employers in country districts, when visited by our inspectors, said that they were not paying the rate. They were asked why, and they said they had not heard that the Trade Board's rates applied to them. When the

13 October, 1921.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

notice was exhibited to them they said: "Well, if we pay this, we shall have to discharge our workpeople." We know perfectly well that sometimes some employers are less scrupulous than others about that sort of thing, when new legislation comes in. The people who were making these enquiries were not inexperienced; they were our most experienced inspectors, and they were convinced that this was not evasion, but that it was true. So we had a complete series of reports brought to us, and it then appeared that in the retail section of the dressmaking trade in 60 or 70 per cent. of the cases investigated the flat rate fixed for adults was being generally observed, but there was more widespread evasion in respect of young workers. We thought at the time that the Board had perhaps allowed itself to be too much guided by London conditions, and might perhaps have not attached sufficient weight to country conditions, and that perhaps as London was very strongly represented on the Board it might to a certain extent have overshadowed local conditions. On the Board the workers' side were particularly interested in factory conditions and much less interested in conditions in the small rural areas, and they themselves were not indisposed to think that in the country the treatment might be rather different; and when we put it to them that £s. was too high they said that they themselves had been considering the matter, and in fact they reduced it to 6s. That reduction was not based on the cost of living; it was simply, I think, the view of the Board that the original rate had been fixed too high. I like to give that case, because that and another are the only cases in which our inspectors have found any evidence whatever to show that Trade Board rates would, if enforced, have caused unemployment.

439. *Mr. Poulton*: That was in the case of learners?—There was in the case of the learners. There was another rather technical point in the case of the fully qualified bodice hands, where the Board had fixed 10½d. per hour as the rate, and they had intended it by the definition to apply to a person in a London workroom who does the fully skilled work. In fact, by the terms of the definition it applied to the ordinary hand employed by the village dressmaker. That was clearly a mistake; the Board had never intended it, and they were surprised when it was reported to them that that was the effect, and they amended the definition to make it clear that they had never meant it.

440. *Chairman*: What was the other case which you had in mind?—The hat, cap, and millinery trade. They were two of the clothing trade Boards, who both had fixed the same rates for learners. The Boards were very closely allied, and they had both in our view perhaps under-estimated the difficulties of the country dressmaker. As I have given some prominence to this particular case I am quite sure that the Boards themselves would wish to explain to you why they took the action, and probably why they took the view that we should have enforced it. I do not put this in a partisan way. We may have been wrong, but that was our view; we thought that the rate was too high, and we did not enforce it.

441. The other instance where you did not enforce it was in the hat, cap, and millinery trade?—Yes. In the same way we found there was great evasion in the case of learners there.

442. *Dame Adelaide Anderson*: That did in fact arise through different causes in those cases; in the first case the country village dressmakers had not been adequately represented on the Board?—We felt perhaps that they had not. We felt that it was very difficult to give them adequate representation, because the bulk of the employees were with the big people.

443. And they did not in fact know that they were called upon to pay these rates?—Very often not. That is one of our difficulties. Somebody asked me, "Have we to send notices to 150,000 grocers?" and I said, "Yes, the regulations provide for that." If a person has not actually had a notice notifying him of the rates applicable to workers at his establish-

ment it is difficult to secure payment of the rates. Of course I know that ignorance of the law is no defence, but it does influence the mind of the Court, at any rate, if you can say that you had never heard of the rates.

444. *Lord Weir*: Was that done under the old Act also?—Yes.

445. There was the same provision?—Yes, the same provision.

446. *Mr. Pugh*: I suppose what we shall get to know—if evidence is to be tendered by these Boards—is how there appears to have been an admitted mistake?—Yes.

447. And what was the difficulty in obtaining information or getting representation which prevented the Board from taking into account the whole of the factors before coming to a decision; that seems to me to be the interesting point?—Yes.

448. Because if you are going to have difficulty of this kind it rather tends to undermine Boards, does it not?—Yes. I said quite definitely that though our inspection is limited in number, yet it covered a very wide field, and these are the only two cases in which we can see that that sort of effect has been produced; and I am perfectly sure that the Boards will give you a very good reason, much better than I have given, for having done it; but I confess that it did not convince me at the time. The first business of our inspectors, therefore, is on complaint to inspect or to take a district and go through that as thoroughly as they can. The difficulties of inspectors are, of course, enormously increased when they have to deal with general minimum piece-rates, or any difficult piece-work trade. In the case of time-work the inspector's duty is very simple; he looks at the wages books, and if the worker is getting the rate, that settles it; if he is not, then the employer has got to make it up; but where it is a piece-rate case, then the question immediately arises whether the price fixed for the job is the sort of price which would have given the ordinary worker the necessary rate, and that involves definite knowledge on the part of the inspector of perhaps a dozen processes, and in a trade like the tailoring trade, where they have what they call log rates, you may have I do not know how many series of log rates, and the inspector has not only got to know all the log rates, but to compare one with another.

449. *Chairman*: He does not go everywhere, I suppose; he just picks out one or two places?—Yes; we have done it particularly on complaint. The trade unions or individual workers complain to us, and then we inspect. The second branch of inspection is special inquiry. If a Trade Board, for example, wishes to fix general minimum piece-rates, it often asks us to send inspectors round to inquire into the conditions obtaining throughout the trade in order to make a piece-list. That may take as long as six months, because any piece-list, as anybody who has drawn one up will know, is not easy to make, and when it is the first one in an unorganised trade it is overwhelmingly difficult. As I say—only a few trades have fixed general minimum piece-rates.

450. *Lord Weir*: I suppose the inspectors have to help the Board by getting the information prior to settling?—Yes, that is right.

451. Is it not done solely by the employers and workers?—No. It will very often happen that there are a lot of establishments which may have peculiar methods which employers on the Board may not know about; and you will understand that it is naturally not every employer's wish that all the other employers should know his processes. Our inspectors inspect in cases of applications for permits of exemption. That, as I told you yesterday, we were trying to get out of; we felt that with the limited staff which we had it was better that that should be done by the Boards themselves. That is a case where an employer says that a worker is either infirm, or owing to injury is unable to earn the rate, and if that can be proved he can have a permit of exemption to say that he is incapable of earning the rate.

13 October, 1921.]

MR. HUMBERT WOLFE, C.B.E.

[Continued.]

452. *Chairman*: Does an inspector see the man then?—Yes, and sees the employer, and, if necessary, examines the medical certificate; but it is so obvious and so practical a thing that it could be just as well done, if they had the time, by the members of the Board. Finally, our inspectors have to a certain extent appeared in Court and conducted proceedings—criminal proceedings—where the cases were comparatively simple. That has been rather altered now, and we are represented in nearly every case by either a solicitor or counsel. That is largely due to the fact that lately the cases have become rather more vigorously contested on the other side, and it has been not quite fair to send a person without legal training to meet King's Counsel, for example, as they might have had to do in certain cases lately. Therefore that particular part of their work has rather declined.

453. *Dame Adelaide Anderson*: It adds to the expense of administration, I suppose?—No, not necessarily, because we are not generally represented by outside Counsel; we are represented by members of our Solicitor's staff. Of course, if we have to take in Counsel that does add to the expense, but obviously we cannot dictate that. If the other side produces Counsel we are rather bound to follow their lead.

454. Of course in other Departments the inspectors do meet Counsel?—Yes, I know, and our people have done so in the past, but when the thing has reached the stage which it reached, for instance, in the Portsmouth case, it is necessary that we should be adequately represented.

455. *Mr. Pugh*: On this matter of legal proceedings, you say that the Boards may initiate prosecutions, but they do not. What procedure would be necessary for a Board to initiate prosecutions? Would they not still have to come to you?—Yes, they would have to come to us to get the money to do it. They have no money to spend. They have to get our consent.

456. If they were taking up the matter, what would be the procedure? Would you simply foot the bill?—We should foot the bill provided we were satisfied that it was a case in which action could properly be taken.

457. Then either they would utilise the Department's Solicitor, or have to employ their own?—Certainly. If a case ever happened in which the Board itself insisted on taking a prosecution, and we were satisfied that there was a proper case, and they applied to us to let our Solicitor act, I do not think we should have any difficulty, but what in fact is much more likely to be the case is that when we decided that it was not a suitable case for prosecution the Board would think that it was, and in that case, if there is a difference of opinion, we might in any event not be prepared to foot the bill.

458. *Mr. Poulton*: Supposing the workmen's representatives were satisfied that it was a very glaring case, have they authority if they think well to take the case themselves straight away?—No.

459. I mean assuming, of course, that they are prepared to pay?—I think as common informers, yes. They cannot appear, and they have no locus otherwise, but they could appear as common informers, I think.

460. *Chairman*: Is that the right term? Any member of the public can prosecute?—I am using an improper term, but I mean they could not appear as—

461. They could as members of the public?—As members of the public. That is what I mean.

462. *Mr. Poulton*: Could not a trade union as such prosecute on behalf of its member independently of the Board, or of the Ministry, if it paid its own expenses?—No, it has not got the locus. That is one of the points which have been suggested—that a trade union should be given that power, but they do not possess it at present.

463. *Chairman*: Could not any individual prosecute?—Yes, an individual could.

464. A trade union could put up an individual to prosecute?—They could pay the expenses of an individual.

465. If they were willing to run the risk of expense, they could always prosecute?—But I understood the question to be that the Trade Union could not themselves prosecute as a trade union. That was the question which you asked, was it not, Mr. Poulton?

466. *Mr. Poulton*: Yes. They could put up one of the trade union members?—Yes. For example, there is a case in which your own Union is interested and in which you have been pressing us for some months to prosecute, and we have refused resolutely, because you are wrong, if I may say so.

467. It is the Trade Board that is doing it.—We have suggested to you again and again that if the case is to go further there is no reason why you should not let the individual man prosecute, and you could pay for it, but it has been put to us definitely that there is a case for giving the trade unions as such the right to take proceedings, and that is a matter which the Committee may care to consider. There is another small point which arises on legal proceedings, which is rather a small technical one. It is this, that you have as well as criminal proceedings civil proceedings, that is to say that you can either go to the County Court or to the Magistrate, but the Minister can only take civil proceedings if it is not open to him in any case to take criminal proceedings.

468. *Chairman*: How can the Minister go to the County Court at all?—The Minister thinks he can. There is a doubt whether he can.

469. Surely the civil right is the right of the person employed to recover his wages?—No, the Minister can definitely take civil proceedings. He has that power.

470. There is something in the Act, is there?—It is a power conferred specifically. It is not, of course, a common law power. It comes in Section 9, Sub-section (2), of the Act of 1918: "The Minister may, if it appears expedient so to do by reason of the refusal or neglect of the worker to take the necessary proceedings, on behalf of and in the name of the worker institute civil proceedings before any court."

471. He does it in the man's name?—Yes, in his name. Of course there is the case where the Minister has gone to the Criminal Court to ask for a conviction, and the Court, which has power both to fine and to award arrears, may have done the first and not the second, and then it is a question whether the Minister, if the worker still wishes to claim arrears and refuses to do so on his own behalf, has the power to go to the County Court to claim arrears; and I think that he has that power.

472. It is not a very frequent case?—No. We happen to have a case just at present, but it is not a very frequent one.

473. *Dame Adelaide Anderson*: Is not a complete statement published of the proceedings in the different cases—of all the prosecutions taken since the beginning?—I do not think so. I have never seen one. There have been summaries of all the recent cases in the Trade Boards Gazette. I do not know whether the Committee has had copies of that. If not, we can circulate it.

474. I have had a copy. I wondered whether they were all set out, or whether those are only sample cases?—No, those are all the cases taken recently. The number of prosecutions under the Acts has been extremely small.

475. *Lord Weir*: Are you giving us some information about that? Have you any figures?—I have not the numbers; I do not carry the figures in my head, but I think that during the last year, 1920, there were about 10 prosecutions, and there have been about 16 or 18 so far this year.

476. Could you give us a return?—I will give you a return.

477. *Dame Adelaide Anderson*: Some of the cases will be extremely interesting, I am sure?—You will

13 October, 1921.]

MR. HUMBERT WOLFE, C.B.E.

[Continued.]

understand that the vast majority of the work is done by way of writing to the employer and asking for arrears, and in perhaps 99 cases out of 100—I will not say 99, but 90 cases out of 100—a letter is sufficient to elicit the arrears.

478. *Chairman:* You might give us a list of the actual proceedings?—If I can get that I will. (See Annex I, Chapter VII, Table A.)

479. What is your next heading of evidence?—The next heading is the relations between the Minister of Labour and the Trade Boards, and if I may I would rather like to make this purely historical, and then to take the controversial points in the second part, if it is equally agreeable to the Committee. The respective functions of the Minister and the Trade Boards are these. The Minister's powers are to apply the Acts to the various trades, to amend the Special Orders where experience shows that they require amendment, the periodical reconstitution of the Trade Boards in accordance with the regulations, to set up District Committees in cases where a Trade Board has decided to establish such committees, and the consideration of minimum rates with a view to either confirmation or reference back. These are the statutory duties of the Minister. The statutory duties of a Trade Board are: fixing, varying and cancelling rates, registration of apprentices, granting certificates to learners and permits of exemption to workers who are incapable, by reason of infirmity or physical injury, of earning the minimum rates, and making recommendations to Government Departments relating to industrial conditions in their trade. Then you have got the disputed territory of prosecution and demarcation. The power to prosecute has always been exercised by the Minister of Labour and by the President of the Board of Trade, who was responsible before the Minister; and as a result of the exercise of the prosecuting power the Minister has felt it incumbent upon him to give advice as to whether individuals were covered or not by the Boards, because if he were to prosecute it is obvious that he must know in advance whether he thinks that a person is covered or not; he would not be prepared to prosecute an employer for not paying the wages when he did not think that the wages were due. Those are the powers.

480. What about inspection; is that one of his powers?—The inspection is the Minister's power as part of the enforcement. The actual history of what has happened as between the Minister and the Boards is as follows: The Acts empower the Minister to appoint a Chairman and Secretary to a Board. There is no provision in the Acts for a Chairman of Trade Boards or a Secretary of Trade Boards; but as a matter of fact under the 1909 Act with the original four Boards the Board of Trade appointed a single Chairman, and appointed a Secretary who was also a whole-time official, as Secretary of the four Boards. There were only four Boards and as was pointed out earlier in the proceedings they were extremely deliberate in their actions, and therefore, there really was not enough to keep the Chairman occupied whole time in dealing merely with the duties which properly fell to him as Chairman of the Boards, and therefore an arrangement was made, I think in 1912, by the Board of Trade, by which the Chairman was asked to make himself responsible as an officer of the Board of Trade, and not as Chairman of the Boards—and that is where the difficult duplication of functions started—for inspection and for prosecution, and he therefore, from that time had a dual capacity: so far as inspection and prosecution were concerned he was under the authority of the Board of Trade, and he made his recommendations to the Board of Trade, but so far as his duties of fixing and settling rates were concerned he was the Chairman of the Board. Naturally it was very difficult as time went on to distinguish those two personalities; I do not think the Chairman himself was able very clearly to distinguish them, and it is perfectly certain that the Boards did not distinguish them.

481. *Mr. Layton:* Was there not also a Department of the Board of Trade which dealt with the confirmation of rates?—Yes, there was.

482. That was separate?—That was separate.

483. He did not hold that office?—No, he did not do that. That power has always remained in the Board of Trade, and there was never a prosecution, for example, initiated by the Chairman; he merely submitted recommendations to the Board of Trade, and in that respect he acted simply as the Board of Trade's officer, and not as Chairman of the Boards.

484. *Chairman:* He ran the inspection, did he?—He ran the inspection.

485. From the Trade Boards office?—Yes. I think it was in Chancery Lane at that time. Obviously, as part of his functions, as Chairman of the Boards when he was in doubt either on a question of demarcation or a question of prosecution he consulted the appropriate Administrative Committee, and in that way quite properly and rightly the Boards were brought fully into the administrative machine; and it worked very satisfactorily as far as we can judge, looking back at it now. I am afraid that I was not concerned with the Boards at that time, but at any rate on the records it looks as though it worked very satisfactorily; but the number of Boards was limited, and the amount of work was extremely limited. There were two Chairmen appointed in turn as whole-time Chairmen, and on the death of the second, Mr. Aves, in 1917, it was decided that the time for having a single Chairman had passed. At that time I think there were 8 British Boards—four additional Boards had been added by Provisional Order procedure—and 5 Irish Boards, and in the *Labour Gazette* of July, 1918, the following announcement was made: "Mr. Aves was Chairman of all the Trade Boards, but the Minister has decided, after very careful consideration of the whole position, that it would not be advisable to appoint a whole-time Chairman to succeed Mr. Aves, and he has therefore, determined that in future each board or group of boards shall have a separate Chairman, and he believes that this will promote a sense of greater independence on the part of the Boards." In these circumstances, of course, you could not maintain the old position by which the Chairman directed the inspectorate and dealt with demarcation questions, because clearly as soon as there was more than one Chairman there was no single head left to the inspectorate; therefore at first there was an interim arrangement made by which the Chief Secretary of the Boards (who was also a non-statutory creation but created as a result of convenience), was made what was called Chief Executive Officer, and he as Secretary took over the functions previously exercised by the Chairman, of controlling the inspectorate.

486. Do you say "as Secretary"?—I should say as a Chief Executive Officer of the Department. He was in control of the Inspectorate, and decided questions of demarcation up to a point, but both those functions were withdrawn from the Chief Secretary and vested in the Minister of Labour himself (though as they had always been exercised by the Secretary as his officer, and not as an officer of the Boards) by a letter which was sent to the Boards at the beginning of 1920. That letter marks a stage in a period of considerable controversy between the Boards and the Minister, which terminated in a report, which, if I may, I will discuss a little later, of a Committee appointed, in November last year, of which I was Chairman. That Committee reviewed the position from the beginning. It was not a Committee like yours which is set up to go into the whole framework of the Acts, and decide what, if any, amendments are required; the Committee assumed that the Acts were to continue roughly in their existing form, and that being so that it was to inquire whether any arrangement could be made between the Boards and the Ministry of Labour which would produce a more satisfactory state of affairs. The Committee had reported to it the history, namely, that originally there was one Chairman, that when one Chairman disappeared and several Chairmen were introduced in his place it was no longer possible for the Chairman to maintain the same general control over inspection and demarcation, and that in consequence it had

13 October, 1921.]

MR. HUMBERT WOLFE, C.B.E.

[Continued.]

been decided to distinguish more clearly between the statutory functions of the Boards and of the Minister. The Committee came to the conclusion, as they were bound to, that there was no question as to the statutory division of functions, that is to say that the functions attributed to the Minister as I have set them out obviously were his functions. So far as the neutral territory was concerned, namely, inspection, prosecution, and demarcation, they were prepared to admit, though this was only admitted after a good deal of controversy, that the Minister must be finally responsible; but the whole of their proposals were designed to give the Board a full opportunity of knowing exactly what was happening on those matters, and of expressing their opinion and seeing that their opinion was not merely expressed, but really considered, and that they should have a full opportunity where the opinion was dissented from of going to the most responsible people, whether the Solicitor of the Department, the Minister himself, or whoever was responsible, and of putting their case. That, broadly, was the effect of the Committee's Report.

487. *Mr. MacCallum Scott*: Were the whole-time Chairmen salaried officials?—Yes, they were salaried officials.

488. And the part-time Chairmen?—The part-time Chairmen were feed officials. As I was Chairman of the Committee, that, I think I may say, is a fair general summary of their view.

489. *Chairman*: As regards inspection, how was it proposed to leave that?—It was actually proposed by the Committee that an Assistant Secretary—a person of the rank of Assistant Secretary—should be placed at the Office of Trade Boards and that he should have responsible to him there the Chief Secretary, who would remain the officer of the Trade Boards and a Chief Inspector, who would also be at the Office of the Trade Boards, but would be wholly responsible in all his work to the Assistant Secretary as an officer of the Minister.

490. So that the inspection would still be conducted by the Ministry?—Entirely.

491. But conducted from the Office of Trade Boards?—Yes, so as to keep in much closer touch with the Boards.

492. As regards prosecution?—That remained entirely with the Minister under the proposals of the Committee.

493. And as regards demarcation of scope?—As regards that, it was recommended by the Committee that no opinion on scope should be offered by the Minister without previously consulting the Board.

494. I rather gathered from what you said yesterday that you think some other tribunal might be set up as regards scope?—That is an opinion which is forced upon one to a certain extent when one reflects that neither the Boards nor the Minister really have the power to decide scope questions. At the best, our opinions are given and may be over-riden at any moment by a Court of Law.

495. There is no reason why you should not still give opinions?—No.

496. Or the Trade Boards, either; but the decision must be with some tribunal or other?—If I may give you an instance, under the Insurance Act there was an Umpire to whom the power to decide those questions was given; he had the final decision and no question could arise thereafter. Yesterday, I said that they were mixed questions of law and fact; I think Mr. Pugh put to me the point that they were generally questions of fact, but if I may just give you an instance you will see what the difficulty is. For example, very many of the Trade Boards give a list of general occupations, such as "warehousing, packing, dispatching and other incidental operations." By the legal phrase *ejusdem generis* the incidental operations must have some connection with the other operations mentioned, and there are constantly odd cases coming up to the Boards where there is no possible ground for asserting that they are *ejusdem generis* with the other operations mentioned. The Boards argue, "This particular operation is obviously

part of the trade, and therefore it is covered by the Order." We say, "We do not dispute that it is part of the trade, but is it part of the Order; is it *ejusdem generis*?" It is that sort of mixed question of law and fact which is extremely irritating to the Boards, because they can see that it is part of the trade and it is very difficult to persuade them that the legal point has any bearing. It would make the administration far easier if there were somebody whose view was final upon that type of question.

497. Whether it is law or fact it has to be decided, and when you have got overlapping Boards you cannot let either Board decide the question between them; there must be some independent authority?—Yes, there must be. Of course, on that, under the Insurance Acts, the final decision is now vested, in the Health Section, with the National Health Insurance Commission, and in the Unemployment Section with the Minister of Labour, subject to appeal to the High Court, but originally, so far as unemployment was concerned, it was with the Umpire, who was an entirely independent official.

498. *Mr. Poulton*: Without having recourse to the Courts of Law?—Without having recourse to the Courts—without any recourse. At present we can only say that we should or should not prosecute if the employer does or does not pay the rate.

499. *Chairman*: Have the Boards expressed an opinion upon that point?—No, but, of course, as I said yesterday, in ninety-nine cases out of a hundred the opinion we give is not disputed; but there is the hundredth case.

500. I suppose reference to the Industrial Court would be rather too expensive?—Yes. I do not think it is impossible.

501. There is a standing Industrial Court?—Yes, there is a standing Industrial Court. It is not an impossible solution.

502. *Mr. Pugh*: But surely if it is not so much law, what the Industrial Court can settle could be settled by the Trade Board, could it not?—No, the difficulty about leaving it to the Trade Board to settle is this: Assuming that a Trade Board were an impartial, judicial authority—and I am prepared to give you that—you get three Trade Boards overlapping, and they may all three claim, if they have final powers, that a given individual is covered by each of them. You must get somebody who is apart from all the Trade Boards to decide it. We have actually got a case where two Boards are both actively claiming the same work.

503. Would such a body as the Industrial Council become competent to deal with a question which involved partly law and partly fact unless it was given those powers?

Chairman: I did not say the Industrial Council, but the Industrial Court.

504. *Mr. Pugh*: Yes, I mean the Industrial Court?—I should not like to express an opinion upon that. I mean my view is that there is a good deal to be said for vesting it in some special authority. From some points of view the Industrial Court, which has got a legal Chairman, and which has got experts on both sides, might be able to do it; but as the Chairman himself suggested, it probably might not be quite the obvious tribunal to consider it; something more like the Insurance Act Umpire might meet the case.

505. *Mr. Poulton*: There is no reason why that should not be adopted?—The umpire?

506. You see no reason why that should not be adopted?—None whatever.

507. *Dame Adelaide Anderson*: As regards the organisation of the Inspectorate, is there any published report on the organisation in the earlier stages when the Chairman of the Trade Boards directed the work of the Inspectorate?—I do not think so.

508. I understood from you that that worked very satisfactorily?—Yes. I ought to qualify this to this extent, that it disappeared during the war. What nobody allows for is this, that there was a very efficient Inspectorate up to about 1914, and it then dis-

13 October, 1921.]

MR. HUMBERT WOLFE, C.B.E.

[Continued.]

appeared. Those officers either went into the Army or they went to other Government Departments, and when the war ended it is literally true to say that there were only five inspectors surviving.

509. But had they lost their direction?—No.

510. But so long as the Inspectorate really lasted in full strength the system worked very satisfactorily?—Very satisfactorily.

511. I ask you, without suggesting anything about it, whether it had ever been considered possible to direct the Inspectorate by a Board of Chairmen, so as to retain the old spirit of control of the Inspectorate by the Boards?—Yes, that definite suggestion was made. It was suggested by Miss Tuckwell, I think, about 1913 that a Board of Commissioners should be set up who would be the Trade Boards Commissioners.

512. I meant really that the Chairmen of the Trade Boards themselves would form a Board with officers to direct, say a Chief Inspector or an Assistant Secretary, or whatever it is called?—I forget how many Chairmen there are, but I think there are about 38, and there are different Chairmen for Scotland, Ireland and England, and you have at present to apportion out your inspection between the three countries. If you asked me for my opinion, at this moment I do not think it is administratively possible.

513. Mr. Poulton: Not with that size?—I do not think it is administratively possible.

514. Dame Adelaide Anderson: Unless you break up into different countries.—Into groups, and then it would be extremely expensive, because each group would wish to have its own inspectors, and the essence of cheapness in administration is to pool.

515. I am only asking in order to elicit information.—Certainly.

516. And to compare with the effective administration when the Boards themselves really controlled it.

517. Mr. Poulton: You could have a panel, could you not?—Yes, you could have a panel, but then the difference between the two periods was that in the old period there were four or eight Boards with roughly 300,000 or 400,000 workers under them, while to-day you have 62 Boards with about 3,000,000 workers under them, and you cannot apply the same administrative machinery to the two things; at least, my view is that you cannot.

518. Dame Adelaide Anderson: My question was only directed to the point that the Chairman of the Boards or the Board controlling had proved effective.—That is perfectly true. There is no doubt about that.

519. The spirit was satisfactory?—Yes; though there was some friction.

520. Mr. Layton: Will you complete your statement of the duties of the Assistant Secretary?—Of the Assistant Secretary as recommended by the Committee?

521. Yes.—He was to be put in charge of inspection and prosecution. The Chief Secretary was to report to him, and he was to have control in respect of all questions of scope so far as the Minister was concerned, and to be generally responsible for the discipline and conduct of the Office of Trade Boards.

522. Have the members of the Committee got copies of that Report?—I do not know whether it has been distributed. I will have them here this afternoon.

523. Has the Recommendation been carried out?—No. When that Report was presented to the Minister, the Minister announced to the Boards that he was prepared to accept all the recommendations except the one as to the housing of the Assistant Secretary at the Office of Trade Boards. There was one other recommendation which I have not mentioned; it was the creation of a permanent advisory committee to the Minister, consisting of representatives of both sides of the Boards. The Minister accepted everything except the housing of the Assistant Secretary at the Office of Trade Boards. The Boards took the view that that was an essential

part of the Report (as indeed it is fair to say that it was) and that they were not prepared to accept the rest of the recommendations without that one, and therefore, when they were invited to nominate representatives to form an advisory committee, both sides of the Boards refused to nominate such representatives; and, therefore, to that extent I am afraid it is true to say that this Report is a dead letter.

524. Chairman: What has happened as regards the internal administration?—Since the Report only one big change has definitely been made, or rather, two changes have been made: the first has been that all scope questions in fact at this moment go to the Boards before an opinion is offered by the Minister. That is to say, if the Secretary of the appropriate Board knows the mind of the Board he sends it back to us with the Board's view without consulting them; if he does not know the mind of the Board he puts it to the Administrative Committee. In addition, the wish of the Committee that there should be a Chief Inspector has to some extent been met. Of course, at the present moment it is not a good time for appointing a large number of additional staff; it is not enthusiastically cheered in any quarter; and therefore, though we have made administrative arrangements the officers in question have had no increase in salary or status, but we have in fact set up a Chief Inspector who is in charge of all the inspection, and he is helped by three deputies. One of the deputies is a woman, and she is in direct charge of all the inspecting staff. She is one of the old Trade Board woman inspectors. Then there is another deputy in charge of the special inquiries, and a third deputy in charge of enforcement.

525. They work where?—They work in Montagu House. They have not been transferred to the Office of Trade Boards for various reasons. The Office of Trade Boards is housed in the Old Bailey now, and the accommodation has been criticised in the Press as being hideously expensive, and by those who have to use it as being hideously uncomfortable. I do not know whether the first accusation is true; the Press has multiplied the expense by six; the second accusation, I am afraid, is true, and we have not yet sent the inspectors down. In fact we rather thought that on that point we should defer taking action until this Committee had reported.

526. Mr. Layton: Who is in charge there?—Do you mean at the Office of Trade Boards?

527. Yes.—The Chief Secretary of the Boards.

528. It is really his office?—Yes, it is really his office, and he is in charge. He is responsible to Mr. Nicholson, the Assistant Secretary who is sitting here. The other proposal of the Committee was that there should be two Assistant Secretaries set up for the Trade Boards Branch. The Trade Boards Branch manages both the Headquarters work and the Office of Trade Boards work; and there is a Principal Assistant Secretary in charge of both branches and some additional work. The Minister accepted that recommendation and appointed an additional Assistant Secretary, but because of a series of changes which have happened in this office (which have no connection with this Report) at the moment there is only one Assistant Secretary; for a time there were two.

529. Chairman: You have also a statement about staff, which involves a great many figures. Would it be sufficient to put that in?—I think it would be sufficient to put that in. (See Annex I, Chapter IX.) I think I would like to put one figure, so that it is in your minds: that the total expense of the Trade Boards, including the cost of the Boards themselves, for the year 1920-21 was £120,000. That includes the whole of the expense of the staff, the whole of the expense of the meetings of the Boards, the fees of the Chairmen and travelling.

530. Mr. Poulton: And subsistence?—And subsistence. That is the whole expenditure first and last in respect of Boards which cover three million work-people; and it is very likely—our staff figures show—that this year the total expenditure will be nearer £100,000 than £120,000.

13 October, 1921.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

551. *Mr. Pugh*: Have you left this Report entirely?—I was coming to it later, but if there is any question you would like to put—

552. I do not want to deal with it now if you are coming back to it later.

553. *Chairman*: You are coming to it in the second part of your evidence?—Yes.

554. Does that conclude the first part of your evidence?—That concludes the first part.

(Adjourned for a short time.)

Mr. HUMBERT WOLFE, C.B.E., recalled and further examined.

555. *Chairman*: Will you come now to the second of the two main branches into which you divide your evidence? You propose to deal with the criticisms of the Acts?—Yes. I have tried to make Part I largely historical. Of course, as a result of questions it became a little more than historical, but in Part II I have tried to set out for the information of the Committee the main criticisms which have reached the Department. I shall not try to answer the criticisms; I shall simply make some comments upon them and leave the Committee to weigh the evidence which they receive afterwards. Before I actually answer the criticisms, I just want to remind the Committee of the main achievements of the Boards, the actual constructive achievements. So far as the criticisms are concerned, they divide themselves into two main classes, those which could only be met by drastic amendments of the Acts, and those which could be met merely by an alteration of procedure. The first class of criticism is advanced by three groups of critics. There is one group of critics who want to get rid of any form of wage regulation, and to revert to a system of settling wage questions between individual employers and employed. A second group of critics contend that while anti-sweating legislation is necessary, any other form of statutory wage regulation is mischievous. They base this contention on the ground that the existing legislation, particularly, as they think, the 1918 Act, involves too much interference with trade, and in their view actually leads to unemployment. The third group of critics are those who accept the principles of the Acts, both as regards anti-sweating and wage regulation, if it may be so described, but who think that the Boards themselves should be more autonomous; that the powers of the Minister should be entirely removed, or very drastically curtailed. The second type of criticism is advanced by persons who accept the Acts as they stand as far as the Minister's confirming authority is concerned, but make the following points: that the machinery is unduly cumbersome and leads to protracted delays; that insufficient attention is paid to local necessities and conditions, and that the Boards are not sufficiently representative of districts; that the composition of the Boards is open to criticism in respect of the appointed members; and in respect of excessive official representation, and of the presence of unorganised representatives on both sides. Then there is a very strong complaint of failure to enforce the Acts owing to inadequate inspection, and there is a further complaint that the definition of the trades is faulty. Then there is the complaint with respect to the difficulties which arise as between the Minister and the Boards, to which I have already referred, and which, if I may, I should like to deal with rather more fully; and there is the general criticism which comes chiefly from Labour quarters that the Acts have not been extended sufficiently rapidly, at any rate, lately; and the counter criticism from the employers' side that the extension has been too rapid.

556. *Mr. Pugh*: Before you proceed to discuss the matter, when you say "failure to enforce the Acts," is that from both sides?—Yes. Before I deal with that, I just want to touch on the actual achievements of the Boards in respect of the improvement in wages conditions; the improvement of organisation among the employers and employed; and the improvement in industrial relations in the trades to which the Acts have been applied; the effects of the Boards on industrial efficiency; the effects of the Boards' legislation on juvenile labour. If I may, I will

deal with wages first. As I have said several times in evidence, the object of the Acts is to give protection to the workers, and the Acts would have failed if the wages level which they have established were not substantially better than the wages level which existed before the Acts were applied. It is not a criticism of the Acts to say that there has been a considerable increase in rates of wages, because the Acts would not have been applied unless a considerable increase were required. For example, if you take the earliest trades of all, the first rates in the chain-making trade which were fixed by the Chain Board involved an increase of at least 100 per cent. The rate actually fixed was not an alarmingly high one; it was 2½d., but 2½d. in the chain trade was at least 100 per cent. in excess of the rate per hour previously paid in the trade. The fact that the Trade Boards have brought about a considerable increase in wages is obviously not a ground for criticism. On the contrary, they would have failed in their duty if they had not effected an increase.

557. *Chairman*: As far as sweated trades are concerned?—Yes, as far as sweated trades are concerned. I have had figures taken out to show the following points: First, the relationship between the rates of wages actually obtaining in the Trade Board trades, and trades of a similar character; that is, trades covered by Joint Industrial Councils and the less skilled workers in the highly-organised trades. (See Annex II.)* Then I have had figures taken out to show the relation between wages fixed by various classes of Boards. (Printed in part only—See Annex III.) And I have had figures taken out to show the relative increases in the rates of wages fixed by Trade Boards as compared with the increases in comparable trades. (See Annex IV.)

558. Have you a copy of these figures?—I am going to hand them in.

559. Could you hand them in before you comment upon them?—I have only one copy and I am afraid it is an enormous document, but I am just going to pick out some figures. I will take first the comparison of the actual wages level in the Trade Board trades and the allied trades. (Annex II.) So far as the adult male workers are concerned, the great majority of the rates fixed by Trade Boards range from 1s. 1½d. per hour to 1s. 4½d. per hour. In outside Joint Industrial Council trades and trades of that type the chief range is between 1s. 2½d. and 1s. 6d. per hour; so that in so far as there is a difference the advantage is with the outside trades. The trades that I have in mind are not trades like the cotton trade, the steel trade, the coal trade, or any of the big organised trades, but the smaller trades which are better organised than the Trade Board trades, the type that are covered by Industrial Councils.

560. *Mr. Layton*: Such as?—I will give you a list of them, if I may. To give instances, the metal trades, bobbin and shuttle-making, pen-making, needle-making, screw-making, harness furniture making, gold and silver work. Then there are the food-preparing trades, oil-cake milling, rice milling; then there are the pottery, drug and fine chemical trades, explosives manufacture, and brick and roofing-tile making. These trades are not of the broad staple character. Then if you come to the staple trades like building and dock labouring, you find that the labourers' rates vary from 1½d. to 1s. 7½d. per hour. The majority of rates in outside trades are between 1s. 2d. and 1s. 4d. per hour, so that on the whole the Trade Board rates

* Page 101.

13 October, 1921.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

as they stand at this moment are certainly not excessive as compared with the rates for comparable classes of workers settled by voluntary agreement outside.

541. *Chairman*: Is the building trade rate by agreement?—Yes, entirely. The building trade basis is fixed by Conciliation Boards district by district.

542. *Mr. Layton*: Are you referring to the current rates in the building trade?—Yes.

543. *Mr. Pugh*: But 11½d. is rather low for labouring work in the building trade, is it not?—Yes, it is low, but it exists. I do not know what area it is in. Of course, you know that each District Committee fixes its own rate. I have a complete list of figures.

544. I should have thought that 1s. 7½d. would have been somewhat low.—These are labourers, 1s. 7½d. is a fairly high rate for a builder's labourer, is it not?

545. It is about 3d. or 4d. below the bricklayer; I thought they were about 1s. 9½d.—That probably is a reduced rate. You will remember that there was a considerable reduction in the rates two or three months ago.

546. I have taken that into account.—I think you may take it that this is perfectly reliable. I will just get the actual figure for you. I am sorry; you are quite right; it is 1s. 2½d.; but it does go to 1s. 7½d. I do not think any higher rates than 1s. 7½d. are shown.

547. *Mr. Poulton*: Not for labourers.—Not for labourers. In the case of dock labourers it starts at about 1s. 7½d. and goes up to 1s. 9½d., but the rates for builder's labourers do not go higher than 1s. 7½d.

548. *Mr. Pugh*: The dock labourer would be under the recent reduction?—Yes, that is so. So far as women are concerned, it is roughly true to say that there is very little distinction between the rates payable to women in the Trade Board trades and women in allied trades outside the operation of the Acts. Although the figures do not quite indicate this, it is probably true to say that women in Trade Board trades are better off than women in non-Trade Board trades. As a matter of fact, the summary shows that they are identical. 8d. to 9½d. is given as the average throughout (see Annex II), but I think that is unduly favourable to the women in the non-Trade Board trades. It is merely a statement of fact so far as the non-Trade Board trades are concerned. It is perfectly open to a critic to say it may be true that as they stand the rates are not unduly high, but that does not prove enough. If they had been unduly raised that would prove that the Trade Boards had moved too quickly. I have had the figures taken out, so far as they can be taken out, to indicate the relative increases in Trade Board and non-Trade Board trades. (See Annex IV.) The average percentage increases for men in the Trade Board trades range from about 113 per cent. to about 200 per cent., averaging, I think, somewhere near 140 per cent. The average increase in hourly rates in organised industry since July, 1914, is estimated to average at least 150 per cent.; so that the average increases in non-Trade Board trades have actually been higher in respect of adult men than they have been in the Trade Board trades.

549. *Chairman*: Since what date?—As between the pre-war period and the present. That is the result of increases in the cost of living. So far as the women are concerned, there is no doubt that the women in the Trade Board trades have had a higher increase than the women outside. Their percentage increases are higher than the men and they are higher than women in other industries. The women's increases range from 143 per cent. to 214 per cent., and the women's increases in industries not covered by Trade Boards range from 100 per cent. to 200 per cent. There is this much to be said, that where the rate was unduly low it is not unnatural, or, indeed, improper, that there should be at least that increase. You have this kind of criticism in respect of the corset trade; it was freely alleged in the Press that the increases in that trade were 700 per cent. over the pre-war level. This would have meant that the

pre-war rates for fully trained adult workers were between 1d. and 1½d. per hour. Of course, the allegation was not anything like true, but in that case there has been a very considerable increase, because the rate before the war was a sweated one. There were two points in the Press statement: the first was that I think they said 600 dressmaking and corset firms had gone out of business in Hampshire, and the fact was that there were only about 400 firms all told in that area when the allegation was made, and the second was that the rates had been increased 700 per cent., which would have meant about a penny rate pre-war. We wrote and pointed out that to them, but they did not pay much attention to us.

550. *Lord Weir*: There were very low rates paid, and the percentage increase is large?—Quite so.

551. Is it not true to say that the Munitions Orders had some effect in bringing about these increases? Is it right to put it all down to the Trade Boards?—That is a very fair point to put. The Trade Boards very often took over the rates fixed by Munitions Orders.

552. Would you say the Munitions Orders exercised a preponderating influence in raising the women's wages?—They had a very considerable influence. The Munitions Orders changed the whole basis of rates of wages.

Mr. MacCallum Scott: In which branch of the trade does that apply?

Lord Weir: It is just the general influence of the Orders made during the war.

553. *Mr. MacCallum Scott*: But I understood it to be said that in non-Trade Board trades the wages of the women had risen more than they had risen in the Trade Board trades?—No, it was the other way; they have risen less. But it is true to say that the influence of the Munitions Wages Orders applied right through industry. L2 fixed 6d. per hour, which was almost an unheard-of rate then.

554. *Mr. Poulton*: That would raise the rate, would it not, altogether apart from the Trade Board?—Undoubtedly, so that the whole of the increases cannot be attributed to the action of Trade Boards.

555. *Mr. Pugh*: I suppose the effect of the Government Orders would be the same over the whole trades so far as women are concerned, so that if we find that the ultimate result is that in other trades the percentage increase is less, the conclusion one may arrive at is that that is because the basis rates or the original rates of the workers in the Trade Board trades were so much lower?—I think that is a fair conclusion, because you can assume, although you cannot take it as complete, that it is the less highly paid trades that have already been covered by the Trade Boards. There are certain special rates fixed by the Trade Boards which go very high. In the perambulator trade I think there is a rate which is fixed at either 1s. 11d. or 2s. 1d. per hour; that is a skilled man's rate, and in so far as there are skilled men's rates fixed by Trade Boards, the increases and the levels compare exactly with the rates of any other skilled men in any other industry. There are obviously not a great number of rates of that kind in the Trade Board trades, but where they exist they generally follow the ordinary industrial conditions. Therefore, if I have established my point as far as I have put it, it is to show that if there have been excessive increases in rates in Trade Board trades that is only because the rates from which the increases started were unduly low. Where they have been normal rates to start from, Trade Board rates they have kept pace with, the general tendency of rates of wages fixed voluntarily throughout the country, and therefore an allegation that the Trade Boards have unduly upset industry cannot be sustained if those figures are correct, in my view, for what it is worth. Then, in the second place analysing the Trade Board rates it is interesting to note that as between the Trade Boards themselves there has been a certain variation, indicating that the Trade Boards have in fact fixed rates which each trade might be expected to bear and

13 October, 1921.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

have not fixed uniform rates for all trades. We have taken out figures to show the variation in rates as between Trade Boards which have fixed flat rates and Trade Boards which have fixed a number of rates for different classes of workers. We have shown the variation of rates within groups, and we have tried to show the variation between one group and another. (*Printed in part only. See Annex III.*) When I use the word "group" I mean, say, a clothing group and a metal group; I mean the variation as between the metal group and the clothing group. So far as the rates for general workers (*i.e.*, workers other than those belonging to special classes) are concerned nothing of very great interest emerges. Where Boards have fixed flat rates to apply throughout the industry the range in the case of adult male workers is from about 11d. to 1s. 4d. per hour, while, where Boards have fixed a number of rates for different classes of workers the range in the case of general workers is from 1s. 1½d. to 1s. 5d., with an average of 1s. 2d. to 1s. 3d. Therefore, it appears from that, that whether the Trade Boards have fixed series of rates or a single flat rate, they have got at very much the same sort of figure.

556. *Chairman*: What do you mean by "series"?—I mean they had ranges of rates, as distinguished from flat rates, a range by classes. But within the groups, what is rather interesting is that allied trades have found it necessary to fix rather different rates in occupations which seem quite alike and yet because of slight differences cannot be paid in the same way. For instance, so far as male workers are concerned, the ready-made tailoring and wholesale mantle and costume rates range from 1s. 3d. to 1s. 9d. for the skilled classes, and the retail bespoke is 2d. per hour higher for the lowest classes than in these trades, presumably because of the higher skill required. A flat rate fixed for the whole lot would have hit the worker in the retail bespoke trade.

557. He might have bargained for that?—Yes, but he would not have got it compulsorily. By this method the retail bespoke man had an advantage which he was probably entitled to by tradition and by special trade skill. Then you have differences—I am still dealing with males—where special rates have been fixed for the most skilled workers. For example, in the dress-making trade and the cloth hat and cap section of the hat, cap, and millinery trade, special rates ranging from 1s. 7d. to 1s. 9d. have been fixed for cutters, while 1s. 3d. to 1s. 7d. has been fixed for such workers in the corset trade. There is a considerable variation in rates, and yet the actual work to an outsider, which is all I can profess to be, does not sound very different. In other words, within the allied group themselves they have found it necessary to differentiate.

558. That has nothing to do with sweating?—No, it has nothing to do with sweating.

559. It is pure wage regulation?—It is in a sense wage regulation, but it indicates, at any rate, that the Boards have adapted the rates to suit their own trades.

560. *Lord Weir*: Could you give us the extreme minimum over all trades?—For men and women?

561. No, for adult men for example—I can give you the actual minima. Do you mean the average or the actual lowest figure?

562. I want to see the range in the minimum.—The lowest rate for men is 11d., and the lowest for women is 7d.

563. Over the whole of the trades 11d. for an adult male is the lowest minimum. What is the highest?—You will remember, of course, the Chairman's point rather applies when you get to the highest rate. I do not think anybody could describe it as a minimum, because it applies to a very skilled man, and I think you would probably get as high as 2s.

564. *Chairman*: That is for a skilled worker?—Yes, for a skilled worker.

565. What is the lowest Trade Board rate for a skilled male worker?—The lowest Trade Board rate for a skilled male worker is 1s. 5d.

566. What is the highest for the unskilled?—1s. 5d.

567. And the woman?—The women's lowest is 7d. and the women's highest is approximately 9½d.

568. That is explained by the habit of the trade and the profit-making capacity?—That is right. I mean it does raise a very fundamental point. It may be urged that 1s. 5d. is more than a minimum—I mean more than what is required as the minimum. On the other hand, it will be asserted that if the trade can bear to pay 1s. 5d. as the minimum there is no reason why it should not fix it compulsorily, and it may be urged that if you were to fix a flat national minimum and were to choose as your minimum the lowest minimum that any trade can pay, the guaranteed rate would be of no value to a really organised trade.

569. *Mr. MacCallum Scott*: What is the meaning of the word "minimum" in this connection? Does it mean that different rates are charged for different districts?—No, it means a flat national minimum for that trade.

570. Would not it be better to leave out the word "minimum"? Are they all "minimum"?—They are all "minimum," it is true, because the Trade Board cannot fix anything else by statute, and, as the Chairman put it to me, some of the rates fixed as minima are in fact so high as not to be minima.

Chairman: It all comes back to the discussion we had the other day: Is it subsistence or is it wage regulation?

571. *Mr. Pugh*: I suppose the point is this, that if you are fixing a minimum for the steel trade, that would necessarily be different from the minimum fixed for the making of rag dolls?—Certainly, in favour of the steel trade; but, of course, it might be said that there is a certain rate common to the steel trade and the rag doll trade which should be the lowest possible rate which you should pay to any person working. The criticism which has been made of that suggestion is that if you got to that figure it is a figure which would be absolutely useless in the steel trade, and probably useless in 80 per cent of the trades in the country, and therefore would be no protection to the worker except in a trade like the toy trade; and it may be useless in some of the associated trades just on the borderline.

572. *Dame Adelaide Anderson*: In every case now there is a standard week of so many hours?—Yes, nearly every Board declares a normal week for its trade. There are one or two, however, who have not declared a normal week.

573. So that it shows what is the ordinary weekly wage?—It depends on the amount of time.

574. Supposing they are working ordinary time?—If they are working 48 hours, which is the normal week in the majority of cases, earnings can be definitely ascertained. On time work there is one other figure which we tried to get out and could not get out; that was, a comparison between the different groups, *e.g.*, as between the textile group and the clothing group. We could not do it because there are so many marked variations. For instance, in the textile group the rates differ in their basis, and then there is a considerable divergence with regard to the age at which the rates are applicable. It should be remembered by some of you that we made a great departure in the Munitions Orders by fixing the adult age for women as 18. There is a long history behind that, but, at any rate, it was done, and the tendency has been rather for Trade Boards to copy that.

575. *Mr. Poulton*: For the purposes of the fixing of rates by Trade Boards, was the adult rate in the jute trade for males 18 or 21?—Twenty-one.

576. Seeing that that is the lowest rate for a male, do you know whether the fixing of that comparatively low rate had anything to do with the fact that there were so many women engaged in that particular industry?—No, I do not think so; I can honestly say I do not think that is so. Jute was always largely a woman's trade. Of course, as I said at the very outset yesterday, the figures for jute were signally low; in 1906 the rates paid to both men and women were extraordinarily low.

577. *Mr. Layton*: You did not give us the trade which the 1s. 5d. applies to.—I am afraid I have not got the information here at this moment, but I can look it up. I am not quite sure what trade it

13 October, 1921.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

is, but I can find out, because I have the whole list here. It is the perambulator trade.

578. That is a small trade, I imagine.—Yes, it is a small trade, and, of course, a rather highly-skilled trade; but this is an unskilled rate in that trade, though, of course, the work is probably semi-skilled as compared with similar work in other trades. Those are the only points I wanted to make with regard to rates of wages.

579. Mr. Poulton: In fixing some of these later rates, were they fixed, do you know, upon the basis that it was wise to fix rates in the trade, not because they were sweated trades, but because it was a wise thing to regulate a trade?—I can only say on that that we applied the Trade Boards Acts because the trade fell within the meaning of the Acts, namely, that they had an ineffective organisation, and that, in addition, the wages were such as warranted the application of the Acts. What the idea of the Board was in fixing a specific rate I am afraid I could not answer.

580. Chairman: It is quite likely that the reason was what Mr. Poulton has said.—There may have been some tendency in the Boards lately to alter their functions.

581. Mr. Poulton: To widen them?—To widen them; but it must not be forgotten that under the old Act the Boards had ordinarily the same powers as regards wages. They are very nearly the same powers as under the 1918 Act.

582. Lord Weir: The provisions of the 1909 Act existed, and there would be very few evils which it could not redress.—I think that is true, providing that you knew what you meant exactly by "exceptionally low"; those are the words of the 1909 Act. You could only apply it to wages which were exceptionally low, and it is a little difficult to say what the words meant exactly.

583. Chairman: You construe the words in the 1918 Act as meaning "practically too low"?—Yes.

584. Lord Weir: It was, however, making steady progress in the trades.—Yes, it was making steady progress in the trades to which it had been applied. It was applied, for instance, to the tailoring trade. This has completely changed in character since the 1918 Act was applied.

585. Mr. Pugh: The passing of the 1918 Act surely was due to the representations, partly at least, coming from the trades themselves.—It was largely due to the generally expressed fear that when the war was over there would be a considerable wages slump, and it was necessary to make some provision to meet that.

586. Chairman: And the Whitley Report?—Yes, and, of course, the Whitley Report, and there was the Report of the Hills Committee to which I referred.

587. Mr. Poulton: Would not Sub-section (2) of the Section in the 1909 Act be quite wide enough to cover the whole of that point?—It depends on the extent to which sweating is general. I do not wish to hold the chain trade up to opprobrium; I have no such object in mind; but supposing the chain trade was exceptional in paying the 1½d. per hour, you could apply the Act under the wording. But if it was 3d. you could not say it was exceptional because it applied to a large number of people, and therefore you would be restricted by the mere wording of the Act.

588. It goes on to say "as compared with other employments"?—Yes, but if rates in a lot of employments were all at 3d. per hour it would not apply.

589. Dame Adelaide Anderson: Was it not the intention to avoid the decline in wages that would be very likely to occur, that they should not be dependent only on a comparison with other employments?—I think that is true, and of course it should be remembered with regard to the Act of 1918 that although the wording was much wider, it was not so very wide after all; because you had to establish two things: you had to establish not only a low rate of wages, but you had to establish ineffective organisation. So you had not a free hand.

590. Chairman: It does not say the rate of wages?—You must have regard to the rate of wages; it does not mention the word, I admit.

591. It must mean that?—Yes, that must be the implication. Of course it almost follows that if you have a very inadequate organisation, you are likely at least to have pockets where low wages are paid. I think the only industry which is not organised which has succeeded in getting high wages is domestic service, and they have not any organisation.

The second point that I had to make as to the achievements of the Board is as to the effect of their existence on the organisation of employers and workers; that is, rather an interesting point, because the Whitley Report recommended the Trade Boards as a half-way house between the anti-sweating machine and the Joint Industrial Council. On the other hand, it was felt widely in some labour quarters that the effect of the Trade Boards might be to interfere with organisation; that the workers might think they had all the organisation they needed in the Trade Board and would not continue to join Trade Unions. It is difficult to state the position with certainty because everybody knows that during the war at any rate, the unskilled organisations increased very rapidly in numbers owing to war conditions, but allowing even for that, it is perfectly safe to say that so far as the Unions are concerned, there is no doubt that where a Trade Board exists they have not suffered; and not to translate a *post hoc* into a *propter hoc*, it is certainly the fact that in every Trade Board trade, as far as we can gather, the Unions are better off from the point of view of organisation than when the Trade Boards started.

592. Have any of them emerged from the state where there was deficient organisation?—We do not like to say so with certainty, but, for instance, the United Garment Workers' Union have changed pretty considerably. They are a very strong Union now, and they have been able to make agreements outside the Ready-made Tailoring Trade Board with the employers, who are equally well organised; and although we do not say that the position has been reached when the trade should be taken out of the Trade Boards Acts, it is getting near to the stage when it is open to question.

593. Chairman: Perhaps it has reached the stage when you would not have put it under a Trade Board?—I think that is possibly true, excepting that you never know what pockets of bad payment might not have existed, say, in the East End; and it is a difficult trade to deal with, because there is so much garret work.

So far as the employers are concerned, there is no doubt that the creation of a Trade Board does increase association. The moment a Trade Board is set up in a trade, the first thing we hear is that a new association of employers, generally with the same secretary, has been formed. I think there is no doubt that Trade Boards have tended to strengthen organisation on the employers' side.

594. Dame Adelaide Anderson: Is there any evidence easily accessible showing the growth of the different industries in organisation—I mean as regards numbers? The Hills Committee, for instance, gave a tabulation of the increase of organisation of women over six or seven years?—We have in the Department the trade union membership figures over a certain number of years, and we can show the trade union membership of the unions of these particular Trade Boards, but it will not prove anything because the causes of the increase or the decline may not have been directly associated with the Trade Board. All that I am concerned to establish is that the facts are that in Trade Board trades there has not been a decline in organisation as was feared, at any rate on the trade union side, would happen. I am reminded that the figures have been obtained confidentially, and I cannot communicate them except as confidential information.

595. Mr. Poulton: Which figures?—The figures of the membership of the unions on the Trade Boards.

13 October, 1921.]

MR. HUMBERT WOLFE, C.B.E.

[Continued.]

596. *Dame Adelaide Anderson*: If you remember, there was a summary table given?—Yes, I have that. Those are generally published figures which were sent to the Ministry of Labour Statistical Department. If the Committee would like the confidential figures, I can get them out.

597. *Mr. Poulton*: What would be the difference between those figures and the figures, for instance, which are published in the Trades Union Congress reports?—I am not quite sure. When we are making an investigation into a Trade Board trade we ask the union what its actual membership is in various localities in order that we may arrive at an estimate of the representation required, and it may well happen that the figures given to us at that stage are a little optimistic, or perhaps a little pessimistic—generally, I am afraid, the former—and they are not always found subsequently to agree with the Congress figures. The Congress figures are available to everyone, and they can be put in, and the figures which *Dame Adelaide Anderson* has can be put in. I do not know whether the Committee want to raise any other point at this moment upon that, but the next point I think, is industrial relations.

598. *Mr. Poulton*: Yes, there is just one point. You made a statement just now which I thought conveyed the idea that the department was considering whether the time had arrived to withdraw Trade Board support and regulation from certain industries; that is to say that their organisation had become such that they would no longer be entitled to the protection of the Trade Boards?—Yes.

599. I should like to know whether you have considered the other point; if that protection is withdrawn, the possibility of the employers' associations particularly falling to pieces, and the same old bad conditions coming about, and the whole of the machinery having to be gone through again?—That is a very pertinent question, but what we have got to look at is the statutory provision upon that point. Section 1, Sub-section (3) of the Act of 1918, says: "If at any time the Minister is of opinion that the conditions of employment in any trade to which the principal Act applies have been so altered as to render the application of the principal Act to the trade unnecessary, he may make a special order withdrawing that trade from the operation of the principal Act." We have only had, I think, three or four formal applications for withdrawal; I mentioned the most important from associations in the jute and flax trades, and I think the Merchant Tailors of Scotland have made an application; but it is interesting to take your point as showing that we have examined that. In the jute trade what the employers put to us was this: they said, "We are 90 per cent. organised," and *Mr. Sime*, who is the leader of the workers, said that the workers were at least 80 per cent. organised. The rate of wages in the jute is, it is true, low; as we said a minute ago, it is 11d. for the men, and it is one of the lowest rates fixed for the women, but even so, there is a very high degree of organisation. It would be difficult to say that the rate of 11d. which now obtains is in itself, taken with an 80 per cent. organisation, such a rate as would warrant the imposing of a Trade Board. In fact, as the Chairman said earlier to-day, if we had found those conditions existing it is improbable that we should have applied the Trade Boards Acts. When the employers put it to us strongly that we should withdraw the Trade Board, the workers said, "If you withdraw the Trade Board the whole history of the jute trade shows that we shall get back to the conditions in which we were before there ever was a Trade Board; we do not believe that any conciliation board would have satisfactory results in the jute trade"; and in fact they went so far as to say that they would not be parties to a voluntary conciliation board if the Trade Board were withdrawn. On those grounds and on certain other grounds the Minister was not satisfied that the conditions were sufficiently altered to enable him to withdraw the Acts and he did not; he refused.

Mr. Poulton: It is a point that ought to receive very careful consideration, because I have some small

experience of it, even in my own trade, which is highly organised. The employers, or some of the worst employers, say that now that the war is over they can get their labour free, and they need not belong to the organisation, and the result is that we are unfortunately having strikes as the direct result of that. We are not going to submit to their getting better conditions than anybody else, so that they get outside, and the result of their getting outside is a strike.

600. *Mr. Pugh*: Was that a post-war application?—Yes, it was post-war.

601. *Mr. Poulton*: It needs to be very carefully considered?—Yes. On the other hand, although we were quite clear there, the ready-made tailoring case which I mentioned in connection with the strengthening of the United Garment Workers' Union was different. There was no application to us for removal from the Trade Board; far from it, when we tentatively suggested that there might be a case in view of the nature of the agreement reached off the Trade Board, both sides repudiated the suggestion as an insult. There you have the case of big associations of employers and employed meeting and arriving at a complete agreement off the Board. It is true that it left out of account some of the smaller districts, but still there was an agreement reached before they came to the Board. When we put it to the Board that possibly it was worth considering whether they had reached a state of organisation which made a Trade Board unnecessary, they put it to us that they only represented a proportion of the trade, and that if the Trade Board were withdrawn the rates would go down again in all the unorganised parts of the trade.

602. Is not the answer to that also the fact that although there may be a number of people outside the organisations of employers and employed, nevertheless if they come to an agreement they will accept the agreement arrived at?—Yes, only so far as the people who are parties to the agreement are concerned.

Lord Weir: You see a little doubt of the wisdom of what the Whitley Council recommended, where they said "pending"?

Mr. Poulton: Yes.

603. *Mr. Pugh*: In the application of Section 1, Sub-section (3), I suppose the Minister would consider it at least desirable—or shall I put it more strongly, and say consider it necessary—to have some sort of agreement from the employers' and the workers' sides of the Trade Board as to the application of Section 1, Sub-section (3) before he actually applied it?—He is under the same statutory obligations in withdrawing a Trade Board as in setting one up: he has to give the same Notice of Intention, and allow the same period of objection, and if objections are made and are not withdrawn he has to have an impartial inquiry in just the same way as he would have to have one when setting up a Board if objections were maintained; and in any case, of course, he would consult with both sides, and the plain fact is that he never has withdrawn a trade from the Trade Boards Acts yet.

604. Do you interpret this clause as implying that if the Minister so chose he could, irrespective of the opinions expressed by both sides of a Trade Board, withdraw the trade from the operation of the Acts?—If I were interpreting it legally, I should say certainly that is the meaning, but I do not think the Minister in practice would fly in the face of the united opinion of both sides unless he had very good grounds for doing so.

605. *Chairman*: He would have to give notice and all that?—He has to take exactly the same steps as when he sets up a Board.

606. And I suppose he has to deposit the Order in the House?—He has to give Notice of Intention; then there is a period of objection, and then if there are objections and they are not withdrawn, he has to hold a statutory inquiry.

607. And if he makes the Order he has to lay it before both Houses?—Yes, I suppose the same procedure applies to the Order; and either House can move to have it invalidated.

13 October, 1921.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

608. *Mr. Layton*: You see, in fact, no sign of any of these trades growing out of the Trade Board stage, as was contemplated in the Whitley Report?—I do not say that: I would not say that. We have some doubt in the ready-made tailoring, though at the present moment compliance with the Trade Board's rates is not very satisfactory. It would be disappointing to admit that in no case has a Trade Board so improved conditions as to get near the Whitley stage. I think the best instance, though even that has not quite reached the point, is the ready-made tailoring trade.

609. You have no evidence as to whether the opinion among employers or employed on a Board accepts the view that the ultimate development should be to go out of the Trade Board?—We have no indication that they are ready to adopt a suggestion that they should go out. You see the employers have had the advantage of seeing their competitors compelled to pay the rates, and the workers have seen the employers compelled to pay the rates to them, and I do not think either party is particularly anxious to relinquish that advantage.

610. *Chairman*: Of course, the members of Trade Boards themselves would not be very desirous of laying down their duties; they are very interesting?—No, they are not. You will find, if you examine the expressions of opinion which have been given lately, that a number of Trade Boards have passed very strong resolutions in favour both of their own existence, and of the existence of Trade Boards generally.

The next point I had was the effect on industrial relations, which is very much linked up with this point; and again it is not possible to make too high a claim on behalf of Trade Boards. It is true, roughly speaking, that there have been hardly any trade disputes of any kind in the Trade Board trades. It is not completely true: there have been one or two, but of course it is fair to say that the trades were unorganised, and you are much less likely to have serious trade disputes in unorganised trades, not because Trade Unions cause trouble, but because, when you have got an organised trade you can get a broader basis for determining your view. But apart from that, it is very noticeable that in the Trade Board trades interruption of work has been very small indeed in any of them throughout, and I think that is a very noticeable thing, and a fact which should be borne in mind in estimating the value of the Trade Boards as an instrument in dealing with industry at all.

611. That is so even in those which have become more organised as time has gone on?—Yes, it applies throughout. There must have been occasions—I have not got that noted—where actual disputes have occurred, but they have been very few and far between.

612. *Mr. Poulton*: So that it has had the effect, not only of setting up a standard of wages, but also the effect of steadying the industry from the standpoint of an employer not having his business upset?—We think so, certainly.

613. *Mr. Layton*: Have you followed out that point in the history of those trades before the Boards became effective?—We did that with jute, and my impression is that the jute trade was much more uneasy before it had its Trade Board than it has been since, but I am not prepared to say that definitely. I do want to qualify that, as I did at the beginning, by saying that they were not trades, at any rate, in which trade disputes were common, because they were unorganised, but certainly the general spirit seems to have improved steadily since the Trade Boards have existed.

614. *Mr. Pugh*: I suppose we may take it, though, that if an attempt had been made by those low-paid workers by any form of organisation to raise their wages to the point which has been reached by the Trade Board, that could not have been carried out without considerable disputation in the trade concerned?—I think that is a very true saying, yes.

I think they would have had to fight very hard by the ordinary industrial methods to get the position which they have got by the decisions of the Boards.

615. And without disputes?—And without disputes.

616. *Mr. Poulton*: And that agreement has been advantageous to both sides?—I should think so, because the employers have not had their business interrupted.

617. *Chairman*: Some employers think that wages are too high?—Of course I had that qualification in mind. Some of them would say that the absence of disputes is more than counterbalanced by the chaos introduced in the wages bill.

618. *Lord Weir*: The real truth is that they have removed wages from the field of trouble?—That is really what it comes to.

619. You have still all the other causes of industrial trouble?—Yes.

620. Or do you suggest that even in connection with them the Trade Board spirit—the atmosphere—improves them?—I do not want to be cynical, but I think that if you can settle the wages trouble in a trade, you have gone a long way to make it happy.

621. *Mr. Pugh*: That is consistent with our experience.—There are two other points on achievements which I do not want to treat at length, but one is a curious point, and that is the effect on the industrial efficiency of the trade. It is rather a surprising and unexpected thing, but it constantly happens that when our Inspectors go round—of course we have very few competent enough to do this because the War robbed us of so many of them—they find that workers employed on piecework are not earning at least the amount of the basis rate applicable, and it is quite clear that the piece-price fixed is not high enough, but the employer points out that his competitor does not seem to be paying higher piece-prices, and yet his men are earning the right amount, and asks what is the matter. Our Inspectors have constantly gone round, particularly in the corset, lace-finishing, shirt-making, paper-box and laundry trades and indicated to employers that if they make alterations in machinery, or if they make some alteration in the way of carrying on their work, they can, without any difficulty, pay higher rates, and get a higher output; and it is surprising, particularly in the lace finishing and the corset trades, how much has been done in that direction. I will hand in some notes of a few cases which I have here. (See Annex V.) That is one of the rather unexpected developments which, I think, is admitted by employers in those trades. Then, so far as juveniles are concerned, I meant to deal with them, but I think I dealt with them rather at length yesterday, and I do not think I need cover the ground again. The Boards have, as I pointed out in some cases developed a very elaborate apprenticeship system; they have dealt with learnership in other cases on very sound lines, and they have, to some extent, helped to mitigate the evils of the blind-alley employment which were so notorious and so much canvassed in the public Press.

622. *Chairman*: They have not, except in the case which you mentioned this morning, prevented the employment of younger labour?—No, they have tried to strike a balance so as to fix a rate not high enough to scare employers from employing juveniles, and not so low as to interfere with the employment of adults. I think you will probably not want me to go further into juveniles, but those are the positive achievements of the Boards which must be borne in mind at a time when they are being exposed to so much criticism. They have actually done these things. Then, if I may, I will come to the criticisms. The first criticism is the broad one put forward by critics who object to statutory interference with wages of any kind, and I think I am entitled to say on that, that the objections under this head are not made widely though they are often implicit in more moderate proposals; it does not follow because such a suggestion is not stated explicitly by a person who makes proposals that he may not hope that the result of his proposal may be to remove all statutory interference with wages. But I think that the people

13 October, 1921.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

who propose to get rid of even anti-sweating legislation could only carry through their proposal on the assumption that no sweating exists at the present moment. It is not likely that anybody would seriously recommend that the sort of conditions which Trade Boards have removed should be allowed to continue or to be revived, and I think it is final, as far as that sort of view is concerned, to say that we still find—I admit in very isolated cases—wages of 3d. and 4d. per hour being paid to adult women at this time, and that 5d. per hour, though by no means common, we have discovered to be quite comparatively widespread in one particular trade. If you deduct from that, as you are entitled to do, 100 per cent., which is 20 per cent., or at least about 18 per cent., less than the present cost of living figure, you get then rates in pre-war values of 1½d. and 2½d., which begin to look very like the old sweated rates. It is no good pretending or believing that there are not bad rates still being paid in the country at the present moment. There are; we know there are.

623. There is also the possibility that even if there are not, there would be as soon as Trade Boards were abolished?—That, I think, is only too true. It is quite likely in some cases, with very heavy unemployment, and I might say as to that, that one of the great contentions of the employers so often is—and it is a very just one—that their workers are willing to take lower rates than those fixed by the Trade Boards. I think most of us would be willing to take less than the law prescribes if the alternative was unemployment, and it very often is presented to the worker in that way. I do not mean that the employer is necessarily tyrannical, but, after all, he is a man of business, and he has got to make the best bargain that he can. We had a notorious case recently at Portsmouth, where a petition was presented by the workers protesting against their being given, I think, 8d. per hour or 8½d. per hour rate. It struck me as a little unusual that workers should object to be paid 8½d. per hour.

624. Were the grounds of the objection stated?—I think they thought that it was too princely a payment. I can only imagine that.

625. *Mr. Layton*: Is that a case in which there is, for example, already an increasing amount of unemployment?—You suggested that it was in deference to a threat of unemployment?—I did not say specifically in that case.

626. That was the implication.—I cannot say that. I have not a shred of evidence to say that there was any threat.

627. It would obviously make a difference, would it not?—But there was, I believe, nothing to show that the relative rates of unemployment in Portsmouth in that industry were higher than in any other town in England.

628. Then they are to-day, you mean?—Of course, there is a great deal of unemployment, but the point which I was going to put on unemployment rather is that if you examine merely figures you will see that there is no distinction in unemployment as between Trade Board trades and any other trades. I do not want to pay too much attention to that, because I think there are so many causes of unemployment that if you try to fix on one you are liable to fix on the wrong one.

629. *Lord Weir*: Was that proposal submitted, for example, on the basis of really maintaining employment?—I do not think so.

Chairman: Do you mean in the Portsmouth case?

Lord Weir: Yes.

Witness: Then I misunderstood you.

Lord Weir: I meant in the case which you mentioned.

630. *Chairman*: It must have been in the minds of the workers who sent that petition?—Yes, I think the workers thought—

631. That the option was between having the rate offered and going out of employment?—I do not think it was specifically stated, and I am not entitled to say that the employers had ever suggested that, but

I think the workers might have quite well come to the conclusion, on their own initiative, that the firm could not afford 8½d., or whatever the rate was, and that if the rate were enforced, the employers, not because they wished to, but because they would have to, would dismiss them. I am not alleging that in that case the employers had threatened to dismiss their workers, but I think a knowledge of the ordinary laws of supply and demand would indicate that there may be occasions when that happens. It is not the only case where we have had notices of petitions by workpeople that the rates were too high, and in one case the trade unions in a flax case definitely stated that the workers had signed under threat. That again I do not take responsibility for, but the unions made that statement.

632. *Mr. Pugh*: Was that rate of 8½d. (if that was the rate) a rate which had been settled by a Trade Board?—Yes, it was a Trade Board rate.

633. And is being paid by the other employers in the trade?—Yes.

634. *Mr. MacCallum Scott*: Is it a rate for adult men or women?—It is a women's rate.

635. *Chairman*: Was that the case where the summons was dismissed?—There was a nominal fine imposed for failure to post notices; the other summonses were dismissed under the Probation of Offenders' Act.

636. *Mr. Poulton*: In that case did not the firm submit an alternative scheme which they said was a better one?—They may have said so. I do not remember it. I do not want to drag the Committee into the Portsmouth case, because the Portsmouth case did arise on the 10½d. point too, which I mentioned just now, and there was a real difficulty there.

637. *Dame Adelaide Anderson*: Had they appealed to the Trade Board?—It was stated in Court that the Portsmouth representations had not been taken into account by the Trade Board—I do not know how far that was true.

638. *Chairman*: There was a real point: the 10½d. case was a case where a mistake had been made in fixing the rate?—Yes, it was a real point to some extent. There were some people who were liable to the 10½d. rate even in Portsmouth, and that arose upon that question of definition which I mentioned this morning; and I think they were entitled, at any rate, to doubt whether they need pay the rate.

639. *Mr. Pugh*: But still there is ample machinery provided for dealing with any question of doubt or objection?—Yes. The Portsmouth employers could have gone to the Board; that would have been the normal procedure.

The second class of criticism, which could only be met by amendment of the Acts, is put forward by critics who assume that provision must still be made against anti-sweating, but distinguish between that and what they describe as compulsory wage regulation; they say that the latter is inelastic and therefore burdensome; and bureaucratic and therefore expensive; and they draw attention particularly to the creation of unemployment as the result of legislation of this kind. I propose to deal with the unemployment point, if I may, separately. You will find, I think, that you will have put to you as a constructive proposal from some quarters that the remedy is a national flat minimum, not applying to one trade only but to all trades, below which nobody should be paid. I do not myself propose to offer any view upon that at this stage. If later the Committee wish to hear the Department upon it, they will be very glad to give evidence. If it is put to you, of course you will form your own conclusions upon it.

640. *Chairman*: That will be on the footing of what is necessary to enable one to live, I suppose?—Yes, it may be something approximating to what was laid down by the Minimum Wage Commission Bill, which was recommended by the Joint Committee of the National Industrial Conference, which recited in the preamble that there should be an adequate living wage, and then provided for the setting up of a Commission to discover what the living wage should

13 October, 1921.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

be. But I would like to take the last point, that compulsory wage regulation is necessarily inelastic. Of course, any wage that has to be paid by everybody in a trade differs from a wage fixed by agreement, but assuming that a wage fixed by agreement is really going to be paid by everybody the additional elasticity of the voluntary agreement is rather in a lack of a sense of honour than anything else, because you have got to pay the rate just as much if you had made a voluntary agreement as if you are compelled by law. But what I think is at the back of everybody's mind is that by voluntary agreement you do get—that is the experience of industry generally—much more district variation than you have had under the Trade Boards Acts.

641. *Mr. MacCallum Scott*: More local variations?—Much more local variation. There is a great deal of criticism to the effect that the Trade Boards have not sufficiently availed themselves of the power to fix district rates. I prefer, if I may, not to discuss that at too great length. I have already explained, I think, that some of the Trade Boards have not wished to have district committees, and undoubtedly with a statutory machine district committees may cause difficulties. I mean if you have 60 Trade Boards, and each Trade Board had 12 committees, the country would be rather full of Trade Board committees when you had set them all up; I do not suggest that that is final against increasing the number of district committees, but I do say that the Acts as drawn permit of the creation of committees, and the Trade Boards have not wished at present to have committees, no doubt for good reasons, and I think this Committee will wish to know why the Trade Boards have not set up committees, and will wish to inquire, if they are in favour of the continuance of Trade Boards, whether something more might not be done with committees than has been done in the past.

642. *Chairman*: Who will tell us that?—I am not quite sure, now you ask me that question. I think you might get it from some of the employers' associations.

643. Shall we have any witness representing the Trade Boards?—It would be very easy to get them.

Mr. MacCallum Scott: You mean some of the chairmen?

644. *Mr. Poulton*: Do you mean in favour of district committees?—I am not prepared to say that.

645. I can get them in favour of abolishing the few that you have.—There is no doubt, as Mr. Poulton suggests, that on Trade Boards there has been no disposition widely to adopt district committees, and I am bound to say that it is not for want of hints dropped by the Minister as to the desirability of having district trade committees that they have not been set up.

646. *Mr. MacCallum Scott*: Will any chairmen of the Boards be giving evidence?—Certainly, if the Committee so wish it will be very easy to arrange. In fact, some of the chairmen have already told me that they would like to give evidence.

Chairman: I think it might be an advantage.

647. *Mr. Poulton*: Apart from the fact that there might be some complications, which I will not go into just now, would not that have the effect of very considerably increasing the expenditure, which is one of the points levelled against the Department as such?—I am not sure. We had thought of that. I am not sure that to set up district trade committees would really materially increase expenditure, because, to begin with, if you meet in your own locality you have no travelling expenses, and you probably have no subsistence allowances, and those are two very heavy items. With district committees there might be a little more expense in printing, and there might possibly be a little more expense in chairmen's fees, but I think one would rather counter-balance the other. I do not think that the expense would be much greater.

648. *Chairman*: Still, you would have the Trade Board also, would you not?—That is one of the big points: what powers would you be prepared to give

to the district committees? At present a district committee has practically only advisory powers, although a Trade Board must pay attention to what the district committee has decided. It is very difficult to see how you can make it more than that, because if you let the district committee actually fix a rate you might get different rates fixed in contiguous counties which bore no relation to each other. In fact, you might have a repetition of the Agricultural Wages Board's difficulties.

649. *Mr. Poulton*: You would be practically setting up rival authorities?—You might be setting up rival Trade Boards. On the other hand, it is possible that if you did increase the number of Boards which had district committees you might find a solution of some of the outstanding difficulties. Take the grocery trade; there was a real feeling that the rates which were at one time proposed—not the rates which are now in the proposal stage; I know nothing of those. I mean the rates which were before the Minister originally. Cornwall and some of the seaside places said, "These rates simply will not do for us." The Grocery Board fixed three scales: London, towns over 10,000 inhabitants, and towns below 10,000 inhabitants. From some points of view it would have been a far easier solution to have taken Cornwall and Devon and to have fixed separate rates for that area. However, that view did not commend itself to the Board. Naturally, it was not our business to enforce it on the Board. There are certain very obvious advantages in district committees. On the other hand, as I say, they have not commended themselves to the Boards, and I think you will find the reasons why they have not commended themselves to the Boards given in great detail by representatives of the two sides who come before you; but, if I may say so, I hope the Committee will not fail to examine this matter further, and if at any stage they want further evidence from us as to the defects of district committees or the possibilities, we shall be very happy to supply a memorandum or to appear again.

650. *Chairman*: That is as to elasticity?—That is as to elasticity. Then as to bureaucracy, I would like to say upon that what I have said before to-day: that the Boards themselves fix the rates. They propose the rates and fix the rates, and they consist of representative employers and workers; and the only complaint of bureaucracy must either be against the Appointed Members or against the Minister. The Appointed Members are not bureaucrats; they are independent persons appointed by the Minister in a judicial capacity—I mean they have a sort of judicial standing, and they are not officers of the Minister; they have an absolutely free discretion to decide as they choose; they vote as they choose, and they need not vote all together. They have been criticised from time to time by employers as being pro-trade-union. I am happy to say that they have been equally criticised by the trade unionists as being pro-employer, and on the whole I think they have steered a very fair middle course. They have had a very difficult task, and not a highly rewarded one, and not a task for which they have been much thanked, but I do not think they can be described as bureaucrats.

651. *Mr. Pugh*: They have been equally satisfactory to both?—In some cases they have been equally unsatisfactory to both, which has been almost as good.

652. I suppose you must please both or offend both, so I say they are equally satisfactory to both.—Whatever else is said, for or against them, they are not officers of the Government; they are simply members of the Board appointed by the Minister. Then as regards the Minister's power, I hope to deal with that separately. That goes to the very root of the constitutional difficulty.

653. *Mr. Poulton*: The Appointed Members are not in any way tied or instructed by the Department?—Not in any way. We are very careful indeed not to express views to them except in the presence of other members of the Board.

13 October, 1921.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

654. *Mr. Layton*: You made a statement this morning, and you rather repeat it now, that the wages fixed are fixed by representatives of the trade. I am still not quite clear how far that is the case?—You mean because the Appointed Members may—

655. Because of the Appointed Members. I am not quite clear how far the rates fixed are really fixed by methods similar to those of direct negotiation?—It is perfectly true to say, as the Chairman said to me this morning, that there must be a number of cases in which one side or another accepts a position which it perhaps would not have accepted under voluntary negotiation, because the Appointed Members are there with their decisive vote; but equally, I think, it is true that without ever exercising their vote, or the threat of their vote, they have been able to secure agreement in just the way in which on a conciliation board an impartial chairman, who has no compulsory powers, has been able to secure agreement.

656. My point is as to the proportion of cases in which really the solution lies in the hands of an outside body, because in these cases the system of wage regulation which you put up is external regulation of wages after hearing both sides, and I am not sure if that is really what is happening in the bulk of cases or not?—My answer to you, of course, is not conclusive, I admit, but I can give you the number of cases where the results have been by agreement. (See Annex I, Chapter V, Table A.) You are perfectly entitled to say to me, "I do not know what went on behind the scenes."

657. Having said that, I find it difficult still to form an opinion.—I cannot pretend to answer that question with certainty, but my belief is that we should have far more trouble than we do, to put it no higher than that, with the Trade Boards if in the majority of cases it was the Appointed Members who made the rates, and not the representative members. I cannot believe that the Trade Boards are in a large measure submitting to having rates imposed upon them. My experience of them is that they are not docile to that degree.

658. *Lord Weir*: I noticed that this morning you said, "decided by those in the trade," and I came to the same conclusion as Mr. Layton.—I was trying, at any rate, to make it perfectly clear that no Minister decides the rates.

659. That is so.—I think you are making a perfectly good point in saying that the Appointed Members have a considerable influence, but then I put it that if you did without the Appointed Members what would be the position? The object of the Acts is to provide protection for the workers. If the Appointed Members were not there, at any rate you might have constant deadlocks, and no rates would ever be fixed. I do not want to press that too far, because from the other point of view clearly it would establish your case if I made too much of it. I simply say that I think a great deal of the work of the Boards is really the result of agreement between the two sides—

660. *Mr. Poulton*: Even then they only act in the same way as under a voluntary agreement; if both sides do not agree, they put it in the hands of somebody else to settle it?—But that is by agreement to get somebody to impose a settlement from outside, and I was suggesting that it was done from inside; and Lord Weir and Mr. Layton were rather challenging that point.

Chairman: I do not understand, Mr. Poulton. A Whitley Council settles wages by agreement of both sides.

Mr. Poulton: They do not. They have an independent person, it may be their chairman, or it may be an umpire, or it may be a conciliator, whichever term you like to use.

Chairman: That is because they choose to do it.

Mr. Poulton: Yes, they choose to do it, but still the fact remains that he is there, and he has the deciding voice, and they accept his decision.

661. *Mr. Pugh*: The point of Mr. Layton's equally seems to me to be this: to what extent, failing

definite agreement between employers' and workmen's representatives, do the Appointed Members act as mere conciliators between the two disputing parties, and to what extent do they impose their own will in the sense of having a right to say what it shall be?—Quite. Honestly I am guessing to a certain extent in this answer—I must be—and I think the best way to settle it is to ask some of the chairmen and some of the Trade Board representatives what the answer is. I shall be surprised, I am bound to say, if you find that in the majority of cases the chairmen do impose their will on the Trade Boards.

If I may, I would rather argue the question of the Minister's power when I take the suggestion that the Trade Boards should remain, but should be more autonomous than at present, which is the third main criticism to meet which amendment of the Acts as they stand would be required.

662. *Mr. Layton*: Do you pass from the question of elasticity altogether?—Yes.

663. Are you going to take the point as to elasticity over a period of time, not as between different places?—Do you mean because it takes too long?

664. Yes.—I am going to take that later on machinery. On the question of greater autonomy there are three proposals: the first is that the Boards should have compulsory powers without any independent members at all, and, of course, with no State interference; the second is that they should have compulsory powers with some sort of independent element, but still without any interference by the State; and I think the third—I do not know whether it has been made very widely, and I do not know whether it will be put to you—is that you should have Boards like the Agricultural Wages Board with compulsory powers subject to appeal to some impartial Tribunal which would finally settle any points in dispute. Again, I do not want to prejudice the view of the Committee, but with regard to all these points I would like to say generally—this applies to all the three—that you do get to a fundamental constitutional question here. Parliament has considered this matter, and it has said that certain employers shall be compelled under penalty to pay certain rates; the Acts, therefore, involve a compulsory change in the habits and businesses of a number of citizens; and Parliament has said: "As long as we give that power we must have somebody responsible to us to render an account of the way in which it is exercised," and therefore a Minister—originally the President of the Board of Trade, now the Minister of Labour—is held responsible to Parliament. Any person who is aggrieved has resort first to the Minister, and if dissatisfied with the Minister, to Parliament. If you withdraw the Minister you withdraw the constitutional control of Parliament, and you withdraw the constitutional remedy for an aggrieved person. That, I think, is the big constitutional point which emerges, and in any proposal to take away the Parliamentary powers, that has to be considered. Apart from that, you have in less degree the question of the public point of view: how far the consumers' interest is to be consulted; how far the general public point of view is to be consulted; and under the first of the proposals there would be no provision whatever for that. Under the second and third proposals there would be some provision. Taking the first, however, what it really comes to is a demand that the Whitley Councils shall be given compulsory powers, that is to say, that a body, consisting only of employers and employed, with no appointed members, and no State interference, shall regulate the wages for its trade.

665. *Chairman*: It is not quite the Whitley Councils, because these will be selected members, not appointed by any organisation.—I think they would probably expect that it should be a nominated body. I do not know the way in which they consider it, but at any rate a concrete proposal which is before us, and has been put to us from time to time, has been that Whitley Councils as they stand should be given compulsory powers.

13 October, 1921.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

666. *Mr. MacCallum Scott:* Does that apply to those unorganised trades?—No, because the Whitley Councils are supposed to apply only to trades which have a measure of organisation, but it would be suggested, no doubt, that the same principle should be adopted in the unorganised trades. The difficulty—I do not say it is decisive—which presents itself, is, first of all, that you would have no means of solving deadlocks; secondly—one is bound to say this—that if there were no foreign competition there would really be no check on the wages fixed by the Board, except the pocket of the consumer, and it might well be that unduly high wages—I say this with great deference, but still one is bound to face it—might be fixed without reference to what the consumer really ought to be asked to pay. Practically I do not think that it would be easy to defend giving these compulsory powers without any person, or body of persons, there to look at the thing from the point of view of the general public interest. I do not say that it is decisive, but it occurs to me that that is a real difficulty in the proposal. On the second proposal, which is that you should have practically the analogy of the Agricultural Wages Board, now defunct, you have, of course, the constitutional difficulty as your first difficulty, and you have this other factor which, of course, did not arise in the case of the Agricultural Wages Board: the Agricultural Wages Board applied to an industry which was a lonely industry; there is no other, except in a very small degree, overlapping or competing with it in this country; and therefore you do not get a great tangle of wages; you have one straightforward series of problems. But when you come to the Trade Board trades, you have, as I say, 62 Boards and you have inevitable complications. If each Board were free to fix its own wages, without reference to any other—though one does not want to insist on uniformity too far, yet some measure of co-ordination is not undesirable—you might get yourself into a very complicated and difficult position. Again, I do not say that this is decisive; I simply say that it is a point which is worth bearing in mind. Then you have the third proposal which allows for that possibility, and says: "Well, have some Tribunal superimposed over all existing Trade Boards which would decide ultimately between the rival interests on individual Boards or actually between the various Boards." The difficulty of that proposal, as it appears to us, is that first you still do not have any Parliamentary control, and secondly, you practically have a body re-hearing again and again things which have already been discussed by a body which was better able, by virtue of experience, to form an opinion, than the Authority. Therefore, I do not dismiss any of these proposals—they will be urged, I daresay, with considerable force—but I do suggest to the Committee that there are difficulties in the way of adopting any of them at the moment.

That was all I wanted to lay before the Committee on this matter, but I want to deal now specially with the question of how unemployment is caused by Trade Boards. Unemployment, of course, is the point which has been urged most generally in the Press and elsewhere, as the reason against extending Trade Boards further, and as a general reason against having Trade Boards at all, particularly in the distributive trades. I would like to make two general observations upon that at the outset: the first is that it is extremely difficult for anybody to say with certainty what the cause of the present unemployment in any trade is. If anybody knew I think it would probably cease to exist. It is rather an audacious employer who asserts generally that the unemployment in his trade is due to a Trade Board. That is the first general point. The second general point is that it would be absurd to pretend that a Trade Board could not fix a rate which would smash its trade. Of course it could. If they liked to commit suicide—the employers who were in the trade and the workers who have got to work in the trade—they could fix a rate which would put the whole trade out

of business; but it is not likely that they would do it. However, I gave a case this morning where, though they had not got to that length, they certainly had endangered the prosperity of a part of the trade. Those are the two general over-riding considerations. If I liked to use what would not be a fair thing from my point of view, I could dispose of the whole of the case against Trade Boards on the grounds of unemployment, by reading out the percentages of unemployment in the trades covered by Trade Boards and the non-Trade Board trades. The actual statistics are the following:—The percentage of unemployment in industry generally at 16th September, 1921, was 12.4; in Trade Board industries, 10.2; and in non-Trade Board industries, 13.3. It would, therefore, appear to follow that the one way to avoid unemployment is to have a Trade Board in your industry. I make no such claim on behalf of Trade Boards, because I began by saying that it is not fair to attribute unemployment to any single cause, but I think one is entitled to say, having regard to those figures, that at any rate at first sight there is nothing to show that a Trade Board by its operation does, in its own trade, increase unemployment.

667. *Mr. Poulton:* Upon that point, have you any special cases where the allegation has been made regarding a particular industry, so that you can test that?—Yes, I was coming to that. I have. I was coming to the point which Mr. Poulton has just put. It really becomes a matter of taking specific allegations and seeing whether in fact they are borne out on investigation. First of all, you have the general allegations made by a number of Chambers of Commerce and Chambers of Trade, which are generally uniform in character, and recite that Trade Boards cause unemployment, but they usually do not add figures in support, so I do not think one need examine their allegations further. The cases where serious allegations are made are more interesting for this reason: first, that they do not apply equally to all Trade Board trades; it is a curious thing that in only about eight or nine Trade Board trades is it ever suggested that unemployment has been caused by the operation of Trade Boards. I do not want to imply by that that the employers in other Trade Board trades do not feel the same, but at any rate they have not said so yet. The trades in which the chief allegations have been made are dressmaking, millinery, corset, jute, flax, laundry, and, I think, retail tailoring. I do not think that the allegation has been made at all widely in respect of grocery. It has been mentioned in grocery, but I think it would be rather a curious allegation, because no rate has yet been fixed in that trade. In regard to the other trades we have had specific cases given us where we were told that actual unemployment had been caused. We have investigated certain cases in Hampshire, Hereford, the Hertfords, and Salisbury, in respect of dressmaking and millinery. Before I give the cases, which all show, in our view, that the allegation was not substantiated, I want to say that what I said this morning still holds; that if the rate fixed for learners had been enforced, we think a good deal of unemployment would necessarily have been caused.

668. That was only for the learners?—That was only for the learners, but, of course, it affected the recruitment of the whole trade, and if it had been persisted in it might have been rather prejudicial to the trade as a whole. The 10s. rate was also a factor in the dressmaking trade. If I might take the dressmaking trade the Chairman of the Hereford Juvenile Employment Committee stated that he had reason to believe that at Hereford the Trade Board rates in dressmaking, millinery, and retail bespoke tailoring, were gravely prejudicing the employment of juveniles. As a result a special investigation was carried out in Hereford in December, 1920, in the course of which nine firms engaged in these trades, employing about 120 workers, were visited. It was ascertained that since Trade Board rates had entered

13 October, 1921.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

into operation (in the Spring of 1920) (1) Two adult workers had been dismissed (one a subsidiary worker), in a dressmaking and millinery establishment; (2) Three learners had been dismissed in a millinery establishment; (3) One firm had engaged two additional learners, a dressmaking and millinery establishment; net loss—three. While, however, the inquiry showed that the immediate effect on employment of the operation of Trade Board rates was slight, and that the total number of dismissals was negligible, it did also reveal what I have mentioned before, namely, a growing reluctance on the part of employers to engage fresh juvenile labour, because of the learners' rates.

669. I suppose that was the reason given?—Yes, that was the reason given.

670. It might conceivably be due to the fact that trade generally was bad?—All the way through that is a possible factor, but in the millinery and dressmaking cases the attitude to these rates for young persons was very marked, and it was not limited to employers who were likely to be misleading the inspectors.

671. *Chairman:* And the inspectors thought it was true?—The inspectors thought there was good ground for the attitude. To take one more dressmaking case, in the Hartlepoons, the Hartlepoons Textile Traders' Association complained to the Minister in January, 1921, in very specific terms, that the rates fixed by the Dressmaking and Millinery Trade Boards were ruining their trades; that members of the Association were only employing half their former staffs, and that young girls who did not show special skill were being discharged. It was stated that one member of the Association, who formerly employed 80 hands, had closed down his work rooms entirely since the Trade Board rates came into operation. A special inquiry was carried out in the Hartlepoons in February, 1921, in the course of which the six largest firms in the retail dressmaking and millinery trades were visited. At the date of the inquiry these firms were found to be employing 80 workers. According to the statements made by the firms they had in May, 1920, employed about 45 additional workers, mainly juveniles. Of those six had been temporarily suspended, and the remainder dismissed. The dismissals appeared to be due, firstly, to the operation of Trade Board rates, secondly, to seasonal depression in trade, and thirdly to particular circumstances in individual cases, e.g., in the establishment in which the largest number of dismissals had occurred, they appeared to result from a heavy falling off in custom following upon the retirement of the head dressmaker. This was admitted by the employer in question. The part which follows is rather striking. The allegation that a firm employing 80 hands had been closed down owing to the operation of Trade Board rates was specially investigated. It was ascertained that the firm in question was a firm of wholesale women's and children's light clothing manufacturers, which had closed down in September, 1920. At the outbreak of war this firm had been employing 80 workers, but by 1916, owing to the loss of skilled hands through the demands of national service, the firm found itself in difficulties. In the subsequent years loss of contracts through a prolonged illness of the proprietor, deterioration in equipment, which could not be replaced owing to lack of capital and difficulty in obtaining materials, increased these difficulties. In June, 1919, only 40 girls were employed, working part-time; by May, 1920, when the Trade Board rates came into force, this number had been reduced to 27, still working short time. In September, 1920, when the firm closed down, 20 workers were employed. In this case it had been definitely alleged by a responsible body, that 80 workers had been dismissed as a result of Trade Board rates. In fact 20 had been dismissed, who had been working part-time, and who probably would have been dismissed in any event.

672. *Mr. Poulton:* Was the result of that Inquiry communicated to the person who was responsible for that inquiry being made?—I imagine so. I cannot be sure, but I dare say that was done. I do not

think I need weary the Committee by reading the other cases. (For other cases see Annex VI.) I do not say that these results are conclusive, because it is quite likely that in some cases, particularly in millinery and dressmaking, unemployment has been caused, but it certainly is the case that when we have had specific allegations made they have not been borne out when we have examined them.

673. *Mr. MacCallum Scott:* Were they not rather borne out in the Hartlepoons?—They were borne out to this extent, that it was ascertained that a certain number of dismissals were due to the rates. Upon that I should like to come back to the point which I made yesterday, that Parliament has laid it down that in trades where the operation of economic laws has not given the workers an adequate wage the State shall intervene to protect the workers in spite of those laws. The possibility that its intervention might cause unemployment was envisaged, and it was decided in effect that the advantages to the majority of a reasonable wage must in the long run outweigh the temporary loss to the minority. But by providing that wages should be fixed trade by trade by a body, half of the representative element of which consisted of employers in the trade, a guarantee was given that the dislocation, if any, would be kept within the narrowest limits. What I mean by that is that you cannot hope when you set up a Trade Board, not to cause some little dislocation; it is inevitable. You have in some trades employers so inefficient and employing such sweated labour, that if they have to pay a reasonable rate they go out of business. Parliament, I imagine, came to the conclusion that it was better that they should. If the trade is a trade which is likely to persist, it is not possible that the dislocation is going to last for a long period; and the result of better wages and conditions should be rather to increase employment in the long run than to decrease it. I do feel that very much which has been written about unemployment has not been proved. As I say, it is a charge which is as difficult to refute as to prove. I cannot refute it by producing my unemployment figures, because I say that I would not be using them fairly if I did. On the other hand, if employers appear before you and say that dismissals have been made on this and that account, I think it would be very difficult for them to prove that it is only due to the Trade Board rates. I should, however, just like very briefly, to mention the case of the jute trade. Employers in the jute trade asked for exclusion from the Acts because they said that they could not get on with their production at all because of the high rates fixed by the Trade Board. They said they required a 25 per cent. reduction in rates at once, and they said that that would make all the difference to them. I got out some figures when the application was made—they may be challenged—which indicated that a 25 per cent. reduction in jute wages would mean a reduction of less than 5 per cent. in the cost of production, and that on the other hand from March, 1920, when the price of jute was £64 a ton, it had gone down to £29 a ton in September, 1921. A great deal of material is held in stock—or at least, a certain amount—bought at the former figure, and the raw material forms 75 per cent. of the cost of production. If it is seriously suggested that a reduction of less than 5 per cent. in the cost of production is in those circumstances going to affect materially the employment position, I find it difficult to understand, and I think that if, as is possible, the jute employers put their case here, that would be rather an interesting typical case to investigate. It is quite likely that they will challenge the ratio of wages to the cost of production. I have got it worked out in detail here by our statistical people, and their bases may be wrong.

674. *Chairman:* Can you give us the material that you have—I do not mean to-day, but at some time or other—to enable us to test any cases which may be put before us?—I shall be very glad to. (See Annex VIII.) In the case of the flax trade, which is another trade asking for removal from the Acts, the change in the price of the raw material is almost

13 October, 1921.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

unbelievable. It reached in March, 1920, £605 per ton, and dropped to £127 per ton in September. A 25 per cent. wages reduction or increase is not going to make a very alarming difference in these circumstances.

675. Still, when prices are falling like that it becomes important?—It becomes very important to reduce wages, obviously, but it is very unlikely that a wages reduction can in fact rectify the position, or prevent unemployment. In fact, it was reckoned that if you paid no wages at all in the jute trade you still could not get a market.

676. *Mr. MacCallum Scott*: Is employment said to be improved recently in the jute trade?—I think it is just beginning to look a little better.

677. *Mr. Layton*: Is not that perhaps rather under-estimating the importance of wages, not statistically but from this point of view: that after all, the competition which the jute trade has to meet will equally get its raw material at low prices, and the competition is in cost of production; the competitor gets the advantage of that fall of prices as well as the employer in question?—I think that is true, and I know that they have their Indian competition, which is very serious. Of course the rates of wages in Calcutta are extraordinarily low.

678. *Mr. Poulton*: Is not this the trade which we were told earlier in the day has actually got men at 11d. per hour?—That is the jute trade, yes. Of course jute has always been a trade which has not been able to afford very high wages.

679. It has always been a trade which has had a great deal of trouble as well?—I am not sure, but I think there was a certain amount of trouble.

680. *Mr. Layton*: Would not the inference be that along with rapidly altering conditions of trade you

want rapidly changing wages?—Yes, I think that is true.

681. And history would show that the procedure takes so long, because of the official machinery which has to be gone through, that it keeps the employer behind the market?

Mr. Poulton: Taking my own trade, my experience is the other way about; that employers want a very, very long period, so that they can stabilise their contracts.

682. *Mr. MacCallum Scott*: Is not the chief competitor in the jute trade Calcutta?—Yes. If I may say so, *Mr. Layton's* point is a very fair one, because the jute employers asked to be removed from the Board as much to get elasticity in the matter of changes of wages as on the ground that it would revive employment. Some of them said that it would revive employment, but if you put to them a straight question, "If wages are reduced 25 per cent., will you guarantee to employ one man one hour more," I am not sure that you would have got an affirmative answer; but they had a very strong case on the need for increased speed of machinery, and that was the next point that I was going to take, unless the Committee have any other points to raise on the previous question.

683. *Mr. Layton*: You are taking it in relation to this question?—Yes.

684. *Chairman*: Increase in speed?—Yes, the speeding up of the machinery.

685. I think that is rather a new subject?—I have finished the criticisms which involve the drastic amendment or repeal of the Act. I come now to criticisms in machinery.

686. We are getting towards the end of your evidence-in-chief, I expect?—Yes.

687. The members of the Committee will be prepared to put any questions to you that they wish to put to-morrow.—I think I shall finish my evidence-in-chief in about an hour to-morrow.

(Adjourned to Friday morning, 14th October, at 11 o'clock.)

THIRD DAY.

Friday, 14th October, 1921.

PRESENT:

The Right Hon. the VISCOUNT CAVE, G.C.M.G.
(Chairman).

The Right Hon. LORD WEIR OF EASTWOOD.
DAME ADELAIDE M. ANDERSON, D.B.E.

Mr. JAMES BELL, M.P.

Mr. W. T. LAYTON, C.H., C.B.E.

Mr. E. L. POULTON, O.B.E., J.P.

Mr. A. PUGH.

Mr. A. MACCALLUM SCOTT, M.P.

Mr. H. D. HANCOCK (Secretary).

Mr. HUMBERT WOLFE, C.B.E., recalled and further examined.

688. *Chairman*: You have given us the criticisms of Trade Boards on broader grounds, and you are now going to deal with criticisms which involve amendments not affecting the principles of the Acts?—Yes. I will try to deal with this as shortly as I can, because a number of the points have been covered already in the course of what I have said before. The first criticism particularly, which is directed against the cumbrous machinery, I do not think the Committee will wish to hear anything more about. That is the point about delays.

689. Do you want at this stage, or are you prepared at this stage, to make any suggestions with a view to shortening time?

690. *Mr. Poulton*: Or simplifying the machinery?—That is much the simplest amendment. I would rather not make suggestions on the other ones, but I should be prepared to on this one. On this I do

not think our view would be that there is any case for reducing the period in fixing the first rate. We think the first rate involves so many new conditions, and there are so many interests to be considered, that a long period is an advantage on the whole rather than a disadvantage; but we feel that so far as the period for variation of the rates is concerned, that could, and probably should, be reduced. At present it is a two months' period, and that could quite well, in our view, be reduced to one month. Moreover, you could get rid of some of the even more tiresome difficulties, by saying that the period of objection should date not from the posting of the notices, which may be three weeks after the decision of a Board to propose, but from the date of announcement of the proposal in the "London Gazette" or from the date of its appearance in public advertisement. That would save you.

† For documents handed in by the witness and annexed to his evidence see page 59 and following pages.

14 October, 1921.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

in addition to your month, another three weeks possibly, or in some cases another month. It would very materially shorten the period.

691. That refers to notices?—That refers to notices.

692. Not to the variation in itself, but only to the notice?—In the case of the variation itself we suggest that a period of one month should be allowed for the lodging of objections instead of two months.

693. I mean you do not suggest that there should be a variation every two months?—No.

694. This refers only to the notice?—This refers to the statutory machinery for getting the notice out. The second point which we think might possibly be changed is the six months' period during which the Minister's consent is necessary to the proposal to vary a rate. As I said yesterday, there has, I think, been no case in which the Minister has refused his consent, and it is very difficult to see how he ever could, and we do not think that there is very good reason for maintaining that particular provision. If those changes, which are not at all drastic, were made, the speed at which rates could be varied would be very much greater. We do not suggest that the time during which the Minister is allowed to consider the rates when submitted to him for confirmation should be reduced. If it were reduced it would have one of two results: either the Minister would become a mere registration authority of the decisions of the Board—which is a view which is held in certain quarters, and is a view for the Committee to decide upon; but at the moment we resist it on the ground that it would have that effect—

695. He might take a month, but in practice he does not take so long?—No, he does not take so long. There have been a number of cases where he has taken more than a month, but the reason for that is simply this, that the Minister may find that if he negotiates with the two sides he may still arrive at an agreement which would avoid the necessity of reference back, whereas if he is compelled to decide within an arbitrary period he either has to confirm against his better judgment or refer back, when he may believe that by a little more negotiation a settlement could be reached. It is exactly the same position as arose during the war on the questions that were referred to arbitration. It was always wished that the Board of Trade should refer matters to compulsory arbitration very quickly. The Board of Trade always resisted that on the ground that if they could settle a matter before it went to arbitration, even if it took a week or so longer, it was better than sending it to compulsory arbitration too early.

696. Mr. Poulton: And ultimately quicker?—And ultimately quicker; and the same applies, in our view, in respect of the Minister's power of confirmation. That, of course, is subject to the assumption that the Minister is still to be a real authority for settling these matters. If there is complete autonomy, or if the Minister is merely a registration authority, then, of course, he does not need even a month; you can make it as short a period as you like.

697. Mr. Pugh: That month is allowed to enable any interested person to raise objections. I suppose that is really due to the fact that there is not sufficient organisation in the particular trade to enable the Board to speak collectively for the whole trade. Is that so?—Only in part. It may be to give one side or another a further opportunity of stating their case if there is a division of opinion, and a question has been decided by a vote of the Appointed Members.

698. Assuming a fair degree of organisation, is it really necessary to wait a month to give an opportunity for all sorts of interests to raise objections, even, it would appear, when they are really parties to the arrangements?—Supposing there is unanimous agreement on the Board, it is very unlikely that a month will be required; it may be possible to confirm at once; but in a number of cases you get one side or the other objecting to the decisions of the Board because they have been outvoted, and that side will wish to be heard. It constantly happens, for example,

that we get a notice from the Secretary of the Board saying, "This is the rate fixed," and by the same post we get a letter from the secretary of the employers' side or the workers' side asking for an interview to state their case further; and, in addition to the persons actually on the Board, you may of course get other bodies in the country—consumers or other interests—who wish to state their view.

699. So far as the objections come from the Board itself, then it means that under present arrangements the Minister holds the position of an appeal court to which either side may appeal against a decision come to by the Board itself?—It is not so much an appeal court, though it might be described as that, but it is to give the Board, if they care, a further opportunity of discussing the matter, so that if the Minister thinks it has not been sufficiently considered he can himself refer it back to the Board for reconsideration. Remember, he cannot decide it; he can only refer it back to the Board to be reconsidered.

700. Mr. Poulton: If the reasons adduced are weighty enough in his opinion to warrant any such procedure?—Yes, that is so.

701. Mr. Pugh: From the point of view of the utility of the Board, however, is not that really a reflection on the capacity of the Board or of the trade to settle its own affairs?—Not necessarily; if you take the view that the Minister represents a broader view than the narrow trade view, it is necessary that the public view should be taken into account. That is the point in the Minister's position; that he represents the view of Parliament and of the general public.

702. Is it considered that a month is really necessary in order to get the public view?—I think a month is not very long. You see, first of all the notice is issued, then associations have got to meet; then they may have to arrange for deputations to be heard. It is not a very long time.

703. Mr. Layton: Do you not consider that the appointed members are sufficient protection from the public point of view?—I think to a certain extent they are; but then the appointed members are in this difficulty, that they have got to live with the Board, and that they have got, as far as possible, to accommodate themselves reasonably to the Board. They cannot hope to have quite that dispassionate neutrality—I do not refer upon them for that reason; I think they have got to accommodate themselves to the Board a little, but they do not quite have the dispassionate neutrality—which a Department of State ought to have.

704. But the Board is essentially a three-party business?—Yes, although as I said, nothing in the Statute says that the appointed members are there in fact to represent the public interest. The principal reason, as suggested, for putting them there was in order to secure decisions.

705. But I understand that the Minister does not turn a rate down because he says, "This is the rate put up, but it is not in the interests of consumers to have this rate," does he? Has he ever consciously done that?—He has never done it for that particular reason, but he has continually lately, or rather several times lately, referred back a rate to ask the Board to consider whether it might not cause unemployment, even where the two sides of the Board have agreed to impose the rate.

706. That has only been done within the last two or three months?—Within the last two or three months, or perhaps the last six months.

707. Hitherto he has always said, "You have not weighed the evidence sufficiently, or given proper weight to the different parties"?—That has been the principal ground upon which he has done it hitherto, and of course on technical grounds—legal grounds; but it has always been open to the Minister—his discretion is not fettered—to consider all the issues.

708. He is absolutely free; he can refer it back on any grounds whatsoever?—I do not think there is anything fettering his discretion.

14 October, 1921.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

709. *Dame Adelaide Anderson*: Has it in fact led to revisions?—In nearly every case when it has been referred back—I think there are two or three exceptions—there has been a revision. (See Appendix I, Chapter VI, Table A.)

710. *Mr. Poulton*: Both sides have at different times taken advantage of that opportunity, have they not?—Very much so, yes.

711. They look upon it not quite as a court of appeal, but as a court of reference to ask that certain points which have not been in their judgment sufficiently considered shall be considered by what they look upon as an independent authority?—Perfectly; that is exactly right, and it has happened by accident that in one or two cases circumstances have materially altered between the date of the fixing and the date when the Minister would confirm, but that is a separate issue. I think Mr. Poulton puts it exactly.

712. *Chairman*: Have you considered another way in which the time might be saved, namely, in applying to the Board to amend a rate which has been proposed?—Yes, that is another very important possibility. As I said to you yesterday, and I think the Committee fully understand, if it is a question of making a substantial amendment in the rate originally proposed you have to go through the whole of the procedure again, and that involves months. We do not think that it really need be done in exactly that way. We think there might be far more latitude allowed to the Boards to make substantial alterations if they think the weight of objections requires it, always leaving some power, as long as the Minister is the authority, to the Minister to decide that in a particular case the alteration is so considerable that the trade ought to have another opportunity of looking at it before he actually confirms it.

713. That might make a substantial difference in some cases?—It might make a difference of months. For instance, in the case of the Grocery Trade Board rates, if the Minister had possessed that power, the rates would have been confirmed last March, and because he had not the power they have not been confirmed yet.

714. *Lord Weir*: That was the settling of a new rate?—Yes. What happened exactly in that case was that a certain number of towns which had been included in a certain scale in the proposal were put on to a lower scale at the fixing stage, and that was felt to be a substantial change, and therefore it had to be re-advertised.

715. *Chairman*: It would apply just as much to varying a rate as to making a new rate?—Yes, certainly.

716. *Lord Weir*: At present, if the Minister sends it back for revision, the whole machinery has to be gone over twice?—Yes, twice. If I may take two cases to make it clear, suppose the Board has fixed a 6d. rate, or rather has proposed a 6d. rate, and during the objection period it becomes clear that the rate is 1½d. too low; that view is expressed to the Board by all the objectors, and they come to the conclusion on merits that it is right, so they change the 6d. to 7½d., the Minister could not confirm that because it is a substantial alteration. Therefore it has got to be re-proposed; that is to say, it will take another two or three months. But suppose the 6d. rate has been fixed by the Board and sent on to the Minister, and the Minister had taken the objections, and had thought that they were good, and had sent it back to the Board, then the same thing would have happened if the Board had then altered their view: there would have been a still longer delay in that case; whereas if the Board had had the power to put on the 1½d. and if the Minister had thought on the whole that it had been sufficiently advertised and the trade did not need to see it again, it could have been confirmed at once.

717. It comes to amending a rate without notice?—Without giving further notice, yes. Of course there are objections; I mean either one side or the other may find imposed upon it a rate which it did not expect from the original proposal.

718. *Mr. Pugh*: Would that rule out the month during which objections may be raised?—It would not rule out the month during which objections may be lodged with the Minister. That would still remain, and, of course, that month would become even more important in that event.

719. But practically that would be the only delay following the decision of the Board?—That would be so, yes.

720. Assuming, of course, that no objections were sent in?—Yes.

721. *Chairman*: It would make that month much more important?—Yes, it would make the month much more important.

722. Could you not possibly have some way of giving notice—short notice, or notice by advertisement only—in cases of substantial variations?—You might. Of course it is very difficult then to be sure that it would reach everybody. You see, there are so many employers concerned in some of these trades, and they are such small employers very often that you could not be sure that they had seen it.

723. You might give notice in bulk?—You could, by newspaper advertisement.

724. *Mr. Pugh*: With regard to the matter of keeping the whole of the interested parties in a trade informed of what the Board is doing, could not that be simplified to some extent: I do not know whether it is the practice now, but could it not be simplified in this way? Of course the parties are all aware that the Board exists; that, I take it, is well understood by every interested person?—Not necessarily, I am afraid.

725. That, at any rate, could be made well-known?—Yes, after the first couple of years of a Board's existence, but not before.

726. Could not the fact that the Board was considering adjustments of rates, or the fixing of rates, be made known and by that means the interested parties kept in full touch with the Board and its proceedings, and so minimise the amount of delay which occurs after the agreement is come to? It seems to me that if interested parties are in a position to keep in touch with what is taking place, the same time for raising objections or the same procedure for raising objections is not necessary when once the Board has come to a decision?—On that there are two points. First of all, when you apply the Acts to a trade in the first place, it is very difficult to know all the employers in the trade, however much care you take. If you take the dressmaking trade, there is no record anywhere, either with us or with the Home Office or anywhere else, giving you all the dressmakers in the country, and I have known cases where you have started with a list of 7,000 employers, and when a Board has been in operation a year you find that there are 20,000 in the trade; so that is the first point which you have to clear up. It is, of course, much easier now because we are using the Employment Exchanges, the Home Office machinery, and all other machinery we can to get a complete list. Then in the second place, even when you have got a comparatively complete list, you have still the fact that the trade is unorganised as a whole, and it is very difficult to get at the individuals, both on the employers' and on the workers' sides; and it is important that they should all know. Unless you do it by some recognised statutory machinery by insisting that a notice is actually at the place of work where it can be seen, or at any rate brought to the workers' notice and the employers' notice, it is very difficult to say that they have in fact been kept in touch. You cannot secure it through any newspaper announcement. Our view is that you ought to cut each of the statutory periods as short as possible, and, taking the Chairman's point, to give much more latitude in altering the rates, but we do not think that if you make it less than that you can guarantee that the trade will really know what is happening, and as the rates are compulsory we think it is vital that they should know.

14 October, 1921.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

727. *Mr. Poulton*: I take it that by that answer you mean that so far as it is humanly possible every individual employer, however small an employer, should be notified personally rather than by public advertisement, or using the Exchanges or using the Post Office, or any other public or Government buildings?—I think so, because if they break the law they will have to be prosecuted.

728. *Mr. Pugh*: Are you not giving very much greater consideration to the interested persons than would be given in an ordinary piece of legislation? They would be expected to know the law?—Of course this is a very individual matter and affects the general wages paid. It is not like a general law such as the law as to stealing. It says exactly what rates you have to pay, and you must know where you are.

729. Take the Hours of Labour Bill—

730. *Mr. Poulton*: Take the Compensation Acts?—I will take the Hours of Labour Bill, if I may. You mean as it was proposed?

731. *Mr. Pugh*: Anyhow.—The Hours of Labour Bill, after all, makes a general provision that a certain number of hours shall be worked throughout the country. It is not like calculating in each case the actual wages you have to pay; you know that if you are working beyond 8 hours you are breaking the law.

732. I am thinking of the question of applying it to a trade or industry. Take the coal mines; you may have small coal mines?—I know, but then it is such a plain provision, is it not?

733. Still the difficulty may not be less, but I think the principle is sound.—I can say this, that the Department would welcome any possible means of expediting the machinery, but it must be consistent with giving fair notice to the interested parties.

734. *Chairman*: What notice are you speaking of—notice before a rate is fixed, or notice after a rate is fixed?—I am much less concerned with notices at the fixing stage. I think employers ought to be told quite definitely that there is a proposal to fix a rate.

735. That is notice before the fixing of the rate?—That is notice before the fixing. They ought to have an opportunity of stating their objections, and it need only be, I think, in cases where the variation is very substantial that they need have a further opportunity of objecting.

736. I suppose that would not apply with the same force to a flat rate?—An alteration of a flat rate would be just as difficult and just as important from their point of view.

737. *Dame Adelaide Anderson*: I should like to ask whether in fact it is possible in such an occupation as dressmaking ever to notify all the employers?—No.

738. It is not possible, is it, to get anything like a complete list of all the employers?—No.

739. They change from week to week?—They change from week to week. You cannot get it complete, but you can get it 80 per cent. complete, I think, with reasonable luck, and sometimes even a bit more; and we rather think that it is our duty to get it as complete as we can.

740. *Lord Weir*: You do not believe that if you had 80 per cent. officially advised, their influence would be sufficient to look after the others?—The difficulty is that they are so scattered in these little trades, and you may well have a couple of dressmakers in a little village who know nothing whatever about what is happening in the neighbouring village or town. In fact, when we went round inspecting in the millinery cases, we were constantly met with perfectly *bonâ fide* statements by small dressmakers or milliners, that they just had not heard of the rates.

741. *Dame Adelaide Anderson*: Would not notification in a public place in every locality meet that difficulty?—It might.

742. I mean such as the post office and town halls. The Home Office had that method years ago?—But then, of course, it would not take any less time, or not very much less time. It would mean getting out your notice and posting that in just the same way.

743. *Chairman*: The printing would take less time?—That is so, but then when you have to deal with London it is a little difficult.

744. *Mr. MacCallum Scott*: Would the printing take less time?—Yes. Instead of having to have 130,000 separate notices for 130,000 employers, you would have slightly less.

745. *Dame Adelaide Anderson*: You could have parish notices?—All these things are well worth exploring. I have no particular view in favour of them; all that I want to be sure is that the people do know where they stand.

746. *Mr. Layton*: Is there any machinery or general practice among the Boards by which people who do not consider themselves properly represented on a Board, can be heard by the Board?—There is nothing to prevent the Board, if they wish, hearing the representatives of any interest or person who may wish to put their case before the Boards. In fact, that has been done on occasions.

747. Is it doné?—It is not very frequently done, but it has been done.

748. Is there any possibility of getting over this difficulty by getting notice before the Board meets—getting an intimation of the proposed change of rate before the Board meets—so that when the Board meets its decision would be final?—You see, the Board proposes a rate and the rate cannot be altered until the Board themselves have altered it.

749. But your objection is that objectors are not properly heard, or due weight has not been given to all sides of the case when the rate is fixed?—Yes, that may be the case.

750. In the main, apart from your special cases during the last two or three months, when on other grounds the rate has been held up by the Minister, broadly speaking, it is because a sufficient weight has not been given to the various objectors' cases. Could that be removed if you had a provision for giving notice before the Board commenced—that is to say, to have one period of notice, and give facilities for objections to be heard by the Board itself?—I do not quite know how you would do that. You see, the date at which the Board meets is fixed; the objectors all know that notice of proposal has been given; they all send in their objections within two months, and if they want to be heard personally, they can now be heard. I do not think that would alter the position much.

751. Does anybody who wants to alter the rate just give notice a day or two before the Board meets? Is that what happens in practice?—If they want to have a rate altered, do you mean?

752. Yes.—No, in practice they simply communicate with the Secretary of the Board.

753. It does in fact happen that considerable numbers, both of employers and of workpeople, might be quite ignorant of the fact that there was going to be any such discussion until they heard that the Board has decided to change the rate?

Chairman: Has proposed.

754. *Mr. Layton*: Yes, has proposed to change the rate?—Yes, I think that is possible. There might be in a big trade a meeting of the Board at somebody's request which would not be widely known throughout the trade, but, of course, it would be widely known as soon as the notice of proposal went out.

755. Quite; but notice of a proposal may be the first general intimation to the trade that the thing is being considered?—I do not know how far it could be done, but I think you might possibly have notice that the Board were going to meet to consider a rate.

756. If that were done would that meet a good deal of your objection to shortening the period very much?—The Minister's period?

757. No, it would do it almost automatically?—No, because I must not be taken to have said that the Minister only goes on the weight of evidence. He very often goes upon that, but he does definitely reserve to himself the right to consider on public and general grounds whether he ought to confirm.

14 October, 1921.]

MR. HUMBERT WOLFE, C.B.E.

[Continued.]

758. You do not think the appointed members have quite the same outlook in that respect as the Minister?—I do not think it would be fair to ask them to have the same point of view. They after all are conciliating the interests on the Board—they are also considering the public point of view—but the Minister is not called upon to conciliate interests, he has simply to decide the broad point of view.

759. *Mr. Pugh*: What is just precisely the limit of time which the Minister may take?—A month, excepting when there are special circumstances.

760. And if there is no objection in a month he can confirm?—As a matter of fact, the average period for confirmation from the fixing by the Board is, I think, 16 days.

761. *Mr. Poulton*: I should like to press my point about notification in the Press and at the post offices and other public and Government buildings. I can understand the difficulty in 1909 when the thing was absolutely new, but it is not at all new now; it has become really part and parcel of the ordinary machinery of the country, and inasmuch as we assume that every citizen knows every alteration in every law and he has to take his responsibility, if we give that sort of notice do you not think that that really would fulfil the purpose; because you admit yourself, and one can quite see it, that it is impossible to get at everybody in the smaller trades where one employer, two employers or three employers are in business to-day and are out of business to-morrow?—Upon that, first of all we asked the Post Office, for example, to exhibit our notices; the Post Office wrote back, very politely, and said that they could not: first of all, they had not room, but even if they had room they did not think the notices would attract any attention if they were in the Post Office because there were so many dozens of notices which they had up, and nobody ever read them. I am not at all indisposed, if the Committee think that that would be adequate notice, to say "Very well"; but then you cannot quite get all the objectors heard, that is all. As far as I personally am concerned I should be glad to accept anything which would reduce the amount of post that we have in this respect.

762. *Lord Weir*: To get a slight idea of this question of publicity, how many notices at any time would require to be put up, or might have to be put up?—Do you mean in a post office?

763. Yes.—A post office might be asked to have as many as 60 notices up. I do not mean that every Board would necessarily be fixing rates, but there might be tiny alterations in one Board, there might be a notice of proposal in another Board, and so on. I mean, you might really have almost a wall covered with notices.

764. *Mr. Layton*: Could you discriminate as to the post offices at which they should be exhibited, or would it have to be done throughout the country?—It would have to be done throughout the country, except in one or two localised trades, like chain-making.

765. *Dame Adelaide Anderson*: It would be more serious with the widely distributed trades, such as laundry and dressmaking?—You see, nearly all the Boards, with the exception perhaps of the chain-making and the Birmingham trades, are national trades.

766. Do you think that some sort of standing notice in every public place available—at town halls, and on parish notice boards and other places—containing a notification that such and such industries were liable, would not sufficiently direct the attention of every occupier to the duty of ascertaining the position before entering into business?—I think that would be a little difficult, because it is a very specific obligation that is put upon him, and he would not necessarily know when his obligations were altered and what they were at any given moment, and he might find himself constantly being called upon to pay arrears, which, in a small business, is a very serious matter.

767. Do you know that at one time there was an objection to exhibiting notices as to particulars of piece-rates for piece-workers under the Factory Acts; there was strong objection taken to plastering the walls of places with long lists?—Yes. On the question of notices I ought to say that there is strong objection among a lot of the Trade Board employers to having to post the notices. Particularly the shops are objecting. After all, a shop tries to make itself as attractive in appearance as it can, and if they have got to put up five large notices it is a great nuisance to them. As a matter of fact, we have thought that possibly in the case of shops we might meet the position by not requiring them to post the notices, but to have the notices and to get the signatures of the assistants on the notice to show that they have seen it. We thought that might be sufficient in a distributive establishment, but we do not quite see how that could be done in a factory with a large number of hands.

768. *Mr. Poulton*: Could not any of these notices, consistently with the law, be made simpler and considerably shortened? I know the machinery would have to be altered?—We have cut down the size of the notices almost by half lately, and nearly all the Boards, except the Rope, Twine and Net Board, have accepted that simplification. For example, we have left out all the sections of the Acts of Parliament which were printed. I think we only show now the actual rate, and not the rate from which it has been altered, which we used to show, and it is a much smaller notice. It was a great double notice, but I do not think it is very much bigger than a couple of sheets of foolscap now.

769. *Lord Weir*: Could you tell us for our information how many notices would have to be exhibited at any given date?—Yes, I could take any date you like.

770. And the area which those notices would cover?—Yes, I could easily take an arbitrary date and let you know what notices would be out, and what area they would cover. (*Not printed.*)

771. *Mr. MacCallum Scott*: This is only a question of the machinery for giving notice; it is not a question of whether notice should be given or not?—No, not at all.

772. It is a question of the amount of time that might be saved between posting the notice in every factory or workshop and exhibiting it in some public place. I do not think there is very much time to be saved between those two?—Not very much, as far as I can see.

773. *Mr. Pugh*: The point I am concerned with is as to saving time when once the Board has come to a decision. I am afraid I do not quite follow this: Where you have got a Board, a body which may be taken substantially to represent a trade and where all interests appear to be represented, whether it be the employers or workpeople in the trade, or the general public, why has there got to be such a tremendous amount of notice given and such opportunities afforded for objections to come in? What I am anxious about is that the witness should indicate some way whereby we can save what seems to me to be an unnecessary waste of time in consulting people after the Board has come to a decision, and whether all that is necessary with regard to the trade, or those concerned in the trade, cannot be done before the Board has made its decision, and why the fact that the Board exists and all interests are represented is not sufficient, so that when once a decision is given all that is necessary is inspection and confirmation by the Minister.

774. *Chairman*: If we adopt your view and make it one month from the date when the proposal is gazetted or advertised, then all this printing does not really waste time?—It does not waste time in the least. If you do not wait to start the period of objection from the time when the poster is actually delivered, but start it from the time when the Board proposes the rate—the time when you put it into the "Gazette"—the time wasted in printing ceases to matter.

14 October, 1921.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

775. *Mr. Layton*: Did you not say that it might take you sometimes as much as three weeks to get it out?—Yes, it might well.

776. That leaves a very short time for objection, does it not?—Yes, it is a short time.

777. *Mr. Layton*: It is a week. Would you not really get better results by following the line I am suggesting of getting out the notification before you go to the Board?—You have two things there: In any case the Associations on the Board have had the opportunity of considering it from the outset, and you would give as much public advertisement as you could; and in the last period available you would give all the individuals time. I mean, the Associations would not feel the month because they would know about it from the Board; individuals would have a much less period, but then they would each of them have time to make up their own minds.

778. *Mr. Poulton*: In practice, have you had in any considerable number of cases very many objections from individual employers or employees apart from those who may be actually members of the Organisations?—In the case of the Grocery Trade Board's proposals I think we received 3,500 objections to the rates—I mention that figure at random. Of course, it was not a very large proportion of the 130,000 employers, but there were all those objections received. Numbers vary. In many cases they are as few as six, or four, or ten, but often there are over 200 objections.

779. *Lord Weir*: The more serious ones though are those at the initiation of a rate?—Yes, they probably would be.

780. They always would be more numerous than at a variation?—It is probable.

781. *Mr. Pugh*: Is not the method of utilising the machinery really a means of inviting objection rather than otherwise?—One must not forget that these are compulsory rates, and that it is not like a voluntary agreement. It is a thing which a man has got to do, whether he likes it or not, and we feel that he must have a real opportunity of expressing his view before it is imposed upon him.

782. *Mr. Poulton*: You have no means of ascertaining when these objections come in whether those objections come in from people who are actually members of the organisations who have come to the agreement on their behalf?—They very often are. It applies to both sides.

783. I know. It is very often, particularly in those unorganised trades, the very reason why the Minister is wanted, because you never can, *ex hypothesi*, get a Board which is really representative of both sides in the complete way.

784. *Mr. Pugh*: It does seem to me that you are giving opportunities of objection with regard to Trade Board arrangements which are not generally recognised as being necessary in the ordinary legislative decisions of the country, and I do not see why the distinction should be made, particularly when it is a cause of friction and objection to Trade Board machinery?—I think on the big point of speed, that if the suggestions which I have ventured to make commend themselves to you, you cut at least in half, and even less than that, the time taken. That makes your system more elastic. On the point of principle whether the Minister should have the time, that, I think, is a broad question for the Committee to consider, but I say quite definitely that if the Minister is to remain really the authority for finally settling the thing, he must be given a reasonable time in which to act. If he is merely a registration authority you can cut off another fortnight or three weeks easily.

785. *Chairman*: Then I think you have dealt with the question of delay?—Yes. The next question on machinery is that insufficient attention is paid to local necessities and conditions. That really has two aspects: One is district committees and the other is the constitution of the Boards themselves. I do not think you will want anything further from me on district committees; I have put it to you, I think, once or twice in the course of my evidence, and I do not want to add anything further upon that here, unless anybody would like to raise a further point

upon it. If not, then the other point is the constitution of the Boards. It is sometimes said that we do not give sufficient weight to country or local interests as opposed to metropolitan or large town interests. Our difficulty there is, of course, very considerable. The Associations tend to centre in the big towns, and it is often very difficult to get anybody at all who will serve, or who could serve, from the rural areas. Moreover, it is perfectly obvious that you cannot get every large town or every rural district represented, because your Board would become perfectly unwieldy if you did, and as the trades are unorganised it is extremely difficult to get proper representation from all parts of the country. What we do as a matter of fact is this: When we write to an Employers' Association saying that we want so many members, we not only tell them the number we want, but we tell them the districts we want. Practically the only time we ever reject a nomination from an Employers' Association or from a Trade Union is when they do not give us a nominee for the right district. Very often we have a difficulty; perhaps a Welsh representative resigns, and then the London people put up a London member, perhaps a very distinguished member, of their trade, but we say: "We cannot have him, we want a Welsh man;" and we may have difficulties upon that. But it is very difficult ever to get a Board which will satisfy all views, because of the great difficulty in an unorganised trade of getting all areas represented. The difficulty applies particularly to Scotland. We are always told in regard to the Scottish Boards that we only have Glasgow and Edinburgh in, and we are always told that we have forgotten the country districts; and we get a great deal of correspondence from Scottish Members of Parliament pointing that out. But we try very hard to get Argyllshire and Perthshire and the far North in, but for one thing they do not very much like to come down to Glasgow, and for another thing it is very difficult to find individuals. That is the difficulty: the weight is always in the big towns; and, of course, London tends to be very heavily represented on all Boards.

786. *Chairman*: It is not a matter upon which any changes in the law can have any effect, it is a question of discretion in constituting the Board?—Yes. Of course, that would be automatically altered if you had district committees more frequently. Then the Central Board would be of less importance.

787. *Mr. Pugh*: Do you think that would be met to some extent by an extension of district committees?—Yes, I think so.

788. *Dame Adelaide Anderson*: Would it be possible to define more absolutely the duties of district committees? They are very optional at present?—I think if you have district committees—if you contemplated an extension of the system—you would have to consider more closely what their functions would be, certainly.

789. *Lord Weir*: It would, of course, seriously increase the time?—It would. That is a very important point. If you introduce a district committee it increases the time which it takes to fix the rate, always.

790. *Mr. Poulton*: And is more likely to increase friction?—It may or may not.

791. *Dame Adelaide Anderson*: Unless a definite question were remitted to them for a prompt reply?—It is a matter you will consider, of course, but if a rate first has to be considered by a Committee, and then has to come to the Central Board, and possibly the Central Board before putting it to the Minister might wish to consider the view of other Committees, it might lead to a considerable delay. But I do not put that as in the least decisive against the Committees, I simply say that it is one of the points.

792. It is a question of detail—of prescribing a reply within a given time?—Yes, a very important detail, because it is on the point of delay that so much criticism has arisen.

793. *Chairman*: I suppose you would rather reduce the objections to district committees if you lessened the number of Boards? If you were able to combine several trades or branches of a trade in one Board, then they would be content with one committee in each district?—I have not thought this over, and I must not be taken to be expressing a view, but you

14 October, 1921.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

might have combined district committees for the trades—all the trades under the Boards—who might just consider the thing from a district point of view, apart from the question of the particular trade; but I am not putting that in as a considered view at all.

794. Are there any cases where the number of Boards might be reduced, or where several trades—say, several distributive trades—might combine in one Board?—Yes, I think that is possible. Of course, the great difficulty there is the question of the numbers of members on the Central Boards. There is, for example, the trade which I am always mentioning, the stamped or pressed metal wares trade in Birmingham; you might make a substantial reduction in the number of Boards in that area if you cared to do so. For instance, there are four Boards there now, you could make them one Board. You would have very vocal outcry from the buttons and the pins and the other minor articles of attire, and coffin furniture.

795. Take the distributive trades, is it really necessary to have a separate Board for each distributive trade—one for the baker, one for the butcher, one for the grocer, and so on?—It is a very difficult and big point. If I may give you the whole history, we began by wanting to have one Board for the whole of the distributive trades; that was the Ministry's point of view. We put that to the highest legal opinion that we could have, and we were advised that the Acts did not permit of that. They said, in short, that if you could have one Trade Board for distribution, then you could have another for manufacture, and therefore you could have two Trade Boards to cover the whole trade of the country. We were bound to accept that opinion, which is obviously good sense. Then when we discovered that we could not have one Board we discussed with the interests affected the number of Boards, and we discovered there were the very sharpest views in the trade itself as to being associated with other branches of the trade. It was not only that the grocers were perfectly unwilling to have anything to do with the butchers, which is perhaps not unnatural, because their interests are clearly different—they buy in different markets and they sell in different markets—but you have, for instance in the drapery trade, the drapers refusing to have anything to do with the men's outfitters, and the men's outfitters refusing to have anything to do with the drapers; and you got a position when it looked as though, if you were going to consult the trade point of view, you would want 30 Trade Boards covering the distributive trades.

796. Mr. MacCallum Scott: Were they willing to have one distributive Trade Board?—At one time it looked as though they would be willing, but supposing you had one single distributive Trade Board—supposing the Acts were altered to make it possible—you would still have to have at least 30 committees for considering each trade if you were going to fix a series of wages, because the wages as between the drapery trade, the fish trade, and the butcher's trade have varied very materially in the past. Therefore, at best you would have a single Board, but you would have to work by committees.

797. Chairman: Variations between trades are matters of history and trade custom and so on, and do not depend in any way on subsistence? If you were going to fix a subsistence wage, of course, you could combine the distributive trades much more than you do?—I think you could if you were simply aiming at a subsistence wage, but then you would have to decide what you mean by a subsistence wage.

798. Of course; and you have to decide what you mean by sweating?—I do not know whether you could do it, but if you could simplify the actual wages scales you might be able to have fewer Boards.

799. In that case the objection to district committees would not be so great?—No, I think certainly not.

800. Mr. Poulton: Do you not think that in practice if you do set up district committees, however, you may attempt here centrally to define their functions, they will tend to confuse the issue; because naturally if they are meeting in smaller bodies rather than in a national body here, they are almost bound to look at a matter locally, and therefore it seems to me that

the Minister would have all these conflicting views, and instead of accelerating settlements it would accentuate difficulties, which ought not to exist?—That is a perfectly tenable point of view. On the other hand, you have trades like the building trade, which have worked most happily through their district system. I do not know whether the coal trade can perhaps be cited as a trade in which the district system has operated with great success, but in the building trade, certainly, it has. Of course I admit that that is voluntary, and, of course, the whole basis of the Industrial Council system is the district, and even the workshop, committee.

801. But they settle a national basis?—It is not invariable, is it?

802. Not invariable?—It depends on the basis of the trade. It may be that the central body merely retain the right of veto. That is the arrangement in about 12 or 14 of the Whitley Councils.

803. In some of the trades where you have district committees, and therefore have some experience, have they not already asked that they should be abolished?—I think in at least one case, yes; but then it might be fair to answer that the areas chosen were so obviously inappropriate that they would be bound to fail in any case.

804. Chairman: Was that the case where they chose the population basis?—No. I think Mr. Poulton has the boot-repairing trade in mind.

805. Mr. Poulton: Yes.—The Chairman had in mind, I think, the grocery and milk distributive trades, but there are cases in which district committees have not been, I think it is admitted, a great success. It has been suggested that perhaps if the Boards had made the original areas a little more appropriate they would not have been quite so liable to failure; but I do not know.

806. Lord Weir: What has been the cause of the failure?—They have just done nothing, roughly.

807. Mr. Poulton: I understand the complaint is that they have increased the expenditure and accentuated any friction?—But you will admit, if I may put it to you, that the boot- and shoe-repairing trade has had singularly little friction.

Mr. Poulton: I quite agree, but instead of helping they say that the district committees have been a hindrance, and both sides have asked for their abolition.

808. Chairman: Then I think you were going to mention—?—Inspection is the next thing I have.

809. Have you dealt with the composition of the Boards?—I have dealt with the suggestion that the composition of the Boards did not pay enough attention to local necessities, but I have a further point, on the personnel of the Boards, which, if I may, I will take later. I can take it now if you prefer; perhaps it fits better to take it here.

810. It comes next in your summary?—My papers had got out of order. On the personnel of the Boards, there are a number of points raised, and they are all very important. The first point raised—it is raised particularly by the employers—is that there is a tendency to professionalism growing up on the Boards; that is to say, that you get on one side or another an individual recurring on Board after Board. In one case there is, I think, an official of the workers' side on as many as sixteen Boards, and on the employers' side there is one, I think, eight Boards. It is suggested that that really is not consistent with the object of the Acts which is to see that each trade is separately represented, and it cannot be that one gentlemen, however gifted, can represent sixteen trades on the one hand or eight trades on the other. The difficulty of altering that is that it may well be that the particular persons are not on because of their knowledge of the particular trade in every case, but because of their knowledge of Trade Boards in general; and further, because they command the confidence of one side or the other, and because it is considered a good thing to have a connecting link on one side and the other between the various Boards.

14 October, 1921.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

811. They are not appointed members, are they?—No, they are representative members. There is one, I think—a workers' representative—on sixteen Boards, and there is one official, a secretary of a number of employers' associations, on at least eight.

812. *Mr. Loyton*: In what sense are they separate Boards? For instance, in the Birmingham trades you have four Boards. It is really sixteen separate trades?—It is not sixteen separate trades, but there are eight or nine quite separate trades; there is no possible connection between them. The position really is that he goes through the lot. He is on some groups as well.

813. *Chairman*: He cannot know the trades except indirectly?—No. They are not on as directly representing the trades, but rather as being good Trade Board representatives in both cases, both of employers and employed. It has been represented that that is not right—that it tends to professionalise the Boards. I simply put it as a criticism which has been made. It is very difficult for us to refuse to make the appointments in those cases. For instance, in the case of the Sack and Bag Board, which I told you will be set up in a day or two, one of the workers' representatives is put on, I think, for the eighth time. It is a lady in this case, and I think she is on seven Boards. I may be over-stating the number, but it is certainly one more Board. We discussed the question there whether we should put her on again, and we decided that we could not very well refuse because she was obviously a suitable person, and it was difficult to get a better representative, and, secondly, we did not want to give as the ground for refusing to put her on that it was professionalism, because it was one of the points that we were going to put to this Committee.

814. Is it necessary to say that? It does rather surprise me. I thought that when you appointed representatives of a trade on any Board, either on the employers' side or on the workers' side, you appointed an employer engaged in the trade, or a worker engaged in the trade?—We do not quite get that, because it may be that on the employers' side there is no association in existence—

815. But apart from associations, you could find individuals in the trade?—We should prefer that ourselves, but then associations are rapidly set up, very often as the Board is established, and it frequently happens on the employers' side, for example, that a person who has been the secretary of employers' associations in other trades reappears as the secretary in this trade, and is immediately nominated by the association, to whom we are bound to write, as their representative. It is a little difficult for us to write back and say, "This gentleman knows nothing of the trade." After all, if the employers in the trade are prepared to say that he does, it is really not for us to challenge it.

816. *Mr. MacCallum Scott*: What is the objection to these people? Is it that they are not able to state the case properly?—I am not stating this as the Ministry's view.

817. But what is the objection?—The objection is that they do not in fact represent the trade, and that you get the position that a Trade Board view as such, instead of the view of the particular Trade Board, tends to prevail.

818. *Mr. Poulton*: Is it not as a matter of fact not because they cannot represent the trade, but that they represent it too well? I am very interested in this point, and I wondered what was meant in connection with a certain industry recently, when employers in Scotland were objecting to what they termed too many professional trade unionists being on Boards. I wondered what a professional trade unionist was. I begin to see some light in the matter now.—There is a different point there.

819. There may be, but it is a very relevant point to this.—Yes, it is. There is the other point taken, that trade unionists, as such, should not be on, because in these unorganised trades—and there is some force in this, remember—so often you have to put

the general unions on because they are the only unions which there are, and yet there may be some special knowledge required of the processes in the trade, and the general workers necessarily will not know anything about it. I may say that the advent of the general worker does not always commend itself to the small craft union (if any) which may exist in the trade, because they take the same view as the employer; they do not quite know what these people are doing on the Board. But that is a different point, if I may say so, from this point, which is that the same trade unionist runs through a large number of Boards. The other point is that any trade unionist without special knowledge is on a particular Board.

820. *Lord Weir*: It is representation by counsel, almost?—That is really what it comes to. It is suggested on both sides that these professional employers' representatives and workers' representatives really are counsel on one side or another. I am not saying that it is wrong; I am simply saying that that is pointed out as a development of the system which is not perhaps regarded as satisfactory.

821. *Mr. Pugh*: Is there any real volume of opinion in this matter? Is the percentage of such representatives very large?—No. All the objections which I am reciting are objections which we have received in the Department, which we have had summarised and analysed, and this particular objection to plurality of membership is becoming rather more prominent lately on both sides.

822. *Mr. MacCallum Scott*: Who takes the objections?—I think this objection has only come from the employers.

823. *Mr. Poulton*: At the end of a period, are they not subject either to re-election or to some re-distribution? What happens then?—Always we are in the hands, quite properly, of the Associations who nominate these people, and if they re-nominate them, unless we have anything against them in the sense that they no longer represent a district, then it is very difficult to reject them. If you ask me, as Mr. Poulton does, "What is the harm in it?" I am not suggesting that there is any harm, but I suggest that you may, by getting these permanent counsel, as it were, on both sides, tend to create a little group of opinion which may, by virtue of its being always there as a nucleus, rather dominate opinion on the Boards generally. I do not say that that is bad. I do not say that it is good; but I say that it may happen even if you have a small number.

824. *Mr. Loyton*: Do you say that it tends to increase or decrease the prospects of agreement between the two sides? Is it possible that it tends to prevent agreement between the two sides on the ground that they are there as counsel, as it were, and that therefore an increased burden is thrown upon the appointed members as conciliators or arbitrators?—I do not think I could say that off-hand. I do not think so. Several of these people are skilful and admirable persons in themselves, and know how to conduct proceedings so that they will help rather than hinder, but they are bound rather to a point of view which is a general rather than a trade view.

825. Do you think that they carry the complete confidence of the people whom they represent? You were suggesting that these organisations are formed rather rapidly when notice is given of the establishment of a Trade Board, and the fact that somebody springs up and forms an organisation suggests that the official forming that organisation would hardly really carry the confidence of the trade as a whole, in a sense?—You cannot pretend, in a case of that sort, that the secretary of a newly-formed association begins to command the confidence of the trade, as is done by the secretary of a long-established association who has been their secretary for a long time; but if he is successful in getting their interests properly attended to on the Board, he very rapidly gets their confidence.

826. *Mr. Poulton*: Would it not also have the opposite effect: that a man who is cognisant with the procedure and methods of Trade Boards would be a

14 October, 1921.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

very great help?—I think that is perfectly fair and true, but as against that there is the possibility which I put in answer to Mr. Pugh's question, that you get a small group dominating—possibly rightly, possibly wrongly—a great deal of Trade Board opinion.

827. *Lord Weir*: You are giving us an Appendix, are you not, from which we can see the extent of that. I think you are giving us an analysis?—Yes, I can give you that analysis. (*Statement handed in—not printed.*)

828. *Mr. Bell*: Can you tell us what percentage of representatives on these Trade Boards actually work in the trades, and can you also tell us whether those who are actually working in the trade make better representatives, or even as good representatives of what is wanted by the Trade Boards, as those who are not actually working in the trade?—The first question means a little research. I will get the answer out. (*See Annex VIII.*) We have tried, as far as we can, to get workers in the trade, either trade unionists, actual trade union officials working in the trade, or actual workers in the trade, but of course we have a large number on every Trade Board of full-time trade union officials not working in the trade. But I will get that analysed. If you ask me which are the better, quite clearly as advocates there can be no doubt which are the better; obviously the trained man must be better than the untrained; but whether the trained man always gives as much help in the sense of having direct knowledge of the trade conditions as the other, is not quite so clear. You see the suggestion made by employers, for example, is that in a number of these trades the only unions which really run into them are the general unions which there may be in each, and a small craft union, which, because its membership is small, is only entitled to a small representation. You have got one of these General Unions sending in their representatives who has been on plenty of other Boards, and it is suggested by employers that he comes in in ignorance of the trade conditions, and is not helpful—is not as helpful as would be the case if, in addition to the craft union of the trade, you had the actual workers in the trade. That is the allegation.

829. I suppose you are well aware that even in the case of a well-organised trade every one of the representatives on the workers' side of the Joint Board which settles the rates of wages in the trade will be a trade union permanent official?—Quite so.

830. And not one of whom at the present time may be working in the trade?—Quite.

831. But who have been chosen for their official position by their fellow-workers, because of their knowledge of the trade, and because of their fitness for advocating the claims of the workpeople?—I quite understand that, but, of course, you are not in the area of trades like, for instance, the cotton trade, which have a long period of organisation behind them; you are in trades like the distributive trades, where you have got perhaps 100,000 out of 2,000,000 workers organised, and that creates a very different position, naturally. In your statement you say that they are chosen by their fellow-workers because of their knowledge of the trade. The objection here is that these general union officials have not got the knowledge of the trade, and would not have been chosen by the workers in the trade on that ground. I am not stating this as a view which has been expressed. We have tried to hold the balance even in administration between the two extreme views; that they ought to be all trade unionists, and that there ought to be a large majority of non-unionists. We have in practically every case got a large majority of trade unionists on the Trade Boards, but where there is a real lack of organisation we have a small number of non-unionists on. I will say this: In practice you do not find that the presence of non-unionists leads to division on the labour side; you do not get the non-unionists voting with the employers against the trade unionists, and very often the representative of non-unionist men is a trade unionist himself, though not an official.

832. And very often the more unreasonable of the two?—I am not prepared to argue about that. The

only other point I had on this is the criticism of the appointed members. I think we have been into that several times. I do not know whether you want me to touch upon that again?

833. *Chairman*: I think we have probably heard your views about that. Then you pass to inspection?—Yes. There, again, you have heard a good deal from me upon that, and I do not think you will want to hear very much more. The only fresh points I would like to make are these: The first is that Dame Adelaide Anderson put to me a question the other day about the older history of the inspection, and I said then, what is true, that the inspection was very satisfactory so far as our side of it was concerned; but it is not true to suggest that it was satisfactory to the critics of Trade Boards at that day—the friendly critics. I believe in a book by Mr. Tawney, there is almost violent criticism on the lack of inspection, in the old trades. The truth is that we never had, and have never aimed at having, complete inspection, and so far as we are concerned now, having regard to the need of public economy, we do not think we can safely suggest that we can ever hope to do more than 2 per cent. inspection with 350,000 employers.*

834. Apart from complaints, I suppose?—No, that covers both—complaints and routine inspection. I have had it worked out. (*See Annex IX.*) These figures must be taken with great qualifications, because they are largely based on conjectures in a sense, but it is suggested that if we had 50 inspectors we could do rather more than 4 per cent. inspection; with 75 inspectors rather more than 6 per cent.; and with 100 inspectors we could do rather more than 8 per cent. inspection.

835. *Lord Weir*: I am rather ignorant about this. What does the percentage of inspection mean?—It means the percentage inspection of the whole number of employers in the trade.

836. *Mr. Layton*: Once a year?—Yes, per annum. With our existing staff we can inspect the premises of about 2 per cent. of the total numbers of employers covered per annum. The broad questions are, two: Ought the State to continue inspection at all; has the time come when it is no longer its business to enforce the Acts, but when it is sufficient to make rates compulsory and leave it to civil remedy by the workman, or his association, and withdraw the whole of State inspection?

837. *Chairman*: How much of the 2 per cent. is caused by complaints by workers?—The large majority.

838. Most of the 2 per cent.?—Yes.

839. *Mr. Poulton*: Did you say that that was put forward? Is the Department putting it forward?—No, I say it is one of the possibilities. I do not say that it has been suggested by the Labour party, for example, but it is a possible way of dealing with the position. I am not putting it forward as a suggestion; I am saying that it is a possible way of dealing with the position to withdraw inspection altogether, and leave it as a matter for civil remedy. I do not say that I advocate that for a moment, but I say that that is a possibility.

840. *Chairman*: Do you say: Leave it only to civil remedy?—Yes.

841. Not only to civil remedy?—I agree. You can have criminal proceedings as well.

842. *Lord Weir*: Every 50 years you visit an employer?—Roughly. That is the actual statement I have here—every 50 years. As a matter of fact if you reject *in toto* the suggestion that you give up inspection, because you take the view that these are essentially unorganised trades, and therefore the persons in them will have no trade union representatives to take their case, and even if they had, would be afraid that if their trade union representatives took the case they would be dismissed—if you, on those grounds, which are substantial, reject that idea, then you are driven to consider the other point: is so small an inspecting staff really worth having at

* The percentage figures given above are based upon the total number of employers affected in trades to which the Acts have been applied. Upon the basis of the number of employers in trades in which minimum rates are actually in operation the percentage of inspection possible would be appreciably higher.

14 October, 1921.]

MR. HUMBERT WOLFE, C.B.E.

[Continued.]

all; I mean is one inspection of an employer in 50 years (as Lord Weir says) any good at all? Of course, it does not really work out in fact like that. As I suggested the other day, what you do is this; when you have a new trade inspectors rather specialise in that trade, and when you have once really inspected the trade you hope and believe that the degree of evasion will not be very considerable; and, in fact, when you have casual inspections later that is borne out. It is also borne out by the incidence of complaints. But at the present moment we are really in the position of having to decide whether we are going to inspect on complaint only, or to try to do routine inspection as well.

843. *Dame Adelaide Anderson*: Inspection by sample?—Inspection by sample, yes.

844. In addition to inspection on complaint?—Yes, you will understand—particularly *Dame Adelaide Anderson*—the difficulty of complaint inspection only, because it is sporadic, it is very often ill-informed, and it may lead to waste of time.

845. And to victimisation?—Quite so, and to victimisation.

846. Have you had cases, for instance, which have been referred to the Industrial Law Indemnity Fund?—No, not that, but we had one most remarkable case when, as the result of an inspection, we brought an action before a magistrate to recover arrears, and the employer dismissed the whole of the workers concerned, and they are still out of work at this moment—a particularly bad case.

847. Then that, you would say, was rather against inspection largely by complaint?—Our view, if we are asked it, is that you have to combine the two. We cannot conceivably inspect on all the complaints we receive; we have not the staff to do it. On the other hand, if we limit ourselves to complaints, then we do not cover a district, and we can never satisfy ourselves that we really have got a grip of that particular trade. At this time one hesitates to suggest in any possible way an increase in any staff, but I do not think it is wrong to say that 36 inspectors are worth having, even if we have no more, but I think a small addition would make a considerable difference to the degree of efficacy of the inspection.

848. *Chairman*: What is the scale of remuneration of the inspectors?—That is under discussion at the moment with the Treasury, because we are under reorganisation. The actual scales at the moment are £200 to £300 per annum for third class officers, £300 to £400 per annum for second class, and £400 to £500 per annum for the first class officers; and the scales of pay are identical for men and women. It is the only instance in the Government service, and it is going to be altered.

849. *Mr. Poulton*: Do you not think that even with that small inspectorate if they were abolished there would be a tendency towards wholesale evasions?—I do.

850. Having regard to the older Acts—take our Factory Acts, for example—even after all these years we find it necessary—and very necessary—to have an inspectorate.—If I am asked my view upon that, I cannot believe that you could administer the Trade Boards Acts, at any rate, for some years, without a reasonable amount of Government inspection; but, on the other hand, I do want to make it clear that unless you have quite an incredibly large staff it is unthinkable in present conditions to hope to do anything more than a very small percentage inspection.

851. *Mr. Pugh*: Very definite recommendations were made in the Report of the Committee (Trade Boards Administration Committee)?—Yes.

852. I understand from you that the Department for the Minister was prepared to accept the recommendations of that Committee, with the exception of Recommendation 19, which proposed an Advisory Committee?—No, that is not quite the way to put it. He was not prepared to accept the proposal for

the assistant secretary to be stationed at the Office of Trade Boards, and, so far as the Advisory Committee was concerned, because that recommendation was refused, the two parties were not prepared to constitute the Advisory Committee; but if you are referring to the recommendations as to the inspectorate, they were accepted.

Chairman: That is No. 8.

Mr. Pugh: It really commences at No. 7, I think.

Chairman: Chief Inspectors; there shall be an additional 16 whole-time inspectors.

853. *Mr. Poulton*: Is it not the fact that, although you may have a very inadequate staff which can only cover a very small amount of ground, from the fact that there are inspectors, do you not think that has a very wholesome influence upon the employers who might be inclined to evade?—I am sure it has.

854. And also they can go anywhere, as a sort of routine, on the instructions of the Department, and nobody knows they are coming?—Personally, as I say, I do not think, in the present state of organisation of many of these trades, it would be possible to administer the Acts without a small body of efficient inspectors.

855. Do you think it would be possible to administer them even if you had no inspectors, having regard to our experience in the Home Office; because at the Home Office we have a great deal of experience, having regard to the number of cases that have to be attended to, judging from the Annual Reports? In this case, where you deal with wages as well as conditions, which is a very important matter, do you not think it is all the more necessary that there should be an inspector?—Of course, under the Wages (Temporary Regulation) Act, where the wages were standard wages as distinguished from what are here called minimum wages, you had no inspection. The only right under the Wages (Temporary Regulation) Act was a right of recovery by civil action, and if these rates ever became recognised as standard rates rather than minima, the point of view would be rather different. The object of inspection is to protect the worker who cannot protect himself. When it ceases to be that, the point may be different. But it does not seem to me that that is practical politics for the next two years.

856. *Mr. Bell*: Is there any reason why a breach of the law under the Trade Boards Acts should not be treated on exactly similar lines to a breach of any other Act?—There is no reason at all why it should not be.

857. Take the liquor law; the police prosecute for any breach of the law?—Yes.

858. Why could not the police prosecute for breach of the Trade Boards Acts?—They could, but I think they would find it rather difficult to find out if there had been a breach.

859. They could find out the rate of wages?—It is rather a technical matter, and a casual policeman going into one of our factories, even a metropolitan inspector, would not get on very well when he got on to piece-work. The general question, as I understand you to put it, is: Will not the State have the responsibility for seeing that the law is enforced? It depends on the nature of the law, to some extent. If it is conferring a right on a workman, it may be sufficient to give the workman the power to exercise his right. You need not superimpose upon that the power of the State to drive it home.

860. Our experience under the Particulars Clauses of the Factory Acts is not very helpful in that direction—Honestly, I would not for a moment advocate, if I may say so, the abolition of inspection.

861. *Mr. MacCallum Scott*: How does it compare with the position under the Insurance Acts?—There you have inspection on a very considerable scale. The difference there, of course, is that it is the money of the State which is involved, and not the money of private individuals. I mean the State expects to see that it gets its own contributions—I mean part of its insurance fund.

14 October, 1921.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

862. *Dame Adelaide Anderson*: And in the case of the Factory Acts, for health and safety?—Yes, and prevention of accidents.

863. Prevention of poisoning and alteration of hours?—Yes; but I do not think, Mr. Chairman, that I really differ from the views which I think Mr. Pugh and Mr. Bell hold, that you have to inspect. The only point which really seems to me to be important is the amount of inspection you can afford.

864. *Mr. Poulton*: At this stage, has the Department any proposals to put before us in connection with the suggestion in paragraph 21?—I believe we have put that into operation. Do you mean in the Summary.

865. On page 6 they are very clear about the inspection?—Up to a minimum of 50.

866. Yes.—I think it is true to say that roughly we have adopted that report as far as numbers are concerned, although we have not appointed the district inspectors which the report contemplated, on grounds of economy, we have actually got about 36 inspectors. This report said: Get rid of the part-time system of inspection through the Employment Department. That was one of its points that we have met. Instead of that we have a staff of Departmental officers who work full-time, and who are under our trained inspectors. The second recommendation was that a Chief Inspector with a Deputy Inspector should be appointed. We have done that. We cannot call them by those titles yet because we have not Treasury sanction, and the question of the persons is still an open point. But we have done that. The third recommendation was that we should have a good deal of decentralisation, and, with that end in view, and with the Home Office parallel in mind, it was suggested that we should have district inspectors corresponding to the Home Office inspectors to control the local staff. There has been a difficulty about that part of the scheme. It was felt that it was too expensive, and that the district inspectors should remain under the control either of the Chief Conciliation Officer or the Divisional Controller; but, apart from that, we have substantially adopted the recommendations, because you see this says up to 50 when you have got up to a certain number of Boards. Well, we have only added three Boards since this report was signed.

867. Does the accumulated experience of the Department upon this point show that there are those inspectors needed?—I think so, certainly. I will hand in a Table, if I may, showing what our view is of the state of compliance in all the Trade Board trades. I have a complete Table showing what the degree of compliance is believed to be at the moment. (*Not printed.*)

868. *Mr. Layton*: What do you mean by that?—The extent to which the Acts are being observed in the various Trade Board trades.

Chairman: It would be shorter perhaps if you put in a Table showing the extent to which they are not complied with.

869. *Mr. Layton*: Is it based on inspectors' reports?—Yes, it is based on inspectors' reports. For instance, the aerated waters, button making, and brush and broom trades are mentioned, and then it explains where we have got the information from.

870. *Dame Adelaide Anderson*: Is there any published report yet of any of the work of the inspectorate?—I do not think so. But I think I can safely say that since we have made the re-arrangement, and during the last year in any case there has been an immense improvement. The previous shortcomings were not due in the least, I am bound to say, to the officers, because they were simply killing themselves; but because we were left at the end of the war with only six officers who could deal with Trade Board inspection, and we had to build up the whole staff practically from the commencement.

871. Is it not possible to get back some of those?—Some of them have gone to get married, and others, I am afraid, will never come back. I hesitate to weary you again on the subject of definition, because

you had that put to you when I told you how investigation was carried out.

872. *Chairman*: You mean definition of the trade?—Yes, definition of the trade. It is one of the most difficult things that can conceivably be done in the ordinary official way. When I tell you that the grocery definition covers three pages of print, you will understand.

873. There are three pages of print to define a grocer?—Yes. I can assure you it is a very difficult task. You see, the grocer's interests are in so many things; he will sell eggs and fresh fruit. We had to identify the 12 staple articles which marked down the grocer, and it was very difficult.

874. *Lord Weir*: I take it that if you lay down to-day what is a grocer, there may be a difference in a grocer three years afterwards?—The grocer in London is very different from the grocer in Glasgow, and the grocer in Lancashire again is different from the grocer in the South-West. They deal in different lines of things.

875. *Mr. MacCallum Scott*: Can we call him an Italian merchant?—Then also you have to distinguish between the wholesaler and retailer. It looked as though it would be very simple to say wholesale on the one side and retail the other. Then you found that all the country grocers were distributing agents sending out their stuff by the same cart to the village grocer, and to the houses in the village, so that they were both wholesalers and retailers. The difficulties of definition are extraordinary, and when it is ambitiously suggested that you ought to put this in, or leave that out, you may take it that in every case it has been discussed at inordinate length with the trade concerned; that we generally have 14 or 15 drafts submitted to our solicitor before we reach a final definition, and no piece of administration with which I have ever been associated has been done so thoroughly or caused so many difficulties.

876. *Chairman*: There was a question whether the confectionery trade included fish curing—I am not going to weary you with the stamped or pressed metal wares trade again, but I may mention that I sat with representatives of this trade for a week trying to settle their definition. They said that wherever you stamped or pressed anything by cold stamping, that should be covered by the Trade Board. Ultimately I put this sort of case to them. Take assembling: there is a little man who lives near me in Kensington High Street, from whom I get electric lights occasionally. Parts of the electric lights are stamped or pressed, and sometimes my electric light goes wrong, and sometimes he does the work in the house and sometimes it is done at his own house.

876a. That man under the extension proposed would be covered thus bringing in the whole electrical trade. Would that principle carry you further?—Yes; that brings in the engineering trade, the moulding trade, the cycle trade, the electric lamp trade, and we practically cited every trade we could think of. Then we had to try to draw a line, and we had to get at the articles manufactured. I think we have got at something like a definition now, but, as I say, it took very nearly a week of solid talk to get at it.

877. You have no suggestion to make on that?—No. As long as you are going to try to define separate trades, it will mean the most definite investigation, and most difficult.

878. *Mr. Poulton*: Might I suggest to you on that point that the Department, to simplify that matter, ought not to go into elaborate statements, because when you have got to the end of it you have got altogether confused as to what the grocer was?—The trouble is this: We started under the 1909 Act with very simple definitions, and as time went on we found that it caused so many difficulties of interpretation—at least that is our view—that we had to make them very elaborate. It is not like the Insurance Acts, where you simply say that engineering trades are covered. After all, in that case an employer may have to pay small arrears of subscrip-

14 October, 1921.]

MR. HUMBERT WOLFE, C.B.E.

[Continued.]

tions, but when it is a question of paying thousands of pounds of wages back, you have to know where you are before you start.

879. I suppose it is a practical way of avoiding future disputes?—Yes; practically going through the processes by which the articles are manufactured from the beginning, and tracing them right through and describing them at every step.

880. *Lord Weir*: Is not that rather dangerous for the future? Would it not prevent changes in technical development in processes; it all tends to stereotype?—There is that danger. On the other hand, of course, if there are changes, then you have to amend your definition, and provision is made for an annual revision when necessary.

881. *Dame Adelaide Anderson*: The kind of difficulty you indicate is with regard to a process, a process which runs through a number of industries. Take, for instance, stamping; you would run into ever so many trades?—Of course, it was alleged by those who took the view, that you could make the trade mean a process. We did not accept that. But there are other complications, apart from an extreme case like that. The only other point that I want to put to the Committee, apart from the suggestion that we proceed too slowly in setting up the Boards, on which I think I have already said all we have to say, is the question of the relationship between the Boards and the Ministry. I do not want to delay much on that, because I personally think it is a minor point, and that too much importance can be given to it, if one bases oneself on that Report. I would like to put it in this way: in the first place, this particular Report of the Committee of which I was Chairman was necessitated really because there are two distinct points of view which this Report attempted to reconcile. There is first of all the point of view which I have mentioned in the earlier part of my evidence, that the Boards should be more autonomous, and almost if not entirely free from any control by the Minister. There is the other point of view that constitutionally the Minister must remain, because of the responsibility imposed upon him by Parliament. In this Report an attempt was made to reconcile those two points of view, and as long as the Acts remained as they did, I as Chairman of the Committee thought that that was as good a solution as we could get. But I think it is quite fair to say, and I am sure any members of the Committee who appear before this Committee will agree with me in this, that none of us liked the Report, neither the employers, nor the employed, nor the officials, but we accepted it as a compromise between two points of view. The moment that the conditions which underlie the Report, namely, the Acts as at present framed disappear, I personally, and I think the other members of the Committee also, will regard the Report as no longer binding. It relates to the Acts as at present framed. If the Committee decided that the existing Acts were to remain unchanged, then the Report would again be of importance.

882. *Chairman*: It is really a staff question?—Yes, it is a staff question, but you must not under-rate the importance of the feeling behind it. There is no doubt that the Boards felt that the Minister was attempting, or some portion of the Boards felt that the Minister was attempting, to interfere with their jurisdiction.

883. *Mr. Poulton*: In the way of limiting it?—In the way of limiting their jurisdiction. In my view that was largely due to a misapprehension, in this way. As I have said earlier, originally there was one Chairman for all the Boards, who was also an officer of the Board of Trade. He had certain functions as an officer of the Board of Trade, and certain functions as Chairman of the Boards, but he was one man, and it was not human to expect the Boards, or anybody else, to realise that he was doing one set of things as an officer of the Board of Trade, and another set of things as Chairman. In other words, the Boards got it into their heads that they in fact had these functions through their Chairman; in point of historical fact they never had; in point of prac-

tical fact, as they were consulted by this man, and as he was always working on the premises where they met, they had them. The theory always was that the power was vested in the Department; in fact, the Boards felt that they were exercising them. With the death of Mr. Aves, the last of the single Chairmen, the position became quite different. Then we set up a large number of new Boards. Shortly after his death the 1918 Act was passed; we no longer had the eight or nine English Boards which were all there were, but we began to add Boards in fives and sixes, until there was a great variety of Boards, and different arrangements for the Chairmanship has therefore to be made. Having done that, you had to consider whether, if you had not got a single Chairman, you could leave the questions of demarcation and inspection, which are matters which obviously require a single authority, whatever it is, in that place. The Minister of Labour thought not, and he wrote to the Boards and said he had decided to take demarcation and inspection back to the Department. The letter which was written in 1920 gave great offence; it was particularly regarded as an invasion of their privileges by the old Boards, and in fact I think it is fair to say the Boards never tried to see if it would work. They never tried it; they simply said it would not work and asked for deputations to be received to prove that it would not work, before it had ever been put into practice. I do not think for a moment that there was not a real feeling with regard to it; I do not say perhaps that the letter was premature; I am not arguing that; I am simply saying that at that stage some change was necessary to meet the position. When the Committee met, we were all very anxious to try to smooth out the difficulties, and we looked first of all at the question of demarcation. But before I put that I would like to say that there is no doubt that the real opposition, such as there is, between the Boards and the Minister, depends upon the Minister's power to confirm. As long as the Minister may upset the Boards' decisions on that point, so long there must be a conflict; in fact, the Minister is there in order on occasion to disturb the Boards. You cannot get away from the conflict as long as the Minister is there; remove that power of the Minister and the real differences between the Boards and the Minister disappear. But assuming the Minister's powers remain, you get the minor questions of demarcation and inspection. So far as inspection is concerned, it seems to me that there is no question whatever; it is purely an administrative matter; that you cannot leave it to 30 people to direct, nor can you leave it to several people to direct; it must be in one place and in one person; and if the Minister is required to enforce the Acts, it is his business to see that the inspection is adequately done, and that is what the Report recommended. So far as demarcation is concerned, there you reach a very difficult question: the Trade Boards know the facts very much better than anybody else, but they do not know the law better than anybody else; nearly every question which arises on demarcation is mixed law and fact, and it is very difficult to say that a representative body is going to give the best judicial decision on questions arising, quite apart from the difficulties of overlapping. Therefore, the compromise that the Report suggested was that the Minister should decide, subject to consultation with the Boards in every case. Finally there was the proposal which the Minister never accepted, that an Assistant Secretary with only one administrative subordinate should go to the office of the Trade Boards. That is very difficult to decide, and it seems very difficult to say why a Committee composed, except as regards the Chairman, of eminent men, should have devoted so much time to the trifling matter of the geographical situation in which this officer was to sit. If it had only been that, they would not have bothered. In the view of some of the members of the Committee (and they made it clear at a big conference they had with the Minister) they wanted complete autonomy, and they felt that if they got an important official down there, that would be one step towards that end. From my own point of view, having no view for or against complete autonomy, I was disposed to agree to that without

14 October, 1921.]

MR. HUMBERT WOLFE, C.B.E.

[Continued.]

prejudice to the future, but it was felt by the Department that it would prejudice the future definitely to put an officer down there, and would be a recognition of a new state of affairs, I think you will hear more about this later, but I honestly do not think it is of first-rate importance, if you are going to amend the Acts. It is of first-rate importance that the Boards should have confidence in the Minister; it is of first-rate importance that the Boards should do the work which they are intended to do; but what is necessary, I think, to clear it up really is to decide first whether the Minister's confirming powers must stay. If that is so, there is no question but that from time to time he will be in conflict with the Boards. In the second place, it is necessary to settle whether the Minister is to decide demarcation questions, whether the Boards are to decide demarcation questions, or whether some third impartial authority is to decide demarcation questions:

884. What kind of demarcation?—Whether or not a person is covered by a Board. I have suggested once or twice that I am not sure that possibly an impartial authority outside both the Minister and the Board is not the right solution there. Then you have to decide the merely administrative question: who is going to look after the inspectorate? If it is not the Minister, if you have 40 English Boards, as you have at present, you cannot have 40, or even 10 or 12, Chairmen doing it; you cannot have a Secretary doing it, because a Secretary is responsible to nobody; and you cannot have a Secretary responsible to 14 or 15 different Chairmen directing a staff. Therefore, you are driven to the conclusion that you have to institute a single permanent Chairman. A single permanent Chairman would then take the place of the Minister, and the effect of that would be to create a new Government Department. Complete autonomy, in my view, involves from an administrative point of view a new Government Department.

885. *Chairman*: Do the Acts say anything about giving to the Boards any duties other than the duty of fixing the rate?—Yes, the Boards have power to take proceedings in certain circumstances.

886. *Mr. Pugh*: What about the Advisory Committee? Would not some machinery of that kind form a valuable connection between the Boards and the Minister?—I think the Minister would welcome that. He issued the invitations to both sides to form it, and both sides refused entirely to form the Committee because the Assistant Secretary proposal had not been accepted by the Minister. They said that that knocked the arch out of the structure. Do not take me to be under-rating that contention. It was a very important part of the scheme that there should be one man at the Office of Trade Boards who really could represent the Trade Board point of view, and by taking that man out of it you do substantially alter the picture. It would be very unfair not to say that. I think myself that if the Committee can settle the big questions of principle, these questions which are in part personal and in part administrative, which arose and which necessitated the previous Committee, will disappear.

887. *Dame Adelaide Anderson*: We are not without precedent as to the control of the staff by a numerous body, because in regard to local government in County Councils and Borough government there are Inspectors and Medical Officers of Health, and so on, who are controlled, I suppose, through the Town Clerk?—Yes, but that is a Government Department. What I say is that complete autonomy would mean the creation of a new Government Department side by side with the Ministry of Labour.

888. For one purpose, inspection?—For inspection and for control of the whole of the staff. You cannot have Assistant Secretaries and Secretaries of Trade Boards without a head who can direct them. I mean it would not be a big office, but you would have a staff of about 50 or 60, probably.

889. Would it be, in fact, something similar to that which you had with the single Chairman?—You would

have something very similar to that, on a larger scale, on so much larger a scale that it would be different in kind.

890. *Mr. Poulton*: Surely that is not inconsistent with trying to meet the reasonable requests of the Committee, and also of the Department as well without setting up some more machinery?—You must face the fact that there is a real desire for complete autonomy—I mean to get rid of the Minister altogether. I do not challenge that; I do not argue against it; I simply say that it exists, and if you do not read the Report in the light of what was openly stated as part of the reason for the attitude of certain members of the Committee, you will not get at the root of this problem. It seems to me to be a problem of administration, and not of principle at all. Personally, if I thought there was going to be no alteration of the Acts, if there had been no question of this Committee, I should still be in favour of the Report as presented. I signed it as Chairman, and I still hold to it, but I say that it only met a certain set of specific circumstances; that if you go back to the first principles you can cover all the points by settling the first principles. That is all I want to say about it, and that is the whole of my evidence.

891. *Mr. Poulton*: With regard to that last point about the Inspectorate, I was just turning up to see how the Report dealt with that matter. It seems to me that it ought to be a comparatively easy matter to reconcile what appear on the face of it to be conflicting views. You used the word "autonomy." I was just trying to find the word here, and I cannot find it.—It is very carefully not there; I would not have signed the Report if it had been.

892. I was wondering what is meant by their phrase here; whether it really amounted to autonomy?—No, there is no proposal in that Report, and I would not have signed it if there had been, to create complete autonomy. But it was an attempt to reconcile the views of those who wished to have complete autonomy with the statutory provisions which existed. There is no difference at all about the inspectorate being housed, for example, if that is preferred, at the Office of Trade Boards, provided it is controlled from one place; but so far as the Home Office inspectors are concerned, they are all on a definite administrative basis under a single administrative head, and there is no question of duality. One of Dame Adelaide's Inspectors did not get instructions from her one day, and the next day from a group of employers, or from a group of employed; they had their instructions from one place; and if you are to have an administrative system you must have it at one place.

893. *Dame Adelaide Anderson*: You will remember what was done by Mr. Aves?—That was carried out simply because they got all their instructions from him.

894. My point just now was that you have an analogous body in Local Government bodies, and the single direction is secured by the Town Clerk.—Perfectly, but then he is a considerable public official, with a considerable public Department. I mean it takes the place of another Department. It may be right, and it is quite possible to say that you ought to set up a separate Trade Boards Department, not under a Minister, but under a Chairman. I do not dispute that, but you cannot have it both ways.

895. He was autonomous in Mr. Aves's days. The difference really lies in the kind of work.—He was not autonomous in fact as Chairman of the Boards. As far as the Boards' fixing powers were concerned, he was completely autonomous just as the Boards are now, but so far as prosecutions, demarcation, and the direction of the inspectorate are concerned, he was an officer of the Department. He would not have had enough to do as Chairman, and so he was given the other functions to fill up his time.

896. *Lord Weir*: Could you tell us whether there was any strong body of criticism of the working of the Acts up to wartime?—None that I know of.

14 October, 1921.]

Mr. HUMBERT WOLFE, C.B.E.

[Continued.]

897. There were no very great difficulties?—There were obvious difficulties as to some of the provisions. There was a feeling that you wanted to amend some of the provisions. But the sort of feeling which has been engendered latterly did not exist.

898. *Mr. Poulton*: I was wondering what the Committee really meant when they say on page 6, Clause 19: "We take the view that enforcement, that is, the control of the inspectors and the decisions as to prosecutions, is a matter for the Minister."—That is right.

899. "But we think it is of vital importance that this duty should be carried out in the closest possible association with the Trade Boards." Surely there cannot be any disagreement there?—None whatever; that is what we accepted, and we still do accept; but what I want to make clear is that this was a compromise which did not carry out the views of some of the Labour Representatives and Employers' Representatives. I persuaded them to accept this as much less than what they asked for. What they were really asking for was complete dissociation.

900. We are bound to deal with what is before us. —Quite, but what I suggest is that the situation in which this was signed need not any longer be regarded to exist, because this Committee can remove the basis of what we are discussing by altering the Acts or suggesting alterations of the Acts. But if you ask me, I still believe the inspection could be carried on in close association with the Boards; I say in any circumstances it ought to be, and it has occurred to me that the solution of this trouble is to put the Trade Boards under the same roof as the Ministry of Labour, and get rid of the necessary feeling of duality which exists.

901. Necessarily making it into the same Department?—I am personally responsible for the Secretarial Staff attached to the Trade Boards as well as for the Trade Boards Branch, and in that capacity I have officers in both places, but, naturally, the officer of the Trade Boards is a long way from me, and taking his orders to a large extent from an outside body, and is not necessarily in the same relationship to me as my own headquarters' officers. But I feel if I had them all under one roof a great deal of the difficulty might disappear. Alternatively, the solution might be to cut them adrift altogether. As

Dame Adelaide Anderson said, you could have a Town Clerk, a Secretary of the Boards, in complete charge of the whole of the work. Of course, he would differ from the Town Clerk, who is controlled only by one Borough Council, because he would be controlled by 40 Borough Councils—I mean there are 40 Boards—and that is a point you cannot forget; if you have 40 masters you have no master at all. But I have sometimes thought that the real solution is to get it all together in one place.

902. *Dame Adelaide Anderson*: Are they really more separate than the separate Departments of our Local Government bodies? I mean you have borough councillors, and they have separate Committees?—But there is one Board which controls the whole of the Council's activities, but in the case of Trade Boards, each Board is completely independent of the other.

903. But a Chairman would have some form of control?—Supposing you had 12 or 14 Chairmen or at the most perhaps five or six. If they were whole-time Chairmen, one of them would have to be the senior member of the Board. If they were part-time Chairmen they just could not do it, because they would not be there. So what you would really get back to would probably be, say, 40 Boards, three full-time Chairmen, with one senior Chairman, and he would have his inspectors and secretaries, and so on. It is another form of Government Department, and it does not seem at first sight to be very much better or very much cheaper than what we have. I do not think this particular document is of first-class importance from your point of view.

904. *Mr. Poulton*: Upon the latter statement of Mr. Wolfe, as far as one could gather as he was going along, the words are contained in their Report?—I wrote it, you see.

905. *Chairman*: I take it we shall have to consider this Report before we have finished, to see how far we adopt it?—May I just put one final point about the Report, because I do not want to be misunderstood about it; I should adhere to the recommendations of that Report if the Acts remained as they are, but I do not put it in as part of my evidence, still expressing my view, because I expect the Committee will probably recommend a variation of the basis of the Acts.

CHAPTER I.

HISTORICAL SUMMARY.†

1. *The Trade Boards Act, 1909.*—During the years 1885-1909 much public attention was directed to the conditions of workers in certain trades, in which it was alleged that "sweated" conditions prevailed, particularly the chain trade at Cradley Heath, and the box-making trade and certain sections of the clothing trades. In 1890 the final report issued by the Select Committee of the House of Lords on

the sweating system,‡ presided over by Lord Dunraven, stated that "the evils of sweating could hardly be exaggerated." Various private Bills were introduced during the succeeding years, notably Sir Charles Dilke's "Sweated Industries Bill," and authoritative information on the subject became available towards the latter end of the period through the Board of Trade Enquiry* into Earnings and Hours in 1906. From the reports of this enquiry the following figures as to some of the trades for which Trade Boards were established either under the 1909 Act or subsequently are taken:—

I.—Full-time Earnings of Adult Men.

Trade.	Percentage working full time whose earnings fell within the undermentioned limits.						Average No. of Hours of Work per week.
	Under 20s.	20s. and under 30s.	30s. and under 40s.	40s. and under 50s.	50s. and under 60s.	60s. and over.	
1. Tailoring (Bespoke) ...	5.1	41.0	31.8	11.6	4.1	6.4	53
2. Tailoring (Ready Made) ...	6.5	37.8	35.6	13.1	2.8	3.2	51
3. Shirt, Blouse and Underclothing ...	14.1	38.2	30.8	11.1	3.3	2.5	50
4. Laundry (Factory) ...	9.8	63.5	22.7	3.6	0.3	0.1	54
5. Laundry (Workshop) ...	25.0	65.2	9.3	—	—	—	52
6. Jute ...	49.1	36.0	13.4	1.3	0.2	—	55
7. Linen ...	44.4	36.7	13.6	3.5	1.0	0.8	55
8. Cardboard, Canvas, etc. Box ...	14.3	43.0	28.7	10.0	2.6	1.4	53

II.—Full-time Earnings of Adult Women.

Trade.	Percentage working full time whose earnings fell within the undermentioned limits.						Average No. of Hours of Work per week.
	Under 10s.	10s. and under 15s.	15s. and under 20s.	20s. and under 25s.	25s. and under 30s.	30s. and over.	
1. Tailoring (Bespoke) ...	15.4	42.4	29.3	10.3	1.6	1.0	53
2. Tailoring (Ready Made) ...	24.0	46.6	22.5	5.5	1.1	0.3	51
3. Shirt, Blouse and Underclothing ...	22.2	46.0	23.5	6.1	1.4	0.8	50
4. Laundry (Factory) ...	20.5	52.0	21.1	4.7	1.0	0.7	54
5. Laundry (Workshop) ...	12.2	63.8	20.5	2.9	0.3	0.3	52
6. Jute ...	6.2	66.4	25.9	1.4	0.1	—	55
7. Linen ...	41.7	49.1	8.5	0.6	0.1	—	55
8. Cardboard, Canvas, etc. Box ...	24.7	55.1	16.1	3.5	0.4	0.2	53
9. Dress, Millinery, etc. (Workshop) ...	28.0	36.2	21.1	8.4	2.6	3.7	53
10. Dress, Millinery, etc. (Factory) ...	12.6	39.5	30.5	11.4	3.5	2.5	50

† Revised to 31st December, 1921.

‡ No. 62 of 1890.

* Earnings and Hours Enquiry, Vols. I-VIII.

The returns were obtained voluntarily and exclude home-workers, who frequently form the worst paid section of the trade, so that the figures are more likely to be an over estimate than an under estimate of the actual earnings.

The earnings of workers in certain of the more highly organised industries in 1906 are given in the attached table "A" (page 62).

In 1906 the Anti-Sweating League was formed to press for legislation for the prevention of sweating. In 1907 and 1908 Select Committees of the House of Commons on Home-work were set up, and in 1908 a report was issued* which laid down the main lines on which the Trade Boards Acts were subsequently drafted.

The Committee came to the conclusion that "sweating" prevailed extensively, not only among home-workers (with whom the Committee were directly concerned), but also among factory workers in trades in which home-work was prevalent.

"If the term 'sweating,' they say, 'is understood to mean that the employer 'grinds the face of the poor' by making an altogether inadequate payment for work upon which he obtains a large and quite disproportionate profit, your Committee are of opinion that, although there are cases of this kind, sweating of this description is not the most important factor in the problem which they have had to consider."

"On the other hand, if 'sweating' is understood to mean that work is paid for at a rate which, in the conditions under which many of the workers do it, yields to them an income which is quite insufficient to enable an adult person to obtain anything like proper food, clothing, and house accommodation, there is no doubt that sweating does prevail extensively. We have had quite sufficient evidence to convince us (indeed, it is almost common knowledge) that the earnings of a large number of people—mainly women who work in their homes—are so small as alone to be insufficient to sustain life in the most meagre manner, even when they toil hard for extremely long hours. The consequence is that, when those earnings are their sole source of income, the conditions under which they live are often not only crowded and insanitary, but altogether pitiable and distressing; and we have evidence that many are compelled to have recourse to Poor Law or charitable relief."

The Committee were convinced that only legislation could remedy this state of things. "Unless Parliament steps in and gives them (the home-workers) the protection and support which legislation can alone supply, the prospects of any real and substantial improvement in their position and condition being brought about are very small and remote. We are further of opinion that carefully considered legislation would aid them materially; and, that being so, we cannot doubt that it is desirable that an attempt should be made."

Two concrete proposals were considered by the Committee:—

- (1) The proposal that it should be rendered illegal to give work to any outworker in certain specified trades, unless the worker had previously obtained a licence from Government factory inspector which authorises the holder of the licence to do work for a specified time in the premises named in the licence. The licences would require renewal every six months, and the conditions for obtaining them would be that the premises in which the work was to be done were clean and wholesome, adequately lighted and ventilated, and not overcrowded.
- (2) The proposal that, in certain specified trades, a Wages Board, consisting of representatives of employers and working people and a neutral chairman, should be established with power to fix the minimum rate of wages to be paid to workers in those trades. The payment of a lower rate than that thus fixed to be a punishable offence.

* No. 246 of 1908.

The Committee made certain suggestions to meet the problem in part on the lines of the first proposals, but held that the second proposal went "to the root of the matter." They recommended the establishment of "wages boards" immediately in tailoring and the making of shirts, underclothing and baby linen, and the finishing processes of machine-made lace, and they proposed that the Home Secretary should be empowered to establish Wages Boards, after enquiry, in any other trade.

The Trade Boards Act of 1909, which was passed when the Right Hon. Winston Churchill was President of the Board of Trade, followed substantially the lines of the Select Committee's Report. The Act was, however, not confined to homeworkers.

In framing the Bill, the Board of Trade had before them, besides the Results of the Enquiry into Earnings and Hours referred to above, the experience of certain of the Dominions in dealing with the same problem. The conciliation and arbitration system of New Zealand dates from 1894, and the Wages Boards of Victoria, which present a closer parallel to the machinery actually adopted in this country, date from 1896. An enquiry into the operation of the legislation in Australia and New Zealand was conducted in 1907 by the late Mr. Ernest Aves for the Home Office.*

2. The Machinery.—The most prominent features of the Trade Boards Act of 1909 are three. In the first place, minimum rates of wages are fixed trade by trade. Secondly, the power of fixing such rates is entrusted, not to a Government Department or to a judicial or quasi-judicial body, but to a joint board, composed of equal numbers of representatives of employers and workers in the trade concerned with the addition of a few independent persons, known as "appointed members." In the third place, the rates fixed by a Trade Board become, when confirmed by a Minister of the Crown, enforceable by either civil or criminal proceedings, and are enforced at the expense of the Government through a body of inspectors. A minor feature of the Act of 1909, which was repealed by the Amending Act of 1918, may be dealt with here as a matter of historical interest. Under the Act of 1909 a rate fixed by a Trade Board had only a limited operation for the first six months; it could only be enforced by civil proceedings, and it was open to any employer and worker to "contract out" of the rate; on the other hand, no Government Department or local authority could give a contract to an employer who thus "contracted out." After six months the rate became universally binding if the Board of Trade confirmed it.

3. The Act scheduled four trades:—
Ready-made and Wholesale Bespoke Tailoring.
Paper-box Making.
Machine-made Lace and Net Finishing.
Chain Making.

Four Trade Boards were established for Great Britain and two for Ireland. The first Trade Board was established for chainmaking in Great Britain on 3rd January, 1910; its first rate was fixed in August, 1910, and was made obligatory by the Board of Trade on 23rd February, 1911. The Act provided that further trades could be scheduled by Provisional Order, and in 1913 the Act was applied in this way to four more trades:—

- Sugar Confectionery and Food Preserving.
- Shirtmaking.
- Hollow-ware and Tin Box Making.
- Linen and Cotton Embroidery.

Under these Orders seven Trade Boards (four in Great Britain and three in Ireland) were established between 1913 and 1916. In 1913 a Provisional Order applying the Act to a section of the laundry trade, namely, machine ironing and calendering in power laundries, was thrown out by a Select Committee partly on the ground "that it did not cover all the sections of the trade which it would be desirable to cover if a Trade Board were established."

* Report on Wages Board and Industrial Conciliation and Arbitration Acts of Australia and New Zealand: C.D. 4167, 1908.

4. Thus at the outbreak of war, or shortly after, there were in existence in the United Kingdom 13 Trade Boards, covering approximately half a million workers. During the war the Trade Boards were temporarily superseded for practical purposes in some of the trades as more and more trades came under the orders of the Ministry of Munitions. It was anticipated, however, that Trade Boards would be able to play a useful part in facilitating the industrial re-adjustments which would follow the conclusion of hostilities. In March, 1917, the Reconstruction Committee issued a memorandum* on the regulation of women's wages after the war, in which they stated that the conditions which might be expected to prevail at or soon after the close of the war were exactly those which were favourable to a sudden and considerable fall in the level of remuneration in semi-skilled and unskilled occupations, and they recommended the protection of a minimum wage for women workers for a two-fold purpose. One purpose is to safeguard the position of women in trades where a reasonable level of remuneration has already been reached in order that they shall not sink back to a condition which is socially undesirable; the other is to raise by such means as are possible those women workers employed in trades in which, notwithstanding war conditions, the rates of wages are unduly low. They recommended for this purpose the use of Trade Board machinery and suggested a number of trades in which Trade Boards should be set up at once. They also suggested some amendments in the Trade Boards Act, most of which were adopted in the Act of 1918.

In the same year the Reconstruction Committee on Relations between Employers and Employed, which was presided over by the Right Hon. J. H. Whitley, M.P., issued its reports. It recommended, as a means of securing industrial harmony, Joint Standing Industrial Councils for the well organised trades and Trade Boards for the less organised trades "pending the development of such a degree of organisation as would render feasible the establishment of a National Council or District Councils."

It recommended that the Trade Boards in addition to their original purpose of securing the establishment of a minimum standard of wages in certain unorganised industries . . . should be regarded as a means of supplying a regular machinery in those industries for negotiation and decision in certain groups of questions dealt with in other circumstances by collective bargaining between employers' organisations and trade unions. It also recommended that the functions of Trade Boards should be enlarged so as "to deal not only with minimum rates of wages but with hours of labour and questions cognate to wages and hours" and "to initiate and conduct enquiries on all matters affecting the industry."

In the following year, shortly before the termination of hostilities, the amending Act was passed by Parliament. The fundamental principles of the earlier Act remained unchanged, and the amendments were mainly directed to improvements suggested by experience and to the speeding up of machinery which was necessitated by the industrial situation and justified by the experience of the previous 9 years.

In the first place, the description of the class of trade to which the Acts could be applied was altered. The condition set out in the Act of 1909 was that the Board of Trade should be satisfied that the rate of wages prevailing in any branch of the trade was "exceptionally low as compared with that in other employments." (Section 1 (2).) This form of words presented certain difficulties. It was difficult to show that in any particular trade, however "sweated" it might be, wages were *exceptionally low*, especially as the comparison might be with a number of other "sweated" trades. At the same time, it was necessary, in the existing circumstances of industry, to deal not merely with trades that were "sweated" but also with trades which

might become "sweated" as a result of the flow of unskilled workers from munitions industries. Accordingly, the Minister of Labour, to whom the administration of the Trade Boards Act had been transferred in 1917 by the New Ministries' and Secretaries' Act, was empowered by the new Act to establish Trade Boards in any trade in which he considered it expedient "having regard to the rates of wages prevailing in the trade or any part of the trade," but it was added, in order to make it abundantly clear that it was not intended in any case that the Acts should apply to the well organised trades, that he must also be satisfied that no adequate machinery existed for the effective regulation of wages throughout the trade.

This Act also abolished the slow procedure by Provisional Order and substituted the procedure by Special Order which is described below in Chapter II. The period of "limited operation" was abolished, as stated above, and the system was rendered more flexible in many ways by giving the Trade Boards greater powers to meet varying conditions of industry. It is to be noted that Trade Boards were not given the wider powers suggested by the Whitley Committee, but a Clause was inserted empowering them to make a recommendation to any Government Department with reference to the industrial conditions of the trade.

The Act came into operation on the 1st October, 1918, and immediately on the conclusion of hostilities steps were taken to carry out its provisions. In some trades, preliminary enquiries had already been made before an amended Act was in contemplation, and it was possible by the end of 1919 to set up 15 new Trade Boards in Great Britain and Ireland. This was not, however, rapid enough to meet the situation; even by the end of 1919 only a part of the women's clothing trades and only one of the Birmingham metal trades had been brought under the Acts. Meanwhile as a temporary expedient, the Wages (Temporary Regulation) Act, 1918, was passed. The object of this Act was broadly speaking to stabilise wages for a short period at the rates payable under agreement, awards or orders at the date of the Armistice (defined in the Act as "prescribed" rates), these rates becoming legally enforceable minimum rates. By the Award of an Arbitration Tribunal or by an agreement or settlement approved by the Minister of Labour or under an Order issued by the Minister of Labour, on the advice of the Court of Arbitration, new legally enforceable rates might be substituted for the prescribed rates. The Act originally passed for six months was on the recommendation of a joint committee of organised employers and workpeople continued for a further six months and the principle of the Act was continued under Part III of the Industrial Courts Act, 1919, until 30th September, 1920, when the provisions lapsed.

This safeguarded the position of the workers in organised trades and in trades to which Munitions Orders applied, but not of those in (e.g.) the women's clothing trades where no rate was generally current at the time of the Armistice. Accordingly the Minister, to cover this period of transition, under the powers conferred on him by the Act, laid down, on the advice of the Court of Arbitration, a "prescribed rate" of 7d. per hour for women in the women's clothing trades.

The Wages (Temporary Regulation) Act was of course only an interim measure, and the methods of protecting unorganised workers from "sweating" continued to attract much public attention. In September, 1918, a committee was appointed by the Prime Minister under the Chairmanship of Sir J. R. Atkin "to investigate and report upon the relation which should be maintained between the wages of women and men . . . the recommendations to have in view the progress and well-being of industry in the future." This committee foresaw that a considerable time must elapse before all ill-organised sections of women in industry could be covered by Trade Boards or other wage-regulating machinery

* Memorandum by the Industrial Groups of the Sub-Committee on Women's Employment.

* Cd. 135-1919.

and that in the case of certain sections any machinery for the regulation of wages trade by trade would probably be difficult of application. They recommended the immediate setting up of machinery to determine and fix a "reasonable subsistence wage" for adult women, to be adjusted periodically to meet variations in the cost of living, with a scale of rates for juveniles fixed in relation to rates for adults; this wage to be legally applicable to all women employed for gain in occupations other than domestic service. The committee appear to have regarded this machinery partly as a means of providing temporary protection for certain sections of women pending the setting up of Trade Boards or other wage-regulating bodies and partly as a means of giving permanent protection to certain fringes whom it would be difficult at any time to bring within the scope of wage-regulating machinery.

The National Industrial Conference, which was summoned by the Prime Minister in 1919, recommended that "minimum time-rates of wages should be established by legal enactment and that they ought to be of universal applicability" and that "Trade Boards should be established forthwith in the various less organised trades where they do not already exist." During 1920 34 Trade Boards were set up (including the new boards which replaced the old Tailoring Trade Board), among them two in England and Wales and two in Scotland for Distributive Trades (Grocery and Provisions and Milk Distributive). The total number of Trade Boards existing on 31st December, 1920, was 60, of which 2 covered the United Kingdom, 29 Great Britain, 5 England and Wales, 5 Scotland, and 19 Ireland. Approximately 3,000,000 workers and 300,000 employers were covered by these 60 Boards.

A chronological list of Trade Boards is given in Table B.

By this time it had been possible to survey generally the field in which conditions might render the establishment of Trade Boards necessary. In some cases investigation had been dropped at an early stage when satisfactory evidence was found

that a Trade Board was not necessary, as voluntary organisation had become developed to regulate wages effectively, for instance, by the machinery of a Joint Industrial Council. There was, however, a considerable number of trades, including many of the distributive trades (in which the Government had announced in 1919 generally their intention of setting up Trade Boards) in which investigation had not proceeded very far or had not reached a stage at which a decision could be given.

Before the end of 1920, however, the trade depression had set in. New Trade Boards began to find it increasingly difficult to settle a basis for their rates in view of the great fluctuations in money value and in trade, and all rates fixed by Trade Boards were becoming the subject of controversy. In these circumstances the Minister decided that it was necessary to proceed with great caution in the establishment of new Trade Boards, and he announced this policy to the House of Commons in March. Since that time, investigations have been restricted and the staff reduced (on the expiry of the special Treasury sanction about this time), and since the beginning of the year only three new Trade Boards have been established—the Ostrich and Fancy Feather and Artificial Flower Trade Board (Great Britain) in February, the Boot and Floor Polish Trade Board (Great Britain) in July, and the Sack and Bag Trade Board (Great Britain) in November. The total number is at the present date 63.

In addition, Special Orders have been made applying the Acts to the following trades:—

Fish, Poultry, Game and Rabbits;
Fruit, Flowers and Vegetables;
Hairdressing;
Whips;

and Notices of Intention to apply the Acts to the following trades are outstanding:—

Jute, Flax and Hemp Finishing;
Meat, Distributive;
Ophthalmic, Optical.

TABLE A.

Tables extracted from the Report of the Enquiry into Earnings and Hours, 1906, showing full-time earnings of adult men and women in certain important industries to which the Trade Boards Acts have not been applied.

(A) Adult Men.

Trade.	Percentage whose earnings fell within the undermentioned limits.						Average No. of Hours of Work per week.
	Under 20s.	20s. and under 30s.	30s. and under 40s.	40s. and under 50s.	50s. and under 60s.	60s. and over.	
Building	5.7	37.1	40.8	13.4	1.8	1.2	53.4
Cotton	15.1	43.7	21.3	15.4	4.1	0.5	55.5
Metal, Engineering and Shipbuilding	7.6	23.4	36.2	13.9	4.8	4.1	53.0
Paper, Printing, etc.	6.8	29.7	38.8	14.7	4.6	5.2	56.9
Woolen and Worsted	15.0	52.2	26.2	4.1	1.1	1.2	55.6

(B) Adult Women.

	Under 10s.	10s. and under 15s.	15s. and under 20s.	20s. and under 25s.	25s. and under 30s.	30s. and over.	Average No. of Hours of Work per week.
Cotton	3.0	20.9	35.4	29.9	9.6	1.2	55.5
Hosiery	14.5	44.4	30.3	9.1	1.4	0.3	53.9
Woolen and Worsted	10.0	55.6	24.7	7.6	1.2	0.2	55.6

Ostrich and Fancy Feather and Artificial Flower (Great Britain)	3.2.21
Boot and Floor Polish (Great Britain)	11.7.21
Sack and Bag (Great Britain)	2.11.21

* These Boards were established in place of the Tailoring Trade Boards for Great Britain and Ireland respectively, set up under the Act of 1909.

THE SCOPE AND APPLICATION OF THE ACTS.

1. *The general scope of the Acts.*—The Acts authorise the establishment of a Trade Board in any trade in which certain conditions as to organisation and wages are present, and they place certain obligations upon employers (or "shopkeepers, dealers and traders") in such trades in relation to their employees. From the terms used the Ministry has regarded the scope of the Acts as restricted in the following ways:

- (a) They can only be applied to trades and not to professions or to other occupations, such as commerce, which are not trades. Naturally, a number of border-line cases may occur; for instance, it may be questioned whether the keeping of a school laundry is part of the teaching profession or part of the laundry trade.
- (b) The obligation can rest only upon employers engaged in trade, and not upon charitable institutions, for instance, which are not engaged in trade, nor upon employers who employ persons not by way of trade or for gain or profit, but for their own convenience, as in the case of a person who employs a seamstress to make clothes for the family.
- (c) The obligation rests upon a person in respect of his employees, and no minimum rate can apply where there is no contract of employment, even though money passes, as in the case of an inmate of an institution who performs work and receives a money payment, but is not employed and does not receive wages. It is to be noted, however, that under Section 9 of the Act of 1909 a worker not engaged under a contract of service is deemed for the purposes of the Act to be in certain circumstances an employee to whom the minimum rate must be paid.

2. *The principle of division by trades.*—The term "trade," in addition to the implications which are given above, also carries the implication of the division of industry into a number of units, known as "trades" or "industries," and it is a principle of the Acts that each unit should be dealt with separately. Both in industrial theory and practice the meaning of the term used in this sense varies greatly, but loosely it may be said to imply a distinction rather according to the nature of the commodity produced than according to the nature of the processes. It is thus at any rate clear that it would be impossible on legal grounds to set up a Trade Board for clerks as a class or for all weavers (woollen, cotton, silk, linen, etc.).

While however the Trade Boards Acts contain no definition of what constitutes a trade, it is clear from an examination of the Schedules to the Act of 1909 and to the Provisional Orders Confirmation Act, 1913, that the Minister has a very wide discretion in specifying or defining the trades to which the Acts shall apply. Subject to the observance of the underlying principle that the wages of each trade shall be settled by that trade alone and by no other, the Minister may, so long as he acts reasonably, define the trades to which he applies the Acts as broadly or as narrowly as may be desirable in each particular case. For instance, the trade scheduled as the lace finishing trade is clearly only a small section of the complete trade of lace warehousing. On the other hand, the trade scheduled as the hollow-ware trade covered two sections so different that it was found necessary to set up a separate Trade Board for each.

Difficulties of definition as they arise in practice are discussed in Section 6.

3. *Varieties of trade.*—It will be obvious, from the list of trades given in Table B, Chapter I, that no general statement can be made about the kind of trades to which the Trade Boards Acts are applied. Low wages are not confined to any particular class of trades.

The trades to which the Acts have been applied may be divided most broadly into two groups:—

- (a) Trades primarily manufacturing, which are carried on in factories or workshops.
- (b) Trades primarily distributive.

The first group covers many varieties of business. There are those which are purely factory trades carried on in more or less large establishments, such as the Flax and Hemp Spinning and Weaving Trade. There are trades which (or certain branches of which) are carried on on a wholesale scale in factories and are also carried on in small workrooms, which may or may not be attached to distributive establishments, working for a more or less limited clientele in the locality. Such trades are the Clothing Trades and the Boot and Shoe Repairing Trade.

In the second group come establishments ranging from the big departmental store through retail shops specialising in one class of commodity to the small general shop common in rural districts. There are also, on the wholesale side, the big warehouses which may or may not specialise in one class of commodity.

Again, a distinction may be drawn between trades in which there is a large export business, where the competition of foreign producers has to be met in foreign markets, trades which have to meet the competition of foreign producers in the home markets and trades which supply home markets alone and have no foreign competition to face. An example of the first class is the Tailoring Trade, and examples of the second class are the Birmingham light metal trades, the manufacture of match boxes (a branch of the Paper Box Trade), and the Lace Finishing Trade. An example of the third class is the Milk Distributive Trade.

It is to be expected that trades in which homework is prominent, should suffer from bad conditions. The Shirtmaking, Tailoring, Paper Box and Lace Finishing Trades, which came under the Act of 1909, and the Button Making and Pin, Hook and Eye Trades, for which Trade Boards were set up under the Act of 1918, are examples.

It is also to be expected that Trade Boards would be needed in trades in which women are largely employed, such as the shirtmaking, dressmaking and women's light clothing, and sugar, confectionery and food preserving trades. On the other hand, in certain trades under the Acts men are largely, or, as in the boot and shoe repairing trade, almost solely employed. Generally speaking, of the total number of workers employed in Trade Board trades, approximately 75 per cent are females.

Again, many Trade Board trades are those in which juvenile labour is extensively employed. In the button making trade it was calculated in 1920 that the proportion of girls to the whole number of female employees was 33 per cent., while the proportion that could be absorbed was 20 per cent. The corresponding figures for the cardboard box trade are 35 per cent. and 21 per cent. On the other hand, certain Trade Board trades, such as the aerated waters trade, employ singularly few juveniles.

Nor again can it be said that conditions are likely to be better or any worse in a localised trade than in a scattered trade. The chain trade is localised at Cradley Heath, and the jute trade at Dundee, while the laundry trade and the boot and shoe repairing trade are widely scattered.

4. *Preliminary Investigation.*—The question of applying the Acts to a trade may arise in various ways. As has been stated in Chapter I, conditions in the chain trade at Cradley Heath and in sections of the tailoring trade were brought to the notice of the Government as early as 1890, and a number of other trades were mentioned to the Committee on Home-Work in 1908. The facts obtained in the Enquiry into Earnings and Hours also directed attention to certain trades in which conditions appeared bad. When the Act of 1918 was passed, it was decided to make, so far as possible, a comprehensive survey of the ground which it might be necessary to cover. Much information was available from the experience of the Ministry of Munitions in dealing with women's trades during the war, and

from the Report of the War Cabinet Committee on Women in Industry.* A list of trades was included in the Memorandum issued by the Reconstruction Committee and a list of some thirty trades, in addition to all the distributive trades, was also submitted to the Department by the Anti-Sweating League as trades in which Trade Boards were desirable, and information was also supplied by the reports of individual social workers upon industrial conditions. In addition, direct applications were received from individual workers or from workers' organisations in various trades, and in some cases from employers and employers' associations. In a few cases, Joint Industrial Councils have applied for Trade Boards to be established in their trades. Attention may also be drawn to bad conditions of employment by a Trade Board for an allied branch of trade, and investigation into one trade often leads to the discovery of unsatisfactory conditions in another which is carried on in connection with it.

The first step when the application of the Acts is under consideration is a preliminary investigation with a view to obtaining precise information as to the conditions obtaining in the trade. This investigation is carried out by the Intelligence Branch of the General Department of the Ministry, and includes, in the first place, an examination of the relevant records in this and other Government Departments, books of reference, etc., and extensive visits to associations of employers and of workers in the trade, and to individual firms (and occasionally individual workers), with a view to acquiring more detailed information. In its early stages the investigation is directed primarily to discovering the exact nature and extent of the organisation in the trade, both on the employers' and workpeople's sides, and the rates of wages which prevail for the various types of work in the trade; but at the same time the opportunity is taken on the occasion of each visit to obtain as much as possible of the more detailed information which will be required at a later stage if it is decided to apply the Acts, not only for the purpose of enabling the trade to be defined with exactitude, but also for the purpose of constituting a Board properly representative of all the interests in the trade, wherever it is carried on.

5. *Grounds for Establishing a Trade Board.*—When sufficient information has been obtained as to the extent of organisation in the trade and the prevailing rates of wages, it is necessary for the Minister to decide whether there is a *prima facie* case for establishing a Trade Board or whether the conditions laid down by the Act are not fulfilled. This decision will be only tentative, as the intention to apply the Acts must, in any case, be published for at least 40 days, and in practice, before a final decision is taken, prolonged consultation with employers and workers takes place, both on questions of principle and in regard to details.

The two conditions laid down by the Act are (1) defective organisation, (2) unsatisfactory wages. As regards the former, the information obtained from the organisations is supplemented and checked by investigations on the spot. Experience has shown that it is not safe to judge merely by numbers; the general stimulus towards organisation on both sides which was due to war conditions has sometimes resulted in the formation of associations which nominally cover most of the trade, but are not likely in fact to hold together for any length of time and may not at any time be able to secure the universal observance of the voluntary agreements they have reached. In most trades, however, in which the establishment of Trade Boards is suggested, it will be found that the organisation is confined to industrial centres, or, at any rate, that there are substantial portions of the trade where organisation is almost wholly lacking and quite ineffective.

With regard to the second condition the Act lays down no criterion, and of course no absolute standard of lowness of wages can be found.

In practice, however, comparisons can be made with minimum rates fixed by Trade Boards or by voluntary

* Cd. 135—1919.

agreement for similar trades. In many establishments in the trade it may be found that the rates of wages are clearly inadequate to afford a reasonable subsistence to the worker, although possibly other establishments in the same trade working under similar conditions are paying wages which are substantially higher.

If it is considered that the facts as discovered by investigation justify further action being taken, the next step is to draft a definition of the trade.

6. Regard is had in the first instance to trade opinions on the broad outlines of the trade, supplemented by information obtained from any other source available. Generally it is found that trade opinions disagree in marginal cases; the Department's general enquiries are accordingly directed particularly towards clearing up the position in such cases. When all the necessary information has been collected either by the Department's investigators or as the result of interviews or conferences, it is carefully examined and sifted with a view to drafting a more or less precise description of the trade and its subsidiary processes. This involves:—

- (a) selecting and describing the branches of work to which it is proposed to apply the Acts. These branches of work may be all or a selection of the branches of work carried on in establishments typical of the trade, or they may be some or all of the essential operations characteristic of the trade;
- (b) considering how far subsidiary operations may be regarded as forming part of the trade;
- (c) considering how far the manufacture of "side-lines," which may be usually made in some other trade, ought to be included;
- (d) considering the claims of branches of the trade to be treated as separate trades or omitted altogether from the application of the Acts;
- (e) considering the treatment of establishments in which more than one trade is carried on or more than one class of commodity is sold.

The questions of demarcation which have to be dealt with may perhaps be illustrated best by instancing one or two cases which have arisen in practice.

In connection with the request that steps should be taken before the lapse of the Wages (T.R.) Act to safeguard the workers in the Birmingham Light Metal Trades, in which women are very largely employed, the Department made a preliminary survey of these trades, and on the information obtained were able to segregate certain more or less well defined and clearly recognised trades, such as the cycle trade, the lamp trade, the nut and bolt trade, and the perambulator trade. There remained a group of trades more or less distinguished amongst themselves by their products but employing the same main processes, namely, stamping and pressing. The trades were engaged in the manufacture of (a) buttons, (b) pins, hooks and eyes, and snap fasteners, (c) coffin furniture, and (d) general stamped or pressed metal work covering a wide variety of articles.

It was accordingly proposed in the first instance to regard all these branches of work as branches of one trade for the purpose of the Trade Boards Acts. Very strong claims, however, were put forward by each of the first three sections indicated above, to be regarded as members of separate and distinct trades. They argued that they possessed their own employers' associations, their own markets, and that they had no interest in common with each other or with the general stampers or pressers—in short that each of their trades had a commercial individuality of its own.

In view of these claims for separate treatment, separate Special Orders were made for each of the four trades.

In the case of the sugar confectionery and food preserving trade it was decided, in spite of the protests of one or two groups of employers in certain sections of the trade (such as the jam manufacturers and the pickle manufacturers), to group together under one Trade Board all the sections of the trade dealing with the manufacture of sugar confectionery, chocolate, jam, preserved fruits, tinned and potted meats and fish, meat extracts and essences, and sauces and pickles. It was felt that it was not possible

to draw any fair line of demarcation between the various sections of the trade in view of the many overlaps between them in the establishments engaged in the trade. The course followed by the Department received the general approval of the trade at the time.

In the sack and bag trade very large numbers of new jute sacks are made in Dundee. The wages paid are governed largely by the rates prevailing in the jute spinning and weaving trade. The employers in Dundee did not wish, for this reason, to be brought under a Trade Board on which the conditions outside Dundee might play an important part in the fixing of rates, nor did the employers in the rest of the sack and bag trade wish the rates fixed to bear any relation to the conditions in the jute trade. It was accordingly decided to exclude the Dundee section from the Special Order relating to the sack and bag trade, leaving that section to be dealt with later, if occasion arose, in connection with the dyeing, bleaching and finishing section of the jute trade.

In connection with the inclusion, within the scope of a Special Order, of the subsidiary operations in a trade (or of the manufacture of side-lines), it will be noticed that the definitions of trades given in the Schedule to the Act of 1909 do not specify operations of this kind in detail as do, to a certain extent, the Orders confirmed by the Provisional Orders Confirmation Act, 1913, and to a still greater extent, the definitions in the Special Orders made under the Act of 1918.

When the Act of 1909 was drafted, it was considered sufficient in the absence of experience to give broad general definitions of the trades covered. As soon, however, as minimum rates were fixed for these trades, questions began to arise whether certain workers engaged on operations not specifically mentioned were or were not entitled to receive the rates. In the paper box trade, for instance, the questions arose, among others, (1) whether the packing and warehouse staffs in a factory were covered, and (2) whether the manufacture of corrugated cardboard was covered in cases where it was manufactured

- (a) in a paper box factory where all the corrugated cardboard made was used in the factory for making boxes;
- (b) in a paper box factory where some of the corrugated cardboard was used while some was sold;
- (c) by a firm, not making paper boxes, by whom it was sold to paper box firms.

Questions of this kind gave rise to legal difficulties of an intricate character, and, although the Department took legal advice, they could never be certain that any action they took as a result might not be reversed in the Courts. It was accordingly decided in future to specify as accurately and completely as possible all the subsidiary operations it was intended to cover. The question of what operations ought to be covered was in every case discussed and settled with the trade concerned, but certain broad principles did emerge in practice. In the manufacturing trades, for instance, the packing and warehouse staffs are now generally regarded as part of the factory staff and therefore included, but clerical and counting house staffs are grouped with the "management" and are considered by the trades to be entirely distinct from the factory staff. In the distributive trades, on the other hand, clerical workers are generally considered to perform an integral part of the work of distribution. It thus happens that in the definitions of the manufacturing trades generally clerical work has not been included while in the definitions of the distributive trades it has been included.

The treatment of establishments in which more than one trade is carried on (or more than one class of commodity is sold) presents considerable difficulties. Where the various trades are segregated in separate departments and the workers have been accustomed to receive different rates, it has generally been found possible to leave each department under its appropriate Trade Board, although in one or two cases employers have complained that this produces confusion. Where various operations

normally confined to certain separate trades are performed indiscriminately in one establishment it has sometimes been possible to bring such operations under the Trade Board covering the main business of the establishment. A simple case in point occurs in the sack and bag and made-up textiles trades, where many firms carry on these two trades—the manufacturing operations being performed generally in separate departments, but all the packing being done in one department by the same workers. In this case the packing department has been placed under the Trade Board covering the larger manufacturing department.

When it was proposed to apply the Acts to the Distributive Trades claims were made by certain organisations of employers and workpeople, whose membership is on a national and not a trade basis, that these trades ought to be regarded as one trade having many branches. Very strong representations, however, were made by many individual trades to the effect that there was little community of interest between the various trades, which in general dealt with their several commodities and knew nothing of the business of their neighbours. The Minister accordingly decided that he could not reasonably regard all the Distributive Trades as one trade, and that he ought to apply the Acts to each trade individually.

A claim was then put forward by the large departmental stores that they should be treated apart from the several Distributive Trades, on the ground that, as they carried on many or all of these trades in one establishment, they were faced with problems of their own not common to each of the trades outside. It was strongly felt, however, by the grocers, for instance, that the conditions in the grocery department of a store were little, if at all, different from those obtaining in an ordinary grocer's shop, and that the departmental stores should not, by separate treatment, be placed in a position in the matter of wages to take advantage of competing grocers' shops.

Precisely similar questions of policy arose in connection with the Hairdressing Trade (for which a Special Order has been made) and the Meat Distributive Trade (for which a Notice of Intention has been issued). In all these cases the department of a departmental store has been treated on the same footing as a hairdresser's, butcher's, or grocer's shop.

Another question of policy arose in connection with the Laundry Trade, where it was originally decided not to bring within the scope of the Laundry Order laundries run in connection with other businesses, such as hotels and boarding-houses, for the purpose of washing the linen of the house and the guests and not of the general public. The question, however, whether the scope of the Laundry Trade Board should now be extended to cover this work is at present the subject of enquiry and discussion.

The small general shop presents a problem which has not yet been completely explored. At present a certain number of such shops are covered by the Grocery and Provisions Trade Boards, but there are many which remain outside. It may be found in the long run that special measures will have to be taken with such shops, which are generally found in the poorer urban districts and rural districts.

7. Notice of Intention and Special Order.—When a provisional definition has been drafted, the next step is to consult representatives of the trade, both employers and workers, with a view to obtaining their criticisms of the draft and their agreement to the policy proposed. The definition is also tested in relation to individual establishments in the trade. When all the suggestions and criticisms have been considered and proposed amendments discussed and settled with the trade, the first formal step is taken by issuing a Notice of Intention to apply the Acts to the trade as now defined. The Notice of Intention, which embodies the definition of the trade, is published in the Gazette and is sent to the trade papers and to the general Press.

Objections and Issue of Special Order.—A period of at least 40 days must be allowed during which

objections to the proposal may be sent to the Minister. Some objections may be due merely to a misunderstanding of the Order, and will be withdrawn as soon as the actual position has been made clear. As regards the others, every effort is made either by correspondence or personal consultation with the objectors to arrive at an agreement. Should, however, objections received within the time limit not be withdrawn and not be merely frivolous, it is incumbent upon the Minister, unless he desires to amend the Order so as to meet the objections, or to withdraw it, to order a public inquiry to be held by some person not in Government employment, and to decide upon the report of the enquiry whether or not to proceed. A case for a public enquiry has not in fact arisen.

The next step is to issue a Special Order applying the Trade Boards Acts to the trade as defined in the Appendix to the Order. Every Special Order has effect without confirmation by Parliament, but it has to be laid before each House, and if an address is presented by either House within a specified period praying that the Order may be annulled, "His Majesty may annul the Order and it shall thenceforth be void but without prejudice to the validity of anything previously done thereunder or to the power of making a fresh Order." The Special Order is published in the Gazette and sent to the general and Trade Press.

8. Reference has been made in Section 6 to the problems which are encountered in drawing up a definition of a trade. However complete a definition may be there will usually be a number of marginal cases which give rise to difficulties of interpretation, and employers and workers on the fringes of the trade are often in doubt whether the rates fixed by the Board apply to them. Considerable importance has, therefore, necessarily been attached to questions of "scope," that is, questions of the interpretation of the definition of a Board incorporated in the Special Order or, in the case of the earlier Boards, in the Schedule to an Act of Parliament. The establishment of a Trade Board has invariably been followed by a large number of enquiries as to its scope, and these enquiries persist, though with less frequency, as a result of the continual changes in industry. Under the old definitions, which were not detailed, these questions might involve a considerable body of workers. For instance, there was a disagreement between the old Tailoring Trade Board and the Board of Trade on the question whether the manufacture of waterproof garments was tailoring or not. Under the new definitions, doubt is not likely to arise in respect of such large classes. The question may involve a fairly numerous class of subsidiary workers, such as porters, or a particular establishment which carries on a special line of work on the borders of two or more trades, but in most cases it is probably true to say that the numbers and interests involved are not very great.

Apart from enquiries which are mainly due to ignorance, the questions fall into two classes—those in which a Court of Law would be guided mainly by trade evidence, and those in which the considerations are mainly legal. In either class, the difficulty of the questions varies greatly. In some cases trade opinion may be unanimous, and in others, not only may one Trade Board disagree with another, but opinion on one Board may be sharply divided. Similarly, questions in which the considerations are mainly legal may in one case need only a careful reading of the statutory definition and in another raise a complex legal problem.

As the Special Order, which lays down the definition of the trade, is a statutory document, there is no authority, except a Court of Law, which can decide upon its interpretation. The Board of Trade and the Ministry of Labour have, however, always taken the view that in administering legislation of this kind, which imposes statutory obligations on sections of the community, it was their duty to give employers and workers as much assistance as possible in knowing their respective rights and obligations. It must be remembered that Trade Board trades

include a large number of small employers and illiterate workers. Further, the Acts place the responsibility for the enforcement of the rate which a Trade Board has fixed upon the Department, and a large number of questions of scope arise in connection with inspection. The Department has therefore felt that it was only proper, in all cases of *bona fide* doubt, not to reserve questions for test cases in the Courts, which would be expensive and might appear vexatious, but to give an indication of the lines upon which it would enforce. It is to be noted that the Trade Boards generally attach great importance to this course being followed.

In course of time, as a result of the inquiries made and of the reports of the inspectorate, it may become apparent in some cases that a definition requires amendment, either to clear up obscurities or rectify errors in the definition by the inclusion or exclusion of certain operations or branches of work. In some cases the alterations required are of minor importance, but in others questions of policy of considerable importance are involved.

For instance, in the case of the Tailoring Trade where the bulk of the Retail Bespoke branch was not covered by the definition in the Schedule to the Act of 1909, the alteration effected by the Trade Boards (Tailoring) Order, 1919, not only removed what had been felt to be serious anomalies in numerous borderline cases, but amounted to the application of the Acts to a large and important branch of trade. In the case of the Stamped or Pressed Metal-Wares Trade and the Sugar Confectionery and Food Preserving Trade the Boards have pressed for the inclusion of cognate branches of trade. In these cases the large number of interests involved and the great variety of articles manufactured have raised problems of great complexity, which are still the subject of discussion with the Boards and the outside interests concerned.

The statutory procedure in the case of revision is exactly the same as in the case of the original application of the Acts to a trade, and may necessitate similar inquiries and negotiations, in addition, of course, to consultation with the Trade Board.

CHAPTER III.

CONSTITUTION OF TRADE BOARDS.

1. *Sub-division of trades.*—It is possible to set up under one Special Order different Trade Boards for different branches of a trade, and this may be convenient where a trade comprises branches using different methods of production, and which it may subsequently be found desirable to unite under a single Board. In four cases only has this course been followed. In the case of tailoring, one Board covers the Retail Bespoke branch of tailoring—roughly, that in which garments are made up for the individual customer by skilled craftsmen and another Board, the Ready Made and Wholesale Bespoke branch, which includes the factory trade and some other sections. Similarly, the women's clothing trade has been divided into the Wholesale Mantle and Costume branch, which covers the wholesale manufacture of tailored costumes, and the Dressmaking and Women's Light Clothing branch, which includes in addition to the making of dresses, the making of blouses, underclothing, &c. Separate Boards under one Order have been established for the Tin Box and for the Hollow-ware trades, and for the General Waste Materials and Cotton Waste Reclamation trades. A method for obtaining a similar result which has been considered but not put into operation is to constitute a Board of a number of statutory Committees each representing and legislating for a separate branch of the trade, and to provide by regulation that no rate shall be fixed for any branch

of the trade except on the recommendation of, or after, consideration by the appropriate Committee.

2. It is also competent to establish separate Boards for separate parts of the country. In the distributive trades it has been the general practice to establish separate Boards for England and Wales, Scotland and Ireland respectively. This plan has been adopted also in the case of some manufacturing trades. Generally, however, one Board is established for Great Britain and in no case have District Boards been established. There are special provisions in the Acts as to the establishment of a Board for Ireland.

3. *Members of Trade Boards.*—A Trade Board consists, under statute, of an equal number of representatives of employers and workers in the trade, with the addition of a small number of independent persons known as "Appointed Members." The representative member may be either elected by the trade or selected by the Minister, but election, where it has been tried (in the Chain trade for employers and workers and in the Paper Box trade for employers, and in two Irish Boards for employers and workers), has proved unsatisfactory and all appointments are now made by the Minister. The membership of a Board varies from 15 (Chain Trade Board) to 83 (Grocery and Provisions Trade Board, England and Wales). Efforts are always made to limit the numbers so far as possible, but the number of claims for representation is usually greatly in excess of the proposed membership. The regulations usually provide that all the members shall vacate their seats after the first year of office; this enables the constitution of the Board to be comprehensively reviewed in the light of the first year's experience. Subsequently, one-half or one-third of the Board retires annually. Any retiring member is eligible for re-appointment.

A representative of employers vacates his seat if he ceases to be an employer and becomes a worker, and a corresponding provision applies to workers' representatives. Provision is made for supplementary appointments to be made during the life of a Board, if it appears that any section of the trade has not received representation.

Regulations as to constitution and proceedings are made for each Board are under Section 11 of the Act of 1909. The Regulations must be laid before both Houses of Parliament, but become operative at once. The personnel of a Board is appointed by minute, and its term of office may be brought to an end by the same procedure.

4. *The Appointed Members.*—The Acts provide that a Board shall consist, in addition to the representative members, of members appointed by the Board of Trade (Ministry of Labour) who shall always number less than half the representative members. Where women are largely employed in the trade, one of the Appointed Members must be a woman.

Some difficulty is naturally found in selecting "Appointed Members" who will be accepted by both sides as impartial; the accompanying table gives a rough classification of the Appointed Members on the panel. (Table A to this Chapter.)

The part played upon the Boards by the Appointed Members is dealt with in Chapter V.

5. *Representative Members on Trade Boards.*—In selecting the representative members of a Trade Board the only specific obligation resting on the Minister is that obligation under Section 11 (3) of the Act of 1909 to appoint specially representatives of homeworkers, where such workers are employed to any considerable extent. The common form of Regulations governing the constitution and proceedings of Trade Boards, provides that representative members shall be appointed after consideration of names supplied by the employers and workpeople concerned. The trades to which the Trade Boards Acts are applied are trades in which the organisation of either employers or workers or of both is poor. No trade, however, is wholly unorganised. Usually the more important employers in the trade or the employers in a particular district are found to be in some form of association, and relatively small groups of workers are found to be in the General Labour Unions or in some Trade Union (probably local) peculiar to the trade.

If a Trade Board is to legislate intelligently and effectively for its trade, every class of employers and of workpeople in all the districts in which the trade is carried on must be, as far as may be practicable, represented on the Board. Accordingly, in considering the constitution of any Trade Board, the difficulty immediately arises as to the basis upon which seats are to be allocated to organised and unorganised representatives of employers and workpeople respectively. Members of organisations can, in general, speak with some authority for a greater or lesser number of their fellow employers or workers, and from this point of view their presence on a Trade Board is valuable; moreover, in many cases it enables representation to be given economically to several classes of employers or several districts. It is, however, very often the case that the interests of the organised employers in a trade are not identical with those of the unorganised employers, particularly in a trade where only the larger firms are organised, and that the interests of the organised workers are not identical with those of the unorganised. Furthermore, where the organisation is confined to certain districts, there may be important establishments carrying on a precisely similar business, possibly under different conditions, in other districts, and employers and workers in such districts can put forward a strong claim for separate representation. The position is still further complicated where there is a variety of different classes of establishments in a poorly organised trade.

In settling the constitution of a Trade Board a balance has to be struck on the merits of each particular case between a variety of considerations, of which the foregoing are the most important, and in face, almost invariably, of a claim from the organisations for the whole of the representation.

Candidates for appointment to a Trade Board may be obtained in a number of different ways. In some cases nominations have been invited by issuing posters to all establishments in the trade, but this method has not resulted in producing many nominations except from employers' associations or Trade Unions. According to recent practice, however, invitations to submit nominations in respect of the various branches of the trade and the various districts covered by the organisations are sent direct to Associations of Employers and to Trade Unions, and in the case of the unorganised employers and workpeople enquiries are carried out in the various localities by the Department. During their enquiries into the general circumstances of a trade, the Department's investigating officers necessarily come in contact with numbers of employers and workpeople, and where these persons are unorganised (and even if they are members of organisations) the investigators endeavour to get the more suitable among them to allow their names to be put forward as candidates for appointment to the Trade Board. Reports on all such candidates are forwarded to headquarters for examination. In some cases, where a lack of organisation is known to exist, definite instructions are given for a certain number of candidates to represent employers or workpeople to be obtained.

Frequently nominations of unorganised workers are obtained from meetings of the workers of individual firms. After a general explanation of what is required by the investigating officer who has arranged the meeting, the workers are invited to nominate one or more of their number to represent workers of their class on the Board. Sometimes it is possible to get a number of unorganised employers in a district to agree upon one of their number to represent their interests on the Board.

It is obvious that many difficulties must arise in securing nominations of unorganised employers and workpeople, of which the following are perhaps the most important. In the first place it is not always an easy matter to get to know of unorganised employers. Secondly, it is often a difficult matter to persuade unorganised employers and workers to allow their names to be put forward. Small employers do not like leaving their businesses to attend Trade

Board meetings, and unorganised workers are often afraid of victimisation. Occasionally difficulty has been experienced in persuading employers to allow meetings of their workpeople for the purpose of electing candidates.

As a general rule an employer and a worker from the same firm are not appointed to serve on a Trade Board, for reasons which will be obvious.

6. *District Trade Committees.*—Section 12 (1) of the 1909 Act provides that on the motion of a Trade Board a District Trade Committee for any area may be constituted in accordance with regulations made for the purpose by the Minister of Labour. Like the Trade Boards, District Trade Committees consist of one or more "Appointed Members" who are directed to act by the Minister, and of an equal number of employers' and workers' representatives. In practice, the Appointed Members have always been those who were serving on the Board itself. A proportion of the representative members are members of the Board itself and are nominated by the Board; the remainder are appointed by the Minister from employers and workers in the district on the same principle as members of a Trade Board are appointed (see Section 3). When a Trade Board desires to establish a District Trade Committee, it furnishes the Minister with a statement showing the areas for which the Committee is to be established and the Minister after giving the Board an opportunity to be heard determines the size of the Committee and the number of members of the Board to sit on the Committee.

The term of office of the District Trade Committee ends with the term of office of the Board.

It is the duty of District Trade Committees to recommend to the Board general minimum rates of wages applicable to the trade in the area served by the Committee, and the Board has no power to fix, vary or cancel any minimum rates of wages for the area for which the District Trade Committee has been established unless such a course has first been either recommended by the Committee or reported on by them to the Board. The Board may delegate any of its statutory powers and duties to the District Trade Committee other than the fixing, varying or cancelling of minimum rates.

In most cases where the Committees have met to consider proposals for fixing or varying minimum rates, the Employers' and Workers' sides have failed to agree, and the Chairman and Appointed Member, being the same as those serving on the Trade Board, have not thought fit to commit themselves by voting on a matter which would eventually come before the Board, and have simply reported the views of the respective sides.

In the case, however, of the Boot and Shoe Repairing District Trade Committees a large number of specific recommendations were made on the piece rates proposed by the Board.

District Trade Committees have been set up for the following trades:—

Tailoring (dissolved with the Board in 1919).
Paper Box.
Sugar Confectionery and Food Preserving.
Shrimaking.
Boot and Shoe Repairing.
Cotton Waste Materials Reclamation.
Made-up Textiles.

The areas vary very considerably; the Paper Box Trade Board divides Great Britain into 9 areas, the Sugar Confectionery Trade Board into 5, the Shrimaking into 4, the Boot and Shoe Repairing into 14; the Cotton Waste and Made-up Textiles Trade Boards have not formed District Trade Committees for the whole country, but have each established a single Committee for Scotland.

TABLE A.

Table showing the Occupation, etc., of the Appointed Members acting on the 44 Trade Boards (i.e., excluding the Irish Boards) at 31st December, 1921.

Description of Occupation of Appointed Members.	Number of Members.	Number of Boards.
University Professors or Lecturers—		
(1) Economics	8	19
(2) Law	3	8
(3) Sociology and Social Organisation	2	6
(4) Miscellaneous	4	7
Members of Legal Profession—		
(a) Active	14	33
(b) Retired	2	3
Social Welfare, Settlement and Educational Work	10	21
Ex-Civil Servants	6*	21
Medical Profession	1	3
Engaged in Public Work	2	8
Miscellaneous	3	5

CHAPTER IV.

POWERS OF TRADE BOARDS.†

A.—Rate Fixing Powers.

A Trade Board is bound to fix a minimum rate of wages for time work (unless it reports to the Ministry of Labour that it is impracticable to do so and is relieved by the Minister of its duty). It may also fix—

- (i) general minimum piece-rates;
- (ii) special minimum piece-rates;
- (iii) guaranteed time-rates;
- (iv) piece-work basis time-rates;
- (v) overtime rates.

Under the Act of 1909, it could only fix time rates and general or special piece rates, but the Act of 1918 extended its powers so that it can fix all the rates commonly recognised in industry. No explicit powers, however, are given to adopt "premium bonus" and similar systems of payment by result, and it is not clear how far the existing powers cover such systems.

A Trade Board may fix any of the above rates (excluding the special piece rates which apply to a particular establishment) so as to apply universally to the trade, or so as to apply to any special process in the work of the trade or to any special area, or to any class of workers in the trade, or to any class of workers in any special process or in any special area.

A Board may only fix these rates in respect of actual time worked or of operations performed. It has no power to legislate (except in the case of a worker waiting on his employer's premises for work to be given him to perform) for periods of time such as holidays, during which no work is performed. A Board, therefore, has no power to fix a guaranteed wage for a week or for a month irrespective of the time actually worked. Any rate which has a time basis, whether a general minimum time rate, a guaranteed time rate or a piece work basis time rate, must be fixed with respect to the shortest period of time normally used in calculating the wages payable to any given class of worker, i.e., it must be a rate per hour for those classes of workers who are customarily paid on an hourly basis (the vast majority of workers in industries at present under the Acts) or a rate per day or per week in the case of those classes of workers whose methods of working do not enable rates of wages to be calculated on an hourly basis, e.g., in the case of commercial travellers, a rate per day.

* Two were previously T.U. officials.

† Information correct to 30th September, 1921.

These rate-fixing powers will be dealt with separately under 5 headings.

1. Rates for piece-work.
2. Rates for overtime.
3. Rates for special classes of workers.
4. District rates.
5. Rates for juveniles.

A Board's powers in respect of hours of work will be dealt with in the section relating to rates for overtime.

1. *Rates for Piece-work.*—Prior to 1918, two British Trade Boards—the Chain and Lace Finishing Boards—had fixed minimum piece-rates, and since that date three other Boards, namely, the Boot and Shoe Repairing, the Brush and Broom, and the Fur Trade Boards (Great Britain) have undertaken the very laborious task of drawing up complicated piece-lists which cover almost the whole trade. The piece-list of the Boot and Shoe Repairing Trade Board covers over 500 items, and that of the Brush and Broom Trade Board over 1,200 items. Such a list is of the greatest assistance to the Inspectors and avoids many disputes between employers and workers. Five other British Boards—the Button making, the Hair, Bass and Fibre, the Pin, Hook and Eye and Snap Fastener, the Tobacco and the Rope, Twine and Net Trade Boards—have also fixed, and two others (the Flax and Hemp and the Jute Trade Boards) have proposed to fix general minimum piece-rates.

Where no general minimum piece-rates have been fixed the remuneration of piece-workers must be calculated on a basis rate, which is either the general minimum time-rate or a special piece-work basis time-rate, a rate which may be fixed when a Board is of opinion that the general minimum time-rate does not form a proper basis for the settlement of piece-rates. Out of 44 British Boards, 27 have fixed, and 3 have proposed to fix piece-work basis time-rates; of the remainder, 5 have fixed general minimum piece-rates, and most of the others cover trades in which there is little or no piece-work. The piece-work basis time-rate is in practice generally higher than the corresponding general minimum time-rate. It is of course generally recognised throughout industry that a worker expects to earn considerably more on piece-work than on time-work because of the additional effort of working at piece-rate speed. The relation between the two rates is fixed in a few cases on a basis of percentage increase, varying from 10 per cent. to 25 per cent.; in other cases the piece-work basis time-rate is higher than the corresponding general minimum time-rate by a flat sum, usually 1½d. per hour for males and 1d. per hour for females.

The method of calculating the piece-rate upon the basis rate is laid down by the Act of 1909, which provides that the piece-rate must "yield in the circumstances of the case, to an ordinary worker at least the same amount of money as" the basis rate.

This principle was recommended by the Select Committee of the House of Commons in 1908 (see Ch. 1), which considered that while the primary task of a Board would be to fix detailed piece-rates, it would be necessary to supplement them by fixing a legal basis rate on which to calculate piece-rates for new operations which the detailed piece-rates did not cover.

The principle is simple. It is that the Trade Board have in mind, when they fix the amount of the basis rate, an ordinary worker, who is not on the one hand exceptionally slow or stupid or careless, nor, on the other, exceptionally quick or hard-working, and that it is reasonable for the quick worker to get rather more, and the slow worker rather less than the ordinary worker, after due allowances have been made for "the circumstances of the case," e.g., the organisation of the workshop, the amount of power used. But while the principle is simple, the application of it is difficult, because it involves the ascertaining of facts which are not always easy to ascertain. It is not always easy to ascertain whether C's earnings fall below the minimum because he is slow or inattentive, or because the workshop is badly organised, or the piece-rate too low. As the questions are questions of fact, no rule of thumb can be laid down, although the Tailoring Trade Board gave an opinion that, generally speaking, it might be ex-

pected that 20 per cent., and the Paper Box Trade Board 15 per cent., of the workers in any establishment in the trade would be unable to earn the full amount of the basis rate, i.e., would be "sub-ordinary."

Where no general minimum piece-rate has been fixed, a Trade Board is bound, on the application of any employer, to fix special minimum piece-rates for his workers. This power has been exercised only by the Paper Box and the Ready-Made and Wholesale Bespoke Tailoring Trade Boards. It is useful where a firm is engaged on special work.

The Act of 1918 gave Trade Boards power to fix a guaranteed time-rate for piece-workers, i.e., a rate (not higher than the General Minimum Time-Rate) to which a piece-worker shall be entitled in respect of all time worked on piece-work whatever his actual earnings at piece-rates. Such rates are in operation under the determinations of the Brush and Broom, the Boot and Shoe Repairing, the Laundry, the Linen and Cotton Handkerchief and Household Goods and Linen Piece Goods and the Tobacco Trade Boards (Great Britain).

21. *Overtime Rates.*—The Acts give no power to Trade Boards directly to regulate hours of employment, but the Act of 1918 empowered them to fix special rates for overtime, either weekly or daily, and for that purpose to declare what are the normal number of hours of work per week or on any day in the trade. The Act does not give a Trade Board power to fix a normal, but it is obvious that it must have a good deal of discretion in declaring a normal, particularly in a trade which is, ex-hypothesi, not organised.

All the British Trade Boards (excluding the Chain and Lace Finishing Trade Boards) have exercised these powers; 5 have fixed weekly overtime rates only, and 35 both daily and weekly overtime rates. The declared normal number of hours weekly runs from 46 to 48, the daily normal from 7 on weekdays and 4 on Saturdays, to 9 on weekdays and 5 on Saturdays. The Milk Distributive Trade Board is peculiar in that a 7-day week is normal in the trade. Its "normals" are 48 hours per week, 6 hours for Sunday and 7 hours for other days, but it is provided that overtime rates shall not become payable until a certain amount of time has been worked in excess of the normal.

Sundays and public holidays are usually declared to be days on which no work is normal and on which, accordingly, all time is to be paid for at overtime rates.

In the case of daily overtime, the actual rates are usually "time-and-a-quarter" for the first two hours' overtime per day, and "time-and-a-half" for subsequent hours, but "double time" for all time worked on Sundays or holidays. Special provision, however, is sometimes made for overtime on Saturday.

There are a number of provisions for special cases; e.g., Jewish workers substitute Saturday for Sunday; employees who work a 5-day week are allowed to work longer hours on those five days; employers who give alternate Saturdays off are allowed a compensatory lengthening of other hours.

3. *Rates for special classes of workers.*—Under Section 3 (1) of the Act of 1918, which is only a slight modification of a corresponding provision in the Act of 1909, a Trade Board has power to fix different rates for different processes or for different classes of workers in the trade. It should be noted that this gives no power to a Trade Board to introduce new principles of classification into a trade; it can only fix rates for classes which already exist in the industrial structure of the trade. (Classes of juvenile workers are dealt with in Section 5; this section deals only with special rates for adults).

In dividing workers into classes many different principles may be followed, and principles which apply to one trade will not apply to another. The distinction between skilled, semi-skilled, and unskilled workers is one of wide application; thus in the Retail, Bespoke Tailoring trade there is a sharp distinction between the skilled journeyman and the unskilled

worker. On the other hand, in the textile industries, the primary division is vertical into a number of crafts, spinning, weaving, etc., and the horizontal division into less and more skilled runs through all the crafts. Other trades, again, consist of a number of vertical sections which, though related by the nature either of the material used or of the produce or of the processes, are economically independent and compete in different markets. Thus the General Waste Trade Board covers the woollen waste, waste paper and scrap metal sections, with cotton waste under a separate board; the Rope, Twine and Net Board covers twine-making (some of which may be used in rope manufacture or net-making). In other cases, a trade may be divided into the factory section and the handicraft section, e.g., the Dressmaking and Women's Light Clothing trade, in which the two sections use entirely different methods and employ different types of labour, but produce the same articles and to a large extent compete in the same market. Another obvious division is between factory work and home work, as in shirtmaking, at any rate till recently.

The first Trade Board to be established (Chain) fixed at the outset different rates for different classes of adult males, and the majority of Trade Boards have used their powers to fix rates for special classes either alone or in addition to general rates. The attached Table A, from which the Irish Boards are excluded, shows the details. It should be noted that where both special and general rates exist the general rate may either cover the great body of workers, as (e.g., in the case of the women in the Stamped or Pressed Metal Wares trade, or, on the other hand, a small residue that is left by subtracting all those who are covered by the special rates, as (e.g., in the case of the men in the Ready Made and Wholesale Bespoke Tailoring).

4. *District rates.*—Both Acts empower a Trade Board to fix any of its rates so as to apply either to the whole trade or only to special areas. The considerations which arise in deciding between national and district rates naturally vary in importance from trade to trade; there is a great difference between a trade which covers the whole country, like the Grocery and Provisions trade, and a trade which is mainly confined to certain industrial centres. It has, however, been the definite policy of most of the Boards to fix flat national rates.

The question did not arise on the Chain and Lace Boards, as those trades are entirely local. It arose, however, early in the history of the Tailoring Trade Board. This Board passed at its first meeting an unopposed resolution that "Whatever minimum rate is fixed, the same should apply to every area under the jurisdiction of this Board," and the resolution was endorsed by all the District Trade Committees. When the Board's proposals were issued, however, a number of objections were lodged demanding a lower rate for "the country districts." The branch of the Employers' Federation in the Eastern Counties, supported by employers in Oxford, Abingdon, and elsewhere, sent a deputation to the Board of Trade to press for at least two rates, and the question was warmly discussed on the Board itself, which eventually reaffirmed its decision in favour of a single rate by 20 votes to 1.*

The same controversy arose on the Paper Box Trade Board, and was settled in the same way.

The first Trade Board to fix a district rate was the Rope, Twine, and Net Trade Board, which in 1920 fixed special rates, on the whole higher than those for the rest of the country, for Dorset and Somerset, where, however, a somewhat special type of trade is carried on. The Board has since issued a proposal which bases differences of rates upon the type of work and not upon the district. Shortly afterwards, the Ready-made and Wholesale Bespoke Tailoring Trade Board fixed higher rates for cutters in London than for the rest of Great Britain. In November, 1920, the first general scheme of district

* See "Minimum Rates in the Tailoring Industry," by R. H. Tawney, Chapter II.

rates came into operation: the Milk Distributive Trade Board (E. & W.) fixed three scales, the lowest for areas administered by Rural District Councils, excluding any town or village having a population exceeding 10,000, the highest for London and an intermediate one for the remaining areas. The other distributive Trade Board in England and Wales, the Grocery and Provisions Trade Board, has also proposed three scales, the lowest for administrative areas with a population under 10,000, the highest for the Metropolitan district, and the intermediate one for the remainder of the country. The corresponding Board in Scotland has proposed two different scales, but the Milk Distributive Trade Board (Scotland) has fixed a flat rate. In addition, the Cotton Waste Trade Board has fixed special rates for Scotland; and the Laundry Trade Board has made special provision for the County of Cornwall and the Orkney and Shetland Islands, where slightly lower rates are in force for female workers than in the remainder of Great Britain.

5. *Juvenile Workers.*—Section 3 of the Trade Boards Act, 1918, provides that a Trade Board may fix different rates for different classes of workers, and that if the class consists of persons who are learning the trade the Trade Board may attach such conditions as they think necessary for securing the effective instruction of those persons in the trade. This section also provides that a Trade Board may attach a condition that workers who are members of a class must be holders of certificates to that effect issued by the Trade Board.

The problems connected with the fixing of rates for younger workers, particularly in a semi-skilled or skilled trade, are perhaps as great as any which the Trade Board has to consider; for it is particularly necessary to take care not to prejudice the employment of adults by fixing rates for the younger workers too low, or conversely, prejudicing the employment of the younger workers and the recruitment of the trade by fixing the rates for the younger workers too high. The prevention of blind-alley employment and the proper training of the worker in the more skilled trades are further important factors which have to be taken into careful consideration by the Trade Board.

The problems vary, but the following considerations are indicative of those which have to be taken into consideration by the Trade Board in dealing with the question of the younger workers:—

- (1) The system of training in some trades is longer, more complete, and less remunerative to the employer than in others. In some a learner is only taught, as a rule, to do a single operation or series of operations, whereas in others she is taught the whole trade throughout, and therefore requires more careful and individual training. Unless the Trade Board take this into consideration and provide an incentive to an employer to teach the worker the whole trade by fixing lower rates provided she does this, the recruitment of skilled workers will be limited;
- (2) The more skilled the trade, the more material likely to be wasted and spoilt by workers; and the value of the materials spoilt by learners varies in different trades;
- (3) It is generally customary that the skilled worker in a skilled trade should receive a higher rate than an unskilled in an unskilled trade. In other words, the greater the skill the higher the rate. It is further customary that this is compensated for by a proportionally lower rate during the period of learning;
- (4) In a semi-skilled or unskilled trade, the older worker undoubtedly becomes proficient and productive much more rapidly than a younger worker, but the factor of age in productivity decreases as the skill in the trade increases. There is probably little difference in the value of a worker in a skilled trade with two years' experience who enters at 14 and one with the same experience who enters at 16.

(5) The tradition of the trade has to be taken into consideration. To take the case of the Dressmaking trade, the workers in the past, particularly in the country towns, have been largely drawn from the artisan and small shopkeeper class. This class regards dressmaking as a means of getting their daughters trained in a skilled trade in places where frequently there are few avenues of employment open to them, and, being in fairly good circumstances themselves, they do not expect their daughters to receive an economic wage, but only wish them to have occupation and a training which may be useful in their domestic life.

(6) The necessity of stimulating or reviving the craft spirit and the importance of giving the worker a thorough training in the whole trade rather than in one particular process of it. This is of particular importance in the case of the more highly skilled trades, particularly those which are carried on in all corners of the country. It may be found preferable to keep the trade alive in those districts at perhaps a low minimum rate, than to drive it into factories and large towns.

The necessity of taking into consideration the varied factors of this description, the importance of which vary in relation to different trades, has caused all the Trade Boards to regard the younger workers as special classes, and to adopt a wide diversity of rates and methods of fixing them and conditions for securing instruction. These range from the rates fixed on an age basis with no conditions attached for securing the instruction and training of the worker in unskilled trades, such as the Aerated Waters or the Milk Distributive trade, to a number of scales of rates for different sections of the trade, fixed on an experience basis, with a comprehensive apprenticeship scheme, as in the Brush and Broom Trade.

The rates in question can be divided into three broad categories:—

- (1) Rates fixed entirely on an age basis;
- (2) Rates fixed for learners to which certain conditions of learnership are attached;
- (3) Rates fixed for apprentices to which conditions are attached for securing to the apprentice a thorough training in the whole trade.

(1) *Rates fixed for younger workers entirely on an age basis with no conditions attached.*—This practice has been followed in trades where the skilled workers are not considered to need the protection of the Trade Board, or where the work is mainly unskilled and where accordingly the worker's productive capacity depends more on his or her age and strength than upon experience or acquired skill. The fixing of rates in trades of this description does not present such great difficulty as in others, although the rates and the basis on which they are fixed are very varied.

Trades in which rates have been fixed on this basis for both male and female juveniles are:—

Aerated Waters,
Cotton Waste,
Flax and Hemp,
Button-Making,
Laundry,
Linen and Cotton Handkerchief,
Milk Distributive,
Coffin Furniture,
Hair, Bass and Fibre,
Jute,
Pin, Hook and Eye and Snap Fastener,
Stamped or Pressed Metal Wares,
Toy,
Rope, Twine and Net,

The Wholesale Tailoring trade, the Wholesale Mantle and Costume trade, the Dressmaking trade, the Shirtmaking trade, the Hat, Cap and Millinery trade, the Ostrich Feather trade, and the Corset trade have also fixed rates on this basis for male workers only.

The advances are as a general rule given yearly but in the case of the Tobacco Trade Board they are given in six-monthly periods; in some trades such as the Hair, Bass and Fibre, the Pin, Hook and Eye and Snap Fastener and the Rope, Twine and Net trades

the basis on which advances are made varies according to the age of the worker.

In the Jute trade the advances to both male and female workers are fixed for two-yearly periods except for male workers over 18 when the age period is three years.

The rates are fixed for ages which begin at 15 and under, except in the case of the Jute trade and the Aerated Waters trade in Scotland where the lowest age is 16 and under, and rise to the full adult rate at the age of 18 in the case of women and 21 in the case of men. In the Corset, Dressmaking, Hat, Cap and Millinery, the Ostrich Feather, Readymade Tailoring, Shirtmaking and Wholesale Mantle and Costume trades however the full adult rate for male workers is not received until the age of 22, and in the case of the Perambulator and Invalid Carriage trade, the Tobacco trade and the Toy trade the full adult rate for female workers is not received until the age of 21. The Sugar Confectionery and Food Preserving trade is peculiar in that the full adult rate is not received until the age of 24 in the case of male workers and certain special classes of female workers engaged on men's work.

Many of the Trade Boards for the trades set out above have made provision for late entrants, *i.e.*, workers who enter the trade at a later age than is usual, by providing that female workers who enter after the age of 16 shall receive a rather lower rate than that otherwise applicable during the first 6 or 12 months of their employment. Similar provision has been made for male workers who enter above the age of 17 in the Laundry and Hollow-ware trades, 18 in the Perambulator and the Rope, Twine and Net trades, and 19 in the Dressmaking and Hat, Cap and Millinery trades.

In some trades, as, for example, the Paper Bag trade, different scales of rates have been fixed for the younger workers according to the class of work and special scales for late entrants.

In the Coffin Furniture and the Stamped or Pressed Metal Wares trades different scales have also been fixed for different classes of work and special scales for late entrants dependent on the length of experience in the particular class.

(2) *Rates for Learners.*—Special rates have been fixed in those trades, and particularly the factory trades, in which a certain amount of skill is required.

Attached to these rates is the condition that there must be some degree of learnership. The definition of learners requires essentially two things:—

- (i) that the learner shall be within certain limits of age and experience or both; and
- (ii) that he or she shall be in fact learning a branch or process of the trade.

To these two conditions a third is almost always attached, namely, a certificate of registration with the Trade Board. If a worker, however young, does not fall within the class of learners, *i.e.*, if the conditions attached by the Trade Board to the rates are not complied with, the minimum rate payable is that applicable to workers other than learners, which in the case of the female workers is in most cases the full adult rate.

The Corset, Dressmaking, Hat, Cap and Millinery, Lace Finishing, Ostrich and Fancy Feather, Wholesale Mantle and Costume, Shirtmaking, Paper Box, Paper Bag, Wholesale Tailoring and Retail Bespoke Tailoring Trade Boards have fixed rates for female workers in scales according to age and length of experience. The length of the learnership period ranges generally from four years in the case of workers of 14 and under to one year in the case of workers commencing at over 21 years of age. In the Ostrich and Fancy Feather trade, however, this latter period is two years and it ranges from two to four years in certain sections of the Dressmaking and Hat, Cap and Millinery trades. The rates are fixed on a graduated basis so that the worker reaches the full minimum rate on completion of the learnership period prescribed by the Trade Board. In the Lace Finishing trade it is, however, a condition of learnership that the workers shall be under 18, after which age the full adult rate is applicable.

The Hollow-ware, Tin Box and Perambulator Trade Boards have fixed rates on an age basis only for both male and female learners, and the Paper Bag and Paper Box Boards have also fixed rates on a similar basis for male learners. Provision is however made for a lower rate than would otherwise be applicable, for late entrants in these trades.

The conditions attached to the rates range from the nominal one provided by the Hollow-ware Trade Board and the Sugar Confectionery Trade Board that the workers shall be employed under conditions which in the circumstances of the case afford a reasonable prospect of advancement to the General Minimum Time-Rate, to that of the Chain Trade Board, which provides that the learner must be definitely and effectively employed under agreement in writing in the practical learning of the trade, and that the Trade Board in granting the certificate may take into consideration whether, having regard to the number of learners employed in any factory or workshop or under any journeyman or worker, the learner proposed to be certificated has a reasonable prospect of receiving due instruction.

In some cases, more particularly in the factory trades, the Trade Board provides that the advances to be given to learners shall become due as from the first Monday in January and July of each year. This is a convenience to large employers of labour, as it enables them to make their increases on certain specified dates instead of making them to each individual learner according to the date on which she entered their establishment.

(3) *Rates for Apprentices.*—In four trades the Trade Boards have fixed rates for apprentices. These rates, which are generally at a lower level than those fixed for learners or younger workers, are only applicable provided the conditions laid down by the Trade Board are carried out. These conditions as a rule provide that the worker shall receive a very thorough training in the whole trade, or in some section of it which requires a considerable amount of skill, and in most cases provide that the form of indenture specified by the Trade Board shall be adopted.

The Boot and Shoe Trade Board have fixed two sets of rates applicable to apprentices—

- (a) those who are employed under an indenture providing for their effective instruction in boot and shoe repairing in all its branches. These rates are fixed on an age basis commencing at the age of 14 up to the age of 19. They are lower than those fixed by the Trade Board for younger workers who are not apprentices, and are only applicable provided the apprentice is employed under an indenture providing for his effective instruction in boot and shoe repairing, &c.;
- (b) those who are employed under an indenture providing for their effective instruction for a period of 5 years in hand-sewn boot making or in hand-sewn making and repairing. The rates in this case are fixed on an age basis and not on an experience basis, namely, for the 1st, 2nd, 3rd, &c., year of apprenticeship.

The Brush and Broom Trade Board have fixed several series of rates and schemes of apprenticeship applicable to apprentices who are apprenticed to various sections of the trade. The rates in all cases are fixed on an experience and not on an age basis for a five years' apprenticeship. In some cases the rates are General Minimum Time-Rates, in others one-half to three-quarters of the piece-rates which would otherwise be applicable.

The Trade Board attach the condition to the rates that a journeyman instructor must be responsible for the work of the apprentice during the first 12 months, and for supervision during the remainder of the apprenticeship, and that the journeyman must be paid by the employer in respect of the instruction of, and responsibility for, the apprentice, the differ-

ence between the earnings of the apprentice at the minimum rates prescribed and the sum which the apprentice would have earned had he been employed at the General Minimum Piece-Rates which would otherwise have been applicable.

The Trade Board have fixed three series of the proportion of apprentices to journeymen shall be one or two apprentices to every five journeymen according to the section of the trade.

Perhaps the most important condition for securing the effective instruction of the apprentice is that the indenture of apprenticeship prescribed by the Trade Board must be used. This Indenture provides amongst other things that the employer will keep the apprentice under his own supervision or place him under a fully qualified journeyman and that he will cause the apprentice to attend during the term of his indenture such technical classes as may be approved, and that the apprentice shall suffer no loss of wages by reason of such attendance.

The Fur Trade Board have fixed three series of rates for younger workers, both male and female:—

- (a) for workers between 14 and 18 other than learners and apprentices, according to age with no provision for late entrants;
- (b) for learners who are employed during the whole or a substantial part of their time in learning certain sections of the trade. The rates in this case are fixed on an experience basis for a period of employment of 7 years for those commencing under the age of 21;
- (c) for apprentices who are employed for a period of five years under an indenture of apprenticeship prescribed by the Trade Board in three specified sections of the trade. The Trade Board further stipulates that the proportion of apprentices to journeymen shall be one apprentice to five journeymen. The indenture adopted is similar to that adopted by the Brush and Broom trade.

The Tobacco Trade Board have fixed two sets of rates for workers who are apprentices to two different sections of the Cigar-making trade. The rates in question are further divided into two sections:—

- (a) for apprentices employed in all parts of Great Britain other than the City of London and the Metropolitan Police District; and
- (b) those employed in the City of London and the Metropolitan Police District.

These rates are fixed on an experience basis for a five years' apprenticeship and are either General Minimum Time-Rates or General Minimum Piece-Rates.

The Trade Board attach a condition that the employment of apprentices must be limited to one apprentice to three journeymen in the case of apprentices to cigar-making, and one apprentice to five journeymen in the case of apprentices to cigar sorting and bundling.

The rates are only applicable provided the form of indenture prescribed by the Trade Board is used which provides that the employer "shall use his best endeavours to teach and instruct or cause the apprentice to be taught or instructed," &c.

B.—Minor Functions of Boards.

1. *Permits of Exemption.*—In Section 5 (5) of the 1918 Act, it is provided that where a worker is unable through infirmity or physical injury to earn the minimum rate applicable to him, the Trade Board may issue a permit of exemption laying down conditions under which he may be employed at less than the minimum rate.

Permits of Exemption may be granted by the Trade Board in the following circumstances:—

- (a) Where a worker cannot suitably be employed on piece-work and is unable through physical disability to earn the general minimum time-rate.
- (b) Where a Trade Board has fixed a guaranteed time-rate for piece-workers and the worker is employed on piece-work, but is unable through physical disability to earn the guaranteed time-rate for such workers.

The requirements of the Acts are satisfied and no Permit of Exemption is necessary in the following cases:—

- (i) If general minimum piece-rates have been fixed by a Trade Board and the worker is paid at such piece-rates. (But see (b) above.)
- (ii) If, where only general minimum time-rates or piece-work basis time-rates and no general minimum piece-rates have been fixed by the Trade Board, the worker is employed on piece-work, and paid at a piece-work rate which is sufficient to yield to an ordinary worker at least the same amount of money as the general minimum time-rate or the piece-work basis time-rate, if one has been fixed, whether the particular worker in question is able to earn that amount of money or not. (But see (b) above.)

The majority of the Boards have delegated to their Administrative Committees their powers and duties in regard to the granting of Permits of Exemption; one or two Boards have appointed for this purpose an *ad hoc* Committee smaller in numbers than the Administrative Committee.

The application to be submitted to the Committee is made on a form prescribed by the Board requiring certain particulars to be furnished and the signatures of the employer and the worker. A medical certificate is usually required also. The particulars furnished and summarised and the summary circulated to the members of the Committee usually in advance. The Committee meets from time to time and deals with each application in detail. If the Committee are able to reach a decision on the facts in the application the matter is disposed of at once. In many cases, however, the Committee may require additional information, in which case the case is referred for a visit either by an Investigating Officer or by one or perhaps two members of the Committee or of the Board who report to the Committee. Formerly all such cases were reported on by an Investigating Officer, but with the large increase in the number of Boards and of Permit applications to be dealt with, this has not been found practicable and the Department have authorised the payment of expenses incurred by members of the Board in visiting and reporting on applications for Permits.

A Committee occasionally exempts a worker entirely from the operation of the minimum rates without conditions, and leaves the question of the rate to be paid to the worker to settlement between the parties. In the great bulk of cases, however, the Committee prescribe a rate (less than the minimum rate) subject to which the Permit operates. It is not the usual practice of the Committees in cases where they consider the rate proposed by the employer inadequate to refuse the Permit outright. Negotiations with the employer are frequently undertaken either by correspondence or on a visit, with a view to securing his concurrence in such advance in the rate originally proposed by him as the Committee think proper.

Where a *bond-fide* application for a Permit has been made to a Board no action would be taken by the Department against the employer for paying the worker at the proposed rate specified in the Permit application pending a decision on the case, and an employer is not prejudiced by the delay in arriving at a decision which occurs for any of the reasons

described. According to the circumstances of each case, Permits are granted for limited periods of 3, 6 or 12 months, or 2 years, or indefinitely, subject to the condition set out in every Permit that it may be revised or cancelled at any time. It is open to either employer or worker also at any time to apply to the Board for revision and also for a renewal of a Permit granted for a limited period.

(2) *Registration of Apprentices.* (See Section A (5).)—A number of Boards have fixed special rates for indentured apprentices employed under certain conditions set out in the Board's Determinations, one of which is that the apprentice shall be registered with the Trade Board. The consideration of applications for such registration follows the general lines described of the procedure for dealing with applications for Permits of Exemption, and is dealt with in practice by the Administrative Committee in the first instance. The volume of this work is in any case small and only a few of the Boards have provided special rates for apprentices. The task of the Committee is to satisfy themselves that the indenture is in the form described by the Board and that any other conditions (such as the limitation in the number of apprentices proportionately to journeymen) set out in the Board's Determination are complied with. Registration then follows automatically.

(3) *Certification of Learners.* (See Section A (5).)—A number of Boards, especially those for the sewing trades, have fixed special rates for learners who are employed under certain specified conditions as to learning and who hold certificates from the Board. The Boards do not themselves deal with these applications for certificates in detail but have instructed the Secretary to grant certificates in all cases in which the applicant is within the prescribed limits of age and experience, unless there appear to be special reasons against this course on the ground of doubt as to the other conditions of learnership being complied with, when the case is referred to the Board or the Administrative Committee. Such cases seldom arise and the applications are granted as a matter of routine. The mere fact of the grant of a certificate does not justify the payment of the lower learners' rates if the other conditions of learnership set out in the Order are not observed. The certification system has come to be a means of providing an accurate record from which the rate payable to a learner at any stage in her learnership can be accurately determined, and so of safeguarding the employer in cases where learners change their employment, and enabling the Department to enforce the rates. The enforcement of the conditions relating to the provision of "reasonable facilities" for learning is one to be dealt with in the ordinary course of inspection.

(4) *Questions of Scope.*—All questions as to the scope of minimum rates fixed by a Board and the interpretation of the provisions of the Orders setting out the minimum rates, whether addressed to the Trade Board or to the Ministry of Labour, or arising in the course of inspection, are under a recent arrangement (see Ch. VIII) referred in the first instance to the Trade Board concerned for an expression of opinion to be conveyed to the Minister, by whom all questions are answered and who reserves the right to express such opinion as he thinks proper after considering the view of the Trade Board.

The procedure, so far as the Trade Boards are concerned, in dealing with questions of scope and interpretation is as follows. If the question raised is one on which the Secretary knows the view of the Board, he conveys that view to the Minister. If he is in doubt, the case is referred to the Board or the Administrative Committee. Most of the Boards have given their Administrative Committees power to express opinions on their behalf. In the case of one or two Boards the Administrative Committee considers the cases and makes a recommendation to the Board as to the opinion to be expressed, which is only conveyed to the Minister after ratification by

the full Board. One Board has decided to deal with such questions in full Board. Another Board has appointed Sub-Committees for different sections of the trade.

The cases sometimes involve prolonged consideration, if it is a question of the applicability of the rates to the making of certain articles, the Board or Committee may require samples to be furnished for their inspection; if to certain operations, they may ask for fuller particulars or may request the Department to have a report made by an Inspector. Occasionally the two sides of the Board or Committee may not be in agreement as to the view to be expressed, in which case perhaps the opinions of the respective sides are both conveyed to the Minister with reasoned statements.

(5) *Power to make recommendations to Government Departments.*—Under Section 10 of the Trade Boards Act, 1918, a Trade Board for any trade may, if they think fit, make a recommendation to any Government Department with reference to the industrial conditions of the trade and the Department to whom the recommendation is made is required to take it into consideration forthwith. A number of specific recommendations on general trade matters have been made to various Government Departments, e.g., the Boot and Shoe Repairing Trade Board (Great Britain) have suggested to the Home Office that measures should be taken to bring "one man businesses" within the Shop Hours Act; the Lace Finishing Trade Board submitted a recommendation to the Labour Section of the Peace Conference regarding the necessity of the equalisation of wages in France and England in their trade.

Extensive use has also been made of this power in co-operation with the Industrial Training Department and with the Juvenile Branch of the Employment Department of the Ministry.

(A) In certain trades the Administrative Committee of the Trade Board—or a special sub-committee of that body—acts as a National Trade Advisory Committee to the Industrial Training Department. The functions of such a Committee are:—

"To advise the Ministry of Labour as to the conditions under which the training of disabled men in the trade in question can best be given the best methods of training, the suitable centres for such training, and, generally, to secure uniformity in the training of disabled men."

It is the duty of such a Committee to consult the Local Technical Advisory Committees set up by the Training Department in various training areas on technical points arising out of the training of disabled men, e.g., the suitability of training in workshops and of the requests of employers for the supply of men for employment after training with special reference to the conditions of the employment and prospects of permanent employment.

The trades in which committees of the Trade Boards act as National Trade Advisory Committees are:—

- (1) Boot and Shoe Repairing.
- (2) Tailoring.

(1) *Boot and Shoe Repairing Trade.*—The National Trade Advisory Committee for Handsewn Boot and Shoe Making and Repairing, one of the first of such committees to be established, issued its original Report (a document setting out the terms under which all training in this trade must be given) in 1917. This body was composed of representatives of the organisations of employers and workers in the trade.

The Boot and Shoe Repairing Trade Board (Great Britain) was established in July, 1919. Shortly after steps were taken by the Training Department of the Ministry to promote co-operation between the Trade Board and the Advisory Committee, and, as a result of negotiations, the functions of the Advisory Committee were taken over early in 1920 by the Administrative Committee of the Trade Board to which certain members of the Advisory Committee were co-opted.

The substitution of the old National Trade Advisory Committee by the Administrative Committee of the Trade Board has resulted in a distinct tightening up of the conditions under which the Industrial Training Department may accept disabled ex-Service men for training in this trade, in view of the Administrative Committee's opinion that there had been a tendency in the past to admit more trainees into the trade than the trade could readily absorb.

It may further be noted that the Committee are attempting to raise the standard of the craft by insisting on efficient training throughout, and by refusing to permit training in repairing only.

(2) *Tailoring Trade*.—The Tailoring Trade Board was in existence previous to the setting up of National Trade Advisory Committees, so that when the necessity arose to appoint a body to deal with training in Tailoring, the Trade Board appointed a Committee from its members to act as a National Trade Advisory Committee.

When the Tailoring Trade Board was replaced by the Retail Bespoke and the Ready-made and Wholesale Bespoke Tailoring Trade Boards, these Boards

appointed separate committees to carry on the functions of Trade Advisory Committees.

Close co-operation also exists between the National Trade Advisory Committee for Brushmaking and the Brush and Broom Trade Board.

(B) A number of Trade Boards have prepared schemes for the training of (a) adult women, *e.g.*, Ready-made and Wholesale Bespoke Tailoring (Great Britain); (b) unemployed women, *e.g.*, Paper Box (Great Britain); (c) war widows, *e.g.*, Dressmaking and Women's Light Clothing (England and Wales).

(C) The majority of Trade Boards have conferred with the Juvenile Branch of the Employment Department, with a view to co-operation with Juvenile Advisory Committees in reference to the employment and training of juvenile workers.

There has also been close co-operation between Trade Boards and the Home Office in the preparation of Welfare Orders.

It may finally be noted that Trade Boards are regularly consulted as to the proportion of disabled men to be employed under the King's Roll of Honour Scheme.

TABLE A.

Table showing Nature of Rates fixed by Trade Boards for Adult Workers in operation on 30th September, 1921.

Trade Board.	Area.	Nature of Rates fixed.*		Basis of Classification of Special Rates.
		Male.	Female.	
Aerated Waters	England and Wales	General		—
Aerated Waters	Scotland	General		—
Boot and Shoe Repairing ...	Great Britain ...	General and Special		(1) Branch of trade (surgical work) (M and F). (2) Responsibility (Foremen and Managers) (M). (3) Type of machine tended (M.). (4) Process (F.). Experience or apprenticeship and process concurrently.
Brush and Broom	Great Britain ...	Both	General	(1) Experience and process concurrently (M).
Button Making	Great Britain ...	General and Special		(2) Homework or factory work (F.). (1) Size of iron, and (cross-division) (2) Provision of tools etc. by employer or worker respectively.
Chain	Great Britain ...	Special		Age, experience and process concurrently.
Coffin Furniture, etc.	Great Britain ...	Both	Special	Age, experience and process concurrently.
Corset	Great Britain ...		General	Age, experience and process concurrently.
Cotton Waste	Great Britain ...	General and General		—
Dressmaking and Women's Light Clothing.	England and Wales	General and Special		(1) Age, experience and process concurrently (M. factory section). (2) Age, training, experience and process concurrently (F. retail section). Section of trade (retail and factory).
Dressmaking and Women's Light Clothing.	Scotland	General	Special	—
Flax and Hemp	Great Britain ...	General		Section of trade and within each section, age, experience and process concurrently.
Fur	Great Britain ...	General and Special		Age, experience and process concurrently.
Hair, Bass and Fibre	Great Britain ...	General and Special		Section of trade and occupation (M.).
Hat, Cap and Millinery ...	England and Wales	Both	General	Section of trade and experience concurrently (F.).
Hat, Cap and Millinery ...	Scotland	General	Both	—
Hollow-ware	Great Britain ...	General		(1) Craft (Spinning) size of hobbin and No. of spindles attended concurrently.
Jute	Great Britain ...	General	Both	(2) There are also two miscellaneous classes—"orra" or spare spinners and spinning shifting mistresses both within the same craft.

* Nature of rates fixed, *i.e.*, whether general rates for all male and for all female workers in the trade, or whether rates for special classes of males and/or female workers.

TABLE A—continued.

Trade Board.	Area.	Nature of Rates fixed.*		Basis of Classification of Special Rates.
		Male.	Female.	
Lace Finishing	Great Britain ...	Nil	General	—
Laundry	Great Britain ...	Special	Both	(1) Occupation (M.). (2) Regularity of employment (casual or otherwise) (F.).
Linen and Cotton Handkerchiefs and Household Goods	Great Britain ...	General		—
Milk Distributive	England and Wales	General and Special		Occupation.
Ostrich and Fancy Feathers and Artificial Flowers.	Great Britain ...	General		—
Paper Bag	Great Britain ...	Both	General	(1) Age and occupation concurrently. (2) Experience and occupation concurrently.
Paper Box	Great Britain ...	Both	General	Age, experience and occupation concurrently.
Perambulator and Invalid Carriage.	Great Britain ...	General and Special		Experience and occupation concurrently.
Pin, Hook and Eye and Snap Fastener.	Great Britain ...	Special		(1) Home-work or factory work. (2) Responsibility (F. charge hands). (3) Occupation (M. and F.). (1) Occupation (M.).
Ready-Made and Wholesale Bespoke Tailoring.	Great Britain ...	Both		(2) Age, experience and occupation concurrently (M. and F.). (3) Cross-division (material used).
Retail Bespoke Tailoring ...	Great Britain ...	Both		(1) Apprenticeship and experience concurrently (M.). (2) Apprenticeship and type of garment made (M.).
Rope, Twine and Net	Great Britain ...	Special		(3) Age, experience and occupation. (1) Home-work or other (F.). (2) Section of trade, experience and occupation concurrently (M.). (3) Section of trade and occupation (M. and F.). (4) Section of trade, machine and process (F.).
Shirtmaking	Great Britain ...	Both	General	Experience and occupation concurrently.
Stamped or Pressed Metal Wares.	Great Britain ...	Both		(1) Age, experience, skill and occupation concurrently (M. and F.). (2) Age, experience and occupation (F.).
Sugar Confectionery and Food Preserving.	Great Britain ...	General	Both	Occupation ("Men's work") (F.).
Tin Box	Great Britain ...	Both	General	Occupation.
Tobacco	Great Britain ...	General		(1) Age, experience and occupation concurrently (M. and F.). (2) Occupation (M.). (3) Cross-division (material used) (F.).
Toy	Great Britain ...	General		
Wholesale Mantle and Costume	Great Britain ...	Both		

* Nature of rates fixed, i.e., whether general rates for all male and for all female workers in the trade, or whether rates for special classes of male and/or female workers.

CHAPTER V.

PROCEDURE IN FIXING, VARYING OR CANCELLING RATES.

1. *Statutory Provisions.*—The Act of 1918, as stated above, expedited the procedure laid down by the Act of 1909 in two ways: it abolished the period of 5 months of "limited operation" before a rate could become obligatory, and it reduced the period for objections from three months to two. The present procedure is as follows:—

When a Trade Board wishes to fix, vary or cancel a rate, it is bound to give public notice of its proposal and to consider any objections which may be lodged with it within two months. The method in which notice is to be given is laid down in the Regulations made by the Minister of Labour under Section 18 of the Act of 1909.*

which provide—

- (1) that a notice setting out the proposed rate (or proposed cancellation or variation) shall be sent to all employers in the trade known to the Trade Board;

- (2) that a notice shall be inserted in the *Gazettes*;

- (3) that employers shall post up the notices, so that they shall be brought to the knowledge of their workers.

2. *Lists of Employers.*—When a Trade Board is established, it is supplied by the Ministry of Labour with a list of employers, compiled partly from information obtained in the preliminary investigations (mainly by the assistance of associations of employers and workers) and partly from lists kept by other Government Departments, as the Home Office, and from trade directories, etc. Recently, the local Employment Exchange service has been used to prepare lists in trades where the other sources were imperfect. The original list is supplemented and revised subsequently, partly by the agencies through which the list was originally compiled and also through co-operation of members of the Board.

Every employer on this list receives from the Trade Board by post one or more copies of a poster setting out the proposals, and stating that objections can be lodged with the Board by employers or workers within two months.

This system of notice is obviously elaborate, but employers and workers appear to value it highly as

* S. R. & O. 1918, No. 1439.

the most effective means of bringing the opinion of the trade as a whole to bear upon any proposals, and of making all employers and workers acquainted with their legal rights and obligations. The system has, however, been criticised recently, on the ground that the notices were so large and numerous that inconvenience was caused in small workrooms. The Minister of Labour has, after consultation with the Stationery Office, suggested to the Trade Boards a revised form of notice which is considerably smaller, and the Trade Boards have generally agreed to its introduction. This change has also effected a considerable economy in printing and paper.

PROCEDURE OF TRADE BOARDS.

3. *Statutory Provisions governing the conduct of business by a Trade Board.*—The conduct of business by a Trade Board is governed by Section 11 of the Act of 1909 and by Regulations made by the Ministry of Labour under that Section. The only provision laid down by the Act itself, apart from Section 11 (5), which provides against the invalidation of proceedings by reason of technical defects, is that one-third of the whole number of the representative members and one appointed member constitute a quorum. While the Regulations might prescribe the procedure in detail, they do not in fact deal further with procedure than to prescribe the method of voting, as follows:—

"Every member of the Trade Board shall have one vote. If at any meeting of the Board the numbers of members present representing employers and workers, respectively, are unequal, it shall be open to the side which is in the majority to arrange that one or more of its members shall refrain from voting, so as to preserve equality. Failing such an arrangement, the Chairman, or, in his absence, the Deputy Chairman, may, if he thinks it desirable, adjourn the voting on any question to another meeting of the Board."

In the Regulations for the Shirtmaking Trade Board and for the Tailoring Trade Board (now dissolved) the Clause as to voting is different, and runs as follows:—

"Every member of the Board shall have one vote provided that the Chairman, or, in his absence, the Deputy Chairman, may, if he thinks it desirable, and shall at the request of more than half of the members representing employers or of more than half the members representing workers, take a vote of the representative members by sides, and in such case the vote of the majority of members of either side present and voting shall be the vote of that side. In such a division the appointed members shall not vote, but in the event of the division resulting in a disagreement between the two sides the question shall be decided by a majority vote of the appointed members. The Chairman, or in his absence the Deputy Chairman, may take the vote of the appointed members and declare the result in such way as he may deem fit."

The effect of this procedure of "side-voting" is to prevent cross-voting both among the appointed members and among the representative members, and it was adopted, in these special cases, to meet the apprehension of the majority of employers in the trade that the presence on the Board of sub-contractors, whose interests are to some extent divergent from those of the other employers, might prejudice their position. When the Tailoring Trade Board was dissolved, and replaced by two Boards for different sections of the trade, in the Regulations for the Ready-made and Wholesale Bespoke Tailoring Trade Board, which covered the bulk of the trade falling under the old Board, the provision as to voting was framed in the usual form, but the Minister of Labour, at the unanimous request of the Board, decided to restore the system of side-voting. He indicated, however, that he objected to the system in principle, as it deprived a minority of the power of enforcing its views by a vote, and he rejected a request for the introduction of side-voting in the Wholesale Mantle and Costume Trade Board.

Subject to these two statutory provisions, the one laid down by the Act and the other by the Regulations, Trade Boards regulate their proceedings in such manner as they think fit.

4. *Chairman and Deputy Chairman.*—The Acts provide that a Chairman shall be appointed by the Minister of Labour, and it is usual to appoint also a Deputy Chairman. It has been the invariable practice to select these persons from the Appointed Members, although there is no obligation to do so. When the first Trade Boards were established, the same Chairman (a full-time official of the Board of Trade) was appointed to all the Boards, but after his death the Minister of Labour decided to appoint separate Chairmen for different Boards or groups of Boards and to select, not Civil Servants, but independent persons of standing outside the Government service.

This policy has been pursued, and there are now 17 individuals acting as chairmen and 28 as deputy-chairmen among the 44 Trade Boards in Great Britain. There is no woman chairman, but there is one woman deputy-chairman.

5. *The position of Appointed Members.*—Historically, the reason for placing appointed members on Trade Boards was no doubt to avoid a deadlock between the two sides, and there is no statement in the Acts that they are appointed to represent (e.g.) the public interest or the consumer or minorities of the trade. They are individual members of the Board, casting a single vote like all other members. Inasmuch, however, as their votes are decisive in the event of a division between employers' and workers' representatives, their influence on a Board is great in proportion as the views and interests of the employers' and workers' sides diverge. It is by no means the case that the decision of the Board usually depends on the votes of the appointed members; in fact, out of 58 sets of rates fixed by Trade Boards since 1st September, 1920, 40 were fixed by agreement (see Table A). Even in those cases, however, the knowledge that the appointed members may exercise their votes influences the two sides to moderate their claims.

In general it may be said that it is the function of the appointed members to endeavour, as neutral persons, to bring the two sides together by conciliation, to see that the facts on both sides are properly placed before the Board, and, in the last resort, to cast their votes according to the facts elicited in the course of the discussion. As they are not a branch, but individual members of the Board, each may cast his vote as he thinks fit, except when the Regulations provide for side-voting (see Section 3), in which case the appointed members, like the two sides, vote as a whole.

6. *Secretaries.*—The Minister of Labour is empowered to appoint a Secretary to a Trade Board. From 1909 to 1919 there was only a single Secretary to all the Trade Boards; since then, one officer has acted as Secretary to all the Boards in Great Britain and one to all the Boards in Ireland. The officers holding these positions have always been full-time officials of the Board of Trade or the Ministry of Labour. In 1919, in view of the increase in the number of Trade Boards the Treasury sanctioned the creation of two grades of officers, Trade Board Secretaries and Assistant Secretaries, and a number of men and women have been appointed to these grades. They have not, however, been appointed as Secretaries or Assistant Secretaries to any Boards and have acted as Assistants to the single Secretaries in Great Britain and Ireland.

No statutory definition of the duties of the Secretary is given in the Acts, and they confer no power on a Trade Board to act through its Secretary or through any other person, except only in the case of legal proceedings taken by the Trade Board under Section 17 of the Act of 1909. In practice, the functions of the Secretary include the carrying out of all matters in regard to arranging for and summoning meetings of the Board and its Committees, preparing the Agenda, and other papers for the meetings, attending the meetings, and taking notes of the proceedings, drafting and circulating the minutes, drafting and issuing Notices proposing and fixing minimum rates,

issuing communications as to the Board's proceedings to the Press, dealing with correspondence, the periodical amendment of the list of employers in the Trade to whom the Notices are issued, the preparation and issue of Permits of Exemption, the issue of learners' certificates, the registration of apprentices. As regards the more important matters, such as the issue of Notices relating to minimum rates, the procedure in respect of which is prescribed in the Acts, the Secretary receives formal instructions by resolution of the Board or Committee. As regards the other matters, including the great bulk of the correspondence, the Secretary receives no detailed instruction from the Board.

It is the practice of the Secretary, in so far as he is able, to advise the Board as to their powers under the Acts and any other legal questions arising. He is at the disposal of the Board or of any section of the Board for advice and assistance when called upon, and he endeavours to keep the Board right in the matter of procedure and to suggest methods whereby effect can be given to their intentions. He frequently suggests, from his experience on other Boards, methods of overcoming difficulties which arise in the course of proceedings. He is especially at the disposal of the Chairman for any assistance which he can give throughout the negotiations directed towards a settlement. Thus, on most of the Boards, the Secretary is something more than a mere clerk recording decisions, and takes a greater or lesser share in shaping the form in which the policy of the Board is ultimately embodied. It is impossible for the Secretary personally to attend all the meetings of all the Boards and their Committees, and in carrying out the duties just described he is assisted by a Deputy and the officers referred to above as Trade Board Secretaries and Assistant Secretaries.

7. Committees.—It is natural that Trade Boards should carry out much of their preliminary work through Committees, although no statutory power can be devolved on such Committees except the power of granting exemptions (see Section 5 (5) of the Act of 1918).*

"Administrative" Committees were set up by certain of the Trade Boards about 1912 to advise the Chairman, who, at that time (see Ch. VIII), was in charge of the inspectorate, on points that arose in connection with enforcement, in particular, questions as to demarcation of "scope", on which trade knowledge was valuable. As time went on these Committees developed into "General Purposes Committees," which could be conveniently called together to deal with minor matters at short notice, and especially with applications for permits of exemption. They are presided over normally by the Chairman of the Trade Board or another Appointed Member, and report their proceedings to the Board for confirmation.

Ad hoc Committees are also frequent, in particular, Committees to draft piece-lists and rates for special classes of workers. It is common for Committees dealing with such technical questions to summon expert witnesses.

8. Side Leaders and Side Meetings.—It is a common practice at the first meeting of a new Board for the two sides to elect a Chairman or a Chairman and Secretary, one of whom becomes the recognised leader of the side and its principal spokesman on the Board. Separate rooms adjoining the Board room are provided at the Office of Trade Boards for the use of the respective sides where they can meet and discuss their common policy, either before or during a Trade Board meeting, and these Side Meetings have come to play an important part in the machinery of Trade Boards. In some cases, in fact, almost the whole business of a Board is transacted by Side Meetings, coupled with informal conferences of the two sides with the Appointed Members, and the full Board only meets to ratify formally an informal agreement which has been reached in this way.

9. Proposing to Fix or Vary Minimum Rates.—All the British Trade Boards naturally do not conduct their business in the same way, and methods vary considerably according to the personality of the chairman, the size of the Board, the state of organisation of the employers and workers represented on the Board, etc., but there is no doubt that in

the course of time methods have tended to become uniform, and the following description may be taken as fairly typical of the procedure where there is no agreement at the outset as to the rates to be fixed.

A general discussion takes place of what may be called the framework of the proposals to be made—whether the rates shall be flat rates for the country or district rates; whether the Board shall attempt now or hereafter to fix different rates for different sections of the trade or for different occupations; whether the Board shall proceed at once to fix all the different types of rates which it has power to fix under the Act or confine itself in the first instance to one or two types of rates, *e.g.*, general minimum time-rates and overtime rates; whether the suggestions presently to be made by one side or the other shall embody at once the whole of the side's programme or whether a single type of rate for a single class of worker (*e.g.*, the general minimum time-rate for adults) shall be taken and disposed of first.

Suppose these questions to be settled at least tentatively and the Board to have decided to address itself in the first instance to a consideration of a flat time rate for the country, appropriate to the least skilled classes of female workers in each age group, but to be applied in the meantime to all workers in the respective groups until such time as the Board may further consider the question of proposing special rates for special classes of workers. The leader of the workers' side makes a definite proposal embodying rates for workers of various age groups, arguments in support of which are advanced by himself and other members of his side. The leader of the employers' side follows, presents the case for his side and makes counter proposals. He in his turn is followed by other employers' representatives after which the discussion becomes general.

The position having now been developed and a certain number of additional facts having been elicited from the representative members by the Appointed Members, the Chairman probably suggests a conference between the Appointed Members and a few representatives of first one side and then the other, or it may be with the whole side. In these conferences, the side may discuss its difficulties with the Appointed Members more freely than on the full Board, further facts may emerge, and first one side and then the other may make some concession on their original proposals. When the full extent of the concession appears to have been reached, the Appointed Members may suggest for discussion a new basis. The representatives of the side take this suggestion back to their whole side and report in due course to the Chairman. The discussion at this stage is probably concentrated on the rate for adults and the age at which it shall operate. If agreement is reached on this point the conferences continue on the rates for the younger workers. If and when an agreed solution has been arrived at the Board re-assembles, the original proposals are withdrawn and the terms of the agreement will be formally moved and seconded and carried. The Board then proceeds to consider the terms of a formal Notice of Proposal in connection with which subsidiary points, such, for example, as special provision for late entrants, arise and are settled, and the formal steps required by the Acts are taken.

Even if the negotiations undertaken by the Appointed Members with a view to finding an agreement are not completely successful, the issue will usually have been reduced to comparatively narrow limits. Further argument may be heard on the Board on the outstanding differences, and if it is still found impossible to reach agreement, a vote is taken. As it sometimes happens that a side which is prepared to abate its original demands if an agreed solution is found, will not do so if the matter has to be put to the vote, the Appointed Members may, when it comes to a vote, be faced with choosing between somewhat widely divergent sets of proposals. Without the support of one side or the other the Appointed Members are powerless to secure by their

* District Trade Committees, which are statutory bodies, are excluded from consideration here.

own votes a middle position which may commend itself to them as a reasonable compromise, although they may of course propose a motion. When the vote is put, cross-voting between the sides sometimes takes place, but is unusual, and the Appointed Members do not necessarily vote on the same side.

The divergence in methods between the original Trade Boards and those established in the last two years is probably not greater than that between different individual Boards to-day. On the whole the older Boards proceeded in the beginning with greater deliberation and caution. They were working out a new experiment and had no precedents to guide them. Before taking any step, it was necessary to consider carefully whether it was in accordance with the provisions of the Act. Adjournments had to be made in order to obtain legal advice from the Department, or to enable the members to consult their constituents. There was no experience of what was or was not administratively possible. The provisions of a draft Notice embodying the minimum rates would be debated clause by clause and sometimes word by word.

It is not uncommon for a newly established Trade Board to proceed to the issue of a formal Notice of Proposal of general minimum time-rates for the whole or part of the workers in the trade at its first or second or third meeting. The first Trade Board, the Chain-making Trade Board, held eight meetings spread over four months, not including a number of meetings of a Committee held in the intervals between meetings of the full Board, before issuing its first Notice, which included, however, not only general minimum time-rates but also an elaborate set of general minimum piece-rates for a certain section of the trade.

10. *Fixing or varying Minimum Rates.*—At a short interval after the termination of the statutory two months period for lodging objections to a Board's proposals a meeting is convened to consider the objections and the question of fixing the rates. The number of objections varies greatly; in many cases few or none are received; in the case of the first proposals of the English Grocery and Provisions Trade Board they amounted to 2,395. Until recently copies of all the objections received were circulated in advance to every member of the Board, and in cases where the objections exceeded twenty or thirty in number, a *précis* of each objection, or a classified index, or both, were also prepared by the Secretary and circulated with the copies of the objections themselves. Mainly with a view to economy it has now been suggested to the Boards that while objections which are in the nature of considered statements, giving special and detailed information about specific localities or individual businesses should be circulated *extenso*, in the case of mere statements of objection on general grounds, or mere statements of objections without specific reasons, or mere variations of the same objection, it would be sufficient for a classified summary to be circulated, with the names and addresses of the objectors, every individual letter of objection of course being available for consideration at the meeting of the Board. The majority of the Boards have adopted the suggestion.

The procedure in dealing with the objections at the Board meeting varies. If the number of objections is small, it is not unusual for the Board to go through them *seriatim* and decide as respects each point raised whether any and if so what modification shall be made in the rates as proposed. In the case of objections lodged in large numbers the Board has to consider in the first place whether, having regard to the objections, it can properly proceed with the fixing of rates or whether the proposals shall be withdrawn and a fresh set of proposals made. As the Minister is precluded on legal grounds from confirming rates which differ substantially from the proposals, the Board's choice is limited to withdrawing the proposals *in toto* or fixing them with or without minor modifications. If it is decided to proceed, suggestions for the modification in detail of the rates or other provisions of the Board's proposals are put forward as amendments to a motion that the Board proceed to fix rates as proposed. References to individual objections are frequent in the discussion on the fixing of the rates

and facts or arguments set out in the objections are quoted in support of suggested amendments.

In cases where objections are numerous, it may often be difficult for a Trade Board to decide whether the better course is to issue new proposals, which will of course take time, or to fix the rates with such modifications to meet the objections as they have power to make. The discussion at this stage follows much the same lines as at the proposal stage. It is usual for a decision to be arrived at at the first meeting held to consider objections. Boards have, however, sometimes postponed the question of fixing the rates by reason of a change in circumstances which has arisen since the rates were proposed, or in order to allow further consideration, or in order to hear objectors in person, or in order to obtain advice from the Department on some legal point.

11. *The issue of Notices: (a) Notices of Proposal.*—After a meeting of a Trade Board at which a decision has been taken to propose to fix, cancel or vary minimum rates, the Notice embodying the Board's decisions is drafted by the Secretary. In the early days, the draft would be considered in detail by the full Board and considerable discussion sometimes took place as to the exact wording of particular provisions to be inserted in the Notice. Now that there are precedents for most of the provisions which a Board may decide to make, the Board by resolution expresses its intention and instructs the Secretary to draft and issue the Notice in accordance therewith. It is only occasionally now that the exact form of wording of some particular clause is debated and settled on the Board. It sometimes happens that some point not foreseen at the meeting of the Board arises in the course of the drafting and the Chairman may have to be consulted; or some clause may be left to be settled by a Committee or by the Chairman and Secretary in accordance with a general instruction of the Board; or some legal point may have to be discussed and settled with the officers of the Ministry of Labour. But in the ordinary case the Notice is drafted and sent to the printer at once. The statutory period of two months for lodging objections runs from the day following that on which the Notices are delivered to the employers.

(b) *Notices of the Fixing or the Varying of Minimum Rates.*—In the case of Notices of the Fixing or the Varying of rates, a draft of the Notice, based on the Proposal, is prepared and set up in proof prior to the date of the Board meeting. As soon as the meeting of the Board at which the rates have been fixed or varied is over, the necessary alterations are made in the proof, which is then sent to the Ministry of Labour, as soon as possible after the meeting, with a request for confirmation of the rates and a recommendation by the Board as to the date from which they should operate. Where the Minister proposes to confirm, his decision is communicated semi-officially as soon as reached to the Secretary of the Board. Accompanying this communication is the draft Notice submitted by the Secretary, returned with any amendments in form suggested by the Minister, and the Notice now becomes a Notice of his Confirming Order. The form of this Notice must, under the Regulations, be approved by the Minister. If, on receipt by the Secretary of this returned draft no question arises on the amendments suggested by the Minister, the Notices are printed and despatched.

12. The periods occupied by this procedure depend, apart from the statutory number of months for objections, upon the time occupied (a) by the Trade Board in reaching a decision at the proposal stage and the fixing stage, (b) by the formal and mechanical steps, *i.e.*, the drafting, printing and circulation of the Notice of Proposal, and of the Notice of Fixing, and (c) by the consideration of the rates by the Minister. The time taken under each of these heads varies greatly. For instance, a Trade Board particularly in considering its first rates, may need several meetings before reaching its decision at each stage; it may not always think it necessary to proceed quickly and, in some cases, where the volume of objections lodged against its proposals is very great, may withdraw the proposals and issue new ones. The time spent on the formal steps varies again according

to the size of the trade (it is abnormally long in the case of Grocery Trade Board which covers 135,000 firms) and the difficulty of the drafting; the time occupied by the issue of a Notice of Proposal varies from 11 to 27 days and is on an average nearly 3 weeks from the date of the Board's decision and that of the Minister's decision. The Minister is bound by statute to make an Order confirming the rates within a month unless either he refers the rates back to the Trade Board or for special reasons postpones making his Order. The decision is reached, on an average, in a fortnight, but it may be considerably delayed, if the issues are contentious, and it is necessary to receive deputations and hear objections.

Table B to this Chapter analyses for the second half of 1920 and the first half of 1921 the period that elapsed after the decision of a Board to issue proposals (which may of course have involved

more meetings than one). Table C shows for each British Trade Board the period that elapsed before the first rates came into operation (cases under the slower procedure of the old Act are underlined).

It appears from these tables that—

- (1) The average time that elapsed during the period in question between the decision to propose and the effective date of the rates was 21 weeks, the longest time 41 weeks, and the least 13 weeks.
- (2) The average time between the establishment of a Trade Board and the coming into operation of the first rates was:—
 - (a) Under the Act of 1909, 23½ months; the longest time being 29 months, and the least 15 months.
 - (b) Under the Act of 1918, 6 months; the longest time being 10½ months, and the least 15 weeks.

TABLE A.

Statement showing voting on the fixing of Trade Board rates from 1st Sept., 1920, to 16th Sept., 1921.

Trade Board.	Date of T.B. Meeting.	Whether rates were fixed by agreement or not.	Remarks.
Aerated Waters (Scotland)	23rd Sept., 1920...	Agreement.	
Boot and Shoe Repairing (Great Britain)	2nd and 3rd June, 1921.	Agreement.	
Brush and Broom (Great Britain)	27th Sept., 1920...	Agreement.	
Brush and Broom (Great Britain)	10th March, 1921	Agreement.	
Button-making (Great Britain)	26th Aug., 1921...	Not by Agreement.	
Chain (Great Britain)	14th March, 1921	Agreement.	
Coffin Furniture etc. (Great Britain) ...	24th Nov., 1920...	Agreement.	
Coffin Furniture etc. (Great Britain) ...	26th Aug., 1921...	Agreement.	
Corset	7th Oct., 1920 ...	Not by Agreement.	
Corset	30th Aug., 1921...	Not by Agreement.	
Cotton Waste (Great Britain)	6th Jan., 1921 ...	Agreement.	
Cotton Waste (Great Britain)	22nd June, 1921 ...	Agreement.	
Dressmaking etc. (England and Wales) ...	21st Sept., 1920...	Not by Agreement.	
Dressmaking etc. (England and Wales) ...	30th May, 1921 ...	Agreement.	
Dressmaking etc. (Scotland)	28th June, 1921...	Agreement.	
Dressmaking etc. (Scotland)	23rd Aug., 1921...	Agreement.	
Flax and Hemp (Great Britain)	22nd March, 1921	Not by Agreement	Rates referred back. Fresh proposals issued.
Fur (Great Britain)	21st Sept., 1920...	Agreement.	
Grocery and Provisions (England and Wales)	2nd and 3rd Feb., 1921.	Not by Agreement	Rates referred back. Fresh proposals issued.
Grocery and Provisions (England and Wales).	9th and 10th March, 1921.	Not by Agreement	
General Waste (Great Britain)	11th March, 1921	Not by Agreement	
Hair, Bass and Fibre (Great Britain) ...	29th Oct., 1920 ...	Agreement.	
Hat, Cap and Millinery (England and Wales).	19th Oct., 1920 ...	Agreement.	
Hat, Cap and Millinery (England and Wales).	28th June, 1921...	Agreement.	
Hat, Cap and Millinery (Scotland)...	29th June, 1921...	Agreement.	
Jute (Great Britain)	16th and 17th Feb., 1921.	Agreement.	
Jute (Great Britain)	11th and 12th Aug., 1921.	Agreement.	
Hollow-ware (Great Britain)	31st Aug., 1921 ...	Agreement.	
Lace Finishing	10th Jan., 1921 ...	Not by Agreement.	
Lace Finishing	12th Sept., 1921 ...	Not by Agreement.	
Laundry (Great Britain)	12th and 13th Jan., 1921.	Not by Agreement.	
Linen and Cotton Handkerchief etc. (Great Britain).	14th Oct., 1920 ...	Agreement.	
Linen and Cotton Handkerchief, etc. (Great Britain).	20th Jan., 1921 ...	Agreement.	
Linen and Cotton Handkerchief, etc. (Great Britain).	21st June, 1921 ...	Agreement.	
Milk Distributive (England and Wales) ...	7th Oct., 1920 ...	Agreement	Rates referred back. Fresh proposals issued.
Milk Distributive (Scotland)	8th and 9th Feb., 1921.	Agreement	
Milk Distributive (Scotland)	1st July, 1921 ...	Not by Agreement	
Made-up Textiles (Great Britain)	26th and 27th July, 1921.	Not by Agreement	
Ostrich and Fancy Feather and Artificial Flower (Great Britain).	7th June, 1921 ...	Agreement.	
Paper Bag (Great Britain)	21st Oct., 1920 ...	Agreement.	
Paper Box (Great Britain)	14th Oct., 1920 (M)	Agreement.	
Paper Box (Great Britain)	14th Oct., 1920 (F)	Not by Agreement.	

TABLE A—continued.

Trade Board.	Date of T.B. Meeting.	Whether rates were fixed by agreement or not.	Remarks.
Perambulator and Invalid Carriage (Great Britain).	10th Jan., 1921 ...	Agreement.	
Pin, Hook and Eye (Great Britain) ...	25th Oct., 1920 ...	Agreement.	
Pin, Hook and Eye (Great Britain) ...	19th Aug., 1921...	Not by Agreement	
Pin, Hook and Eye (Great Britain) ...	19th Aug., 1921 (homeworkers).	Agreement.	
Ready-Made and Wholesale Bespoke Tailoring (Great Britain).	17th March, 1921	Agreement.	
Ready-Made and Wholesale Bespoke Tailoring (Great Britain).	1st Sept., 1921 ...	Agreement.	
Retail Bespoke Tailoring (Great Britain)...	8th July, 1921 ...	Agreement.	
Rope, Twine and Nets (Great Britain) ...	15th and 16th Sept., 1920.	Agreement.	
Stamped or Pressed Metal-wares (Great Britain).	24th Nov., 1920...	Agreement.	
Stamped or Pressed Metal-wares (Great Britain).	11th May, 1921 ...	Not by Agreement.	
Stamped or Pressed Metal-wares (Great Britain).	16th Sept., 1921...	Not by Agreement.	
Tobacco (Great Britain)	22nd April, 1921	Agreement.	
Tobacco (Great Britain)	28th July, 1921...	Not by Agreement.	
Toy (Great Britain)	19th and 20th Jan., 1921.	Not by Agreement.	
Wholesale Mantle and Costume (Great Britain).	3rd March, 1921...	Agreement.	
Wholesale Mantle and Costume (Great Britain).	2nd Sept., 1921 ...	Agreement.	

Total number of sets of rates fixed	...	...	...	...	58
Cases in which rates were fixed by agreement	...	...	...	...	39
Cases in which rates were not fixed by agreement	...	...	...	...	19

TABLE B.

Table analysing for the second half of 1920, and the first half of 1921, the period that elapsed after the decision of a Board to issue proposals before the rules came into operation.

Name of Trade Board.	Date of Decision to Propose.	Notice of Proposal Dated.	Objection Period Expired.	Intimation to Ministry of Labour of Fixing of Rates.	Date of Order Confirming Rates.	Date Rates came into Operation.
Aerated Waters (Scotland) ...	* 10th June, 1920	5th July, 1920	6th Sept., 1920	28th Sept., 1920	14th Oct., 1920	18th Oct., 1920
Brush and Broom (Great Britain) ...	* 28th April, 1920	8th July, 1920	9th Sept., 1920	1st Oct., 1920	15th Oct., 1920	18th Oct., 1920
Chain (Great Britain) ...	* 28th June, 1920	19th July, 1920	20th Sept., 1920	29th Sept., 1920	1st Oct., 1920	8th Oct., 1920
Laundry (Great Britain) ...	* 17th June, 1920	19th July, 1920	20th Sept., 1920	18th Oct., 1920	2nd Nov., 1920	8th Nov., 1920
Corset ...	* 2nd July, 1920	21st July, 1920	22nd Sept., 1920	18th Oct., 1920	13th Nov., 1920	29th Nov., 1920
Paper Bag (Great Britain) ...	* 2nd July, 1920	22nd July, 1920	25th Sept., 1920	21st Oct., 1920	10th Nov., 1920	14th Nov., 1920
Pen and Cofon Handkerchief and Household Goods and Linen Piece Goods (Great Britain).	* 9th July, 1920	26th July, 1920	27th Sept., 1920	19th Oct., 1920	6th Nov., 1920	11th Nov., 1920
Hat, Cap and Millinery (England and Wales) ...	* 13th July, 1920	22nd July, 1920	30th Sept., 1920	21st Oct., 1920	9th Nov., 1920	15th Nov., 1920
Pin, Hook and Eye and Snap Fastener (Great Britain) ...	* 5th July, 1920	31st July, 1920	1st Oct., 1920	26th Oct., 1920	6th Nov., 1920	10th Nov., 1920
Paper Box (Great Britain) ...	* 9th July, 1920	4th Aug., 1920	5th Oct., 1920	19th Oct., 1920	15th Nov., 1920	19th Nov., 1920
Milk Distributive (England and Wales) ...	* 12th May, 1920	14th June, 1920	15th Aug., 1920	8th Oct., 1920	1st Nov., 1920	8th Nov., 1920
Coffin Furniture and Casket Making (Great Britain)	* 15th July, 1920	5th Aug., 1920	6th Oct., 1920	20th Oct., 1920	6th Dec., 1920	13th Dec., 1920
Hair, Bass and Fibre (Great Britain) ...	* 28th July, 1920	19th Aug., 1920	20th Oct., 1920	25th Nov., 1920	10th Nov., 1920	15th Dec., 1920
Stamped or Pressed Metal Wares (Great Britain)	* 14th July, 1920	26th Aug., 1920	27th Oct., 1920	29th Oct., 1920	14th Dec., 1920	31st Dec., 1920
Perambulator and Invalid Carriage (Great Britain)	* 19th Aug., 1920	18th Sept., 1920	19th Nov., 1920	25th Nov., 1920	13th Dec., 1920	27th Dec., 1920
Parapluia and Invalid Carriage (Great Britain)	* 15th Sept., 1920	22nd Oct., 1920	23rd Dec., 1920	12th May, 1921	14th June, 1921	27th June, 1921
Jute (Great Britain) ...	* 17th Sept., 1920	22nd Oct., 1920	23rd Dec., 1920	11th Jan., 1921	18th Feb., 1921	28th Feb., 1921
Laundry (Great Britain) ...	* 14th Oct., 1920	22nd Oct., 1920	30th Dec., 1920	25th Feb., 1921	24th March, 1921	4th April, 1921
Cotton Waste Reclamation (Great Britain)	* 15th Oct., 1920	4th Nov., 1920	5th Jan., 1921	14th Jan., 1921	27th May, 1921	30th May, 1921
Toy (Great Britain) ...	* 18th Oct., 1920	4th Nov., 1920	5th Jan., 1921	8th Jan., 1921	26th Jan., 1921	31st Jan., 1921
Pen and Cofon Handkerchief and Household Goods and Linen Piece Goods (Great Britain).	* 26th Oct., 1920	6th Nov., 1920	6th Jan., 1921	21st Jan., 1921	4th June, 1921	13th June, 1921
Lace Finishing	* 14th Oct., 1920	8th Nov., 1920	9th Jan., 1921	22nd Jan., 1921	16th Feb., 1921	25th Feb., 1921
Pin, Hook and Eye and Snap Fastener (Great Britain) ...	* 18th Oct., 1920	8th Nov., 1920	9th Jan., 1921	11th Jan., 1921	1st Feb., 1921	4th Feb., 1921
Brush and Broom (Great Britain) ...	* 25th Oct., 1920	9th Nov., 1920	10th Jan., 1921	18th May, 1921	13th June, 1921	26th June, 1921
Wholesale Mante and Costume (Great Britain) ...	* 22nd Oct., 1920	17th Nov., 1920	18th Jan., 1921	17th March, 1921	20th April, 1921	27th April, 1921
Tobacco (Great Britain) ...	* 8th Dec., 1920	23rd Nov., 1920	24th Jan., 1921	21st Feb., 1921	17th May, 1921	23rd May, 1921
Chain (Great Britain) ...	* 9th Dec., 1920	20th Dec., 1920	21st Feb., 1921	22nd April, 1921	9th May, 1921	16th May, 1921
Ready-Made and Wholesale Bespoke Tailoring (Great Britain)	* 20th Dec., 1920	4th Jan., 1921	5th March, 1921	15th March, 1921	28th March, 1921	4th April, 1921
Brush and Broom (Great Britain) ...	* 18th Nov., 1920	6th Jan., 1921	7th March, 1921	19th March, 1921	17th May, 1921	23rd May, 1921
Door and Shoe Repairing (Great Britain) ...	* 10th Dec., 1920	13th Jan., 1921	1st April, 1921	8th June, 1921	20th June, 1921	21st June, 1921
Bressard and Women's Light Clothing (England and Wales)	* 18th Dec., 1920	1st Feb., 1921	2nd April, 1921	9th June, 1921	16th Sept., 1921	26th Sept., 1921
Overhead and Electric Light Fittings (Great Britain) ...	* 4th March, 1921	22nd March, 1921	23rd May, 1921	8th June, 1921	23rd July, 1921	11th Aug., 1921
Cotton Waste Reclamation (Great Britain) ...	* 9th March, 1921	24th March, 1921	1st June, 1921	9th June, 1921	28th June, 1921	2nd Aug., 1921
Pen and Cofon Handkerchief and Household Goods and Linen Piece Goods (Great Britain).	* 23rd March, 1921	13th April, 1921	14th June, 1921	7th June, 1921	28th June, 1921	4th July, 1921
Linen Piece Goods (Great Britain).	* 30th March, 1921	14th April, 1921	15th June, 1921	22nd June, 1921	4th July, 1921	11th July, 1921

Hat, Cap and Millinery (Scotland) ...	March, 1921	15th April, 1921	16th June, 1921	4th July, 1921	4th Aug., 1921
Dressmaking and Women's Lights Clothing (Scotland)	*23rd March, 1921	15th April, 1921	16th June, 1921	4th July, 1921	8th Aug., 1921
Hat, Cap and Millinery (England and Wales) ...	*22nd March, 1921	15th April, 1921	16th June, 1921	4th July, 1921	8th Aug., 1921

* In these cases rates were being varied.

† In these cases certain rates were being fixed for the first time.

TABLE C.

The following table shows for all the British Boards the time that elapsed before the first rates became binding to July, 1921.

Trade Board.	Board established on	Proposal issued on	Rates fixed on	Date Rates became compulsory.
Aerated Waters (England and Wales)...	2nd Jan., 1920	17th Jan., 1920	12th April, 1920	1st May, 1920
Aerated Waters (Scotland)	8th Jan., 1920	16th Feb., 1920	13th May, 1920	14th June, 1920
Boot and Shoe Repairing (Great Britain) ...	5th July, 1919	11th Aug., 1919	22nd Oct., 1919	17th Nov., 1919
Brush and Broom (Great Britain) ...	17th July, 1919	22nd Sept., 1919	10th Dec., 1919	1st Jan., 1920
Button-making (Great Britain) ...	13th Feb., 1920	26th March, 1920	12th June, 1920	7th July, 1920
Chain (Great Britain)	3rd Jan., 1910	16th May, 1910	22nd Aug., 1910	23rd Feb., 1911
Coffin Furniture and Cerement-making (Great Britain).	16th Dec., 1919	11th Feb., 1920	3rd May, 1920	26th May, 1920
Corset	17th July, 1919	16th Aug., 1919	29th Oct., 1919	1st Dec., 1919
Cotton Waste Reclamation (Great Britain).	16th Sept., 1920	4th Nov., 1920	6th Jan., 1921	31st Jan., 1921
Dressmaking and Women's Light Clothing (England and Wales).	15th Jan., 1920	6th Feb., 1920	21st April, 1920	24th May, 1920
Dressmaking and Women's Light Clothing (Scotland).	29th March, 1920	26th May, 1920	11th Aug., 1920	27th Sept., 1920
Flax and Hemp (Great Britain) ...	27th Jan., 1920	5th March, 1920	15th July, 1920	3rd Aug., 1920
Fur (Great Britain)	25th Oct., 1919	8th Dec., 1919	11th March, 1920	12th April, 1920
Hair, Bass and Fibre (Great Britain) ...	20th Feb., 1920	5th May, 1920	14th July, 1920	3rd Aug., 1920
Hat, Cap and Millinery (England and Wales).	12th Jan., 1920	30th Jan., 1920	8th April, 1920	10th May, 1920
Hat, Cap and Millinery (Scotland) ...	31st March, 1920	20th May, 1920	12th Aug., 1920	27th Sept., 1920
Hollow-ware (Great Britain)	6th Aug., 1914	19th April, 1915	1st Jan., 1916	3rd July, 1916
Jute (Great Britain)	8th Dec., 1919	6th Feb., 1920	6th May, 1920	4th June, 1920
Lace Finishing	7th Sept., 1910	6th March, 1911	18th Aug., 1911	19th Feb., 1912
Laundry (Great Britain)	1st May, 1919	16th July, 1919	24th Oct., 1919	24th Nov., 1919
Linen and Cotton Handkerchief and Household Goods and Linen Piece Goods (Great Britain).	28th May, 1920	26th July, 1920	14th Oct., 1920	11th Nov., 1920
Milk Distributive (England and Wales) ...	27th Feb., 1920	14th June, 1920	7th Oct., 1920	8th Nov., 1920
Ostrich and Fancy Feather and Artificial Flower (Great Britain).	3rd Feb., 1921	31st March, 1921	7th June, 1921	4th July, 1921
Paper Box (Great Britain)	29th July, 1910	1st Sept., 1911	11th March, 1912	12th Sept., 1912
Paper Bag (Great Britain)	14th July, 1919	12th Aug., 1919	24th Oct., 1919	24th Nov., 1919
Perambulator and Invalid Carriage (Great Britain).	20th Jan., 1920	20th Feb., 1920	21st May, 1920	21st June, 1920
Pin, Hook and Eye and Snap Fastener (Great Britain).	17th Feb., 1920	31st July, 1920	25th Oct., 1920	10th Nov., 1920
Ready-made and Wholesale Bespoke Tailoring (Great Britain).	17th Feb., 1920	17th May, 1920	27th July, 1920	16th Aug., 1920
Retail Bespoke Tailoring (Great Britain)	12th Dec., 1919	12th Feb., 1920	22nd April, 1920	7th June, 1920
Rope, Twine and Net (Great Britain)...	3rd Dec., 1919	22nd Dec., 1919	11th March, 1920	2nd April, 1920

Wholesale Mantle and Costume (Great Britain).	13th Dec., 1919	12th Jan., 1920	25th March, 1920	19th April, 1920

Cases in which rates entered into operation under the 1909 Act underlined. In these cases rates entered into limited operation on date of fixing.

CHAPTER VI.

THE CONFIRMING POWER OF THE MINISTER OF LABOUR.

Under the Act of 1909 the Minister of Labour (Board of Trade) had power either to make or withhold indefinitely an Order making rates obligatory, and even if a general Order were made under Section 5 (4) confirming in advance any rates which a certain Trade Board might fix, there still remained power to direct that this general Order should not operate in any particular case or to revoke the general Order. The Minister had also power to direct a Trade Board at any time to reconsider a rate, whether a confirming Order had been made or not, and, if a confirming Order had not been made, to suspend even the limited operation.

The corresponding provision of the Act of 1918 is couched in very wide terms: it states that the Minister shall make an Order confirming the rate "unless he thinks it necessary to refer the matter back to the Trade Board for reconsideration." He

also retains the power given by the Act of 1909 to direct a Trade Board at any time to reconsider a rate. It is thus clear that Parliament intended that powers which involved in the last resort coercion of members of the community should only be exercised on the authority of a Minister constitutionally responsible to itself.

The discretion of the Minister of Labour is not limited by any statement of the grounds upon which he is to refer back a rate for reconsideration or to direct the Trade Board to reconsider a rate already in operation, but it may be inferred that cases would fall into one of three classes:—

- (1) Cases in which the procedure of the Trade Board is technically incorrect, and in which accordingly confirmation of the Minister would be *ultra vires*.
- (2) Cases in which, although the procedure is technically correct, the Minister is not satisfied that sufficient weight has been given to the views of a minority of the Board, either on or off the Board.

- (3) Cases in which the Minister considers that confirmation would cause hardship to the trade generally or to the community.

The first class needs no comment. A case might arise in the second class if it appeared, e.g., that objections to a proposal had not been fully considered by the Board, or that the proposal had not been properly appreciated by sections of the trade, or that the Board had not sufficient knowledge of the point of view of a section of the trade not directly represented. A more serious case would arise if it appeared that the procedure of the Board had been definitely misused, for example, if one section of the employers combined with the workers to force unreasonable rates upon another section which was in trade competition with them, or if the representatives

of organisations on both sides combined against the Appointed Members and the unorganised representatives to impose rates that would crush the small employer out of existence. The third class would cover a case in which the Minister thought that the Trade Board was going too fast and that by attempting to raise wages suddenly to a reasonable level it would dislocate the industry, or in which he felt that the rates would lead to an unjustifiable increase in prices to the consumer.

The attached table A shows all the cases in Great Britain in which the Minister has referred rates back for reconsideration (to September, 1921). In addition, the power to direct rates in operation to be reconsidered was exercised in 1917 when the Minister directed all the Trade Boards to reconsider their rates in view of the increased cost of living.

TABLE A.
Rates Referred Back to Trade Boards during period ending 30th September, 1921.

Trade Board.	Date.	Rates affected.	
Retail Bespoke Tailoring (Great Britain).	1920	General Minimum Time-Rates, Piece - Work Basis Time-Rates and Overtime Rates for Female Workers.	The rates were referred back on the question of the suitability of the rates for the poorer class of trade in the country districts and of the applicability of the learners' rates to apprentices. As a result the Trade Board excluded apprentices from the operation of the rates and have since fixed special rates for them.
Rope, Twine and Net (Great Britain).	1920	General Minimum Piece-Rates and Overtime Rates for certain classes of Male and Female Workers.	The rates were referred back in this case on a technical issue. In fixing rates the Board made several alterations in their proposals which at first sight appeared substantial. The rates were referred back to the Board for reconsideration and technical advice. On the information supplied by the Board it was clear that the alterations were not so substantial as to require fresh advertisement and they were accordingly confirmed.
Jute (Great Britain) ...	1920	Overtime Rates for Male and Female Workers in certain areas.	The Board in settling overtime rates had made no provision for the class of worker who works five days a week only. Protests were lodged with the Minister by the workers' organisations concerned, as a consequence of which the rates were referred back to the Board. The Board eventually decided by agreement to exclude the workers in question from the scope of the overtime rates already fixed and to issue fresh proposals in respect of such workers.
Laundry (Great Britain)	1920	General Minimum Time-Rates, Piece - Work Basis Time - Rates, Guaranteed Time-Rates and Overtime Rates for Female Workers.	These rates were fixed against the votes of the employers' representatives on the Board. Representations were made to the Minister to the effect that the rates would operate prejudicially in rural areas, and after deputations of employers and workers had been heard the rates were referred back to the Board. The Board re-affirmed the rates, but, at a meeting held before the Confirming Order was made, excluded Cornwall and the Orkneys and Shetlands from the scope of their rates by the votes of the employers' representatives and appointed members.
Milk Distributive (Scotland).	1921	General Minimum Time-Rates and Overtime Rates for Male and Female Workers.	Reference back in this case was on a technical point. The Board made very substantial alterations in their proposals at the fixing stage, and the Minister was advised that these would necessitate fresh Notice of Proposal.
Grocery and Provisions (England and Wales).	1921	General Minimum Time-Rates for Male and Female Workers.	The Board issued fresh proposals by agreement. Substantial alterations were made by the Board at the fixing stage on the initiative of the employers' representatives. The Department was advised that fresh notice was required in respect of these alterations. Ratification of the remaining rates would have left certain sections of the workers in the trade uncovered, and at the same time representations were received from employers in the south-west to the effect that the rates were too high. The rates were accordingly referred back for reconsideration as a whole. The Board re-affirmed the rates, this time against the votes of the employers' representatives. In view of the anomalous position created by the modification of the original proposals, and still not remedied, of the volume of protest from employers in the trade and of the fall in the cost of living since the proposals were settled, the rates were again referred back for re-consideration on 1st July. Fresh proposals since issued.

TABLE A.—*continued.*

Trade Board.	Date.	Rates affected.	
General Waste Materials Reclamation (Great Britain).	1921	General Minimum Time-Rates, Piece - Work Basis Time - Rates, Guaranteed Time-Rates and Overtime Rates for Female Workers.	The Board proposed its first rates for female workers in January and fixed them in March, 1921. After seeing both sides, the Minister asked the Board to reconsider the matter, especially the effective date, in view of stagnation in the trade. The Board re-affirmed their decision in May. In view of continued depression a letter was despatched on 19th July, again asking the Board to reconsider the question. A revised proposal has since been issued by the Board.
Ready-made and Wholesale Bespoke Tailoring (Great Britain).	1921	General Minimum Time-Rates, Piece - Work Basis Time-Rates and Overtime Rates for Male and Female Workers.	Identical rates were fixed by these two Boards at the same time. The Minister referred the rates back as a case in which it appeared that the Trade Board machinery was being used to legalise agreements reached outside the Trade Boards. After seeing deputations from the Boards, however, it was decided to confirm. The rates have since been reduced.
Wholesale Mantle and Costume (Great Britain).	1921	General Minimum Time-Rates, Piece - Work Basis Time-Rates and Overtime Rates for Male and Female Workers.	
Flax and Hemp (Great Britain).	1921	Piece-Work Basis Time-Rate and Overtime Rates for Male Hose-pipe Weavers.	The Board proposed and fixed a flat rate for the whole of Great Britain in spite of a recommendation of a sub-committee in favour of differential rates for England and Scotland. The Scottish employers protested to the Minister on the ground that the rates would involve a substantial increase in the standard rates paid. The rates were referred back to the Board which eventually decided by agreement to withdraw the rates originally fixed and to propose a flat rate lower by 1d. per hour.
Made-up Textiles (Great Britain).	1921	General Minimum Time-Rates, Piece - Work Basis Time-Rates and Overtime Rates for Male and Female Workers.	The Board proposed rates in February, 1921. In April the Board met and decided in view of the grave depression prevailing in the trade to postpone consideration of their rates for 3 months. In July they again met and although the depression of trade still obtained they decided to ratify their proposals and to submit them for confirmation. At the same time they decided to apply for the Minister's consent to issue a Notice proposing substantial reductions. This decision appeared to the Minister to indicate doubt in the minds of the members of the Board as to the appropriateness to existing conditions of the rates submitted to him and he accordingly referred them back for reconsideration. The Board eventually decided to withdraw the rates previously ratified and to issue fresh proposals.
Milk Distributive (Scotland).	1921.	General Minimum Time-Rates and Overtime Rates for Male and Female Workers.	After the Board had submitted rates to the Minister for confirmation representations were made to him by the most influential employers' associations in the trade that the imposition of the rates would lead to numerous dismissals of workers and would increase the price of milk. The Board moreover in fixing rates had decided to hold a meeting as soon as possible after they had become effective to consider the effects of their operation. This appeared to the Minister to indicate that the Board themselves had doubts as to the suitability of their rates and in view of the representations made to him he decided to refer the rates back to the Board for reconsideration.

CHAPTER VII.

ENFORCEMENT AND INSPECTION.

1. *Sanctions.*—Payment of the minimum rates may be enforced by criminal proceedings. Any person who fails to pay wages at not less than the minimum rate is liable on summary conviction to a fine of £20 and £5 a day for each day on which the offence is continued after conviction: the Court may, in convicting, order the payment of arrears. The Acts place upon the defendant the onus of proving that he has not paid wages at less than the minimum rate. Civil proceedings can be taken by the aggrieved worker for recovery of the sums due. These sanctions also cover (a) breach of the conditions upon which a permit of exemption has been issued, (b) failure to register

apprentices or learners, (c) failure to give effective instructions to a learner or to comply with other conditions laid down by the Trade Board. In these three classes, failure to comply with the conditions under which alone the lower rate for these special cases is payable means that the employer is liable to proceedings for non-payment of the ordinary rate, i.e., usually the ordinary rate for adults.

Other incidental obligations on employers, which are enforceable, are as follows:—

- (a) Deductions from wages, even deductions which would be lawful under the Truck Acts, are forbidden if they bring the rate below the legal minimum. The only exception is for deductions under the Insurance Acts or any similar Acts.

- (b) "Contracting-out" is forbidden, and any agreement for the payment of wages in contravention of the provisions of the Acts is null and void.

- (c) No premium can be received in respect of an apprentice or learner, except a premium under an instrument of apprenticeship made not later than four weeks after the beginning of employment.

With these may be included—

- (d) Section 9 of the Act of 1909, which extends the obligation of an employer to cover homeworkers not under a contract of service, and provides that the net remuneration of such workers, after their necessary expenditure in connection with the work has been deducted, shall be deemed to be wages, and must therefore be calculated on the minimum rate in force.

Finally, there are provisions designed to secure the observance of the Acts.

- (a) An occupier of a factory or workshop, or of a place used for giving out work to outworkers, is bound to comply with the Regulations of the Minister as to methods of giving notice, i.e., to post the notices issued by a Trade Board so as to bring it to the notice of all workers concerned.
- (b) An employer is required to keep such records of wages as are necessary to show that the provisions of the Acts are being complied with as respects his employees.
- (c) Obstruction, i.e., of Inspectors, [Dealt with below (see 2)].

2. *Officers.*—The Minister is empowered to appoint such officers as he thinks fit "for the purpose of investigating any complaints and otherwise securing the proper observance" of the Acts. These officers are to act under the directions of the Minister, or, if he determines, under the directions of any Trade Board. The powers of these officers to enter premises, to examine wages books, to interrogate workers are very wide (Sections 14-17 of the Act of 1909) and are enforceable by penalties. They have also power to take proceedings, subject to the directions of the Minister, both in England and in Scotland.

3. *Enforcement (general).*—The inspectorate was, until 1920, under the control first of the Chairman of all the Trade Boards and then (in Great Britain) of the Chief Executive Officer. Throughout this period, however, all cases in which prosecution was suggested were referred to the Labour Department of the Board of Trade or to the Trade Boards Branch of the Ministry, though it was open to the Chairman or Chief Executive Officer to decide on his own responsibility not to take proceedings. In addition, a few applications were made direct to a Trade Board to take civil proceedings under Section 9 (2) of the Act of 1909, but in no case did a Trade Board take action. Since the inspectorate became part of the Trade Boards Branch of the Ministry, it has been possible to make an accurate division between the administrative work connected with the policy of enforcement and the executive work of inspection, and, by entrusting the former wholly to a separate staff (see Chapter IX) to enable the inspectors to devote the whole of their time to inspection. The work of the enforcement section is to consider what action should be taken on an inspector's report which reveals infraction. The Minister uses his discretion in regard to the action to be taken in such cases. Legal proceedings are not taken in trivial cases or even in serious cases where, for example, there is clear evidence of the employer's *bona fide* ignorance of his obligations and where the payment of arrears and future compliance can be secured without resorting to proceedings. In the great majority of cases, it is in fact possible without proceedings to get the employers concerned to make good any arrears and to comply with the requirements of the Acts in future.

4. *Inspection.*—The executive work grouped under the term inspection can be divided into four groups:—

- (a) Non-compliance inspection proper.
- (b) Special inquiries.

- (c) Investigation of permit applications.
- (d) Conduct of legal proceedings.

In addition, inspectors are from time to time being called upon by the Department to undertake special tasks, either because of their technical qualifications or for reasons of economy or convenience. For instance, they are occasionally asked to obtain the facts necessary to clear up a question of scope, or to interview persons suggested for membership of a Board.

(a) *Non-compliance inspection.*—This term means the visiting of an establishment to discover whether workers are being paid at not less than the minimum rates, and whether any conditions attaching to the rates—for effective instruction, for certification of learners, &c. (see Chapter IV. B. (3)) are being observed; whether proper records are being kept, and whether the Trade Board Notices are kept posted. It also involves the visiting of individual workers to obtain statements from them, and in particular the visiting of outworkers in trades where they are employed. This work requires in addition to knowledge of the Acts, considerable knowledge of each trade concerned, and of industry generally, particularly where the inspector has to investigate different rates for different operations or for different classes of workers, or to check complicated piece-lists. Probably the most difficult task is to determine, where a Trade Board has fixed a basis rate but no minimum piece-rates, whether the piece-rates in any establishment are such as will yield an ordinary worker the amount of the basis rate. This will involve, at the outset at any rate, repeated visits to establishments in the trade and scientific tests of the time taken on various operations by various workers. In this connection it may be mentioned that an inspector is often able, where the yield of the piece-rates is deficient, to suggest to the employer improvements in the organisation of the factory by which the earnings of the workers will be brought up to the minimum without an increase in the piece-rates.

(b) *Special inquiries.*—An important part of the work of the inspectors has been, since 1911, the conduct of special inquiries at the request of particular Trade Boards. These inquiries are usually directed to ascertaining the yield of piece-rates in particular operations or particular trades in order to enable a Board to draw up general minimum piece-rates. In drawing up such piece-rates the Boards rely largely on the impartial evidence given by these officers as a result of their inquiries, and also derive assistance from their technical knowledge of the trade as a whole. In one case, a Board asked for a special inquiry into the proportion of labour costs to the total costs of production; this inquiry was, however, of very limited extent. In the early years of Trade Boards a number of special inquiries were made under the directions of the Chairman of all the Trade Boards (a) to find out, before rates were fixed, how the proposed rates were likely to affect a trade, and (b) at the same time to ascertain the attitude towards the proposals of employers and workers, and to clear away misconception by explanation of the meaning of the terms of the Trade Board Notice.

(c) *Investigation of applications for permits of exemption.*—In considering such applications, the Boards wish in many cases for a report upon the worker concerned, giving detailed information as to his disability as it affects his work and an estimate of what would be reasonable wages in the circumstances. Up to 1920 these investigations were almost invariably carried out by Inspectors, and formed a considerable part of their work. Since then, the increasing demands of non-compliance inspection have made it impossible to spare inspectors for this work, and it is now done by members of the Boards.

(d) *Conduct of legal proceedings.*—From 1915 until 1920 Inspectors conducted in person a considerable proportion of the cases taken into court. Latterly it has been the exception for an inspector to undertake this work, most of the cases being conducted by an officer of the Solicitor's Department. Before

1915 cases were conducted either by Counsel briefed by the Department's Solicitor or by the Solicitor's agents.

5. *Methods of non-compliance inspection.*—It has never been contemplated that the Acts should be enforced by a periodic inspection of every establishment in the trades covered. Many firms at least desire to comply with their legal obligations, and the force of public opinion, aided by the efforts of associations of employers and workers, the deterrent effect of occasional prosecutions (which have always been few) may be expected to be and has, in fact, been effective in securing a large measure of com-

pliance among others. The method of ensuring compliance that has been followed is to combine investigation of the numerous complaints received with occasional general inspections of particular trades or particular districts. Unfortunately, the complaints are not a very accurate guide in directing inspection, since a very large percentage of the workers who complain appear quite incapable of calculating what wages are due to them under the Acts. In fact, in most cases, the results of inspection on complaint show no higher percentage of non-compliance than the results of "routine" (i.e., general) inspection.

TABLE A.
Table showing list of cases in which legal proceedings have been taken under the Trade Boards Acts, during period ending 6th October, 1921.

No.	Trade.	Nature of Offence.	No. of Workers affected.	Date of Hearing.	Penalty Imposed.	Arrears Ordered to be Paid.	Remarks.
1	Chain	...	3	25.8.1911	£ s. d. 15 0 0*	7 15 10½	* In default one month's imprisonment.
2	Lace	...	8	30.8.1911	Costs 9 9 0 Costs 1 0 0	—	Convicted on one summons, other charges dismissed, the Magistrates intimating that any future offence would be severely dealt with.
3	Paper Box	...	1	1.5.1913	Costs 3 3 0	17 0	
4	Lace	...	—	28.5.1913	Costs 5 5 0	2 2	95 summonses in respect of underpayment of 25 outworkers were not proceeded with on payment of arrears of £1 12s. 6d.
5	Lace	...	27	18.7.1913	(a) 20 0 0 (b) 10 0 0	5 5	
6	Lace	...	2	23.7.1913	Costs 2 0 0	3	Nine summonses in respect of same worker were withdrawn on payment of arrears amounting to 7s. 11d.
7	Lace	...	1	5.3.1913	Costs 10 6 Costs 9 6	2 9	Eighteen summonses were not proceeded with on payment of arrears of £1 12s. 9d.
8	Lace	...	19	15.10.1913 and 3.12.1913	Costs included in Penalty. Costs 2 0	—	
9	Lace	...	—	3.12.1913	Costs 15 0 (a) Dismissed on legal point.	10 18 0	* Referred back to Magistrates with an expression of the High Court's opinion that "the mere fact that the defendant was employing other people to do the work does not prevent him from being an outworker within the meaning of the Act."
10	Chain	...	2	19.12.1913	Case stated (b) 10 0 0	—	Defendant ordered to pay costs of appeal. Magistrates on 25.6.1914 and dismissed. Case abandoned.
11	Chain	...	2	31.12.1913	(a) 10 10 0 (b) Dismissed. Costs 4 17 0†	3 3 0	
12	Lace	...	1*	13.1.1914	Costs 3 0 0† (Costs included in penalty)	3 2	* 14 other summonses were adjourned till 10.3.1914 to give an opportunity for payment of arrears.
		...	9	10.3.1914	(Costs included in penalty)	1 10 10	† Or in default of payment 14 days imprisonment on each of two counts. Defendant went to prison for 28 days.
13	Lace	...	2	30.3.1914	Costs 10 0 Costs 3 6	1 0	One charge was dismissed. Arrears were paid.
14	Tailoring	...	1	15.5.1914	Costs 2 0 0* Costs 4 4 6	16 0	* In default one month's hard labour.

No.	Trade.	Nature of Offence.	No. of Workers affected.	Date of Hearing.	Penalty Imposed.	Arrears Ordered to be Paid.	Remarks.
15	Tailoring ...	(a) Underpayment (b) False information ...	18	17.7.1914	£ s. d. (a) 19 0 (b) Withdrawn. Costs 1 16 0	£ 9 9d	
16	Tailoring ...	Underpayment ...	5	17.7.1914	Costs 8 0 0	1 5 2d	
17	Paper Box ...	False information ...	—	6.8.1914	Costs 6 6 0	—	The sum of £12 had been paid to the worker in respect of whose wages the false information was given.
18	Lace ...	Underpayment ...	6	13.8.1914 23.9.1914	Costs 4 0 0 Costs 5 0	16 11	Convicted on one charge and the others were adjourned generally to give defendant an opportunity to pay the arrears. This was done.
19	Lace ...	(a) Underpayment (b) False information ...	3	23.9.1914	(a) 5 0 (b) Dealt with under Probation of Offenders Act. Costs 10 6	2	The two other summonses were adjourned generally on payment of arrears of 7d.
20	Tailoring ...	(a) Underpayment (b) False information ...	1	2.10.1914	(a) 10 0 (b) Six weeks imprisonment in Second Division without the option of a fine. Costs 1 3 0	4 0 0	
21	Tailoring ...	Underpayment ...	1	7.10.1914	Costs 5 0 0 Costs 7 0	1 13 0	The sum of £3 was paid by defendant out of which arrears were paid to worker. In default of payment of the balance the defendant was committed to prison for four weeks.
22	Tailoring ... (2 Defendants.)	(a) False records ... (b) False information ...	1	9.12.1914	(a) (1) 5 0 0 Costs 13 10 (2) 3 0 0 Costs 13 10 (b) 6 0 0 Costs 12 0	2 0 2	(a) Both defendants were convicted.
23	Tailoring ...	Underpayment ...	8	27.1.1915	Costs 1 4 0 Costs 1 11 0	17 2 8	(b) Charge only against one defendant. Prior to giving judgment the Stipendiary asked if Defendants were prepared to pay the £7 18s. 2d. arrears due, if not the Court would have them sent to prison without the option of a fine.
24	Paper Box ...	(a) False records ... (b) Underpayment ...	1	16.12.1914 and 23.12.1914	(a) 7 0 0 (b) 5 0 0 Costs 10 10 0	6 18 0d	
25	Tailoring ...	Underpayment ...	3	9.2.1915 and 10.2.1915	Costs 1 10 0 Costs 4 0	1 10d	Two cases were dismissed and decision in third case reserved. Cases were stated by Magistrate in respect of two. One case was abandoned. Appeal allowed 18.4.1915 and allowed. Case reheard on 5.8.1915 and judgment given.
26	Paper Box ...	Underpayment ...	7	28.4.1915	Costs 4 6 0 Costs 14 0	12 18 4	

No.	Trade.	Nature of Offence.	No. of Workers affected.	Date of Hearing.	Penalty Imposed.	Arrears Ordered to be Paid.	Remarks.
46	Tailoring ...	Underpayment ...	7	9.5.1917	£ 8 0 s 8 0 d 0	£ 2 2 0	
47	Sugar Confectionery and Food Preserving.	(a) Failure to post Notices ... (b) Underpayment ...	—	25.7.1917	Costs 2 2 0 (a) 2 15 0 (b) 5 0 0	50 3 5½*	* Refunded prior to the laying of informations.
48	Tailoring ...	(a) Failure to post Notices ...	5	6.9.1917	Costs 3 0 0	9 0 10	
49	Tailoring ...	(b) Underpayment ...	46	10.9.1917	(a) 3 0 0 } to include (b) 17 15 0 } Costs. 5 12 0	*	
50	Shirtmaking	Underpayment ...	2	7.11.1917	Costs 8 17 0	24 0 4*	* £800 arrears were paid before the case was heard.
51	Tailoring ...	Underpayment ...	7	1.2.1918	Costs 12 2 0	63 0 11	* No order made, but defendant undertook to pay arrears.
52	Shirtmaking	Underpayment ...	8	13.2.1918	Costs 70 17 6	11 11 8½	(Ireland).
53	Tailoring ...	(a) Underpayment ...	1	19.2.1918	Costs 8 0 0	3 2 4*	(Ireland).
54	Tailoring ...	(b) False information ...	1	19.2.1918	3 months' hard labour, reduced on appeal to a fine of £10. (27.3.18.)	2 10 6	* Defendant volunteered to pay arrears before appeal.
55	Tailoring ...	(a) Underpayment ...	5	21.2.1918	Costs 8 0 0 (a) 2 0 0 (b) 36 0 0	60 2 11	(Ireland).
56	Tailoring ...	(a) Underpayment ...	1	21.2.1918	Costs included in penalty. (a) 10 6 (b) 1 0 0	5 8 11	(Ireland).
57	Shirtmaking	(a) Underpayment ... (b) Failure to post Notices ... (b) False information ...	3	21.2.1918	— 4 0 0 Costs 16 0 (a) 15 0 (b) 15 0	Arrears paid prior to bearing. 5 7 1*

CHAPTER VIII.

RELATIONS BETWEEN MINISTER OF LABOUR (BOARD OF TRADE) AND THE TRADE BOARDS.

1. *Respective functions of Minister and Trade Boards.*—The duties laid upon the Minister by statute are:—

- (i) The application of the Acts to trades by Special Order and the establishment of Trade Boards.
- (ii) The amendment of Special Orders where experience has shown that the definition of a trade as set out in the Special Order requires amendment.
- (iii) The periodical reconstitution of Trade Boards in accordance with statutory regulations.
- (iv) The constitution of District Trade Committees in cases where a Trade Board has decided to establish such Committees.
- (v) The consideration of minimum rates of wages submitted to the Ministry by Trade Boards and the confirmation or reference back of such rates.

The statutory functions of a Trade Board are:—

- (i) Fixing, varying, and cancelling rates.
- (ii) Registration of apprentices, granting certificates to learners and permits of exemption to workers who are incapable, by reason of infirmity or physical injury, of earning the minimum rates.
- (iii) Making recommendations to a Government Department relating to industrial conditions in the trade.

In addition to these duties, which can clearly be assigned to the Minister on the one hand and the Trade Board on the other, there are the duties of:—

- (i) Enforcing the Acts by inspection, and by prosecution where necessary, and
- (ii) Advising on questions of scope.

In these two matters, while it has been recognised throughout that the ultimate responsibility rested with the Minister, administration has passed through several stages.

In addition, the Minister is generally responsible to Parliament for the administration of the Acts as a whole, and, in particular, for the expenditure of money and provision of staff, whether in connection with meetings of a Board or in connection with prosecutions.

2. *The Single Chairman and Single Secretary.*—The Acts empower the Ministry to appoint a Chairman and a Secretary to each Trade Board, but they create no such position as that of Chairman of Trade Boards or Secretary of Trade Boards. When, however, the first Boards were set up the Board of Trade appointed as Chairman and Secretary respectively to all the Boards two officials of the Board of Trade who had been employed previously, with a small staff of investigation officers, on work in connection with the establishment of the Boards. The investigation staff referred to above continued to act under the control of these officials in connection with the establishment of further Trade Boards and subsequently, when the first minimum rates came into operation, as inspectors for the enforcement of those rates.

The Chairman was thus, on the one hand, an officer of the Board of Trade and under the Board of Trade's instructions and, on the other hand, Chairman of several independent statutory bodies whose views he was bound to voice. In 1912 steps were taken to define the position. The Board of Trade wrote to the Chairman intimating that the Board of Trade valued the technical knowledge and expert assistance of the several Boards and therefore wished the Trade Boards to be associated with the Board of Trade in the direction of the inspectors. At the same time, it was pointed out that it was impossible for any officer or any staff of officers to work under the directions of a number of independent Boards. It was accordingly proposed

that the staff of inspectors should be placed under the directions of the several Trade Boards, subject to the following conditions:—(a) that the officers should receive instructions only from the Chairman to whom alone they should be responsible; (b) that the Chairman should not employ the officers to enforce minimum rates in any branch of trade to which the Board of Trade considered that they did not apply; (c) that no legal proceedings should be taken without the express sanction of the Board of Trade in each case; (d) that the Chairman should refer to the Board of Trade all matters as to which he felt doubt; (e) that the above arrangements were provisional and open to revision in the light of experience.

The above arrangements were concurred in by all the Trade Boards and remained in operation until 1917. In accordance with the suggestion that the Trade Boards should be associated with the Board of Trade in the direction of the inspectors, several of the Boards established Administrative Committees to advise the Chairman on points which he might wish to refer to them. The principal points on which the Chairman consulted the Administrative Committees were those arising out of questions as to the scope of the respective Boards.

In addition, he consulted Administrative Committees in a small proportion of cases of infraction, chiefly ones in which technical questions, such as the yield of piece-rates were involved, in which he thought that the expert knowledge of the Committee would assist him. He was always careful in such cases to avoid giving the Committee any information which would enable them to identify the firm.

He also laid before the Trade Board concerned the very few cases, probably less than half-a-dozen in all, in which a worker definitely addressed a complaint to a Trade Board and asked them to recover arrears under Section 10 of the Act of 1909. In no case, however, did the Trade Board take this action. With these exceptions, all cases of infraction discovered in the course of inspection, whether on complaint or otherwise, in which criminal proceedings were contemplated were referred by the Chairman in the ordinary course of his duties to the Department and not to the Trade Board.

In 1917 the Minister of Labour decided not to continue the practice of appointing one whole-time Chairman for all the Trade Boards, and his decision was announced in the Labour Gazette of July, 1918 (p. 301) in the following form:—

"Mr. Aves was Chairman of all the Trade Boards, but the Minister has decided, after very careful consideration of the whole position, that it would not be advisable to appoint a whole-time Chairman to succeed Mr. Aves, and he has therefore determined that in future each Board (or group of Boards) shall have a separate Chairman, as he considers that this will promote a sense of greater independence on the part of the Boards."

In these circumstances it was impossible to continue the old arrangements for the direction of the staff of Investigating Officers, and it was accordingly decided that the Secretary should hold the combined post of Chief Executive Officer and Secretary of the several Boards. As Secretary of each Board this officer, of course, continued to be responsible to the Board, while as Chief Executive Officer in control of the Investigating Officers he was responsible to the Ministry of Labour. This position was explained to the several Boards in letters addressed to them by the Ministry in July, 1918.

The Secretary under this arrangement in matters of scope and enforcement was in substantially the same position as the Chairman. At the beginning of 1920 the Minister decided that the Inspecting Staff should be placed under the direct control of the Department and that all opinions on scope should be issued directly on his authority.

The following letter was addressed to the Boards:—

"Sir,

"I am directed by the Minister of Labour to say that he has had under consideration the

relation to the Trade Boards of the officers appointed for the purpose of investigating complaints and otherwise securing the proper observance of the Trade Boards Acts. He communicated on this subject in July, 1918, to the Trade Boards which were in existence at that time, and he desires to recapitulate, for the information of the Trade Board, the views he then expressed, with such modifications as have been suggested by further experience of the working of the Acts. The increased number of the Boards, the establishment in certain cases of separate Boards for different parts of the United Kingdom, and the rapid extension of the application of the Acts which is projected, make it imperative, in the Minister's opinion, to ensure a proper system of co-ordination. He trusts that he will have the co-operation of the Trade Board in the arrangements which he proposes for this purpose.

"As you are aware, the Chief Executive Officer and his staff are directly responsible to the Ministry of Labour. The Minister regards it as essential, in view of his own responsibility to Parliament for the administration of the Trade Boards Acts, that the decision in all questions of enforcement should rest with him in consultation with his legal and other advisers. In the consideration of all such questions, however, he wishes to utilise to the full the technical experience of the Trade Boards, and he accordingly proposes to circulate to each Board monthly a report upon the enforcement of the Acts in the trade with which it is concerned, and to invite any observations which it may wish to offer thereon. He will, of course, also be glad to receive at any time the expression of a Trade Board's opinion upon this and kindred matters.

"The Minister desires at the same time to refer to the related question of the interpretation of Regulations and Orders made under the Trade Boards Acts. Many requests for such interpretations are received both by this Department and by individual Trade Boards, and, though, of course, no binding opinion can be given except by a Court of Law, the Minister regards it as important that persons who may be affected should receive advice that will assist them. He greatly appreciates the attention which Trade Boards have given in the past to these difficult matters, on which their experience and practical knowledge are invaluable. The question of interpretation, however, is closely connected with that of enforcement, because the instructions to the Chief Executive Officer naturally depend upon the interpretation which is placed on the Orders and Regulations, and the Minister therefore considers that he must take upon himself also the responsibility for the issue of interpretations to the public. He accordingly proposes that all inquiries of this kind, whether addressed to an individual Trade Board or to the Ministry of Labour, shall be dealt with by the Ministry, and that replies shall be sent on his authority. As in matters of enforcement, he trusts that he will be able to rely on the advice of the Trade Boards in all cases of doubt and difficulty, and that the Boards will freely communicate to him their views on these questions of scope and interpretation.

"The Minister will be glad to hear at your earliest convenience whether this proposal meets with the approval of the Trade Board."

3. *The Committee on Trade Boards Administration*.—The administrative changes referred to in the last section gave rise in certain quarters to the impression that the Minister by limiting the functions of the officer who was Secretary to all the Trade Boards wished to encroach upon the proper functions of the Boards themselves. A number of Boards protested against the Minister's action and asked to be received in deputation. A deputation was received in the autumn of that year from all the Trade Boards in Great Britain, and the Minister was charged not only with wishing to deprive the Boards

of any voice in interpretation of scope and enforcement, but also with the improper exercise of his power of referring rates back for reconsideration.

As a result of this conference, the Minister decided to appoint a small Committee, consisting of 3 officers of the Department and of 2 Chairmen of Trade Boards, 4 employers' representatives, and 4 workers' representatives on Trade Boards who were nominated by the conference. The Committee issued a Majority and a Minority Report which made recommendations for improving co-ordination between the Department and the Trade Boards in the discharge of their respective functions. Both reports recommended that the staff engaged in carrying out, on behalf of the Minister, the work of enforcement and interpretation of scope should be stationed at the same office as the secretarial staff attached to the Trade Boards, that they should both be under the control of a single officer of the Ministry and that questions of scope should be dealt with in the first instance by the Secretary of the Trade Board or Trade Boards concerned, subject to control by a responsible officer of the Ministry. The Majority Report, in addition, recommended that there should be a Chief Secretary of Trade Boards, in charge of all the secretarial staff, responsible to the Trade Boards as Secretary and to the Department in matters of scope. They stated that this appointment was necessary not only in order that the work of the Secretaries might be adequately co-ordinated, but also in order that each Board might have at its disposal an officer responsible to it with a general knowledge of the working of all the other Boards. The Minority Report objected to such an appointment on the grounds that the independence of the Boards might be jeopardised by the influence of a permanent official who, while partially responsible to the Ministry and to each Trade Board, was fully responsible to no one. A further recommendation made by both Reports was for the appointment of a Standing Advisory Committee of Trade Board members.

At the resumed conference, which met the Minister in May, 1921, a resolution was passed by a majority, asking the Minister to adopt the Majority Report. In announcing his decision, the Minister stated that he had endeavoured to meet to the fullest extent the wishes of the signatories of the Majority Report consistently with the responsibilities laid upon him by Parliament, but he was bound to recognise that the Report represented a compromise between two points of view. The one view was that a Trade Board should have largely extended powers and should be mainly or wholly independent, not merely in the exercise of its rate-fixing power, which among others, the Acts have conferred upon the Trade Board alone, but also in other matters for which Parliament had made him responsible. The other view was that it was impossible to make such a change while the present Acts were in operation. Without expressing an opinion on the policy involved in the former view, the Minister felt that in the interests of the Trade Board machinery as a whole nothing should be done at this stage to prejudice the position in one direction or another. In these circumstances he accepted the following recommendations of the Majority Report:—

1. That the practice of early consultation between the Department and Trade Boards on matters arising out of their determinations should be continued and extended.
2. That a Trade Board should, if it wished, send a deputation to interview his legal adviser upon legal questions.
3. That for the present only one officer should be appointed as Secretary to all the Trade Boards.
4. That a Chief Inspector should be appointed in control of all officers engaged on Trade Boards inspection.
5. That all questions of the scope of any Trade Board should be referred to the Secretary of the Trade Board concerned before being dealt with by the Department.

He also promised to give further consideration to the question of increasing the inspectorate.

The conferences of Chairmen of Trade Boards, of representatives of employers, and of representatives of workers on Trade Boards respectively were held to elect the Advisory Committee, but the conferences of employers and workers passed resolutions declining to proceed with the formation of the Committee on the ground that the Minister had not adopted "the principal recommendations" of the Majority Report. The Advisory Committee was thereupon dropped. The new arrangements as to question of scope are described in Chapter IV.

CHAPTER IX.

STAFF† AND EXPENDITURE.

1. *Headquarters Staff (excluding Inspectorate).*—The functions attaching to the Minister (Board of Trade) were carried out until 1917 by the Labour Department of the Board of Trade, which was transferred in that year to the Ministry of Labour. At the passing of the Amending Act of 1918 an investigating staff of 24, under two staff officers, was formed to carry out enquiries into the conditions of trades in which the establishment of Trade Boards appeared desirable. This staff was subsequently raised to a total of 60 (mainly temporary officers) under special Treasury authority, and was reduced to 20 on 1st April, 1921, on the expiry of the special authority. About the same time it was transferred to the Intelligence and Statistics Division of the Ministry as a "common service" for the whole Ministry, although its main work continued to be Trade Board investigation.

The administrative and higher staff were placed on a permanent footing in 1919, when Treasury sanction was obtained for the following posts:—

Assistant Secretary	1
Principal Clerk	1
Senior Clerks	2
Senior Staff Clerks	2
Upper Division Clerks (2 women)	6
Staff Clerks (Lower Grade)	3
Minor Staff Officers	3

As the pressure of work increased with the number of Trade Boards, and also through the new arrangements as to scope and enforcement, this staff was increased by transfers from other Departments of the Ministry, and stands at present as follows:—

Trade Boards Branch of General Department (excluding Inspectorate).

Assistant Secretary (1)	(£1,000-£1,200)*	
Principal Clerks (2)	(£700-£900)*	
Senior Clerks (3)	(£550-£650)*	
Junior Upper Division Clerks (3)	(£200-£500)*	
Senior Staff Clerk (1)	}	(£550-£650)*
Temporary Senior Staff Clerk (1)		
Deputy Chief Executive Officer (1)	}	(2 at £300-£400)*
Staff Clerk (1)		
Negotiating Officers (loaned from I.R. Department (6)	{ (4 at £200)*	
Assistant Secretary of Trade Boards (in training) (1)	{ (£300-£400)*	
Minor Staff Clerks (4)	{ (£200-£300)*	
Temporary Administrative Assistants (5)	{ (1 at £300-£400)*	
	{ (1 at £400)	
	{ (3 at £430)	
Temporary Junior Upper Division Clerk (1)	{ (£300)	
Clerical Officers (2)	{ (£80-£250)*	
Clerical Staff (23)	{ Male (75/- to 106/-)	
	{ Female (57/- to 74/6)	
Permanent Staff	21	
Temporary Staff	34	
Total	55	

* Exclusive of bonus.

† September, 1921.

2. *Staff attached to Trade Boards.*—Until 1917 a permanent Officer of the Board of Trade was Chairman of all the Trade Boards. The only staff at the Chairman's disposal, beside a Secretary and clerical staff, was the inspectorate (*see below*). After 1917, the Secretary was placed in charge of all this staff with the title of Chief Executive Officer, and two deputies were appointed, one to assist him in secretarial work and the other to take charge of the inspectorate. With the increase in the number of Trade Boards, the secretarial work became very heavy, and assistance had to be given by the inspectors. In 1919 Treasury sanction was obtained for the appointment of Secretaries and Assistant Secretaries on scales of £400-£500 and £300-£400 respectively to the number of three to every nine boards. Three Secretaries and 8 Assistant Secretaries have been appointed; these officers have not been allotted to any particular Boards, but assist the Secretary generally. The total staff, secretarial and clerical, is as follows:—

Staff in Office of Trade Boards.

Chief Executive Officer (1)	(£700-£900)*
Deputy Chief Executive Officer (1)	(500-£700)*
Secretaries (3)	(£400-£500)*
Assistant Secretaries (7)	(£300-£400)*
Staff Clerk (1)	(£300-£400)*
Minor Staff Clerks (2)	(£200-£300)*
Clerical Staff (45)	(as T.B. Branch)
Permanent Staff	23
Temporary Staff	37
Total	60

3. *Inspectorate.*—In 1911-12 there were four inspectors, two men and two women. The numbers in subsequent years were as follows:—

July 1914	9
" 1915	12
" 1917	10
" 1918	9
" 1919	9

In 1920 there were 17 full time inspectors, six of whom were under training, and a varying number of Unemployment Insurance Inspectors who gave part of their time to the work. 21 of these Unemployment Inspectors received short periods of training in the Trade Board work at Headquarters and some 50 did more simple cases from time to time without trainging at Headquarters. This arrangement was made as part of a scheme for the pooling of Inspectorates which has now been given up. It is impossible to state at all accurately how many effective officers were added to the Trade Board staff in this way as the trained officers spent a considerable part of their time in training the others, many of whom worked only part time. The Unemployment Insurance Inspectors remained under the disciplinary control of the Divisional Officers of the Employment Department of the Ministry and were stationed in the Employment Divisions. In September, 1921, a change was made, the Trade Boards Branch securing from the Employment Department the whole time services of 9 officers who had had considerable experience in Trade Board work. The present position as regards number of inspectors is:—

Number stationed at Headquarters	27
" " in Provinces	9
	36

4. *Expenditure.*—The attached table shows the amounts spent in each financial year since the passing of the 1909 Act in connection with salaries, fees and travelling. A note on other expenses follows. During the financial years 1909-10 to 1919-20 (inclusive), no separate figure was kept by the Board of Trade, or, subsequently, by the Ministry of Labour in respect

* Exclusive of bonus.

of the salaries of officers at Headquarters engaged upon work in connection with the administration of the Trade Boards Acts. The figures given, therefore, include only expenses in connection with Office of Trade Boards. It was only during the financial year 1919-20, after the passing of the 1918 Act, however, that the staff at Headquarters rose to appreciable proportions, i.e., above a dozen.

The increase of expenditure during this year was, of course, due to the rapid increase in the number of Boards and the consequent increase of staff, both at the Office of Trade Boards and at Headquarters, especially important in this connection being the staff necessary to deal with the investigation of trades prior to the formation of Trade Boards. The rise of the Civil Service Bonus with the Cost of Living Index Figure and the increase of subsistence allowances to workers' representatives to include payment for lost time also led to an increase in expenditure.

The total expenditure under all heads, excluding Post Office services, during the year 1921 was approximately £120,000 (detailed statements below).

Actual expenses during the first five months of the financial year 1921-22 to 31st August have amounted to approximately £35,000, and it is estimated that on the total expenditure for the year a saving of about £20,000 will be effected as compared with expenditure in the year 1920-21.

*B.—Details of Expenditure in Financial Year 1920-21
(Figures to the nearest £1,000).*

Expenses of Trade Boards.

Staff (including Inspectorate at that time stationed at Office of Trade Boards) ...	£22,000
Fees of Appointed Members ...	4,000
Travelling and Allowances ...	26,000
	<u>£52,000</u>

Headquarters.

Staff employed on administration of the Acts subsequent to the establishment of a Trade Board ...	£12,000
Staff employed on application of the Acts to Trades ...	43,000
	<u>£55,000</u>
Total ...	<u>£107,000</u>

Notes.—Nothing is included in the above in respect of services rendered by (i) Post Office; (ii) Office of Works; (iii) Stationery Office.

(i) It is impracticable to assess separately the cost of postal services.

(ii) In 1911 the Office of Trade Boards was established in 5, Old Serjeant's Inn, Chancery Lane. The rent of these premises (on a pre-war lease) was £2,050 per annum (inclusive of rates), the total annual cost including heating, lighting, cleaning, etc., being £2,285 per annum. With the growth in the number of Boards in 1919 and 1920 these premises were found to be too small, especially as regards Board Room accommodation. On 29th March, 1921, accordingly the office was moved to 7-11, Old Bailey, E.C.4, where there is almost twice as much Board Room accommodation as at Chancery Lane. The cost of adopting the new premises was £2,360, a sum which is included in the total expenditure given above for the year 1920-1921. The cost of the present Office of Trade Boards is:—

	£
Rent ...	3,186
Rates ...	1,600
Heating ...	421
Water rate ...	52
Lighting, lifts, etc. ...	292
Total ...	<u>£5,551</u>

(iii) The cost of stationery services had risen by the middle of 1921 to a figure which may be estimated at £10,000 per annum. Steps have been taken to reduce the amount of printing and duplicating and, as a result, future expenditure on this head may be estimated at £5,000.

Distribution of Duties among Staff of Trade Boards Branch, September, 1921.*

- 1 Assistant Secretary.
- 1 Principal Clerk (General Policy).
- 1 Principal Clerk.

Application of the Acts, Constitution of New Trade Boards, Revision of Scope.

- 1 Senior Clerk.
- 1 Assistant Principal.
- 3 Temporary Administrative Assistants.
- 1 Minor Staff Officer.
- 1 Negotiating Officer.

Interpretation of Scope.

- 1 Senior Clerk.
- 2 Women Upper Division Clerks.

- 1 Senior Clerk.

Confirmation of Rates, etc.

- 2 Assistant Principals.
- 1 Senior Staff Clerk.
- 1 Minor Staff Officer.

Reconstitution of Trade Boards.

- 1 Temporary Administrative Assistant.
- 1 Negotiating Officer.
- 1 Assistant Secretary of Trade Boards.

Records and Supervision of Clerical Staff.

- 1 Negotiating Officer.

- 1 Senior Staff Clerk (Acting Chief Inspector).

Enforcement Policy.

- 1 Deputy Chief Executive Officer.
- 1 Staff Clerk (lower grade).
- 2 Minor Staff Officers.
- 5 Assistant Negotiating Officers.

Inspectorate.

- 36 Officers.

* Clerical Staff excluded.

ANNEX II.

COMPARISON OF RATES OF WAGES FIXED BY TRADE BOARDS WITH MINIMUM RATES IN OTHER INDUSTRIES AT 12TH OCTOBER, 1921.

I.—Men.

The analysis of the Trade Board minimum rates given in Table A at the end of this Annex shows that the great majority (over three-fourths of the whole) of the minimum rates of wages fixed for adult men by the various Trade Boards in Great Britain, excluding the higher rates (above the general minimum) fixed by certain Boards for special classes, range from 1s. 1½d. to 1s. 4½d. per hour. In only three cases is the rate higher than 1s. 4½d., and in

only two cases is it below 1s. 1½d. About two-thirds of the Boards have minima ranging from 1s. 2d. to 1s. 4d. These minima generally apply to men of 21 years of age or over; but in a few cases the minimum age to which the rate applies is fixed at 22 years, and one case it is 24 years. The higher rates above the general minimum for the trade fixed by certain Boards for special classes of men range from 1s. 1½d. or 1s. 2d. up to (as a rule) 1s. 8d. or 1s. 9d., and in the case of two trades, 2s. or 2s. 0½d. In certain other industries, minimum rates of wages have been fixed for men by an agreement or resolution of a Joint Industrial Council or an Interim Industrial Reconstruction Committee. Particulars of these rates are given in the following Table:—

J.I.C. AND I.I.R.C. AGREEMENTS.

(Men.)

Trade.	District.	Rates for lowest grade of men.		Rates for special classes (excluding foremen).
		Rate per hour.	Grade.	
Lock, Latch and Key ...	Midlands, London, etc.	1s. 6d. to 1s. 8½d.	Men*	1s. 7d. to 2s. 4½d.
‡Cocoa and Chocolate Confectionery.	Great Britain ...	1s. 4½d.	Dayworkers* ...	—
Needle, Fish Hook, etc. ...	Redditch	1s. 4½d.	Men 21 and over ...	1s. 6½d. to 1s. 9d.
Bobbin Making	England and Wales ...	1s. 4½d.	Labourers	1s. 6d. to 1s. 8d.
Asbestos	Great Britain	1s. 4½d.	Men 21 and over ...	—
Soap and Candle	Various	1s. 4½d. to 1s. 6d.	Men 21 and over ...	—
Paint, Colour and Varnish ...	United Kingdom ...	1s. 3½d.	Men 21 and over ...	—
Woolen and Worsted Manufacture.	Yorkshire	1s. 3½d.	Labourers, odd men, etc.	1s. 4½d. to 1s. 8½d.
†Wrought Hollow-ware ...	Birmingham, Dudley, Wolverhampton and Lye.	1s. 3½d.	Labourers	—
Match Making	United Kingdom ...	1s. 3½d.	Men 18 and over ...	—
‡Sugar Confectionery and Fruit Preserving.	United Kingdom ...	1s. 3½d.	Men 21 and over ...	—
Lead Smelting and Rolling ...	Various	1s. 3d. to 1s. 5d.	Men*	—
Breweries	Nottingham, Derbyshire, and Lincs.	1s. 2½d. to 1s. 4½d.	Beer bottlers and matsters.	—
Boot and Floor Polish	England	1s. 2½d.	Men 21 and over ...	—
Electricity Supply	Great Britain	1s. 2½d. to 1s. 6½d.	Labourers	1s. 2½d. to 2s. 3½d.
Coir Mat	Great Britain	1s. 2½d.	Men 21 and over ...	—
Flour Milling	Various	1s. 2d. (day work)	Labourers	1s. 5d. to 1s. 9½d.
Furniture Removing and Warehousing.	Various	1s. 1½d. to 1s. 3d.	Porters	1s. 2½d. to 1s. 7½d.
Incandescent Mantle	Great Britain	1s. 0½d.	Men 21 and over ...	—
Woolen and Worsted Manufacture.	West of England ...	1s. 0d.	Carters, Jobbers, Yarn Jobbers and all others unskilled.	1s. 1d. to 1s. 4½d.
Local Authorities (Non-trading Services).	Various	11½d. to 1s. 8d.	Labourers	—

* Grade unspecified.

† This trade is covered both by a J.I.C. and by a T.B. The T.B. rate has recently been reduced.

‡ This trade is covered both by an I.I.R.C. and a T.B. The rate fixed by I.I.R.C. is higher than that fixed by the T.B. Only a proportion of employers are represented on the I.I.R.C.

It will be seen that the rates fixed vary considerably, ranging from 11½d. or 1s. to 1s. 8½d. for the lowest grades, and from 1s. 1d. to 2s. 4½d. for higher grades. Excluding lock, latch and key making the range is 11½d. to 1s. 8d. for the lowest grades, and 1s. 1d. to 2s. 3½d. for the special grades. The great majority of the rates for the lowest grades fall between 1s. 2½d. and 1s. 6d. and are clearly no lower, on the whole, than the minima fixed by the Trade Boards, the great majority of which, as shown above, range between 1s. 1½d. and 1s. 4½d.

In other industries it is unusual for agreements to be made fixing general minimum rates of wages for men of an unspecified grade, but in many cases agreements have been made between the employers' associations and the trade unions concerned fixing

differential minimum rates of wages for different grades of workers.

In such cases the minimum rates fixed for unskilled labourers provide a basis of comparison with the Trade Board minimum rates, and particulars of these minima are accordingly given below for a number of trades which may be regarded as fairly comparable with the majority of Trade Board trades. In a few cases in which general minima have been fixed for men, irrespective of occupation, these minima have been included. Trades in which rates have been fixed for the London area alone or for other single centres in which wages are exceptionally high, have not been included. The classes of workmen dealt with in the Table are, therefore, in general, not of higher grade than those to whom the Trade Board minima (excluding those for special classes above the general minimum for the same trade) apply.

Rates agreed upon between Employers' Associations and Trade Unions.

Industry.	Minimum Rate per hour for Unskilled Labourers or for men of unspecified trades.
<i>Metal Trades.</i>	
Pen Making (Birmingham) ...	1s. 4d.
Bobbin and Shuttle Trade (Scotland).	1s. 4d.
Silver, Electro Plate, etc. (Sheffield)	1s. 3½d.
Gold, Silver, etc. (Birmingham) ...	1s. 0½d.
Hosiery Needle (Leicester) ...	1s. 0½d.
<i>Textile Trades.</i>	
Bleaching, Dyeing, Finishing, etc. (Yorks, Lancs. and Scotland).	1s. 3½d. to 1s. 4½d.
Dyeing and Dry Cleaning (Great Britain).	1s. 3½d.
Making-up and Packing (Manchester).	1s. 3½d.
Lace Making (Nottingham) ...	1s. 3d.
Silk Manufacture (Leek and Macclesfield).	1s. and 1s. 1½d.
Flannel Weaving (Wales) ...	1s. 1d.
<i>Other Trades.</i>	
Export Packing (London) ...	1s. 4½d.
Fellmongering (Great Britain) ...	1s. 4½d.
Employees of Co-operative Societies (Great Britain).	1s. 2½d. to 1s. 6d.
Umbrella and Walking Stick Making (London and Glasgow).	1s. 2d.
Wholesale Textile Warehousing (London).	1s. 1½d.
Wholesale Clothing, etc. Warehousing (Manchester).	1s. 1½d.
Leather Tanning and Currying (Great Britain).	11d. to 1s. 2d.
<i>Clothing.</i>	
Boot and Shoe Manufacture (Great Britain).	1s. 2d.
<i>Transport.</i>	
Railway Porters (Great Britain) ...	1s. 2½d. to 1s. 3½d.
<i>Paper, Printing, etc.</i>	
Paper Tube Making (Yorks. and Lancs.)	1s. 6½d.
Paper Making (Great Britain) ...	1s. 3½d.
Printing (Great Britain) ...	1s. 3d. to 1s. 5½d.
<i>Woodworking.</i>	
Mill Sawing (Great Britain) ...	1s. 4d. to 1s. 9d.
Shuttle Making (Lancs.) ...	1s. 3½d.
Vehicle Building (London, Liverpool and Glasgow).	1s. 2d. to 1s. 3d.
<i>Pottery and Chemical.</i>	
Pottery (N. Staffs) ...	1s. 3½d.
Drug and Fine Chemical (Great Britain).	1s. 2½d.
<i>Food and Drink.</i>	
Brewing (Principal Centres) ...	1s. 4½d. to 1s. 7d.
Oil Cake Milling (Liverpool) ...	1s. 3½d.
Flour Milling (Great Britain) ...	1s. 2d. to 1s. 5½d.
Rice Milling (Liverpool) ...	1s. 2d.

It is clear from this Table that the minimum rates fixed by agreement between many employers' associations and trade unions for unskilled labourers, or for men generally, are at least as high, on the whole, as the great majority of the Trade Board minima for men of no lower grade.

Outdoor workers, such as builders' labourers and dock labourers, whose rates of pay are to some extent influenced by considerations of weather conditions, are not included above, but it may be mentioned that the rates for the ordinary unskilled labourer in these trades are generally higher than the Trade Board minima. For example, the rates for builders' labourers range from 1s. 2½d. in the small country towns in the southern counties to 1s. 7½d. in some of the large industrial towns, and those for dock labourers are 1s. 7½d. in the smaller ports and 1s. 9d. in the larger ports.

In the engineering and shipbuilding trades, in which minimum rates have not in most cases been fixed by joint agreement, the rates of wages of unskilled labourers mostly range from about 1s. 3½d. to 1s. 5d., and even in the small towns in the South-West of England, where wages are relatively low, the rates are generally 1s. 2½d. or more.

It is evident, therefore, that whether the comparison is made with the corresponding rates fixed by Joint Industrial Councils and Interim Industrial Reconstruction Committees, or with those fixed by direct agreement between employers' associations and trade unions, the general minimum rates fixed for men by the Trade Boards in Great Britain are not unduly high.

As regards the *special rates*, above the general minima, fixed by certain Boards for special classes of workmen ranging from 1s. 1½d. to 1s. 8d. or 1s. 9d. (2s. and 2s. 0½d. in two exceptional cases), it may be observed that the range of wages for workmen in other industries runs considerably higher.

The following are examples of the approximate average hourly rates of wages of typical classes of skilled workmen in other industries, from which it will be seen that rates of 1s. 8d. to over 2s. an hour are not exceptional:—

Cabinet Makers ...	1s. 8d.	} (Average rate in the principal centres.)
French Polishers ...	2 1	
Letterpress Printers (Compositors and Machinemen) ...	2 1	
Shipwrights ...	1 10	
Fitters and Turners ...	1 9½	} (According to length of service.)
Railway Engine Drivers ...	1 8 to 2 0½*	

2. Women.

For women of 18 years of age the great majority of the *minimum* rates fixed by the Trade Boards for Great Britain range between 8d. and 9½d. per hour for women of 18 years of age or over (see Table A). 8d. to 9d. being the most general rates. Special rates above the general minimum for the trade, fixed by some Boards for special classes of women mostly range from 8½d. to 1s. or 1s. 0½d. per hour, although in two trades higher rates have been fixed for certain grades of women.

*Additional "Mileage" allowances are also earned in some cases.

The following Table summarises, for comparison, the minimum rates of wages fixed for women by Joint Industrial Councils and Interim Industrial Reconstruction Committees:—

Trade.	Locality.	Rates for Lowest Grade of Women.		Rates for Special Classes (excluding forewomen).
		Rate.	Grade.	
Asbestos	Great Britain ...	11d.	Women of 18 years	—
Cocoa and Chocolate Confectionery.*	Great Britain ...	9½d.	" " "	—
Bobbin Making	England and Wales	9½d.	" " "	—
Match Making	England and Wales	9½d.	" " "	—
Wrought Hollow-ware Manufacture.†	Midlands	9d.	" " "	—
Sugar Confectionery and Fruit Preserving.*	England and Wales	9d.	" " "	—
Flour Milling	Great Britain ...	9½d to 10½d.	" " "	—
Needle, Fish Hook, etc., Making.	Redditch	8½d.	" " "	—
Boot and Floor Polish Making	England	8½d.	" " "	—
Soap and Candle Making ...	Great Britain ...	8d. to 9½d.	" " "	—
Paint, Colour and Varnish Making.	Great Britain ...	8d.	" " "	—
Incandescent Mantle Making	Great Britain ...	8d.	" " "	—
Lock, Latch and Key Making	Midlands	7½d.	Warehouse Women.	8d. to 9d.
Woollen and Worsted Manufacture.	Yorkshire	7½d. to 9½d.	Worsted Doffers and Women of 18 in Woollen Spinning.	8½d. to 10½d.
Coir Mat Weaving	Great Britain ...	7½d.	Women of 18 years	—
Woollen Manufacture	West of England ...	7½d.	" " "	7½d. to 8d.
Glove Making†	England	7d.‡ to 7½d.§	" " "	—

* Covered both by Trade Boards and Interim Industrial Reconstruction Committees. Interim Industrial Committees only represent proportion of employers, and has fixed higher rate than Trade Boards.

† This trade is covered both by a Joint Industrial Council and a Trade Board. The Trade Board rate has recently been reduced.

‡ Fabric.

A comparison of the figures in this Table with those in Table A below reveals a remarkably close similarity between the rates fixed by the Trade Boards and those fixed by the Joint Industrial Councils and Industrial Reconstruction Committees. In both cases a range of 8d. to 9½d. per hour covers the majority of the rates fixed for women other than special classes.

Turning to trades not covered by Joint Industrial Councils or Reconstruction Committees, the following Table gives particulars of the minimum rates fixed for women by settlements arranged between employers and workpeople, in a number of industries selected as being most nearly comparable with the Trade Board rates.

RATES AGREED BETWEEN EMPLOYERS' ASSOCIATIONS AND TRADE UNIONS.

Trade.	Minimum Rate for lowest grade of women.		Rates for Special Classes.
	Rate.	Grade.	
<i>Metal Trades.</i>			
Bobbin and Shuttle Making (England and Scotland.)	8½d.-9½d.	Women of 18 years	—

ANNEX IV.

COMPARISON OF INCREASES IN TRADE BOARD RATES AT 12TH OCTOBER, 1921, WITH INCREASES IN WAGES IN OTHER TRADES.

The following Table shows the minimum rates per hour in operation in July, 1914, in the trades for which Orders under the Trade Boards Act had then

been made, and the minimum rates fixed in 1915 and January, 1916, for certain further trades for which Trade Boards were established. The Table also shows the present minima in each of these cases and the percentage increase which these represent.

Trade.	Men.			Women.		
	Minimum Rates.		Increase per cent. in hourly rates.	Minimum Rates.		Increase per cent. in hourly rates.
	July, 1914, or when first fixed.	Oct., 1921.		July, 1914, or when first fixed.	Oct., 1921.	
<i>In operation at July, 1914 :—</i>						
Chain	s. d. 0 5½ to 0 7½	s. d. 1 5 to 1 11½	205 to 209	d. 2½	d. 8½	214
Lace Finishing	—	—	—	2½	7½	173
Paper Box (Great Britain)	0 6	1 1½	129	3	9½	208
„ (Ireland)	0 6	1 1½	125	2½	7½	173
Ready-Made and Wholesale Bespoke Tailoring (Great Britain).	0 6	1 2	133	3½	8½	162
Ready-Made Tailoring (Ireland) ...	0 6	1 0½	113	3	8	167
<i>Fixed subsequently :—</i>						
Sugar Confectionery (Great Britain)	0 6 (June, 1915).	1 2½	142	3 (June, 1915)	8½	183
„ „ (Ireland)	0 5½ (Sept., 1915).	1 1½	157	2½ (Sept., 1915)	7½	210
Shirtmaking (Great Britain)	1 1½ (Nov., 1919).	1 4	14	3½ (July, 1915)	8½	143
„ (Ireland)	1 1½ (May, 1921).	1 1½	—	3½ (Dec., 1915)	8	146
Tin Box (Great Britain)	0 6 (Nov., 1915).	1 3	150	3½ (Nov., 1915)	9	177
Hollow-ware (Great Britain)	0 5½ (Jan., 1916).	1 2½	164	3 (Jan., 1916)	8	167

For men the percentage increases range from 113 to about 200, and seven of the nine cases fall within a range of 125 to 164. This is rather less, on the whole, than the percentage increase in hourly rates in organised industries generally since July, 1914, which is estimated to average at least 150 per cent. for adult workers generally, and considerably more for the lower paid grades of workmen. For example, the percentage increases in the hourly rates of unskilled labourers in the cotton, coal mining, engineering, and building industries and in agriculture range between 145 and 200 per cent., and in the railway service they considerably exceed the latter figure.

For women under the Trade Boards the percentage increases shown are rather greater than those for

men, ranging from 143 to 214. In the principal women's industries not covered by the Trade Boards Acts the increases in hourly rates of wages have varied widely, ranging from little more than 100 per cent. in some cases up to more than 200 per cent. in others. On the whole, the percentage increases in the Trade Board minima appear to be somewhat greater than those in the wages of women in well organised industries, but, as has already been shown, there are numerous cases in which rates equally high have been fixed for workers not covered by Trade Boards. Moreover, in the case of three of the trades shown in the Table in which the percentages are relatively high, viz., Paper Box, Sugar Confectionery, and Tin Box (Great Britain), proposals for reduction of rates have been issued.

ANNEX V.

EFFECT OF TRADE BOARD LEGISLATION ON INDUSTRIAL EFFICIENCY.

Important evidence on the effect of Trade Board rates in increasing efficiency in equipment, organisation, and methods of supervision has been obtained in the course of inspection, and the good effects in these respects have been admitted by employers. Some of these have, under the pressure of circumstances, so reorganised their methods as to pass from a position in which they had accumulated arrears of wages amounting to hundreds of pounds to one in which they were fully capable of keeping their trade, while paying Trade Board rates.

The following notes give summaries of a few cases in the Corset, Shirtmaking and Laundry Trades. Examples from other trades could also be given.

1. *Corset Trade.—Machinery and Equipment.*—The Inspector found four groups of piece-workers underpaid to the following extent:—9½ per cent.,

10½ per cent., and 26½ per cent. (two groups). He found that the power provided was insufficient properly to drive the cutting machines and the stitching machines. The machines' speeds were very poor and had a big effect in causing the low earnings of the general machinists. The position was explained to the employer. At a later visit it was found that the firm had had the engine and the machines overhauled by competent engineers and the improvements were reflected in the improved earnings of the machinists.

2. *Corset Trade.—Organisation, Supervision and Equipment.*—The failure to pay the Trade Board rates was traced in this case to a variety of causes. The equipment was fairly good, but the machines were of varying values owing to different drives. This was reflected in the workers' earnings and output. The organisation was found to be bad. The machinists had to do their own fetching and carry-

ing, as well as other operations, which the Inspector considered should have been done by juveniles. The stitchers had to keep the machines idle 10 per cent. of the working day while they did boning. As regards supervision, the Inspector reported that the factory had apparently been run in a slipshod manner and that this was largely responsible for the low earnings. Later the firm undertook to make good the deficiencies, including the lack in supervision and general management.

3. *Shirtmaking.—Equipment and Organisation.*—The Inspector reported that in this case both equipment and organisation were bad. Breakdowns were frequent owing to the poor quality of the gas used for the gas engine. Even when there were not stoppages there was often a slowing down of the engine, which materially affected machine speeds. He considered that the machines ought to be run at a speed 20 per cent. higher than they were when he made tests. Workers were frequently kept waiting for work, and the machinists had to do their own fetching and carrying, which ought to have been performed for them. Later the firm admitted that they had relied on their apparently more than adequate piece prices to fulfil the Trade Board requirements, and that they had not realised the importance of the conditions referred to.

4. *Shirtmaking.—Equipment, Organisation and Supervision.*—In this case the Inspector reported that the inability to pay the Trade Board rates was due to faults in respect of equipment, organisation and supervision. The machines were reported to be very poor and worn. During one visit of the Inspector he reported breakdowns in three different machines during the short time he was in the factory. These the workers themselves had to repair, the lost time varying from 8 to 15 minutes. Work was found to be given out oddly and irregularly; the workers came and went at their own times and no time records were kept. There was a big variation in work, which was done in short runs. An improvement which had taken place between two visits of the Inspector was attributed in part to the appointment of a foreman in place of a forewoman; the foreman stayed behind, when necessary, in order to tune up the machines. The employer admitted that the very low earning power had been due to the working conditions.

5. *Shirtmaking.—Organisation.*—In this case piece prices paid appeared to be fairly high. The employer showed from an adverse audit report that

the firm could not, without grave risk, again raise their piece prices. On examination, the Inspector found that the low yield of the piece-rates was due to a very poor system of manufacture. He pointed out to the employer that he should be able to keep the machines working full time and to increase daily output from 20 to 30 per cent. if he made the following changes:—(1) slight readjustment in supplying work; (2) the creation of a full-time and properly balanced creasing team, using the slowest stitchers for this purpose, first on time-rates and afterwards on piece-rates; and (3) readjusting the stitching rates to allow for the taking away of the creasing.

6. *Laundry.—Organisation.*—The inspection in this case was made at the instance of the firm itself. The management felt that although apparently high piece-rates were being paid, the earnings of the workers on these piece-rates might not be sufficient to satisfy the Trade Board requirements. The firm desired, therefore, to have the matter cleared up by the Inspector. The Inspector found that the earnings of the piece-workers were inadequate, requiring to be increased by about 25 per cent. He found the piece prices, however, the same as had in other circumstances yielded higher earnings and, on examination, reported that the low earnings were due to the following causes:—(1) waiting for work, especially on Fridays; (2) time lost by workers (ironers) in fetching and carrying their own work; (3) faulty preparation of work, i.e., either too wet or too dry; (4) workers (ironers) doing their own goffering; (5) workers folding and pinning shirts after ironing them. The Inspector made suggestions remedying each of these deficiencies.

As illustrative of the manner in which Trade Board inspection work may lead to greater efficiency and at the same time bring to light facts as to uneconomic employment of juvenile labour, the following remarks from the report of a special inquiry into the wages paid on the carding of safety pins (Pin, Hook and Eye Trade) may be noted:—“Most home workers were found to card by the quickest method, i.e. opening pin, inserting pin in card, and closing pin in one operation; other workers taking much longer to get through the work were found to card by first opening all pins, next inserting all pins and lastly closing all pins (such workers usually had the help of children, who generally opened all the pins ready for the mother to insert them in the cards, afterwards helping in the closing).”

ANNEX VI.

NOTES SHOWING THE RESULTS OF INVESTIGATION OF SPECIFIC STATEMENTS THAT TRADE BOARD RATES HAVE CAUSED UNEMPLOYMENT.

(1) *Laundry Trade.*

In June, 1921, a Steam Laundry announced to its customers that it was closing down “because a Government Department had ordered the company to raise wages again.”

Investigation revealed that:

1. The output of the laundry was low owing to inefficient organisation of work and antiquated machinery;
2. Overhead charges were disproportionately high in relation to turnover;
3. Difficulties in obtaining coal during the coal strike had led to a further lowering of output;
4. Owing to the admission of an official of the company, to the high overhead charges and old machinery, there had been little or no profit from the business for some considerable time.

It was admitted by the firm that the variation of rates to which the closing down had been originally attributed (involving an increase of £3 per week on a £50 wages bill) was not really responsible for this

result, and that the laundry had only been kept running during the last 12 months in order that it might, if possible, be sold as a going concern.

Corset and Dressmaking Trades.

It was stated in an article in the “Evening News” on 19th January, 1921, that 600 dressmaking and corset workshops in Hampshire had been closed down on account of the operation of Trade Board rates, which showed, it was alleged, an increase of about 700 per cent. on pre-war rates.

Enquiries showed that the total number of employers known to be engaged in these trades in Hampshire was:—

In the Corset Trade ...	22
In the Dressmaking Trade ...	403

and that since June, 1920, two corset establishments and 10 dressmaking establishments had closed. Further investigation showed that the closing of the corset establishments in question was due to general causes and not to the operation of particular Trade Board rates. This was admitted by the manager of the most important establishment, who, while of the opinion that Trade Board rates might be acting to some extent prejudicially, attributed the depression obtaining in the Corset Trade at that time to the

inability of the English manufacturer to compete in Continental markets, owing to the breakdown of the foreign exchanges.

It may be noted that if the Trade Board rates in the Dressmaking and Corset Trades in January, 1921, did in fact represent an increase of 700 per cent. on pre-war rates, the pre-war rates were 1d. to 1½d. per hour for fully trained adult workers.

Dressmaking, Millinery and Retail Bespoke Tailoring—Salisbury.

The Salisbury Chamber of Commerce passed a resolution in March, 1921, attributing the general state of unemployment in the country mainly to the action of Trade Boards, which they called upon the Government to abolish. They also wrote to Mr. Hugh Morrison, M.P., stating that about 60 workers in the above trades in Salisbury had been dismissed owing to the operation of Trade Boards rates.

A special enquiry was carried out in Salisbury in April, as a result of which it was ascertained that:—

- (1) Three firms had closed down dressmaking workrooms employing 39 hands within the past 12 months, mainly owing to their inability to pay Trade Board rates;
- (2) No serious change in the numbers employed in Hat, Cap and Millinery and Retail Bespoke Tailoring workshops had taken place;
- (3) Great slackness of trade in all three trades had conduced to the closing of the workrooms referred to in (1) above and elsewhere had led to slight reductions of staffs and general short-time.

Note.—It should be noted that the rates which formed the main subject of criticism in the above cases, the rates for juveniles in the retail dressmaking, millinery and tailoring trades, have been substantially reduced in the course of this year (1921).

ANNEX VII.

RELATION OF WAGES TO COST OF PRODUCTION IN THE FLAX AND HEMP AND JUTE TRADES.

The demand of certain employers for the removal of the Flax, Hemp and Jute industries from the operation of the Trade Boards Acts is put forward on the ground that if the employers had been free to lower wages they would have been able to sell at such lower prices as would have enabled them to dispose of more goods, and in consequence much of the present unemployment in the Flax and Hemp and Jute industries would have been avoided; and, similarly, that if they could be free from now onward to lower wages, they would be able to avoid discharging further workers and in a better position to re-engage workers when trade revives.

The reduction in wages which would suffice to secure these advantages is understood to be one of 20 to 25 per cent. To judge the strength of the argument, it is necessary to consider what reduction in the total cost of production (including the cost of raw materials) such a reduction in wages would effect.

According to the Census of Production, the value of the raw materials used in the linen, hemp and jute trades of Scotland constituted almost exactly three-quarters of the gross cost of production, the remaining one-quarter comprised the whole costs of manufacture; and of this quarter (as may be ascertained from a comparison of average net output per head in 1907 with average annual earnings per head as given in the Earnings and Hours Enquiry of 1906) one-half represents wages. Consequently wages represented one-eighth (one-half of one-quarter) of the gross cost of production, and a reduction of wages by 25 per cent. would in 1907 have affected the selling price of the finished product by one-quarter of one-eighth, or approximately by 3 per cent.

The Census of Production does not differentiate, so far as the cost of raw materials used is concerned, between Flax, Hemp and Jute, and consequently the inference drawn above is applicable only to those trades regarded as a group, and is not necessarily true of any section of that group or of any particular establishment.

In considering how far the conclusion reached above is true of the first nine months of 1921, it is necessary to take account of the changes in the pro-

portions in which wages and materials entered into the gross cost of production during that later period.

In the case of Jute it is estimated that wages have increased in greater degree than the cost of raw materials. But assuming the ratio of wages to gross cost of production in the jute trade to have been in 1907 not greatly different from the ratio ascertained for the whole group, the relative increase is not so great as to render wages costs more than one-fifth of the total costs of production (including the cost of raw materials), and a reduction of wages by 25 per cent. would, during the first nine months of 1921, have affected the selling price of the finished product by less than 5 per cent.

In the case of Flax the position is even more striking. The cost of the raw material increased in far greater degree than the cost of labour, so that the part played by wages in determining the cost of the finished product became of even lesser importance. It must be remembered, however, that in consequence of the high price of flax a considerable admixture of lower-priced materials, such as hemp and cotton, have been used, and any final statement would depend on a knowledge of the degree to which these cheaper materials have been introduced.

It may be pointed out that the prices of imported flax, hemp and jute have fluctuated violently during the three years ended September, 1921.

In the case of Flax the average monthly c.i.f. price, according to the Board of Trade Returns of the weight and value of imported flax, has varied between £605 per ton in March, 1920, and £127 per ton in September, 1921. In the case of Hemp the average c.i.f. price has varied between £107 in December, 1918, and £38 in June, 1921. In the case of Jute the average monthly c.i.f. price has varied between £69 per ton in December, 1919, and £19 per ton in May and June, 1921. In so far as the volume of sales, and consequently of employment, is conditioned by the practicable price at which the finished article can be offered, the effect of these violent fluctuations is such as to overwhelm the effect upon selling prices which could be obtained by cutting wages by 20 or 25 per cent.

Should the price of raw materials used by these trades decrease in greater degree than labour costs the importance of wages as a factor in the gross costs would be correspondingly increased.

MR. JOHN CARR.

[Continued.]

FOURTH DAY.

Wednesday, November 2, 1921.

PRESENT:

The Right Hon. the VISCOUNT CAVE, G.C.M.G.
(Chairman).

The Right Hon. LORD WEIR OF EASTWOOD.

DAME ADELAIDE M. ANDERSON, D.B.E.

The Hon. MRS. ALFRED LYTTLETON, D.B.E.

MR. JAMES BELL, M.P.

MR. W. T. LAYTON, C.H., C.B.E.

MR. ARTHUR F. PEASE, Bart.

MR. A. PUGH.

MR. A. MACCALLUM SCOTT, M.P.

MR. H. D. HANCOCK (Secretary).

MR. JOHN CARR, called and examined.

906. *Chairman:* You are a director of Messrs. Peek, Frean and Co., Ltd., who are biscuit makers and manufacturing confectioners, of Drummond Road, S.E.?—Yes.

907. You are also the chairman of the manufacturers' section of the London Chamber of Commerce, and it is on their behalf that you have come here to give evidence before the Committee?—Yes.

908. I suppose the manufacturers' section is composed of manufacturers engaged in business?—Yes, of all kinds of manufacturers.

909. They include manufacturers who are not affected by Trade Boards, I suppose, as well as some who are?—A very large number who are not affected.

910. How many in all are there?—There are 1,350 members of the manufacturers' section.

911. How many of those do you estimate to be interested in trades controlled by Trade Boards?—I am afraid I am not in a position to give you that information.

912. About a quarter, or something like that?—Yes, I should say about a quarter.

913. Have you yourself had experience of the operations of some of the Trade Boards?—Yes, in my experience with Peek, Frean and Co. I have come in touch with dressmaking and women's light clothing, laundry, tin box and canister, paper box and paper bags, and sugar, confectionery and food preserving—more largely with the tin box and sugar confectionery, perhaps, than with the others, which are in a smaller degree.

914. I think mainly you have come here to inform the Committee of the views obtained in answer to a circular addressed by the manufacturers' section of the Chamber to its members?—Yes. Some months ago the manufacturers' section of the London Chamber of Commerce, before this Commission was set up, had determined to institute this inquiry as a matter of interest initiated by themselves, and I am here to give evidence as a result of that inquiry; and it is general evidence rather than evidence affecting individual traders, which the Chamber realised would be dealt with by the Trade Associations affected by the individual Boards.

915. Can you tell us what questions were put to the members?—It was a general questionnaire as to whether the Trade Board system affected craftsmanship and whether it resulted in unemployment, and it invited a general expression of opinion as to the value of Trade Boards and so on. The inquiry was very general.

916. How many reports did you receive?—We received 150 reports. I have had those summarised in this document, of which I have several copies. (Copies were handed in. Not printed.)

917. Perhaps we may consider these reports as part of your evidence showing what you have received?—Yes.

918. I see the reports affect a large number of trades: tailoring, retail tailoring, costume and mantle, dressmaking, shirt making, corset making,

the elastic fabric trade, millinery, button making, confectionery and food preserving, aerated waters, the paper box trade, the brush trade, the tin box trade, the laundry trade, the tobacco trade, boot polish and dubbin, the stamped or pressed metal wares trade, the hemp, twine, canvas and allied trades, the distributive trades, and other trades. Can you give the Committee shortly the effect of those reports? We will of course read this document.—Yes. In the first place there is no evidence from these communications received that Trade Boards threaten the existence of any valuable craft. In some trades it is affirmed the Boards have been the direct means of causing unemployment. There is no general desire for the total abolition of the system, and, further, any proposal to adopt such a course would meet with opposition from some traders on the ground that the Boards have prevented sweating, and have thus eliminated unfair competition amongst traders by this means. It is, however, apparent that strong objection does exist to the Act of 1918, under which many matters of detail hitherto left to the Boards were transferred to the Minister of Labour, causing duplication of work and increased expense. The repeal or the amendment of this Act would therefore be generally welcomed, and would not destroy any of the benefits provided by the original Act of 1909.

919. Will you just explain shortly what were the matters of detail which were transferred to the Minister by the Act of 1918?—It seems to be a general resentment to any power being transferred from the Trade Board itself to the Minister of Labour.

920. What powers were transferred by the Act of 1918? I know that there is the requirement of approval by the Minister. Is that what you mean?—Yes, that is the chief objection.

921. I am reminded that there is a provision in Section 3, Subsection (5), that a rate shall not be varied in less than six months without the consent of the Minister. Is that what you have in mind?—Yes, that is one, because there has been a general criticism that the machinery of the Trade Boards is too slow, as it is.

922. That is another matter, but I wanted to get at the bottom of what you meant?—Yes, that is one of the points.

923. Is there any other?—No, I think that is the only one.

Mr. Pugh: Where in the Act does that arise?

924. *Chairman:* It is the proviso to Section 3, Subsection (5): "Provided that where a rate has not been effective for a period of at least six months, the Trade Board shall not, without the consent of the Minister, be given on an application made to him by the Board for the purpose, give notice of a proposal to vary the rate, and the Minister shall not give his consent to such an application unless he is satisfied that the special circumstances of the case render it desirable that such notice should be given

2 November, 1921.]

MR. JOHN CARR.

[Continued.]

immediately." The purport of that is that a rate shall run for at least six months without alteration unless the Minister thinks it desirable to vary it sooner?—Yes.

925. Before you go on to other matters, I noticed that you said that in some trades the Boards are said to have been the direct means of causing unemployment. Have you any cases of that kind?—I have here the letters in reply, but the chief instances referred to as being cases in which unemployment has been caused are instances where the manufacturer has ceased to manufacture rather than pay the Trade Board rate.

926. Are any specific cases of that character given?—There is a sort of general statement by many of them, and I have to represent that view, although personally I do not share the view of the people who have made that complaint.

927. You do not yourself know of any such case?—Personally I am quite satisfied that the rates fixed by the Trade Boards have in no case caused unemployment.

928. Will you give us the cases where they are said to have caused unemployment, because of course you will appreciate that that is not unimportant. I do not know whether that is contained in this abstract of yours?—Under "retail tailoring" there is an instance where a small country tailoring business employing three assistants and an improver has been compelled to discharge all assistants in consequence of the Trade Board rates.

929. Is the name given?—Yes, I have the letter here.

930. Will you hand me that letter? I do not want to use names unless it is necessary. If you will leave the letters we will have them looked through?—I will leave all these with you, if you like.*

931. *Mr. Pugh*: Will that state the number of persons thrown out of employment?—Yes, the letters would give details.

Chairman: You will see that the summary at the bottom of the first page of the document handed in by the Witness says that that was a small country tailoring business employing three assistants and an improver.

932. Then you were going on to say that there is a strong feeling, even among trades which are favourable to the Boards, in favour of amendments to the system?—Yes.

933. What kind of amendments are proposed?—A greater elasticity in the fixing of wages to meet varying conditions of industry from time to time.

934. Will you develop that?—I think that arises from the fact that some Trade Boards have got beyond fixing a minimum rate, and have entered into a discussion as to what an industry could afford to pay, and have fixed some rate which is perhaps above what would be considered a minimum rate. Those people under those Trade Boards now want some greater elasticity to rectify that somewhat high minimum rate which has been established when the cost of living and conditions of industry make it difficult to maintain that higher rate.

935. That means greater facility for varying rates, does it not?—Yes. Then the next point is the speeding up of the machinery for altering rates.

936. Before you leave the first point, as to the machinery for varying rates, I should like to know exactly whether you have any suggestion to make. Is the criticism directed to the time occupied, or to some other feature?—It is suggested that the period prescribed for notice of variation should be reduced—that three months is too long a time.

937. Is there any other suggestion?—No. I think not. That is the chief. It is the length of time that it takes to make an alteration.

938. *Mr. Pugh*: Will you tell us whether the time to which you refer is after the arrangement has been made, or previous to the Board making the arrangement?—It is the time taken between the publication of the proposed rate and its coming into force.

939. After the rate has been made?—Yes.

940. *Chairman*: The objection which you are conveying to us relates to the alteration of a rate already made, I understand?—Yes.

941. Not to the time taken in fixing the original wage rate?—No, it is alterations taking place now, or possible alterations taking place now.

942. I see that is your second point. Is your first point something different?—No, they are practically both the same, really.

943. The second is put down here as "A speeding up of the machinery for altering rates." Have you any time to suggest?—We would suggest one month instead of three.

944. What is the next suggestion?—The next suggestion is really the point that in big manufacturing concerns there may be a great number of Trade Boards affecting them, such as I have in my own personal case, and the minimum rates fixed by those Trade Boards are all different, so that when you transfer a worker from one department to another to save her being unemployed—supposing one department gets slack, and you can employ her in another department, and you transfer her—it means an increase or a decrease in her rate, because she comes under a different Trade Board. That causes a great deal of dissatisfaction in quarters where more than one Trade Board exists.

945. They are doing different work, of course?—Yes, but I mean a pure labourer who is not skilled in anything may be transferred from your confectionery department to your tin box department; he is sweeping the floor in both rooms; he knows nothing about confectionery, and he knows nothing about tin box making; but because he is transferred from one room to another he has to have a different rate. That is really the point which is made by No. (iii), and undoubtedly it does cause a considerable amount of dissatisfaction in factories, because if you transfer someone to a department where he gets a higher rate he goes back and tells his late friends that he has got a higher rate by the transfer, and there is, undoubtedly, a lot of dissatisfaction and unrest caused amongst the workers by that fact.

946. Are those all people paid by time-rate, or by piece-rate?—The majority of them by time-rates, because it is the pure rank and file worker who is affected by this. Of course directly you get to piece-rates you are probably paying more than the Trade Board rates. There is a certain amount of skill necessary, and it is a different condition of affairs; but in the case of the pure labourer, the person who sweeps the floor or wheels a truck about in the place, he knows nothing about the industry concerned, but he is simply a labourer.

947. *Mr. MacCallum Scott*: Is your illustration of a man sweeping a floor in one room and being transferred to sweep the floor in another room a concrete example?—Yes, it would happen.

948. Does it actually happen?—Yes, I have had it happen in my own factory; when I have had slackness in one department and have been able to employ them in another, I have had to alter their rates in consequence.

949. I do not mean the general case, I mean this particular instance of a labourer sweeping the floor?—Yes, I have had personal experience of that in my own factory.

Mr. Pugh: I do not know whether we should interject questions now, Mr. Chairman?

Chairman: Yes, it saves going back.

950. *Mr. Pugh*: I should assume that if you fix varying rates there must be varying conditions, and if you fix those rates for different departments those conditions will be known when the rates are fixed; so that if for the convenience of an employer or to meet temporary conditions you have to move one worker from one department to another where the rate is different, surely there can be no difficulty arising in consequence of that, because you possibly replace somebody else who had the rate. What I want to find out precisely is what is the difficulty

* Letters handed in—not printed.

2 November, 1921.]

MR. JOHN CARR.

[Continued.]

that arises from that?—You have the Confectionery Trade Board, which fixes a rate for a girl of 14 or 15 years of age who is a messenger in your confectionery department; your confectionery department gets slack, and you want to employ or you can see your way to employ an additional messenger in your laundry; she is transferred to the laundry and comes under the Laundry Trade Board, which has fixed a different minimum rate.

951. Quite. I am trying to see whether there should be any difference in principle in regard to the trades which are covered by Trade Boards, and trades generally. Taking my own experience, I do not quite see the difficulty. I want to try to see your difficulty if I can. In trade generally where you fix rates for different departments or for different occupations, and you take a worker from one occupation or from one department where a certain rate is paid and you put him or her to another occupation or to another department, he or she receives the rate which is payable in that department, and the employer does not seem to me to be inconvenienced. At any rate that is not my experience. What I want to do is to try to get to the bottom of the difficulty, because generally in industry we find no difficulty at all; you simply pay the rate which is payable for the job to which you put the worker in the particular department to which you transfer him or her.—I think that is quite simple when it is a case of some particular skill—say a tin box maker being deliberately transferred to do something else; but in the case of the pure rank and file labourers in a big factory whose work is identical, it does not matter what department they go into, why should they have varying rates?

952. *Mr. Bell*: You mentioned confectionery and laundry. Supposing you were giving a girl the choice between working in the confectionery department at a lower rate and going into the laundry at a slightly higher rate, which would the girl choose?—In the cases to which I am referring she would have no choice really, except—

953. But suppose she had?—She would always choose the higher rate.

954. That is not my experience. They choose the pleasanter work unless there is a very big difference in the rate.—That is assuming that the laundry is unpleasant work.

955. I am judging, from what I have seen of it, that confectionery is nicer work than washing.

956. *Mr. Pugh*: Do we understand that if you take the particular employment which you mentioned, sweeping the floor, a different rate would be fixed for sweeping the floor of a laundry from the rate for sweeping the floor in your confectionery department?—Yes; different rates are fixed by the Trade Boards.

957. For purely sweeping the floor?—Yes.

958. *Lord H'air*: There is no rate for sweeping floors.—No, but there is a minimum rate in the industry.

959. *Mr. Bell*: Which is the dirtier floor?—Well, take two industries where the floor is identical, and it still applies.

Mrs. Lyttelton: It is curious that sweeping a floor should make you a confectioner, is it not?

960. *Mr. Bell*: May I put another question: Supposing conditions are identical and there is a different rate, I can understand an objection. You suggest co-ordination. Who do you suggest should be the co-ordinating authority in view of the criticism against the Ministry of Labour?—I suggest that it should be incorporated in a revision of the Act that the Trade Boards should, in fixing a minimum rate for unskilled workers in an industry, seek to establish a rate which is not widely varying from that established in some other industry.

961. *Mr. Pugh*: But a minimum rate, I take it, is the lowest rate for which you could get consent to pay to any worker employed. If, therefore, the rate of the sweeper is the lowest rate, then surely any rate which is paid above that will be due to difference in conditions, and you are not prejudiced, are you?

May I put it in this way: If you fix the lowest rate that you can fix as a minimum rate for a sweeper in your confectionery department, is it possible to fix a lower rate than that for a sweeper in your laundry department simply because he is working in another department? Have you not, in other words, reached the absolute minimum, and therefore any variation of the rates would be above the minimum and due to their own special conditions?—I think my answer to that is: Yes, in the confectionery trade it can be said to be at an absolute minimum; but take the tobacco trade, for instance: They have fixed rates which are admittedly away above what a purely minimum rate should be, and if you get the rates fixed by all these different Trade Boards, the minimum rates for all the unskilled workers right the way down—in a number of instances they are overlapping—you will find that they are varying rates.

962. Assuming that there is a grievance in that respect, to what do you attribute it? Is it due to the fact that your Boards do not know the business with which they are met to deal? I rather gather that the Boards consist of representatives of employers and workmen in the trades concerned; that they are people who are fully conversant with the conditions in the trades; and they are assisted by certain other persons. I assume that a body of that kind, being conversant with the conditions of the trade, will know what it is doing, and therefore it seems to me that when one criticises what the employers and the workpeople in that trade, which they understand, have done, it is not a reflection upon the machinery of the Board, but upon the persons who comprise the Board, is it not?—Yes, it is, certainly.

963. Do you not get rid of that by appointing people who know their business and will see common sense in their arrangements? Is that a criticism of the Boards, or is it not rather a criticism of the individuals whom you appoint; and therefore, is not it the fault of the trades themselves?—To a very large extent, yes, but it has created a difficulty.

964. *Chairman*: I suppose there are traditions in different trades; I mean, some trades have always paid higher rates than others for similar work, or at any rate certainly for unskilled work?—Yes, I think the difficulty has arisen very largely through the employers' and employees' sides of many of the Boards being insufficiently organised and being largely affected by sentiment at the moment when they established their rates, a great number of which were established in 1919 and 1920, at a time of great prosperity, when they did not foresee this difficulty. If you take the Confectionery Trade Board which was set up in 1914, they have presumably fixed an adequate rate, but they are not in the difficulty in which all these Boards are which have been set up since.

965. *Mr. Bell*: You say it has created a difficulty. I want to ask whether it is your opinion that these varying rates are due to the operations of the Trade Boards, or were there different rates in operation long before the Trade Boards came into existence?—No.

966. One employer might pay a slightly higher rate than another employer; and was not that very largely the reason why the Trade Boards were set up—because of these varying rates? If the rate was 3d. per hour, say, in one place, and the Trade Board came to deal with it, and in another place it was 5d. per hour, and the Trade Board came to deal with it, there might be a variation?—I think I can perhaps shortly answer your question in this way: that in a big factory comprising a number of industries, before the existence of Trade Boards they have had a Trade Union agreement or an agreement with their workpeople to pay a minimum rate for unskilled work. That applied to the whole factory; but in the particular case which I have mentioned of confectionery and tin-box making, we paid a uniform minimum rate before the existence of Trade Boards in both those departments, which rate was identical. In those days the tin-box industry paid

2 November, 1921.]

Mr. JOHN CARR.

[Continued.]

a very much lower rate. The confectionery trade established a minimum under their Trade Board, and the Tin Box Trade Board established a minimum which is higher than the confectionery trade rate.

967. *Lord Weir*: The co-ordination of rates was done in the factory instead of by the Trade Board?—Yes, and that co-ordination ceased to exist because you have to obey the Trade Board now.

968. *Sir Arthur Pease*: You just mentioned that they are not only fixing minimum rates but they are grading rates. You did not develop the point, and I did not quite know whether you considered that the duty of a Trade Board was only to fix minimum rates, or to grade rates?—I would urge that the duties of Trade Boards be confined to fixing the purely minimum rate.

Chairman: You are rather getting on to a future point of Mr. Carr's. If you like to go on now, please do, but I think the Witness is coming to that later on.

Mr. Pugh: Just following up the last question which I put to Mr. Carr—

Chairman: I must not stop *Sir Arthur* if you are going on, but I was hoping that you would postpone all your questions to the end of his examination.

Mr. Pugh: Certainly, if that is your wish.

Chairman: I am afraid we are getting a little bit into conversation. I want to finish the evidence-in-chief first.

969. What is your next suggestion?—It is a demand that there should be a modification of the existing law in order to meet the special conditions of seasonal trades.

970. What does that mean?—It is submitted by certain manufacturers—it will transpire in that correspondence which I have handed in—that there are such things as seasonal trades where they employ people for three months, say, and they want to be in a position to pay those people who are only working just seasonally for a rush period less than they pay to the workers who are with them the whole year round.

971. Why less?—The theory being that they come in for only three months, they are unskilled, and they are simply rush labour for the time being. That is the demand. I must say that I cannot personally share that view, because I do not think that any manufacturer ought to be encouraged to do his business on a seasonal basis, but he ought to be encouraged to spread his work as far as he can over the whole year so as to maintain employment rather than have these rush periods of partial employment.

972. *Dame Adelaide Anderson*: Is there any evidence about the extent to which this is really unskilled labour which comes in seasonally?—Yes, I think so, more especially in trades like the straw hat trade in Luton, which has a rush period just before the summer.

973. It might, however, be more skilled labour?—Yes, but I do not think this criticism would apply then, because they would be getting more than the minimum rates.

974. *Chairman*: What is the next suggestion?—The next point is one which is provided for by the Acts, but which some of our correspondents maintain has not received sufficient consideration; that is, that the question of fixing district rates should be given very full consideration on all occasions. That is provided for in the Acts, but so many of these correspondents mentioned it as if it did not exist in the Acts.

975. Can you give the reason for that?—The reasons are that a manufacturer in a provincial town says that he ought not to be asked to pay the minimum rate which is applicable in London; and it seems to me that that is quite a reasonable argument if the Trade Board rate has been based on London. If they are fixing a minimum rate presumably the Trade Board take an average of the country and fix a rate which is applicable to the whole country. The unfortunate manufacturer who works in London may have to pay more than the Trade Board rate to get his workers; but it does not seem to me that you can assume that every Trade Board has simply taken London as its basis for fixing a minimum.

976. If they take the whole country I suppose the rate must be too high in some districts and too low in others?—My answer to that would be: No, the absolute minimum rate, even though you can get people to work for less, should be paid by all, if it is the minimum rate. I mean to say, you get back to sweated conditions, where people are willing to work for less, but then I do not think that they ought to be asked to.

977. I am rather trying to get this suggestion that there should be district rates developed. Is the reason given that the cost of living differs in different districts?—Yes, and the cost of rent, and all that sort of thing, but the majority of the Boards, or many of the Boards, I understand, have carefully considered this point and have invariably come back to the point of view that it is desirable to fix a flat rate for the country and not to go about in districts.

978. You are not supporting the suggestion?—I am putting it forward but not supporting it.

979. *Lord Weir*: But there is a substantial body of opinion among your people that it is operating against them?—Yes—that greater consideration should be given to the fixing of district rates.

980. *Mr. MacCallum Scott*: I presume that that view would be put forward in the respective Trade Boards by the people present?—Yes.

981. The Boards having that before them decide otherwise?—Yes.

982. *Sir Arthur Pease*: But if you fixed a minimum for the whole country, as you suggest, and it was not sufficient for London, you would give no protection to the London worker?—Yes, that is so, if it was not sufficient for London.

983. If, on the other hand, you fix a rate which protects the London worker, it will be too high for some of the country districts?—Yes.

984. And yet you argue that there should be one minimum rate for the whole country?—Yes, because the difficulty of defining districts is so great. It is not just a difference between London and the country, because there are many provincial towns, like Brighton and such places, where it is quite as expensive to live as it is in London, so that you would have great difficulty in determining these areas. The Confectionery Trade Board have district committees covering east, west, south, north, and London, but they have found in attempting to define these areas that it is quite impossible.

985. *Lord Weir*: I think that was foreseen in the Acts, which permitted the formation of district committees and the fixing of district rates?—Yes.

986. *Mr. Bell*: Is it your opinion, then, that if a flat minimum rate were fixed there is nothing to prevent London employers from paying more if they desire?—Yes, certainly, nothing at all.

987. *Mr. Layton*: Do I understand that the majority of the members for whom you are speaking to-day would like to see district rates?—Yes.

988. The great majority of them?—The great bulk of them consider that there should be district rates.

989. *Chairman*: I think there is one Board which has fixed one rate for London and another for large urban areas and a third for other areas?—Yes, country areas. It is one of the distributive Trade Boards, I think.

990. Is that the kind of thing which your members have in mind, do you think?—Yes, an application of that to all the Trade Boards.

991. *Mr. Bell*: Supposing that were done, would not that be another system of unfair competition?—Yes, but I do not see that you can get over that difficulty, can you?

992. You have large industries in the country with a flat rate, whether for large towns or country districts, in order to get rid of that very thing—unfair competition. You are aware of that?—Yes, that is so.

993. *Lord Weir*: I take it that those views have been put forward by the employers' representatives on the Trade Boards?—Yes, in a great many cases they have, but you must realise that a great many of these employers have no employers' organisation. Certain employers have been selected, in some cases

2 November, 1921.]

Mr. JOHN CARR.

[Continued.]

by the Ministry of Labour, to serve on the Trade Board, but the industry itself has no masters' association or federation, and the non-members of the Board never have an opportunity of expressing their views to those who are representing them on the Board.

994. Is there any suggestion that London, for example, is over-represented?—No, I do not think so; no, certainly not.

995. *Mr. Layton*: I did not quite catch Mr. Bell's question, and therefore I did not follow the import of your answer to it, but I gathered that you said that if you had varying district rates it might involve unfair competition between the country and London. Was that the import of your answer?—Yes, that was his question to me, and I say, Yes, decidedly, it would.

996. Is there not the other view, that the variations in rates as between London and the country are in fact economically equalising the fact that in competition an industry in a big centre has many advantages from the point of view of transport, and so on?—There are counteracting influences.

997. And these variations are the natural result of economic considerations?—Yes, to a very large extent.

998. Therefore, if you had varying district rates you would be adapting the Trade Board machinery to those varying conditions?—Yes, to some extent.

999. But I understand that the point which you put forward was that the minimum should be the minimum adapted to the economic conditions in the least favourable area, and you would leave the London rate, which, for economic reasons, could be higher, to be settled, not by the Trade Board, but by arrangement or by offering higher rates?—Yes, I should be an advocate of the Trade Boards fixing something between the London rate and the lowest economic rate outside London.

1000. For the whole country?—Yes.

1001. But that is not the opinion of the majority of your members?—No; the majority of my members are in favour of district or area rates.

1002. *Mr. Pugh*: Fixed by the Board?—Yes.

1003. *Chairman*: What is the next point?—The next point is a point to which I have referred before; it is urged that the Board should confine themselves to fixing minimum rates, and should not take into consideration any particular skill or conditions in particular industries—that a Board should simply fix a minimum rate for unskilled labourers.

1004. That is the present state?—Yes.

1005. It should not fix the higher rates for skilled labour?—No.

1006. Because they cannot be sweated; is that the attitude?—Yes, there would not be sweating there. You always get up against the difficulty of definition of a job. What one manufacturer calls a machine minder another man calls a worker, and the definition of a job is very difficult; and different jobs vary so much in the same industry; but when a Trade Board attempts to go beyond the fixing of a minimum rate for the unskilled worker it always leads to difficulties.

1007. *Lord Weir*: That is a suggestion to go back to the 1909 Act?—Yes, to confine it to fixing the minimum rates.

1008. *Dame Adelaide Anderson*: For what?—Unskilled workers.

1009. Unskilled workers only, leaving the crafts entirely outside?—Entirely outside the Trade Boards.

1010. You think there is no danger of semi-skilled or skilled labourers being affected by competition so as to fall down to a sweated rate?—My answer to that would be that that is something outside the operations of the Trade Boards, and it should be dealt with through unions or anything else you like.

1011. Even in the kind of unorganised trades which are covered by the Act of 1918?—Certainly.

1012. *Chairman*: You say that it is wage regulation, and not anti-sweating regulation?—Yes.

1013. *Mr. Pugh*: By what machinery would you fix those rates above the minimum?—As they are fixed in a good many cases now. There are Industrial

Interim Reconstruction Committees in the cocoa and chocolate trade who have automatically adopted a rate which is away above the Trade Board rate for the chocolate trade.

1014. But there you have a fair degree of organisation on both sides, have you not?—Yes.

1015. You have an Industrial Council, or something of the kind?—Yes; but if the Trade Board is to go beyond fixing the minimum unskilled rate, where will it stop? It should go right up to the very top of an industry.

1016. Then you do not suggest that rates other than the minimum rates should be fixed by the wage Trade Boards?—No.

1017. What do you suggest will take the place of the Trade Boards for fixing rates above the minimum?—Trade union negotiations, as is done now in a good many instances.

1018. But the 1918 Act specifically provides for the trades which are not sufficiently organised to look after themselves, so that if you take away the protection of Trade Boards you have nothing in its place?—Not for the skilled worker, no.

1019. Have you now for any of the workers so far as fixing any rate above the minimum is concerned?—No.

1020. Having no machinery, you would have to leave the thing to ordinary negotiations between the individual employers and all their workmen to a great extent. Would you admit, therefore, that the result would be that the whole tendency would be for the rates to sink to the minimum?—That would be the tendency inevitably, would it not?

1021. So that if that tendency is to be avoided, we have to have some kind of protective machinery where it is not supplied in the trade itself?—Yes.

1022. There does not appear, therefore, to be any alternative to the Trade Boards for that purpose, does there?—No, unless you could push on the organisation of industries in other directions by means of Industrial Councils or anything else.

1023. Let us assume that you have got a trade with a fair measure of organisation in it, and that you set up a body representative of employers and workmen, and they come to an arrangement in regard to rates above the minimum, but that they only represent a part of the trade; how is it proposed that those rates can be fixed for the trade?—Do you not think that when such a thing has occurred the unions then see to it that that agreement is observed?

1024. But this is only a partly organised trade?—But if it is an agreement between masters and men of a section of a trade, my experience is that the union quickly sees that the agreement is applied throughout the industry.

1025. I admit that, but this is rather an important point, because you are really asking for the repeal of the 1918 Act; but one has to have in mind the importance of that Act from the point of view of its intentions. I want to get at what you are going to do to meet the situation, assuming the Act to be repealed. You have admitted that you have nothing at the moment to take the place of the Trade Boards. I would therefore like you to consider what would be the effect upon the trades and upon the workpeople and upon the fair employers of attempting to deal with the situation without the machinery of the Trade Boards; and consequently I would be glad if you would enlighten the Committee as to how, when any body of employers and workmen had fixed rates above the minimum, that is going to be enforced in the trade, and if it cannot be enforced, whether it would be possible to apply it at all and do justice to the fair employer?—I think it would be very difficult to get it applied, but as it exists at present the Trade Board in many instances in fixing a flat rate minimum have fixed a rate which is applicable to a certain degree of skill. If they had established two rates, an absolute minimum rate and then a rate for someone just immediately above that, the position would have been different, but they have not done that in a great many cases; they have taken

2 November, 1921.]

MR. JOHN CARR.

[Continued.]

a certain degree of skill into consideration, and fixed a rate which should really be one of the secondary rates.

1026. *Mr. Bell*: A minimum rate for that particular trade?—Yes.

Mr. Pugh: It seems to me, Mr. Chairman, that after all we keep coming back, not to a difficulty in the machinery of the Board, but to its application.

Chairman: Of course we are really in a difficulty, because the witness is very fairly representing a view which is put before him and then saying that he does not agree with it. Perhaps it might be better to put these points to somebody who does support the views which his members have put forward.

Mr. Pugh: Yes.

Chairman: Mr. Carr is in obvious difficulty, because he does not quite agree with his correspondents, or some of them.

Witness: That is almost bound to arise with a large number replying to an inquiry like this.

1027. *Mr. Pugh*: We have appreciated that there is considerable difference between a defect in machinery and a failure properly to apply it?—Yes.

1028. *Sir Arthur Pease*: In these industries which you represent I suppose in the past prices fluctuated and rates of wages went up and down in accordance with those fluctuations?—Yes, for a period of years.

1029. Before there were any Trade Boards?—Yes.

1030. When in the past wages fluctuated did not the skilled man's wages go up or go down in proportion to those of the unskilled man?—Yes, certainly.

1031. If the Trade Board fixes a minimum rate which is higher or lower than the rate at present being paid, would you not anticipate that the skilled workers would automatically go up or down as well?—Yes, proportionately to the other alteration.

1032. Then the fact of fixing a minimum rate for the unskilled would in practice vary all the other rates in the trade?—Yes. For instance, in the confectionery trade you have a rate of 54s. for a man, and directly that is determined your sugar boiler gets something more, your machine minders get something more, and so on right the way up the whole scale. It all bases back on to that minimum rate.

1033. So that even if there were no Trade Board machinery for fixing skilled and semi-skilled rates, when the rates of the unskilled men were put up you would anticipate that almost automatically that would affect all the others?—Unless there were such a terrible shortage of employment that the skilled man was willing to accept the bare minimum.

1034. *Mr. Pugh*: Arising out of that question, would not the argument be very strongly put forward by the employers if you were going to raise the minimum of the unskilled man, that that should not be done because of the effect which it would have in raising the wages of the other classes of workers?—That always occurs. During the period from 1914 onwards whenever a Trade Board has increased the rates, it has automatically increased the rates of everyone above.

1035. That is part of the general arrangement, but I rather think Sir Arthur's questions were directed to establish the point that if without the existing machinery for regulating the wages above the minimum of the unskilled you altered the rate of the unskilled man, that of itself would have an effect upon all the other workers and their wages would be altered proportionately. I want to suggest that while that might apply under a proper Trade Board system, it would not apply if the alteration of those rates were left to voluntary arrangement, and they would not be effected by an alteration merely of the minimum wage to the unskilled man. What is your view upon that?—I think they would be effected because many of the Boards have only dealt with the minima. The Confectionery Trade Board, for instance, has never dealt with anything more than the minimum for an unskilled worker. Each alteration of that minimum for the unskilled

worker has carried with it automatically a proportionate advance to the skilled worker, although the Board has never said a word about anybody but the unskilled worker.

1036. And the arrangement for the other workers not being part of the Trade Board settlement?—Never having been referred to at the Trade Board.

1037. *Chairman*: If I understand you, that rather modifies what you said just now about the tendency being for the wages of the skilled worker to sink to the level of the wages of the unskilled. I gather you say that that would happen only in cases where there was great lack of employment?—Yes, and perhaps the semi-skilled who was getting 1s. or so more than the minimum at present would in a number of cases be brought back to the minimum.

1038. By what pressure?—Simply by lack of employment; he will accept it.

1039. *Mr. Bell*: Supposing the minimum is increased, you are of opinion that it has a tendency to increase the wages of those not affected by the fixing of the minimum?—Invariably.

1040. Supposing the minimum is reduced, what effect has it on the other rate?—The high wages are reduced.

1041. May I call your attention to your Clause 3 Sub-section 1, and Clause 4? In Clause 3 (1) you say: "For greater elasticity in wage fixation to meet the varying conditions of industry from time to time," and then at the end of your Clause 4 you say: "The powers of the Trade Boards might be limited to fixing minimum rates only for the lowest class of labour." Do you not think there is a conflict there between the two statements? If you ask for elasticity in wage fixation to meet the varying conditions of the industry, why not have varying rates to meet the conditions in the industry in question?—I do not think those are really in conflict. They are both intended to refer to the minimum rate for unskilled.

1042. *Chairman*: No. 1 being practically the same as No. 2?—Yes.

1043. *Mr. MacCallum Scott*: It is suggested that the Board should confine itself to minimum rates for unskilled labour; I can understand that in trades like the confectionery trade where, I should think, the bulk of the labour was unskilled; but take the trades that are mentioned here, such as tailoring, dressmaking, shirtmaking, the corset trade, and so on. I should think that most of the labour there was skilled in some way, and it was that skilled labour which was found under sweated conditions. In practice I believe in the confectionery trade it resolves itself into fixing rates for the unskilled only, but that is a trade where there is a very large volume of unskilled labour, and in those trades which consist mainly of skilled work, is not that rather an attempt to get out of the operation of the Board?—I do not think so, because in every industry there must be a number, more or less, of unskilled workers.

1044. *Chairman*: What is your next point?—Some trades complain that the appointed members have too great an influence on the decisions of the Boards.

1045. What does that mean?—The point they raise there is that in many of the unorganised industries the employers and the employees are all at sixes and sevens, and to get the thing settled the appointed member has to step in and settle it.

1046. Why is that an undue influence?—Because they say that in a great many instances the appointed member has picked on the higher rate under discussion and fixed that higher rate.

1047. *Mr. Pugh*: Would you rather have had a fight?—I say again that I am in a very awkward position in representing a point of view which has been put forward. Some say: No, instead of having appointed members let us choose a member ourselves: let the employers and the employees meet, and if there is a difference of opinion say, That is our Referee, let him be Chairman. It is only another form of appointing an appointed member.

2 November, 1921.]

Mr. JOHN CARE.

[Continued.]

1048. *Chairman*: If he were an impartial man he would have to agree with one side or the other?—Yes.

1049. *Sir Arthur Pease*: The members of the Board are not appointed by anybody, are they?—Yes, they are appointed by the Minister of Labour.

1050. Therefore they would choose somebody to act under an Act of Parliament for whom the Minister was not responsible?—That is the suggestion, that they should choose their own referees.

1051. But those representatives are not representative of the country; they are appointed by the Minister and they might choose somebody that the trade as a whole did not approve of?—Yes, under existing conditions.

1052. No, under the conditions that you suggest?—At the present moment the employees and the employers on the Board have no voice in the choice of the appointed member, and it is suggested that they should have a voice, that they should be consulted as to whom should be appointed as appointed member or referee on the Board.

1053. But the representatives on the Board are not elected representatives, they are appointed by the Minister themselves?—Yes, and then the employers say, "Let us have a voice in the appointment of these appointed members."

1054. There are a great many employers who are not represented at all by those members, are there not?—A great number.

1055. And could not those who are not represented object to having somebody appointed whom they did not like?—Yes, quite easily.

1056. Whereas now the responsibility rests with the Minister?—Yes.

1057. *Mr. Layton*: Is this a criticism against the people actually chosen, or is it the fact that they are appointed by the Minister?—It is divided into two: it is against appointed members as a whole, and in a number of instances it is against the individual appointments. They evidently think that unsuitable appointments have been made in some industries.

1058. Is the complaint only heard where there is a lack of organisation in the main, and therefore they say that the rates have fallen into the hands of the appointed member?—Yes, in my personal opinion that is so.

1059. *Mr. Bell*: If the Trade Board were composed entirely of representatives of the employers and workpeople and a referee were called in and gave a decision, would it be alleged that he had been unduly influenced by the workers' representatives on the Board if he fixed a higher rate than the employers wanted, or would it be alleged that he was influenced too much by the employers' view if he fixed a lower rate than the workpeople's representatives wanted?—My answer is that whoever you have in that capacity is not going to give complete satisfaction to everyone. Whether he be appointed by the people themselves or by the Minister, he is bound to give dissatisfaction to one party or the other at some time or another.

1060. *Chairman*: In some cases the appointed members try to get the two sides to agree before giving any decision?—Yes.

1061. In those cases a compromise may be accepted?—We have evidence before us of great appreciation of the appointed members in some industries, which I have not, of course, put forward because it is not a criticism.

1062. *Mr. Pugh*: You have had a good deal of personal experience of Trade Boards; what is your own opinion with regard to this matter?—My own view is that it is completely satisfactory.

1063. *Mr. Layton*: And that the Trade Boards machinery would not work without the appointed members?—Certainly not.

1064. The last point with which you have to deal relates to expenditure?—Yes, clause 6 relates to expenditure. That is not the expenditure incurred

in the administration of the existing Trade Board findings, but in the number of officials who have been touring the country—that is the way it was expressed to us at a meeting which we had—in a species of rivalry between the Industrial Councils and Trade Boards. A representative of the Minister of Labour calls to see whether your industry is sufficiently organised for an Industrial Council; then a week or so later an official of the Ministry of Labour calls to satisfy himself that you are not sufficiently organised, and must have a Trade Board; and it has been very apparent to manufacturers throughout the country that there has been a rivalry between those two sections, each seeking to enlarge its own department, so to speak.

1065. There has been a great sense of public duty in both?—I have had personal experience of that, because in the biscuit making industry we were strongly in favour of having a Trade Board, and every biscuit manufacturer in the country has been called upon by two representatives, one in favour of an Industrial Council, and the other in favour of a Trade Board. They have been investigating matters as far north as Aberdeen and as far south as you like to go, right throughout the whole country. That paragraph 6 is perhaps not very well worded, because it does not seek to criticise the administration of the existing Trade Board system, but it criticises the investigation which takes place with regard to the establishment of Trade Boards or Industrial Councils.

1066. *Chairman*: What about the Inspectors? Have you anything to say about them?—The number of Inspectors administering the existing findings of a Board is, if anything, inadequate. There are barely sufficient of them, and there is no criticism of the expenditure on that side. A few more have been appointed lately, but not too many.

1067. *Dame Adelaide Anderson*: In fact you think that there was too much inquiry before?—Whether your industry is coming under an Industrial Council or a Trade Board, it is really all under one department of the Ministry of Labour, and you go through the same procedure. You call up your Works Committee to talk to different people both really in the same department of the Ministry, but both making the same investigation.

1068. You suggest that they should agree together to send one official instead of two?—The suggestion is that it is unnecessary that there should be two departments incurring the same expense.

1069. It is in no way necessitated by the Act, is it?—No, but when we asked this question that was a very general criticism which was made.

1070. *Lord Weir*: In connection with that matter in the different trades which have Trade Boards now and with which you are personally conversant, do you consider that the Minister was justified in constituting each of those Boards on the ground that there was insufficient organisation for the regulation of wages?—I think so, unquestionably.

1071. In every case?—Yes, because with regard to many of those earlier Boards, like the Sugar Confectionery Board, the mere existence of the Board has organised the industry. There was no organisation previously.

1072. *Mr. Layton*: Your constituents have not generally complained about the extension so far as the field covered was concerned under the 1918 Act?—No, the general opinion is that the Boards have been of value.

1073. *Lord Weir*: If you consider you are organised now, is it now time to give up the Trade Boards altogether and progress towards Industrial Councils?—No, I am afraid that ambition will never be realised. You must in an industry have some legal power to enforce your decisions, and in an Industrial Council you have no legal power to enforce your decisions.

1074. *Chairman*: In an unorganised industry?—If you are a highly organised industry and you agree in the Industrial Council to pay a given rate, however highly organised the industry is, there is sure

2 November, 1921.]

Mr. JOHN CARR.

[Continued.]

to be some one manufacturer in it or some one manufacturer will start in it who will pay less, and you have no legal power to make him pay the rates.

1075. What you say is rather in favour of extending the compulsory power?—Personally I am in favour of extending Trade Boards with a compulsory legal backing behind them.

1076. Even in an organised industry?—Yes. As an instance of that, the tobacco trade asked for it and the biscuit industry have asked the Minister of Labour to set up a Trade Board for the industry. Although we have our minimum rates fixed, every manufacturer in the country is a member of our organisation, and we can fix minimum rates which we impose upon ourselves, at the same time we feel that it would be of value to have a Trade Board.

1077. *Sir Arthur Pease*: You now say minimum rates, but you previously said a minimum rate?—It is a minimum rate, but it is different according to whether it is for a girl or a man, and it differs at different ages; there is a difference between the rate for a girl of 14 and a boy of 14, and so on.

1078. *Mr. Pugh*: I should like you to assist us on one point, that is to say, with regard to speeding up. I am assuming it is necessary to speed up Trade Boards for the benefit of both sides: could you tell us from your own experience of Trade Boards whether before the rate is fixed or after, it is possible to facilitate the machinery? For example, could you do everything that was necessary as regards investigation previous to fixing your rate? Would you not have to get everything that was necessary done before the rate was fixed so as to apply it directly after it was fixed, consistently with the necessity for the Ministry of Labour approving it?—There would be no difficulty in applying it, I think, in any industry in a period of a month, instead of three months.

1079. I understood there was considerable loss of time after the rate was fixed, and that it often happened that before the rate could be applied there came some changes again; is that your experience?—Yes. During the last year that did occur in some of the Trade Boards. But I think this criticism is directed to this—that in almost every trade not subject to Trade Boards but subject to Trade Union agreements, they have had reductions in rates before the Trade Board industries could get theirs through. If you have watched the papers you will have seen that the engineering rate came down and this, that, and the other came down, all following fairly closely on the cost of living, while the Trade Board rates are the last of all to move because of the length of time that it takes to get a rate through. Another point is that when rates were going up the manufacturer had almost invariably to pay the increased rate immediately it was proposed, but now that they are coming down he has to wait three months before he can pay the reduced rate.

1080. How do you account for that difference as between going up and coming down?—Theoretically we should have had three months for the going up, but the workers in the boom period said, "No, unless you pay this increased rate which has been published on your walls here, we will leave you;" so, by the economic conditions, when a rise of wages is justified the manufacturer is forced to pay it immediately the proposal is made, without making any conditions. When the rates are coming down he is held up for three months before he can pay on the agreed reduction.

1081. That is in abnormal conditions?—The conditions may not be abnormal when a Trade Board rate varies, but those conditions exist.

1082. Can you suggest any means by which the machinery can be speeded up?—I consider that a reduction of the three months to a month would have a material effect.

1083. A great deal of time is now taken up in investigation with all the people concerned, and where you have thousands of small employers would you

suggest that if a Board which substantially represents the trade comes to a decision, the giving of notice should be sufficient without their having to consult those people again to hear their objections?—Do you mean the circulation of the bills and posters which have to be posted up in factories and so on?

1084. Yes?—My experience is that in many cases those arrive now weeks after the proposal has been made.

1085. Should there be any necessity for an opportunity for objections after the parties have been informed what is going to take place, and a fairly substantial representation of the trade has come to a decision?—My view is that it should be published officially somewhere, and that we should not have to wait for the department to circulate those bills to every little factory all over the country. They are sometimes reported at present in the "Times" and of course in the "Labour Gazette," but my suggestion would be that there should be some recognised official method of publishing in the Press the figures or proposals of a Board, and that that should constitute notice to anyone who wishes to make an objection.

1086. *Mr. Bell*: I wanted to clear up the same point. Are not contracts very often entered into by manufacturers in which the price of the article bears on the wage rate to some extent?—I think very few manufacturers now will enter into any contract in which they do not insert a clause that they are relieved of their quotation if there be a variation in the rates.

1087. Would that apply to all industry?—When there are substantial variations in wages now there is usually a clause in the contract to say that the contract is to be affected by that variation.

1088. Does that apply to all industries?—The great majority of trades affected by the Trade Boards are not large contracting trades, but are more composed of people who, as I should say, take an order which is not spread over a long period like it is in the engineering industry.

1089. Take the tailoring trade for instance?—I do not think in the tailoring trade at the present time you could enter into a contract for a period of years which was not subject to such a clause.

1090. They might enter into a contract for the supply of cloth. What I want to bring out is this: suppose the period were decreased by one month being inserted instead of three months, what effect would that have on any industry in which a contract was necessary?—I do not think the mere shortening of that period would have any effect.

1091. Taking your own industry, you said you had applied for a Trade Board, although you had a minimum rate already in operation: what was the object of applying for a Trade Board?—It was realised that there were manufacturers who were not prepared to abide by the findings of the Manufacturers' Association.

1092. Did your Association fix more than minimum rates as minimum rates for one class of workpeople, or were minima fixed for other classes?—There was simply a minimum rate for the unskilled worker.

1093. And it did not deal with the skilled workers?—No.

1094. So that your object then in asking for a Trade Board would be to legalise your own agreements?—Yes.

1095. You legalise them and make them binding on everybody?—Yes.

1096. *Mrs. Lyttelton*: May I ask if your opinion that compulsory rates would be a great benefit everywhere, and therefore you would like to see Trade Boards everywhere, is quite consistent with the opinion which you expressed before, that you would like Trade Boards only to deal with the minimum rate? I do not quite understand the two opinions. You stated first that you would like Trade Boards only to deal with the minimum rate, and not to touch skilled trades at all; then a little later on I understood you to state that you personally would like to see

2 November, 1921.]

Mr. HARRY TROTMAN.

[Continued.]

Trade Boards in other trades, because that might make their rates compulsory. Are you still thinking of the minimum rates there?—Yes.

1097. Mr. Layton: I understand that is not only your personal opinion but the opinion of your constituents, and that they have no objection to the extension which has taken place under the Act of 1918?—That is so.

1098. And the suggestions contained on page 5 of your *présis* of evidence, including the suggestion that the Board should be limited to fixing rates, could be met by an amendment of that Act?—Yes.

1099. And that therefore the views of your constituents whom you represent would be met by an amendment of the Act, and it would not be necessary to repeal the Act?—An amendment of it to meet this particular point would meet the view.

1100. Not merely your own personal view, but the view of the body which you represent?—Yes. On page 4 I say "The repeal or amendment of this Act would therefore be generally welcomed."

1101. That is rather different?—Yes, but I have gathered from meetings of them throughout that the amendment of the Act would meet the objection.

1102. Sir Arthur Pease: You stated that contracts were made now with a clause in them about the rise or fall of wages; has not that largely disappeared within the last few months?—No, my experience as a purchaser in the manufacturing business is that that exists very largely still.

1103. Have you experience with any trade abroad?—Not at the moment.

(The Witness withdrew.)

Mr. HARRY TROTMAN, called and examined.

1113. Chairman: Are you a member of the Milk Distributive Trade Board?—Yes.

1114. Are you one of the employers' representatives on that Board?—Yes.

1115. How long have you been on the Board?—From its start.

1116. Just to get it on the notes, the Board was formed, I think, under a special Order dated 9th January, 1920?—I am not sure of the date, but that would be about the period.

1117. It was established in February, 1920, and I think your first proposals for a wage rate were made in June, 1920?—They became operative, I think, in November.

1118. There has been no variation since that time, has there?—There was a variation made at our last meeting, proposals for which are now being published.

1119. Does your Board fix time rates only?—Yes.

1120. And overtime rates?—Yes.

1121. I think you have fixed district rates, that is to say rates varying in different districts?—Yes, rates that we have had occasion to vary. We are now in line with the Grocery Board; proposals are going out to that end.

1122. Just to take the original scheme, you fixed rates for London; rates for large urban districts and rates for small urban districts, and rural districts?—Yes.

1123. Three classes of rates?—Yes.

1124. The highest, of course, being for London?—Yes.

1125. You say it is now proposed to vary them?—Yes.

1126. In what way?—In respect of the rural rate, the A rate. The original intention and agreement of both parties was that places with less than 10,000 inhabitants should come under Scale A; but there appeared to be some difficulty in drafting, and our intentions, therefore, were not really carried out. Complaints were made of this at several meetings. The grocers' representatives saw our difficulty, and after a good deal of trouble they revised the area. One was drafted in an inclusive manner, and the other in an exclusive manner.

1127. But you still fix the lowest rate for places with a population of less than 10,000?—Yes.

1104. If you were competing with a foreign country you would be bound to quote a fixed price then?—No. For our particular industry we have no fixed prices.

1105. Have you no fixed price at all?—No.

1106. Does the price just go up and down?—A buyer abroad has to pay the price ruling at the date of the receipt of the order.

1107. Would you consider that exceptional or not?—No, the confectionery trade and the biscuit trade are both of them on that basis. Most of the food-stuff trades, such as jam manufacturers and manufacturers of tinned foods and so on, are on a similar basis.

1108. Lord Weir: You have been speaking largely as a manufacturer competing in foreign markets?—Yes.

1109. You do sell in foreign markets?—Yes, in normal times we did very largely. Many of these people here are exporters.

1110. Chairman: How is the price at the date of delivery fixed? Is there a market price?—In my own industries the price is the price ruling on the date.

1111. Ruling where?—In London.

1112. Mr. Layton: Are these long period contracts of the receipt of the order in London, for manufacture over a period or mainly out of stock?—Mainly out of stock.

Chairman: We are very much obliged to you for your evidence.

1128. Do you also fix overtime rates?—Yes.

1129. On what basis?—On a time basis, time-and-a-quarter or time-and-a-half, as the case may be.

1130. What do you call overtime in your trade?—Time worked beyond the number of hours set out, which in this case is 48 hours a week.

1131. Firstly, what have you to say about the principle of the Trade Board Acts?—In the first instance I think that while I am personally in favour of some kind of official referee such as the Trade Board, I do say that the time taken in altering or varying rates is much too long. We have considered in the Metropolitan Dairymen's Society that a period of about six weeks or a maximum of eight weeks should suffice from the time of coming to a decision on the Board to its becoming operative. Of course it may be said that prices are falling and that we are speaking as employers, but I would point out that when the rates were first fixed we came to some arrangement with the Trades Unions that the payment should become operative really on proposal.

1132. Did that apply also in the non-organised trades?—I can only speak for my own trade.

1133. Was your trade well organised?—No, it was not well organised.

1134. But it was sufficiently organised to enable you to make an agreement with a Trade Union?—Yes, so far as London is concerned, but I should not like to say what the Provinces did.

1135. So that the proposal for a rise came into operation at once?—Yes.

1136. That was agreed to by the Trade Board?—Yes, in London.

1137. But a proposal for a fall does not come into operation until the whole formalities have been gone through?—That is so.

1138. That is three months from the notice?—Yes. If I may say so, I think the time for objection is really too long.

1139. At all events that would not matter very much if the rate came into operation within a fixed time from the resolution of the Trade Board proposing the rate?—That is so.

1140. And you suggest what?—Six weeks.

1141. Is there any other amendment or machinery which you would propose?—There is the question of inspection. The Board has been in operation for

2 November, 1921.]

Mr. HARRY TROTMAN.

[Continued.]

over a year, and I do not want to be the one who is first prosecuted, but no prosecution so far, I think, has taken place. A certain number of inquiries have been made, particulars of which were circulated to us at the last meeting, and they appear to have come to agreement with them, but those agreements are only private—they are not known—whereas if there were a prosecution in a bad case it would get publicity, which would strengthen very much the position of those who are loyally carrying out to the best of their ability the orders of the Board. If things go on in a hole-and-corner way it will mean that there will be more and more evasion.

1142. When you speak of a hole-and-corner way, you mean, I take it, that the inspector finds out some evasion and tells the employer that he must remedy it, and he does so?—Yes, they come to some arrangement and no one outside the trade knows it.

1143. You can come to no arrangement except that the law shall be applied?—That is so, but if there were prosecutions and publicity in a bad case, that would help us, I think.

1144. *Mr. MacCallum Scott*: As a deterrent to others?—Yes.

1145. Whereas if there is no prosecution it only acts as a deterrent in that particular case?—Yes.

1146. *Dame Adelaide Anderson*: A prosecution would also spread knowledge amongst the obscure people?—Yes.

1147. *Mr. Pugh*: Would you advocate that cases should be reported to the Board?—Cases have been reported to the Board, and the reports that we get which are marked "Strictly private and confidential" only give a number.

1148. Would you advocate that the whole of the cards should be put on the table so far as the Board is concerned, and that the Board should be fully conversant with what had taken place?—Yes, I should.

1149. *Chairman*: What is the next point?—I may say that in my capacity I am rather representative of the larger employers, and I do feel somehow that there are a number of small traders who have perfect liberty to do so who have put in a good many more hours themselves in competition than the paid worker can do.

1150. You do not blame them for that, do you?—No. I have been told over and over again by them that whatever rates were fixed they will do so many more hours themselves; they say: "I am working myself."

1151. That is the owner of a business?—Yes. The matter came up for consideration; it was a point that the workers on the Board made particularly, and it was considered at the time; but just then, when we were negotiating, there was a Bill promised which would make some restriction on shop hours, but that never became law: it died in its infancy.

1152. Have you anything to suggest about that?—It is simply a point that will be put, I think, by workers, and I thought possibly it might be right for me to mention it here.

1153. Do they suggest that a tradesman or the owner of a manufacturing business should be forbidden to work more than so many hours? Is that the suggestion?—If I were speaking as a worker I should say "Yes."

1154. *Mr. Layton*: Is there not some misunderstanding here perhaps? There is already a regulation as to the keeping open of shops, is there not?—Yes, there is a Shop Hours Act now.

1155. *Chairman*: But that does not prevent the owner of a business working at his business after the shop is closed. He cannot sell things, that is all?—Yes.

1156. *Mr. Bell*: I take it your point is not that the shop is kept open for a certain number of hours, but that the man may be working himself distributing milk any number of hours he likes?—Yes.

1157. Does not that also apply to the larger employer if he cares to go round with the milk himself?—He would have some job, would he not?

1158. *Chairman*: However, you are not putting that forward yourself?—No, I would not put that forward myself. There is a matter as regards ex-

perience in working that we are having some little difficulty about, and that is in connection with the outside workers; there does not appear to be proper or suitable provision in the Act for them. When we fixed the rates for the dairy workers we were told by the officials in authority that we were bound to settle a daily number of hours for the workers for the purpose of reckoning overtime. A good deal of effort was put in to obtain some elasticity over the week, but we were told it was not possible to do it. That was on our first proposal. Then we dealt at a later period with clerks and shop assistants, and when they came under review this elasticity was yielded in respect of their class, and it was pointed out that there was a Shop Hours Act regulating their hours. Now roundsmen go out and they are very largely free from supervision, and we think that they should come in a separate class, irrespective of any particular day, considering that they are being paid on a weekly basis. The question is how to make the Act apply. Of course, bearing in mind the peculiar nature of the trade, and the article in which we are dealing, which is a highly perishable one, we are dependent upon rail transit; it is outdoor, healthy work, and, of course, we have varying times and seasons and so on to contend with. If you take workers at the seaside, the demands upon their time during the holiday period are, of course, very great, while at other periods they can work very much shorter hours; and even in London, if you take the City and the business portion of the West End, there is very little business done there from Saturday midday until Monday morning, while the reverse is the case in domestic industrial districts on Sunday: that is their one day at home. If some arrangement could be made in the Act by which a given number of hours in a week, say 54, could be spread over the days indifferently, it would be a welcome proposition not only to the employer, but to a very large number of workers, many of whom, of course, are elderly men.

1159. Cannot your Board do this themselves?—We are told not.

1160. Why not?—We were told definitely by the officials that it was absolutely necessary to fix a daily number of hours rather than a weekly number.

Lord Weir: It is one of the duties of the Board.

1161. *Chairman*: The Act does not say that that is so, does it?—I do not pretend to understand the Act.

1162. *Chairman*: I am told, and you will correct me if it is wrong, that the matter arose in this way: The Board wanted to fix a daily overtime rate, and they were told that they could not fix a daily overtime rate without fixing a daily rate. That would not prevent you, if you were willing to fix a weekly overtime rate, from fixing a weekly rate?—I believe there is a daily overtime rate. It is generally understood throughout the trade, and I think that members of the Board understand it that it is a daily number of hours.

1163. Yes, if you fix a daily overtime rate you must fix a daily wage.

Lord Weir: That is what the Board exists for: it was to fix those very conditions that you are objecting to: it is the duty of the Board.

1164. *Chairman*: It is a matter of detail, but you can discuss it now with the Ministry. I think you can do as you wish with regard to that?—Our difficulty has been that we came in our initial stages to certain agreements with the workers. It was a matter of compromise, and so on, and when we got together and came to decisions which were appointed and sent up to the Ministry, and we were told that our proposals could not be agreed to because they were not according to the letter of the law. We were pretty well sick of it, because neither of us got what we thought was right; but we had to make the best of it, and now we are taking good care, if we can, when we come to a decision to endeavour to get the opinion of the legal members of the Ministry as to whether we are on the right track or not.

1165. *Sir Arthur Pease*: With regard to overtime, do you find many instances of people making overtime

2 November, 1921.]

MR. HARRY TROTMAN.

[Continued.]

on purpose, that is to say, not getting through their work in order to be able to earn overtime?—There was a good deal of that at the start, but I think very little overtime is being paid to outdoor roundsmen now. The reason being that they get out and go into a public-house, or they may want some bread and cheese or go into a coffee shop, and they spend a good deal of time in gossiping, and that kind of thing. The matter was fully discussed with the trade union leaders, and a working arrangement was come to with them, though whether it is correct or not I do not know, that any round should be tested by an average man, and if that average man could do the work within the time, that should form a sort of basis for the work.

1166. Then a man might take eight or nine hours to go round, but if it has been tested by an average man he is not entitled to overtime?—That is the position which has been taken up in consultation, I think, with the trade union.

1167. Outside the Trade Board?—I presume so, and I rather gather that that is not an infringement of the Trade Board Order, judging from the leaflet which they circulated.

1168. Are you quite sure? Is that overtime in respect of the time of day or only in respect of hours?—In respect of hours.

1169. *Chairman*: You have some other point to make about people who manufacture products and who are not only milk distributors coming under the Board?—That question has been under review by the Board. The difficulty has been as regards some of the provincial creameries, and so on, which occasionally send up certain supplies to customers, sometimes fairly regularly, though perhaps not all the year round. The Board has given this matter a good deal of consideration as to their being included within it. Inspectors have been down, and they have felt so far satisfied that although the trade might be somewhat large in volume it did not form any large or appreciable proportion of the work of the creamery: they could not very well find a dividing line. But the Board does not seem quite satisfied about it, and they have referred the matter back for further enquiries to be made as regards given months in a year.

1170. *Chairman*: When you come to your conclusions about that point, perhaps you will let us have a note of them?—Yes.

1171. Is that all you have to say?—Yes, I think that is all that is necessary.

1172. *Lord Weir*: There has been a considerable increase since 1914 in the cost of delivering milk to any specific area, say in London, has there not?—Yes.

1173. Could you give us any figures of the difference in cost of delivering milk between 1914 and to-day in the same area, and is it possible to give us the proportion of that increase which you would say was due to the operations of the Trade Board? I know it is rather a difficult question?—The figures are, I believe, all in the hands of the Ministry of Food. They took out very careful costings, and that kind of thing before they granted the working margin which there was: how far that would be comparable with pre-war times it would be very difficult to say, because wages and everything were rising and rising during the whole period of the war, and to get back to a comparable period before would be very difficult.

(The Witness withdrew.)

Mr. W. E. SMER, called and examined.

1191. *Chairman*: I think you come to give evidence on behalf of the National Federation of Dairymen's Associations?—That is so.

1192. Are those Associations of Employers?—Yes.

1193. What do you say on their behalf as to the Trade Boards?—I have not very much criticism to make of the Trade Board itself, except that it is very slow. That has already been touched upon by the previous witness, and I think we are all agreed

1174. I am only asking about the cost of delivering milk, not about the cost of the milk. Your own business is distributing, I take it?—Yes.

1175. Can you tell me what it cost to deliver milk in 1914 and what it is costing to-day, and of the difference how much you would attribute to the operations of the Trade Board?—I should not attribute very much to the operations of the Trade Board.

1176. I am really asking if you can give us such figures from your Society?—From the Metropolitan Dairymen's Society?

1177. Yes.—I am afraid I could not give you those figures offhand; it would take a good deal of investigation, but, generally speaking, I do not think there is very much due to the Trade Board, because we had arrived at very nearly the Trade Board figures before the Trade Board came into operation.

1178. You made no change, for example, in the rates?—Yes, higher rates.

1179. Of course, I should like to know how much that cost. Perhaps you will ask your Society, and see if you can give us an answer to that question?—There may be some difficulty in getting it, but I will certainly ask them if they can do so.

1180. *Chairman*: Will you write to the Secretary about it?—Yes.

1181. *Dame Adelaide Anderson*: In your opinion the Trade Board having fixed the rates in accordance with the general view of the trade, the advantage is in the enforcing of them throughout the trade?—Yes, so that each one is on a fair and proper footing with the other.

1182. Have you made any estimate of the amount of inspection which is necessary?—It is very considerable if properly carried out, and what I think is a very strong point in connection with that is that inspectors as far as possible should be those who have experience in the trade.

1183. You have had some inspection, have you not?—We have had some little inspection.

1184. A little?—Yes, but I think the Trade Union leaders have given a good deal of gratuitous work—I mean gratuitous so far as the Trade Board is concerned—to this, and they have done quite a good deal of work in connection with it, and they, of course, can refer anything they find to the Trade Board or to the Ministry for attention.

1185. Would you think that seven inspectors with surprise inspection would be adequate?—Yes; I think with surprise inspection that should be sufficient.

1186. *Mr. Bell*: A question which I wanted to put has been partly covered already. It is with regard to surprise inspection, which you have referred to. How would you carry that out, and who should make the surprise inspection?—The Ministry of Labour.

1187. Someone appointed by the Minister, you mean?—Yes.

1188. It is difficult for even the smallest distributor to keep an accurate record of the wages he pays?—I could not say.

1189. If he did not, even surprise inspection would not find out exactly what amount of wages he was paying?—He would have access to the worker, of course.

1190. And if the worker and the employer were acting in collusion there would be no remedy.—That is so.

Chairman: Thank you. We are very much obliged to you for your evidence.

upon that. For one thing, two months is allowed in which either employers or workpeople may make objections to the proposal, and that, I think, is about four times too long; a fortnight ought to be sufficient. I agree with a previous witness that the wages went up when the proposal was issued, but we have to wait for the proposal to come into operation before they go down again. Apart from that, I have very little criticism to make of the Act itself, except so far as it applies to the milk trade.

2 November, 1921.]

Mr. W. E. SMER.

[Continued.]

1194. As to that last point, what have you to say to us? You say, except so far as it applies to the milk trade: What do you mean by that?—I mean the working of the Act in the milk trade. We have had twelve mouths' experience at the present time, and my experience is that not fifty per cent. of the trade are carrying out the whole of the conditions of the Act. That is a serious statement to make, and I made it before the full Wages Board in July.

1195. How do you explain that?—From personal experience and by my knowledge of my fellow tradesmen.

1196. Do you mean that 50 per cent. or more are paying wages which are less than those fixed by the Trade Board?—I said carrying out the strict letter of the Act. It may be a matter of the minimum wage per week, but I think the trouble is that they work longer hours; that is the whole difficulty, and the chief difficulty as it applies to the milk distributing trade.

1197. Do you mean longer hours on one day, or longer hours if you take it by the week or the season?—By the week or by the day.

1198. So you are not referring to the same point as the last witness mentioned, that the hours are longer at one time of the year than at another?—I agree with him on that point, but I say generally that the men are working longer hours than they are actually paid for.

1199. Has your Association called the attention of any of the authorities to any case?—As a member of the Trade Board I personally called the attention of the Board to that fact, but you cannot expect the dairymen to be policemen on each other—at least, I would not like the job. There are, of course, difficulties so far as a seasonal trade is concerned. I have made out a rough chart of our own particular business in the West End trade, and you will see the difficulty of putting that on an hourly basis (*exhibiting a chart*). At one time of the year a man would be practically getting nothing, or at any rate a comparatively low wage, and at other times he would be getting a good deal more than the minimum wage.

1200. Will you put that chart in?—I only brought it for inspection.

1201. You shall have it back again?—Very well, (*Handed in for inspection*). That, of course, applies to many businesses, and I brought it as an example of how the conditions vary.

1202. What does this show?—It shows the amount of milk actually sold taken on a weekly average. I hope you will regard the figures as confidential.

1203. Yes. There seems to be some very rapid variations?—Yes. That, of course, applies particularly in the West End trade, where our firm carries on business mostly.

1204. *Mr. MacCallum Scott*: I suppose it is in a district like the West End where many people go away for long periods that those variations would apply?—Yes, they go away from the second week in July until the second or third week in October.

1205. *Chairman*: There is a fairly rapid fall at Easter, which is one holiday season, and there is a big fall in the latter part of July and in August and September; and then in October it rises again?—Yes, and then it goes down again at Christmas for a good period. If the strict letter of the Act were carried out in a business of that description, an hourly time rate, I think, would be a disadvantage to the men: they would have a good deal of money at certain seasons of the year, and they would have to go very short at the slack seasons. That has never been the custom in the milk trade, but if this Act were to be carried out as it should be, that would be the effect as far as that particular district is concerned.

1206. *Sir Arthur Pease*: Is there any great variation as between the different days of the week?—No, except speaking personally of my business in the West End we do a good deal less on Saturday and Sunday. That we do not object to, because Sunday is a short day of only six hours; but in the suburbs you will find that on Saturday and Sunday, when the business men are at home, the sales go up. That applies also to seaside towns.

1207. *Lord Weir*: In fixing the rates of your Board you must have brought up all those points?—We did.

1208. But you were not able to arrive at a system under the law which would cover the conditions of your industry?—Quite so.

1209. *Chairman*: Is your rate of wages a weekly rate or a daily rate?—It is practically an hourly rate. We pay a certain wage for seven hours a day for six days a week, and six hours on Sunday, making up a week of 48 hours.

1210. *Lord Weir*: That was in the hands of the Board to settle. The Act does not say that.—As a Board, I agree, we fix what hours we like; we can have an 8 or a 10-hours' day, but the trade union members who are on the Board will not consider anything except a 48-hour week.

1211. You mean they do not consider the conditions of the industry in association with the construction of the Act?—No, they are trying to apply an Act which is quite a good thing for a factory, but when you come to the milk trade, which is quite a different and a separate business, the two do not agree, and I personally, though I should like to see something which would bring things into line, cannot see how under an Act of this description you can do it.

1212. *Chairman*: Even when trade is most slack you would have to pay a wage enough for a man to live on?—I quite agree. For instance, all through the slack season since we have been under the Act my firm particularly have paid the full wage, although the men in some instances were only doing 40 hours a week. We do that because it has been the custom of the trade not to work by the hour.

1213. *Sir Arthur Pease*: Then it is not an hourly rate. You said at one stage that it was an hourly rate?—It is as an act of grace that we pay.

1214. Under the Trade Board decision could you pay for, say, 3½ hours instead of for 7 hours for one day?—As I understand, you can engage a man for whatever hours you like, and you have only to pay him per hour. I am open to correction upon that, but that is my reading of it.

1215. *Chairman*: Then what is your suggestion upon this point?—I have given it very careful consideration, but I have no suggestion under this Act to offer for the milk trade.

1216. But have you any suggestion for amending the Act to meet your difficulty?—If I might leave that point for the moment, we come to the carriers. They are paid an hourly rate of wages; they leave your business perhaps in the early morning, and in some businesses they have their breakfast away, and they come back to the shop again, and that is all you see of them. In my business they go out at 6 o'clock in the morning, and are back again at 8; they are back to the shop again at 9 o'clock, and they go back again, say, at 1 o'clock, or they should do. They wash up, book in, and are supposed to finish at 2 o'clock. That man has finished his work for the day. That is the only way that we can get in 7 hours to suit the customers who require milk for breakfast and again before lunch. We do not deliver milk at all after lunch. That applies, I think, in nearly every dairy business.

1217. *Mr. Pugh*: But the Act does not lay down that you should work 7 hours a day, does it?—You can work what hours you like provided you pay for it.

1218. Then this is not a complaint against the Act, but against the arrangement with the Trade Union?—I was only explaining how we work. If you are paying an hourly rate, and you agree to pay a man overtime, he can come in at what time he likes. You can, as we have done, test a round, as they call it, for the time it takes. That man on some days does not feel very well, and he is not going to do his round in the same time on that day as perhaps he did it in on the previous day. Are you going to pay him overtime? Supposing a man is not scrupulous, but he is willing to make as much overtime as he can, he can easily spend half an hour or an hour extra on that round, for which the employer has to pay. My point is that there is no reasonable check except at great expense as far as the milk business is concerned.

2 November, 1921.]

Mr. W. E. SMER.

[Continued.]

Sir Arthur Pease: Does the amount of work which a man has to do on a particular round vary very much from day to day?

Mr. MacCallum Scott: You mean on the same round?

1219. *Sir Arthur Pease:* Yes, on the same round.—From day to day?

1220. From day to day or from week to week?—From week to week, yes, but not from day to day, except that in our business Saturday and Sunday are quiet days. In other businesses Saturday and Sunday are busy days. The only thing beyond that which would vary it is the question of the seasons.

1221. The point I want to put is this: Supposing you put a large number of extra customers on to a particular round which was the same distance?—We should naturally expect that it would take longer.

1222. The man might be justified in taking longer to go that round?—There you bring up a point where this Act favours the large firm with a compact round as against a small man with a scattered round. A man with a large, compact round can say, "We will do (in round figures) 40 gallons a day in the 7 hours." A smaller man with a scattered round may only be able to do 20 gallons in the 7 hours. Therefore the big man pays less per gallon for his carriers' wages than the small man.

1223. That was not quite my point. My point was this: if a man were entitled to overtime, the average man might have gone the round and found that he could do that round in a certain time, but if you put on another 25 per cent. of customers?—Naturally you would have to re-test that round to see what the new time should be.

1224. That is what you have to do?—Yes.

1225. If there were any substantial variation in the number of customers served you would have to re-test the round?—You would have to re-test the round.

1226. *Mr. Bell:* May I ask whether there is any variation in the number of men you employ during the year?—Personally, I should say not.

1227. *Mr. MacCallum Scott:* Say in August?—In August we do not employ less; in fact, this August, speaking of my own personal business, we were employing more, because we gave the men 10 days' holiday.

1228. *Chairman:* At full pay?—Yes, at full pay, or at least the minimum wage.

1229. *Mr. Bell:* When you say "personally," are you expressing a personal opinion which applies simply to your own firm, or a personal opinion which you think is true of the industry as a whole?—On particular points, where I say "personally" it refers to my own business.

1230. Can you tell us what is the custom of the trade?—Do they as a rule employ fewer men at one period of the year than at another?—No, the custom of the trade has been to keep the men on through the slack seasons at the ordinary weekly wage.

1231. You said at the beginning, complaining about the machinery of the Act and the length of time, that wages went up very quickly, but that it is taking a long time to get them down?—Yes.

1232. When the Trade Board was set up, did it force wages up more quickly than the rate at which prices had gone up?—We have only had one rate fixed, and that was when the Act first came into force. We have only had that one rate fixed.

1233. Has there been no alteration since?—No. There is a proposal now for a reduction.

1234. So that the cost or the prices have never made any difference to the rate?—No.

1235. *Lord Weir:* This rigidity of which you speak, I presume, has increased the cost of delivery; I mean those conditions to which you have referred?—Yes.

1236. Can you give us any idea as to what that represents? I do not mean just now, but can you send us any information upon that?—I do not think it would give you very much information, as our Trade Board came in only last year when wages were high, and to the best of my knowledge it only made an increase of about 10s. or 15s. per week per man.

1237. That is the increase in the rate of wages, but you have not said anything about the increases of wages, you have taken objection to changed conditions?—In addition to the increase in wages, of course there are the shorter hours. Against that is the less waiting on (if you like to put it in that way) that the customer has had. The public has suffered to a great extent.

1238. It is not an equal service?—It is not an equal service, so it is difficult to figure it out accurately. You are not only paying higher wages for shorter hours, but you are not giving the same service as you did, say, in pre-war times.

1239. Perhaps you will think it over, and if it is possible to give us any figures you will do so?—If it is possible I will let you have them.

1240. *Chairman:* Have you any other points on your notes?—I consider that the Act will be very difficult to enforce. After making the statement that 50 per cent. of the trade in my experience are not carrying it out after 12 months, I consider that it will require an army of inspectors to enforce it. As I understand, there are 50,000 or 60,000 notices sent out under this Milk Trade Board. I consider it as an asset to a large firm or to a big company against a small man. There is also the effect on the workers themselves. It is favourable in our particular business for a young, active man, and against an older, less active man.

1241. *Mrs. Lyttelton:* You mean because he is dismissed if he cannot do his round in the specified time?—The point is that from the business point of view you ought to dismiss him.

1242. Yes. I only asked the question?—My own experience is that the men would rather do their work as milk carriers without being tied down to half an hour or so.

1243. May I ask whether it is chiefly the question of regulation of the hours in which you feel the Act cannot be enforced? Is it mainly upon that point?—It is mainly on the point that you have no reasonable check on a carrier's hours.

1244. It is not the wages, it is the hours?—It is not the wages at all. I want to make that quite plain. I have no objection to the amount of wages we pay, but when it comes to the position that a man has got to be paid overtime over a certain period, then I say that it is a thing on which we cannot keep a reasonable check. In fact I consider that to start paying overtime would be a very dangerous experiment; it would tend to encourage a man to take as long as possible on his round.

1245. *Dame Adelaide Anderson:* Is it not possible to arrive with the help of the Union at averages of the times to be taken?—I disagree with the last statement, that you can make an arrangement with a Union which is outside the Act. I do not think you would have a leg to stand on.

1246. The Board cannot?—You can make no agreement outside the conditions of the Act, either with a Trade Union or with anybody else.

Lord Weir: An agreement might be made although it were outside of the Act. I think that is all that the last Witness said.

1247. *Dame Adelaide Anderson:* I only meant a working arrangement—calculating this question of cost in relation to the hours of work. It is, of course, manifest that you cannot go on long paying for work which is not done. I was only suggesting that it is possible for your class of business, after a certain length of time when you know the area which you are going to cover, to arrive at the proportion of time, and you can work it out on the average?—Then you are still in the man's hands to keep to that time.

1248. *Mr. MacCallum Scott:* Is there not a little misconception as to the use of the words "outside the Act"? Of course you can make any number of agreements outside the Act, but what you meant, I think, was rather that you cannot make an agreement contrary to the terms of the Act?—Yes, contrary.

2 November, 1921.]

Mr. W. E. SMEE.

[Continued.]

1249. You may make any agreement you like on things that are not covered by the Act?—I may be misunderstanding the last speaker, but she gave an instance—or rather I took it in that way—that if you test a man to take seven hours a day, and that is the time in which he should do that round, if the man takes nine hours to do that round nothing is said about it, because the union people do not bother about it. Still, I think you are breaking the Act. It says definitely that you have got to keep proper time sheets and proper records of the hours that a man works and the rate of pay at so much per hour.

1250. *Sir Arthur Pease*: May I just clear up that point? You mean if one man went round in six hours, and another man took eight hours, the average being seven hours, you would strictly under the Act be liable to be prosecuted if you did not pay the man who took the eight hours for overtime?—Yes.

1251. Although it was the man's own infirmity or the man's own fault that he could not get round in seven hours?—Yes.

1252. And you have no way of checking that?—No.

1253. *Mr. Bell*: May I ask what was the arrangement with regard to hours before the award?—I do not think there was anything, apart from what you made in your own business.

1254. You could work a man as long as you liked?—No, you worked a man as long as he liked to work.

1255. That was not so long as you liked?—A man will work as long as he wants to, and that length of time will be sufficient to enable him to earn sufficient money to keep him going. You cannot work a man as long as you like.

1256. *Mrs. Lyttelton*: Did you have different rates of pay for a man who would work long hours?—We had different rates of pay according to the different rounds. A good man got more pay; an indifferent man slightly less pay.

1257. *Mr. Bell*: So that without any award, if a man did not like to work more than six hours per day you could not make him. Is that your point?—You would not employ him.

1258. And if he did not like to work more than eight hours a day, and you wanted him to work 12 hours, what then?—You would employ the men who were willing to work as you wanted them to.

1259. That was my first question?—But that is not making a man work longer than he wants to.

1260. *Chairman*: Have we got all your points now?—There is one other. The circular here issued by the Trade Board says: "It has been argued that the minimum rates tend to become the maximum rates, but experience has not borne out this view." My experience and the experience which I have gathered from the Association is that a minimum rate is, with few exceptions, the maximum.

1261. *Chairman*: You are dealing with two different points altogether. You mean to say that they fix what they call the minimum, which is really the maximum?—Yes.

Chairman: That circular deals with another point altogether, which is: Whether the wages of skilled workers tend to come down to the minimum rate of the unskilled workers. It is a wholly different point, but I quite understand what you say of your own experience.

(The Witness withdrew.)

FIFTH DAY, Wednesday, 9th November, 1921.

PRESENT:

The Right Hon. the VISCOUNT CAVE, G.C.M.G., (*Chairman*).

The Right Hon. LORD WEIR OF EASTWOOD.

DAME ADELAIDE M. ANDERSON, D.B.E.

The Hon. Mrs. ALFRED LYTTETTON, D.B.E.

Mr. W. T. LAYTON, C.H., C.B.E.

SIR ARTHUR F. PEASE, Bart.

Mr. A. PUGH.

Mr. A. MACCALLUM SCOTT, M.P.

Mr. H. D. HANCOCK (*Secretary*).

Mr. MICHAEL FREDERICK CAHILL, called and examined.

The Witness handed in the following statement as his Evidence-in-Chief:—

MEMORANDUM OF EVIDENCE OF MICHAEL FREDERICK CAHILL on behalf of the Grocery and Provisions Trade Board, England and Wales, Employers' Side.

(Given pursuant to a Resolution of the majority of the Side.)

Grocery Board.

1. The Grocery and Provisions Trade Board, England and Wales, was constituted by Order dated 23rd June, 1920. It consists of 83 members, being five Appointed Members, 39 employers, and 39 representatives of workers. It deals with the Grocery and Provision trade, which is mainly a food trade dealing with great part of the £300,000,000 home and £700,000,000 imported food of the United Kingdom. The number of persons affected by its decisions is estimated by the employers at about 600,000, and is unofficially estimated at about 400,000, these figures being arrived at as follows, namely:—Employers, as per official list at the Trade Boards Offices, 153,000; Workers, as per unofficial estimate 250,000, but as per employers' estimate 400,000. It is the largest Trade Board ever created, and it is to be noted that while in Victoria there are no less than 147 Boards

to deal with 150,000 workers, in England this one English Board has to deal with twice the number of workers there dealt with by 147 Boards.

Proposed Evidence.

2. The working of the Trade Boards Acts and their effect will, it is thought, be best shown under three main headings, concerning respectively:—(a) the institution of the Board, together with its personnel and the manner of their appointment; (b) the operation of the Board, showing the precise nature of a Trade Board; (c) the decisions of the Board and their operation; and it is desired under each of these three headings to make certain submissions to the Committee, based upon the experience of the Grocery Board to date. It is, however, first necessary that the Committee should be informed of the composition and nature of the trade and its place in the national economy.

Composition of Trade.

3. The trade is tripartite in composition, the three interests being respectively:—

- (1) Private Trader, whether wholesale or retail;
- (2) Co-operative Movement;
- (3) The Multiple Shops;

and between each of these sections, as also between the members of each section, there is the keenest competition. The respective traders differ considerably

9 November, 1921.]

MR. MICHAEL FREDERICK CAHILL.

[Continued.]

in magnitude, ranging from the small single shop grocer in the rural village to the great multiple shop company or West End emporium, but while the private trader carries on business for his personal benefit, the co-operative movement and the multiple shop companies carry on business for the benefit of their members, of whom the majority are persons of the middle and lower middle classes. The cardinal feature of the trade is the case with which the grocery assistant may become a masterman with a shop of his own, there being many single shop grocers, as they are called, in existence. When a man has successfully worked one shop he may gradually extend and take another and others, and so become gradually a multiple grocer possessing several shops, and it is then only a matter of concentration and perseverance for him to develop ultimately into a great multiple shop concern. Many of the employers unite with the Grocery and Provision trade separate and independent trades quite outside the scope of the Grocery Trade Board. Many employers, also, combine the process of manufacture with that of distribution, and in the case of many employers, retail shops, factories and wholesale warehouses are operated in conjunction, and frequently the various buildings are situated closely together. Any rate of wages, therefore, fixed for one department or portion of the premises immediately has an automatic effect in the adjoining portions of the premises and in the adjoining buildings, if any, of the employer. On the side of the workers there are no sharp divisions into classes of workers. Practically the whole of the workers are what may be described as general workers, the reason being that, except in a few highly organised businesses on the wholesale side, there is not sufficient work in any one operation to keep the worker continuously engaged, and he turns himself to whatever is required to be done. The operations in the trade are myriad in number, and the divisions of the workers which the employers recognise are in gradation of authority, *e.g.*, foremen, managers, etc. Moreover, as no monetary difference has hitherto attached to the description by which a worker was called, workers doing the same kind of work are known by different names in different parts of the kingdom, and even the same name has a different meaning in different localities, *e.g.*, the meaning of the term "warehouseman" is widely different in London from that in Manchester or Liverpool. Neither is it possible to classify workers as being in the wholesale and retail trades, because in numerous cases the retailer also carries on a wholesale business in the same premises and by means of the same staff.

Nature of Trade.

4. The trade is mainly a food trade dealing with numerous articles of food, the majority of which are imported from other countries. This is the cardinal fact of the trade and in consequence thereof the traders become divided as follows, namely:—(1) The importers, who are necessarily situated in the chief ports. These importers sell in enormous bulk to (2) the great wholesalers who, under Food Control, were termed "primary wholesalers," and are situate in the chief cities. From them the food is distributed to the lesser areas of the kingdom, being sold necessarily to (3) other wholesalers (who are called "secondary wholesalers") and the larger retailers; from these secondary and primary wholesalers the various retailers necessarily derive their supplies. The various wholesalers, in fact, serve the purpose of central and local depots for the distribution of food. On the wholesale side, however, there is no wholesaler who handles all the staple articles dealt in by the retail grocer; on the contrary, nearly all the staple articles of food form the subject of an independent and separate wholesale trade. For instance, there are butter and cheese merchants, also cheesemongers separately. There are bacon dealers, and there are merchants dealing in bacon, butter, cheese and eggs collectively. The dried fruit market is practically an independent trade; similarly the canned goods trade

and the tea trade; sugar also is largely separate. In fact, on the wholesale side, almost every article of food comes from a different country and undergoes separate and different treatment, with the result that the several articles of food form the subject of separate and independent wholesale trades. These separate wholesale trades may be compared to streams which all converge into a main outlet, namely, the retail grocer's shop, by which the public is supplied. Turning now to the retail side of the trade, the retail grocer is the general store of each locality, and so far as the poorer classes are concerned, he is, in fact, the larder or cupboard by which they are daily supplied with food. The trade of retail grocers varies widely throughout the country according to local custom; in some parts the grocer is also the baker; in many parts he sells bread although not baked by him; in other parts he will also deal in millers' offals and cattle food. Some grocers sell groceries, others sell provisions in addition. Some grocers sell butcher's meat. Most grocers combine with grocery the sale of other articles, such, for instance, as hardware, cutlery oil and colour, china, glass and earthenware, mats, rugs, baked bread and confectionery, cooked meats, wine, spirits and beer, tobacco, greengroceries, patent medicines, etc. Many carry on Post Offices. On the other hand, there are very many articles sold by a grocer which are quite easily saleable, and are therefore sold by many other traders, such as dairies, butchers, corn chandlers, Italian warehousemen, oil and colonmen, bakers and confectioners, drapers, ironmongers, and others, and the sale of these separate articles by such traders has become a matter of serious competition to the retail grocer. The retail grocer is also considerably affected by competition from street traders, who, being free from rates, taxes, wages, etc., and being subject to lesser inspection in the matter of weights and scales, quality of food and so on, are able to undersell the grocer in many cases. It will be seen, therefore, from the foregoing (which might be much extended), that on the wholesale side the Grocery and Provision trade comprises a large number of separate and independent trades which find their main outlet in the retail grocer, but also sell their products freely to his competitors. On the retail side, it will be seen that the trade is inextricably interlaced and interwoven with the rest of the distributive retail trades of the country. The effect of this is that it is quite impossible to frame any other than a purely arbitrary definition of the trade for the purpose of putting it within a Trade Board Order, and that accordingly any such definition must necessarily be (as it in fact is) both defective and unfair. It is defective because it includes persons not within the trade, and it excludes many persons who are in the trade, and it is unfair because it thus brings about inequality between competing traders in the same locality.

Place in National Economy.

5. The outstanding feature of the trade is that it is in the main an internal or domestic trade; it occupies the same place in the industrial community as the Army Service Corps in the National Army. The price of its goods constitutes the root basis of all wages costs in the kingdom, and in particular it deals in the majority of the articles of food upon which the Ministry of Labour cost of living index figure is founded. Any increase in price, therefore, of such goods will have an immediate effect on such index figures and directly affect all wages depending thereon. This, however, is no reason why workers in the food trade should not be properly paid, as the public have no right to cheap food at their expense, but it is submitted that it is a very distinct reason for seeing that the settlements of wages in the food trade shall be conducted with the greatest possible care; and it will be noted from the number of workers affected by the Board, that an increase of 1s. per week per person means a total sum of £676,000 per annum on the low estimate of 250,000 workers concerned, while, if the employers' estimate of 400,000

9 November, 1921.]

MR. MICHAEL FREDERICK CAHILL.

[Continued.]

workers is accepted, an increase of 1s. per week means an addition of one million pounds per year to the foods costs of the country. It will be noted also that the great bulk of the trade is distributive in character; no question of output exists, and no increase of wages, therefore, can be reproductive except by increased work on the part of each employee, which, owing to the nature of the work, would necessarily bring about a reduction of staff, with consequent unemployment. A third characteristic of the trade is that it is an intermittent trade varying in the case of retail shops with the shopping hours of each locality, and in the case of a wholesale trade the intensity of the work also varies with the localities, workers, therefore, in all localities sometimes working at great pressure and at other times having nothing to do. The effect of this is that the amount of labour that may be absorbed in the trade is variable and may be easily decreased.

Trade Organisation.

6. Apart from the Co-operative Movement, the only employers' organisations existing in the trade on the retail side are the various Grocers' Associations throughout the kingdom, who are united in the Federation of Grocers' Associations. These Associations are limited to retail grocers only and are estimated to comprise a membership of about 20,000 only. On the wholesale side there are various Wholesale Associations throughout the localities of the kingdom, most of which are now federated in the National Federation of Wholesale Produce Merchants, but the number of wholesalers included in the Wholesale Federations again is estimated at not more than 20,000. The great Multiple Shop Companies have a Multiple Shop Association, but this comprises only the main firms and the membership is trivial in number. The result is that so far as the employers side of the Grocery trade is concerned, there are only approximately one-third of the employers comprised in any organisation.

So far as the workers are concerned, on the Co-operative side there was, prior to the institution of the Grocery Trade Board, only the Amalgamated Union of Co-operative Employees, which is stated to have comprised 80 per cent. of the workers in the Co-operative Movement. The Co-operative Movement has, it is estimated about forty thousand distributive workers in the Grocery section. Let it be assumed, therefore, that these are all comprised in the A.U.C.E. The only other union in the Grocery trade on the retail side which was of material importance was the Shop Assistants' Union, whose total membership at the present time, according to their published reports, is approximately 100,000, but their membership extends to all distributive trades and not Grocery alone, and in a Labour journal they are estimated to comprise not more than 10 per cent. of the workers in the distributive trades. It is a generous estimate, therefore, to assume that they comprise 40,000 grocery workers. On the wholesale side the union whom the employers have been mainly brought into touch with is the General Workers' Union, which again is a very general union and extends to many other trades besides the grocery. If it be assumed that they have 20,000 members directly in the Grocery trade, the estimate is probably generous. The result is that of the workers in the Grocery trade, approximately only 100,000 or about 30 per cent., are comprised in any Trade Union whatever, and taking the whole of the trade, the Shop Assistants' Union, in particular, standing alone, does not comprise more than one-sixth at the utmost of the workers in the trade. A curious result of this is (as will be hereafter seen) that by the institution of a Trade Board the whole of the trade is ruled by the organised minority of 30 per cent., the remaining 70 per cent. being outside the various organisations. The membership of all organisations, moreover, is unevenly distributed throughout the kingdom, but the greater number of members are resident in the industrial centres; and the workers' and employers'

Unions in the rural and country areas have only a meagre membership and possibly in some districts none at all, so that various districts are probably wholly unrepresented on the Trade Board.

State of trade prior to Trade Board.

7. Prior to the Trade Board, the trade throughout the entire country was comparatively peaceful and harmonious, with the exception of the Co-operative Movement, in which several strikes had occurred. With that exception, there had been practically no disturbance in the trade and no labour unrest except in the districts of South Wales, the Cleveland Mining District, Liverpool, North Staffs, Manchester, Birmingham and Newcastle, and in these districts, with the assistance of the Unions (whose good services require to be acknowledged), strikes and trouble had been avoided. Apart, possibly, from some black sheep employers, throughout the bulk of the trade wages had been, broadly speaking, advanced proportionately to the increase in the cost of living, though not doubtless so much as many workers would desire. It is expressly to be noted that, speaking of geographical area, quite seven-eighths of the country was in industrial harmony so far as the Grocery trade is concerned.

Institution of the Board.

8. The application of the Trade Boards Acts to the distributive trades was first publicly mooted at a meeting held at the Ministry of Labour about February, 1919, to discuss the formation of one Trade Board for all the distributive trades, and the Press statement of the meeting was the first notification received by some of the chief bodies in the Grocery trade. The formation of one omnibus Board for all distributive trades was desired by the Trade Unions, who were appreciative of the difficulties set out in paragraph 4 above, but was keenly disputed by the various employers; but it was ultimately ruled that as under the Statutes the power of the Minister was only to set up a separate Board for each separate trade (the idea of the Statutes being to give each trade autonomy within itself), he had no power to set up an omnibus Board for several trades (as this would render each trade subject to the power and interference of outside persons), and therefore the institution of one omnibus Board fell through, and the Minister proceeded to institute separate Boards for the separate trades. Note expressly, however that this was solely and exclusively an arbitrary decision of the Minister. No employers in any distributive trade had made any application whatever for a Trade Board, and the reasons for its institution were never communicated to the employers. The Grocery Board, in particular, was arbitrarily imposed upon the Grocery trade against their wish.

Cause of Institution.

9. It is understood that the action of the Minister was founded upon *ex-parte* representations made by the Shop Assistants' Union to him, but those representations were never submitted to the employers, and they never had any opportunity of considering their accuracy, and it was idle and impossible for them to attempt to resist the imposition of the Board, because under the 1918 Act the Minister is empowered to set up a Trade Board in any trade in which he is of opinion that no adequate machinery exists for the effective regulation of wages throughout the trade (Section 1, 1918 Act); and it is clear (as shown above) that there was no such organisation in the Grocery trade.

Effect of Board's Institution.

10. The effects, however, are these, viz.:—(a) At the application of one Trade Union representing not more than one-sixth of the workers in the trade, and

9 November, 1921.]

MR. MICHAEL FREDERICK CARHILL.

[Continued.]

by reason of unverified statements made by that Union, a Trade Board has been imposed upon the Grocery and Provision trade without their consent; and at the instance of a representative claiming to represent 40,000 workers, the lives and earnings of at least 400,000 persons have been thrown into a dispute which did not previously exist, and which the great majority of them did not desire. (b) Whereas prior to the Trade Board the trade had industrial peace in seven-eighths of the country and unrest only in one-eighth, now, at the instance of the one-eighth, the unrest has, by force of law, been compulsorily extended to the seven-eighths. The entire country has been thrown into turmoil, and the question of wages and hours and conditions of labour have been compulsorily made the subject of an obligatory and fresh dispute between employer and worker throughout England. The institution of the Trade Board, *ipso facto*, manufactured the very labour trouble which its formation was no doubt desired to avoid. (c) As a further effect, preparation has necessarily been attempted to be made to meet the increase in wages which the Board have proposed as "minimum" wages, and this has necessitated the closing of some shops and the discharge of many employees, and all this takes place at a time when, as stated in the Journal of the Shop Assistants' Union for 15th October, 1921, page 717, "it is only too true to say that never before was unemployment so great among shop and warehouse workers as it is to-day." Ample evidence in support of this paragraph is to be found in the 2,843 objections lodged with the Grocery Board since its institution; but the employers in the trade are helpless to remedy the effects mentioned or to prevent further dismissals because they are saddled with the Trade Board.

Legal Reason for the Board.

11. It is not as if the trade were a sweated trade. It never has been a sweated trade, and there is not the slightest likeness or comparison between workers in the Grocery trade and the home workers, outworkers, etc., engaged in the Tailoring and other sweated trades for which Trade Boards were instituted under the 1909 Statute. The operations of the trade are carried on wholly in public; its retail shops are visited by the public daily; they are subject to inspection under the Shops Acts, and by Food and Sanitary Inspectors, and the nature and conditions of employment of the assistants are well known. The occupation of a shop assistant is, in fact, a pleasant occupation. On the wholesale side substantially similar conditions prevail, and the warehouses are subject to inspection by the Authorities. The customary hours of employment on the wholesale side vary from 46 to 52 per week, and on the retail side the average hours are 52 to 56 per week, notwithstanding that the maximum hours fixed by law for all juvenile workers are no less than 74. Wages have been in accordance with all other distributive trades, and they have been substantially advanced by the great bulk, if not the whole of the trade, to correspond with the increase during recent years in the cost of living. If there had been any suggestion of sweating, the trade might easily have been brought under the Trade Boards Act, 1909, as a sweated trade, but no such attempt was made. It is, therefore, clear that the Grocery trade is not a sweated trade under the 1909 Act. The only reason why the Board was imposed upon the Grocery trade was the fact that in the opinion of the Minister "there is no adequate machinery existing for the effective regulation of wages throughout the trade" (Section 1 of the 1918 Act).

Defect of 1918 Statute.

12. Surely, however, a Trade Board representing a form of collective bargaining can only be successful where a trade is sufficiently organised to *assimilate*

and accept a Trade Board as a part of its organisation? All Trade Union experience confirms this, and where any Trade Board may have had any measure of success, it is submitted that it will be found to be due largely to this reason. Unorganised trades, *ex hypothesi*, in which no machinery exists for the effective regulation of wages are obviously without experience in collective bargaining, and therefore necessarily proportionately unfitted for the exceedingly difficult task of fixing wages upon a national basis. It seems extraordinary, therefore, that the 1918 Statute should have made the very lack of organisation which unfits a trade for the task, the very reason why they must undertake it. Surely it is clear from the experience during the War that the fixing of wages upon a national basis is not a task to be thrown upon unorganised trades or traders? While it may be true that where no sufficient organisation existed for fixing wages, such lack of organisation might possibly be made good by the formation of a Trade Board, a Trade Board can only exist where there is sufficient organisation and willingness to work it. It must be *suius* to the trade if it is to succeed, and if the gravest difficulties are to be avoided, there must be somewhere in the trade the requisite knowledge and ability and willingness (free of remuneration and at a personal loss and inconvenience) to settle wages for the kingdom on a large scale. It is submitted that no Trade Board should ever be set up in any trade unless that trade is sufficiently organised to receive and accept it, and that the best test of whether the trade is so organised is the application of the trade for the institution of a Board. Except for sweated trades no Trade Board should, it is submitted, be entertained or set up except upon the application of both employers and workers, and then only provided the application be made by bodies truly representative of the different sections of both workers and employers and comprising, in number, at least one-half of the employers and one-half of the workers.

Discussion of Trade Board Principle.

13. As we are now dealing with the institution of Trade Boards, it seems proper that we should offer our views as to their principle, and this we proceed to do as follows:—

In view of the evil effects caused by the Trade Board in the Grocery trade, there ought to be great advantages to outweigh those effects, but the Employers' Side are not able at present to see what those advantages are. The advantages usually claimed for these Trade Boards are three—(a) that they put an end to sweating; (b) that they prevent strikes; (c) that they place all employers on a level. The first of these claims is very doubtful, and the last two are directly contrary to the fact.

Sweating.

- (a) The Grocery trade is not concerned with sweating, as it is not and never has been a sweated trade. When, however, it is alleged that sweating is prevented by a Trade Board, it is necessary to remark that this has never been proved. Sweated workers are composed of the weak and more or less incompetent workers. The only effect of a Trade Board is to make a legal Order fixing a rate of wages. The result of that has been (*vide* R. H. Tawney's Works on the Tailoring Trade Board, the Chain-making Trade Board, and the Box-making Trade Board, and Mr. and Mrs. Sydney Webb, in "Industrial Democracy") to cause the employers to choose their workers more carefully, and to see that they get value for the higher wage which they are compelled to pay. It may be true that under Trade Board enforcement new and higher wages are

9 November, 1921.]

MR. MICHAEL FREDERICK CAHILL.

[Continued.]

being paid, but the fact seems to be that they are being paid to different and higher class workers worthy of the money in question. The net result of the humanitarian efforts to abolish sweating, therefore, has possibly been to throw the sweated workers out of employment. In other words, it has simply been a question of the survival of the fittest.

Strikes.

- (b) It is alleged that Trade Boards prevent strikes, but no proof has ever been attempted on this point. It seems to the Grocery employers that what is really important is not the Board or persons by whom a wages Order is made, but the actual Order itself. The fact that wages may be fixed by a National Conference, Cabinet Council, a Joint Industrial Council, or a Trade Board, is not material. What really matters is the actual Award. If workers are satisfied, nothing is heard; if they are dissatisfied, then they express their dissatisfaction by strike or in such other manner as they please. Experience shows in this respect that a decision of a Trade Board is of no greater sanctity than any other decision. In point of fact, the decisions of Trade Boards have themselves been a prolific source of strikes by reason of the grave discrepancies in wages to which they give rise. So far, therefore, from preventing strikes, Trade Boards have themselves caused numerous strikes. This is conclusively shown by the great number of strikes which have occurred in Australia on this very ground, *vide*, for instance, H. M. Murphy, Secretary to the Department of Labour, Melbourne, in his work in 1917 on *Wages and Prices in Australia*, page 56, where he expressly says:—"As long as we have separate tribunals, wages boards, and courts of arbitration throughout Australia it is inevitable that the wide powers which they possess for fixing wages high or low as they please will be used in such a way that wide divergencies in wages will occur. These divergencies, in some cases resulting in one man getting in the vicinity of double the amount of another doing similar work, have been, in my opinion, a most fruitful source of strikes." At page 44 he says: "The hostility of trade unions against piece work payment has been so great that strikes have occurred against it and the strike method of attempting to prevent piece payment by force has even been employed in trades where the tribunal has fixed prices and so legalised piece payment." Again, at page 51 he speaks of Australia having topped the world's records in strikes. If it be true that in England there have been no strikes under the eleven Trade Boards created under the 1909 Act, it would appear to follow that the workers were satisfied with the Awards made by their Trade Boards, which is not to be wondered at, as prior to the exceptional circumstances recently existing, those wages were uniformly steadily in an upward direction.

Undercutting of Employers.

- (c) it has been asserted that the effect of a Trade Board is to place all employers on a level. This claim, in turn, appears wholly invalid. Experience shows that the moment the Trade Board proposals become operative, the Unions immediately agitate for

higher wages from the better employers on the ground that those fixed by the Trade Board are minimum rates, and this very thing is happening at the present time in the Grocery trade. Moreover, even if wages were fixed at standard rates, it would still depend entirely upon what Order the Trade Board made whether this equalisation of competition amongst employers took place, and it will be found that the Orders made by the Trade Boards upon the pressure of the Appointed Members frequently fail to secure to the employers this advantage. This is especially so with regard to the proposals of the English Grocery Boards and the areas set out by them. Most wages settlements have substantially gone upon the principle that all employers competing for the same market shall be compelled to pay at least the same minimum wages, but this principle is wholly disregarded in the Grocery Board proposals, because the same areas are prescribed for the wholesale and for the retail trade. The interest, however, of the wholesalers as regards area is directly opposed to that of the retailers as the wholesalers' competitors are spread over a wide area, while the retailer's competitors are limited to a few miles from his shop.

Trade Board Principle.

14. As the extension of Trade Boards to all trades in the country is proposed (Mr. Humbert Wolfe, at the Ministry of Labour, on 20th October, 1920, foreshadowed no less than 200), the Grocery employers feel bound to offer their evidence on such proposal, so far as their present experience extends; and having also made enquiry on the subject elsewhere, they feel justified in referring the Committee to authoritative criticisms of the result of the Trade Board system elsewhere, with a view to the Committee enquiring whether similar defects or weaknesses exist here, and what protection or defence may exist against them.

15. First with regard to the Grocery trade:—

Smaller Employers driven from business.

- (a) The institution of the Board and its proposals will drive out of business many of the smaller and middle employers, many of them being in fact ex-Service men, and widows of ex-Service men endeavouring to earn a livelihood by keeping on their deceased husband's shop, or in some cases preserve their business for his young son. Others are elderly men, others are disabled men who only require to employ assistants because of the loss of a limb or other war injuries. We do not understand why these men and women employers have not as good a right to earn their living as anybody else; but there is no legal provision in the Trade Boards Acts enabling them to pay lesser wages than those prescribed, where the assistants are willing (as they are) to work for less. Instances of this class of case are to be found in the objections addressed to the Board.

Slow workers dismissed.

- (b) There are very many workers in this trade (as in every other) who, while not physically or mentally defective, are nevertheless dull or slow and not so bright as their fellows, and are paid a living wage, but not so high as a more efficient workers. These are now being dismissed in some cases

9 November, 1921.]

MR. MICHAEL FREDERICK CAHILL.

[Continued.]

not worth the wages proposed by the Board. This may, in the judgment of our superiors, be a proper thing, but we fail to understand why these workers in turn are to be prevented from earning their living within the limited measure of their ability or weakness as the case may be. They are completely outside the permit system existing under the Acts.

Late entrants excluded from trade.

- (c) Owing to the practice of Trade Boards to fix wages by reference to age, it will be very difficult for newcomers to enter the trade at a later age, as they will not be worth the prescribed wage as beginners, and will be prevented by law from being paid less.

Unfairness of definition.

- (d) By reason of the necessarily defective definition of the scope of the trade contained in our Trade Board Order, the continued existence of the Grocery Board or the enactment of its proposals will be productive of unfair competition within the trade, with consequent financial difficulty to the traders affected. The scope and extent of this difficulty we are unable at present to estimate; but we are decidedly clear that the operation of the Grocery Board and its proposals should be completely suspended until this defect is removed and until our competitors and competing traders are also brought under a Trade Board.

Closing hours of small shops.

- (e) Provision should be made fixing the same closing hours for small shops employing no assistants, as for the rest of the trade. Otherwise the proposals of the Board with their declaration of a 48 hour week and overtime pay thereafter will place the other retailers at a still greater disadvantage to these small shops than at present. The workers are at one with us in this view, as it is the long hours of these small shops which in many cases necessitate the longer keeping open of other shops where assistants are employed.

Secrecy of Board.

- (f) The proceedings of the Board (as of all Boards) have hitherto been secret and the Press have not been present. This privacy is essential if any decision is ever to be come to upon the Board, but it is totally impossible to expect that 400,000 people will perpetually be content to have their lives interfered with by a secret body representing not more than 30 per cent. of their number without being aware of the reasons for their action. Yet, if the Press are admitted and reports of the proceedings are published, as in some countries, such publicity, it is considered, cannot tend to industrial harmony in the trade.

General effect of Trade Boards.

16. Next, with regard to the general effect on the country of the institution of these Trade Boards, we desire to call the attention of the Committee to the following opinions of H. M. Murphy, the Secretary of Labour at Melbourne, in his (1917) work on Wages and Prices in Australia, and we respectfully suggest that these published opinions of a gentleman of such high authority afford matter of serious inquiry here:—

Unemployment.

- (a) *First with regard to unemployment:*

The Secretary of Labour writes (page 45):—"Many workers have lost their places through being below the standard. When minimum wage fixing was first proposed it was said that to insist on a minimum wage involved forcing the employer to insist on a standard capacity in the worker and as minimums were fixed all workers below the average would be discharged. The experience of the Labour Department shows that this argument was well founded. The inelastic minimum wage does not fit the slow and the fast worker alike, employers will not keep slow men while they can get faster ones, and so the law has pushed many slow workers out of employment. With piece payment, which fits all workers, fast, average or slow, this would not have happened."

Strikes.

- (b) *Next with regard to strikes:*

The Secretary of Labour affirms (page 56) that the system of Trade Boards produces divergent awards of wages which are a most fruitful source of strikes, and he considers these divergent awards inevitable. It seems to us that the extension of the system here must also inevitably lead to the same result, because the decisions of a trade Board (as we have found) depend upon a thousand and one things other than the value of the work and they necessarily differ. The decision depends very much upon the strength of the evidence and case made out; on the course of bargaining between the sides, one thing being traded for another, or the interests of one locality (say Cornwall) being sacrificed for the benefit of other parts of the country; or because of the pressure of the Appointed Members, or of the rest of the side in question; or for fear of worse things befalling, or the chance of the voting, the character of the representatives on each side, the fortune of the debate, informal and unbinding assurances given by representatives of either party as to the interpretation to be placed upon the Boards Order, the profits of the particular trade, the profits of some trades being greater than others; or the times in that trade possibly more favourable; the circumstances in the locality or several localities where the majority of either side carry on business; the ease with which any increased wage must be passed on to the public; the individual interests or lack of interest of members of the Board; the cost of living, etc. The decision of the respective Boards, therefore, even if consistent with themselves, are necessarily frequently inconsistent with each other. In the case, for instance, of a porter, what difference does it make to him whether he trundles draperies or cheese? Yet the wage fixed by the Wholesale Tailoring Board for Great Britain for a porter is 54s., and by the Grocery Board is, for England, 48s. to 56s. 6d. according to locality, and for Scotland is 47s. to 52s. according to locality, and, of course, other comparisons may be made with other Boards and other workers.

Industrial Training Discouraged.

- (c) With regard to apprenticeship and industrial training, the extension of which was so

9 November, 1921.]

Mr. MICHAEL FREDERICK CAHILL.

[Continued.]

great a cause of the enactment here of the Education Act, 1918, the Secretary of Labour speaks as follows:—

"One of the most serious consequences of our laws is to be found in the fact that the skilled worker is not encouraged. A comparison of rates of pay shows that the unskilled in some trades are paid more than skilled in others, and in all trades the pay of each class is so near to being equal that there is little inducement for the increase in skill and knowledge which under other conditions the worker might aim at. The inducement for a young worker to spend his time at a Technical School is his ambition to command a higher wage. Our labour tribunals have failed to provide that inducement. The adolescent worker sees ahead of him as much or almost as much pay if he spends his evenings at the picture shows as at the working men's college. He is more likely to choose the easier way than to face the work and deprivation involved in the effort to become a highly skilled artisan. As time has passed the tendency of the tribunals to make only slight difference in the skilled worker has become rather more marked than otherwise."

Similarly, the English Ministry of Labour in "Labour Overseas," December, 1920 (Vol. 1, No. 2, page 1) writes as follows:—"Efforts to popularise apprenticeship and the training of juveniles for skilled work are being made in South Africa, in France, and in Denmark. As the wage of unskilled labour tends to approximate more closely to that of skilled workers, the incentive to embark on a long course of training becomes weaker. The problem first became acute in Australasia as the result of the fixing of a basic minimum wage; it has developed in Europe with the general rise of prices owing to the necessity of paying a living wage to all workers and the difficulty of paying much more to the efficient."

It seems curious that H.M. Government should pass the Education Act, 1918, to encourage industrial training, and in the same Session pass a Statute (the Trade Boards Act, 1918) the effect of which, by the publications of their own Ministry of Labour, is to weaken industrial training.

Cost of Living.

- (d) Finally with regard to the *Cost of Living*, the Secretary of Labour writes as follows:—

"When tribunals for fixing wages were first set up it was with the idea that the employers would pay the wages granted. It was never dreamt that Courts or Boards could give the workers higher pay out of the pockets of others than the employers, yet this is what has happened. At first every request for a rise in the current rates of wages was bitterly fought. Employers talked of being ruined, and having to close their businesses on account of increases in their employees' pay. As experience ripened, however, employers in certain trades found an easy way out of their difficulties, and found, too, in many cases, that it returned them more than they gave. The discovery was the process known as 'passing it on.' . . . That means that the employers can, by slightly raising the retail price of the article, recoup themselves for the extra wages

paid. . . . The worker does not know it, but he is playing the employers' game, for the obvious effect of passing it on is higher cost of living. The employer, in fixing the higher price of his article, cannot exactly pass it on. He cannot fix an extra cost which will return him no more and no less than the extra cost in wages. Therefore he fixes on an increase which will give him a margin on the right side. . . . The proposition amounts to something like this: The employees say: Why should you oppose the advance in wages we are asking for? It will not cost you anything. All you have to do is to pass it on by an increase in the retail price and the public will pay, not you. The employer accedes to this proposal and plays the benefactor by allowing the rise in wages to be carried. In due time he raises his prices and in return for his friendly acquiescence extracts from the pockets of the public not only a reimbursement of the extra wages, but also something more into the bargain." (*Wage Wages in Australia*, p. 27.)

Again, at page 1 he writes:—

"In practice regard is had almost solely to the cost of living. Cost of living goes up, the employees go to the Wages Board and wages are raised. Evidence is not seriously gone into as to how the higher wages are to be found, but it is generally assumed that the cost will be passed on to the consumer by means of an increase in the cost of the article dealt in. The process of raising wages has become almost mechanical in recent years, and during the period of about 20 years that Australia has had Labour laws, the trend has been always upward. No tribunal has yet lowered wages."

The Employers' Side feel that a grave danger is here suggested as possibly arising from the extension of the Trade Boards Acts to the distributive trades. Many of the Employers' Side of the Board were much engaged with the Ministry of Food during the Food Control, and they were witnesses as members of numerous Committees of the extreme anxiety of H.M. Government to reduce the cost of living, which it is rightly considered is at the very root of all industrial trouble to-day, and they respectfully marvel that at the very time when, by means of fixing prices and by Food Control Orders, and by Agricultural and Fisheries subsidies, the Government were doing their utmost to reduce the cost of living, the power to nullify and undo their work by unduly inflating wages was placed in the hands of a Trade Board open to all the difficulties and dangers set out in this evidence. Had the original demands of the Trade Union on the Grocery Trade Board been acceded in full, the employers estimate that they would have added upwards of 50 millions a year to the cost of living, and therefore have sent up the cost of living figures more than six points. Proportionate results in other distributive trades may follow unless wages are wisely regulated. The gravity of this suggestion will be readily appreciated by the Committee. The employers consider that the better policy of both employers and workers to-day is not to inflate wages to correspond with the increased cost of living, but to reduce the cost of living so that greater value may be obtained for the wages.

9 November, 1921.]

Mr. MICHAEL FREDERICK CAHILL.

[Continued.]

The employers suggest that Trade Boards act only in the direction of increase. When they increase wages the employers are compelled by law to pay; when they reduce wages the reduction is nullified by trade union action.

Principle Impossible to Continue.

Finally, on page 80, the Secretary of Labour writes as follows:—

"In Australia we have tried one of the boldest and most remarkable experiments in legislation known to history, in the enactments for the fixing and enforcement by law of a minimum time wage for workers. Experience has shown such serious defects in this legislation and such dangerous possible consequences that it is permissible to believe that the breaking point is approaching. It seems impossible to go on as we are doing indefinitely. Our experimental laws in this connection are regarded in many quarters as having nearly run their course," etc., and he goes on to suggest a system of profit sharing to take their place.

Trade Union Extension.

- (b) A further result of the Board is to encourage all workers to become members of a Trade Union; and ultimately this must inevitably be the case if Trade Boards are to continue. We are aware that owing to the policy of the Whitley Council Committee and other causes, there seems to be a predominance of expert opinion in favour of compelling all employers and all workers to join Unions respectively, and this idea seems to be based upon the expectation that it will secure the authority of the Unions on the side of industrial peace, but, as stated by the Secretary of Labour, they have had ample experience in Australia of the futility of such authority as a strike preventer, and he gives instances in support of his view.

Personnel of the Grocery Trade Board.

17. Turning now to the personnel of the Grocery and Provision Trade Board, it is understood that both workers' and employers' representatives were appointed upon the nomination of Trade Unions and Employers' Associations, and the Appointed Members by the Ministry of Labour. The Appointed Members are as follows:—

- (1) Professor L. T. Hobhouse, D.Litt., Chairman, Professor of Economics at the London School of Economics, Author of the following Works:—
Development and Purpose, Philosophy and Evolution.
Social Evolution and Political Theory.
Questions of War and Peace.
Mind in Evolution.
The World in Conflict.
The Material Culture and Social Institutions.
Metaphysical Theory of the State.
Theory and Knowledge.
Democracy and Reaction.
Labour Movement.
Liberalism.
Morals in Evolution.
- (2) Mr. W. Addington Willis, LL.B., Barrister-at-Law, and Author of various legal works, including one on Trade Boards.
- (3) Professor Knoop, of Sheffield University, Author of Outlines of Railway Economics,

Principles and Practice of Municipal Trading, and American Business Enterprise.

- (4) Professor E. A. Lewis, of the University of Wales, Aberystwith, Author of Medieval Boroughs of Snowdonia.
- (5) Miss A. V. Gordon, of Nottingham.

The Employers' Side comprises representatives of the following organisations, namely, nine of the National Federation of Wholesale Produce Merchants, Manchester; two representatives of the Bakery and Allied Traders' Association, Eastcheap; one of the Wholesale Distributors' Association, London; eleven of the Federation of Grocers' Associations; three of the United Kingdom Multiple Shop Proprietors (the great Multiple Companies); four representatives of the Parliamentary Committee of the Co-operative Congress; one of the Incorporated Association of Retail Distributors (which comprises the great London and other Departmental Stores); five of the National Chamber of Trade, and one of the Wholesale Tea Federation.

The Workers' Side consists mainly of Trade Union representatives by whom the work on the Board, so far as the Workers' Side is concerned, is exclusively conducted. So far as we can trace, the Workers' Side comprises one representative of the Amalgamated Union of Carters and Motormen, Leeds; one of the National Union of Clerks; one of the United Kingdom Commercial Travellers' Association; six of the Amalgamated Union of Co-operative and Commercial Employees and Allied Workers (now understood to be merged in the National Union of Distributive and Allied Workers); one of the Dock, Wharf, Riverside and General Workers' Union; one of the National Union of General Workers; one of the Journeymen Butchers' Federation; 18 of the National Amalgamated Union of Shop Assistants, Warehousemen and Clerks; one of the United Vehicle Workers; one of the National Union of Vehicle Workers; two of the National Warehouse and General Workers' Union; one of the Workers' Union; one of the National Federation of Women Workers; and three workers chosen to represent all employees not comprised in any Union. Of these Unions the employers do not understand the appointment of representatives of the Carters' and Vehicle and Transport Unions, as prior to the Institution of the Board the trade generally had nothing to do with them. They were concerned only with those few employers who had an independent transport of their own. The sale of butchers' meat is only carried on by comparatively few grocers, and the Journeymen Butchers' Federation has not been brought into contact with the trade otherwise. The United Kingdom Commercial Travellers' Association was a necessary appointment in consequence of the strange inclusion of Commercial Travellers in the scope of the Board. The General Workers' Union have been met only on the wholesale side of the trade and not to any great extent. The main and most important Unions in the trade are the Shop Assistants' Union, which deals with both wholesale and retail, but rather more with retail, and the Co-operative Employees' Union, which, prior to its recent change, devoted its activities almost exclusively to the Co-operative Wholesale and Retail Trading Societies. The National Federation of Women Workers is unfamiliar to the employers. As before stated, the main Unions of importance to the trade are the Shop Assistants' Union and the Co-operative Employees' Union, and their representatives—Mr. J. Turner, General Secretary of the Shop Assistants' Union and a member of the Trade Union Council, and Mr. J. Hallsworth, General Secretary of the Co-operative Union, and N.U.D.A.W.—are the workers' spokesmen and leaders on the Board.

The employers' representatives were appointed by the Minister on the nomination of the Employers' Associations on account of their knowledge of the trade, and with a view to their fitness to act upon the Board. It is particularly to be noted that, except

9 November, 1921.]

MR. MICHAEL FREDERICK CAHILL.

[Continued.]

by accident, there was no professional or other representation of any kind on the part of the Employers' Side, although their Secretary accidentally happens to be a solicitor. It is to be noted, also, that representation was accorded to the Co-operative Movement, which is a body of generous working-class employers governed mainly by Trade Unionists of the working class. On the other side, the representatives of the workers comprise many Trade Union advocates experienced for many years in the advocacy of wages questions, and possessing also experience on other Trade Boards, and with many years' study of the Labour Movement and of Labour difficulties of every kind. In other words, trained and experienced Trade Union advocates with knowledge of other Trade Boards and of conspicuous ability, accustomed to the ready and accurate formulation of their thoughts on wages subjects, and possessing the most complete knowledge of labour problems, aided and backed by the Labour Research Bureau, and all the records of the excellent Labour Organisation of the kingdom were placed upon the Board to meet a body of employers in an *unorganised* trade who had no knowledge or experience of Trade Boards and had never before met together as a side, and who had not necessarily had any experience in dealing with wages except with their own staff, or with their own localities. The seriousness of this is increased by the fact that employers are not entitled as of right to any professional assistance; and it is submitted that, if Trade Boards are to continue, full information and guidance as to their procedure and the evidence required thereon should be previously afforded both to workers and employers, and both sides should be entitled as of right to have professional assistance.

Professional assistance necessary but not desirable.

18. It would appear from the foregoing that if Trade Boards are to continue and are to be applied to unorganised trades, then the very lack of organisation on either side renders it essential that either side shall be able to employ, if they so desire, expert professional assistance, so as to make up for the defective organisation existing. These questions of wages, especially upon Trade Boards, necessitate on the part of the professional advocate a considerable quantity of work. They necessarily involve a study of economics, knowledge of law, an ability of advocacy, and, furthermore, a constant study and acquaintance not only with the Orders of other Trade Boards, but also with all Trade Unions claims and negotiations not only throughout the trade, but also throughout the other trades in the kingdom, and a continual keeping up to date with all labour problems, Government publications and labour questions, both here and abroad, if the experienced and skilled advocates of the Labour party are to be faced on equal terms. In New South Wales the foregoing considerations have, we understand, led to this advocacy before Trade Boards and Courts of Industrial Arbitration, forming a department of legal work and books are issued for the guidance of lawyers to qualify in practice before that Court, and to qualify in advocacy upon Trade Boards. There appears a considerable opening for lawyers in this respect. Nonetheless, if such intimate and important questions as wages are to become a matter for lawyers to argue, on Trade Boards, it seems to us that the result cannot possibly be beneficial to trade, but must be deleterious and harmful to a degree. Our uniform and lifelong experience leads us to the considered judgment that the less trade has to do with law or lawyers the better it is and the more likely to be more harmoniously conducted. If the Trade Board system is to be extended, as provided by the 1918 Act, there is, however, no alternative that we can see to the Australian system and the increase and extension of lawyers' work indicated.

Appointed Members.

19. The institution of Appointed Members appears inexpedient. They are ignorant of the trade, and

their presence induces the workers to put forward claims of a highly extravagant nature, presuming upon the ignorance or sympathy of the Appointed Members. Then, when the employers make an offer, sometimes they are told to make their utmost offer immediately and not to go through any tedious process of bargaining, with the result that they may make their highest offer at the start, and the Appointed Members nearly always split the difference, with the result that that tends to become true in practice which is now commonly stated around London, namely, that a Trade Board is an institution where workers ask for three times what they are entitled to and get two-thirds of their excessive demand. It would be far better that employers and workers alone should sit upon these Boards, with the assistance only of an independent chairman without voting power, who could act as a conciliator, and that the decisions when come to by agreement between employers and workers shall be given legal effect to in the same way as in the Agricultural Conciliation Committees recently instituted. If, however, Appointed Members must continue, it is respectfully suggested that both the workers and employers should be consulted in the nomination of the Appointed Members, so that, if possible, they may be appointed by agreement of the sides. It is suggested that the Chairman or Vice-Chairman should preferably be a lawyer of recognised status, so as to have the benefit of the judicial mind.

Operations of the Board.

20. In order to show the operation of the Board, we give the following short statement of the proceedings on the Grocery Board to date:—

On the Grocery Trade Board the Employers' Side met for the first time on the 21st July, 1920, the date of the first meeting of the Board. They were wholly without experience of any Trade Board whatever, and were in ignorance of the procedure upon the same, contrary to the workers, various of whose representatives sit upon other Trade Boards and are fully experienced in the procedure and practice. The proceedings opened with a slight address by the Chairman, and claims were put forward by the workers, which are hereafter dealt with. The Employers' Side looked for guidance from the Appointed Members in what manner the enormous task of fixing wages for the whole of the kingdom should be accomplished, but no guidance was forthcoming. The workers merely clamoured for their enormous demands, hereinafter referred to, and were totally indifferent as to the manner in which their demands should be met, caring nothing about the adjustment of the burden to the individual shoulders, merely clamouring for payment of their wages demands, and caring nothing where the money was to come from, which they said was the business of the Employers alone. The employers' idea was that on entering upon a task of such magnitude the only way in which it would be undertaken was by means of District Trade Committees, who would know the local conditions and the local differences in every area, and be able to advise the Board with reasonable authority what rates of wages the various areas were able to stand, but the formation of District Trade Committees was with the consent of the employers in deference to the Chairman of the Board ruled by him as premature. The employers anticipated, however, bringing up the question later because they understand it is one of the objects of the Board to improve the organisation of the employers and employees respectively, so that ultimately the Trade Board may be superseded by a Whitley Council, and if District Trade Committees are set up, as might be done, based upon the foundation of the District Grocers' Associations throughout the country, they hoped that the complete organisation and binding together of the employers of the trade might be commenced. The Chairman, however, pressed the Board immediately to proceed to fix wages for the main classes of workers in the trade, leaving all other questions in abeyance for the moment, the

9 November, 1921.]

Mr. MICHAEL FREDERICK CAHILL.

[Continued.]

matter being regarded by him as urgent. The employers, therefore, felt that as the Appointed Members had the casting vote it was incumbent upon them to fall into line with the views of the Chairman. The demands of the workers had not been formulated prior to the Board; they were presented to the employers' side on the afternoon of the first day of the meeting, as to part, and as to further part, on the following day. These demands are hereinafter referred to. The rest of the Board meeting was devoted to speeches by the workers and the meeting closed in a slightly heated manner, after three days discussion. The next Board meeting was held on the 24th 25th and 26th August, 1920, when further demands were put forward by the workers. The employers put forward a counter offer dealing first, in accordance with the views of the Appointed Members, with the main classes of workers in the trade. Those classes were, on the wholesale side, all workers engaged in warehouses, and, on the retail side, all workers engaged in shops; the employers' classification being (1) Warehouse workers, (2) Shop Assistants. Much discussion ensued upon the employers' counter offer and the Board meeting was ultimately adjourned. The next meeting took place on the 28th, 29th and 30th September. The question of classification of workers was particularly dealt with. The employers understood that the workers were dealing with all classes of warehouse workers upon the basis of their classification, but that the workers were not satisfied with the name "warehouse worker" which the employers desired to use, and the workers wanted to substitute the name "porter" with a definition of the duties. The employers never understood that the workers meant merely to deal with some of the warehouse workers only but thought all along that what they were dealing with was the great bulk of the workers in the warehouses and not merely a part of them. The workers, on the other hand, as it has subsequently appeared, intended to deal only with the labouring and unskilled workers to whom they applied the term "porter," although the words in the definition are, in the employers' view, sufficiently wide to include the great bulk of workers in the warehouses. The misunderstanding appears to have arisen in the course of negotiation, and it has never been cleared up. On the 28th September the Appointed Members sent for representatives of the employers and intimated that the matter must be brought to a head and that they were going to put their votes up for auction to either side, the votes to be cast in favour of which ever side would come nearest to the views of the Appointed Members. This being so, the employers were placed in a dilemma of accepting something they did not want for fear of worse, and the employers side decided to accept the Appointed Members' views subject to certain amendments which the Appointed Members agreed. This being so, the views of the Appointed Members, as backed by the employers, were carried against the workers. The next meeting of the Board took place on the 27th and 28th October, when the question came up what wages were to be fixed for women porters and women shop assistants, and inasmuch as the men's rates had been settled by the vote of the Board, an agreement was arrived at through the Appointed Members, between the two sides, and the women's rates were accordingly fixed by agreement, but it has to be borne in mind that the agreement in question was a most peculiar agreement and it is very questionable in the minds of the employers whether any agreement of any Trade Board is really an agreement at all seeing that whatever agreement is entered into, it is merely the necessary and compulsory result of the position in which each side is placed by law. There was nothing voluntary about the agreement at all. In other words, they were compelled to agree voluntarily instead of having a voluntary agreement. The Board next met on the 17th and 18th November, when, after discussion, rates were proposed for male and female clerks, and male and female cash desk workers, which were carried by the vote of the Appointed

Members and the employers against the workers. A long discussion subsequently ensued on the question of the definition of warehousemen and their classification. The proposals of the Board as to porters, shop assistants, clerks and cash desk workers were advertised, and no less than 2,648 objections were lodged, which are hereafter dealt with. The next meeting of the Board took place on January 11th, 12th and 13th, 1921, when the discussion as to classification of warehouse workers was resumed. The employers considered that they had already fixed a minimum in the porters' rates for the lowest grade of the warehouse staff, but the workers desired that all warehouse workers other than porters should be given the same wages as those of shop assistants, and they wanted special rates of wages proposed not only for head warehousemen, foremen and chargehands, but also for mealers and storemen in bacon drying, and curers in bacon curing, boners, rollers, and cutters. The employers felt that it was quite impossible to have distinctions created by law in the Grocery trade which did not correspond with the distinctions existing in fact; neither could the employers see where the process of dividing up and creating differences and distinctions, not now existing, was going to end, as it was quite impossible to take each one of the operations in the warehouse and say that workers performing those operations formed a separate class, inasmuch as the workers are at present general workers and turn their hands to several operations as they may be directed. The next meeting took place on the 2nd and 3rd February, 1921, when the objections to the advertised rates were discussed. Imagine the astonishment of the employers' side then to be told that although objections had been advertised for for two months at much expense, and although an individual copy of the Board's proposals had been sent by post to 133,000 employers asking for objections, the Legal Adviser of the Ministry of Labour had ruled that the Board could not pay any attention to these objections or make any material alteration in the wages without abandoning the whole of the proposals and issuing fresh proposals based upon the objections, which fresh proposals in turn would have to be readvertised for a further two months as before. This is a grave flaw in the Trade Board procedure, as at present constituted. The Employers' Side of the Grocery Board consider that it is perfectly ridiculous to advertise for objections if the Trade Board cannot give full effect to the objections if it wishes, and they think that the Trade Board should have the fullest power in this respect. Ultimately an agreement was arrived at between the employers and the Appointed Members, by which certain alterations were agreed in the proposals, and these alterations were carried by the vote of the Appointed Members against the workers. By agreement, however, between the Appointed Members and the Employers' Side it was agreed that if the Minister of Labour should not be able legally to confirm the alterations, the Appointed Members were no longer to be bound to the Employers' Side, but that the Board was then to revert to the same position as on the morning of February 2nd, and would have to resume discussion of all objections received to the original proposals *de novo*. The altered proposals were then sent to the Minister of Labour for confirmation. He was unfortunately advised that it was impossible for him legally to confirm at once the altered proposals as a whole. He intimated, however, that he could confirm a part at once, and the other part after readvertisement. At the next Board meeting, however, on March 9th and March 10th, the Appointed Members took up the attitude that they could accept the confirmable part of the proposals and could alter afresh the portion of the proposals of which the confirmation had to be deferred. To this the Employers' Side strongly objected, saying, as the fact was, that the alterations made on the 2nd February had only been agreed by compromise amongst themselves and must be taken as a whole, and that the alterations which could not now

9 November, 1921.]

MR. MICHAEL FREDERICK CAHILL.

{Continued.

be confirmed were the price which the employers had received for passing the portion of the proposals which could be confirmed. The altered proposals remained a part of the original bargain, and the Appointed Members could not fairly take the benefit of a part of that bargain without accepting the burden of the other part. The Appointed Members did not share this view, with the result that the Employers' Side withdrew in a body from the Board and appealed to the Minister, who took the same view as the Employers' Side and referred all proposals back to the Board. No further meeting of the Board was held until the 18th and 19th May. By that time the cost of living had fallen from 161 on the 30th September, when the porters' and shop assistants' rates were first resolved upon, to 128 on the 18th May. Grave falls had occurred in the markets, heavy losses had fallen upon the trade, and strong representations had been made to the Employers' Side, in view of the altered circumstances, the rates proposed nearly eight months before were now unfair. The Employers' Side accordingly moved that all advertised proposals should be withdrawn and fresh proposals should be issued, reduced in accordance with the fall in the cost of living, but this proposal was rejected by the votes of the Appointed Members and the workers. The workers then moved that the Board confirm the confirmable portion of the original advertised proposals and send them back to the Minister for confirmation, and this was carried by the votes of the Appointed Members against the employers. Consciously or unconsciously, the effect of this was that instead of looking at the actual present position, the Board (which is really the Appointed Members) were really adhering to their previous attitude, notwithstanding the Minister's action, and thus again the Appointed Members were in fact taking the benefit of the agreement with the employers without the burden. The Board met again on the 31st May and the 1st June, when the rates for clerks and cash desk workers were considered, but here again, in view of the extraordinary conditions then prevailing, the unstable and falling markets and the depression in trade, it was impossible for the employers to accept the originally proposed clerks' rates, but inasmuch as the proposals for porters and shop assistants were basic rates and had been confirmed by the Board, the employers were unable to put forward any reasonable figure in substitution the original clerks' proposals without proposing figures out of proportion to those already passed for porters and shop assistants. The clerks' rates were therefore confirmed against the employers and sent forward to the Minister of Labour, to whom the employers accordingly appealed for non-confirmation of all rates by reason of the extraordinary change in circumstances which had taken place since September, 1920, nine months before. The Minister, after consideration, decided to send back the rates to the Board for reconsideration. The next meeting of the Board took place in July, 1921, and was adjourned until 18th/19th August, 1921, when fresh reduced proposals (print herewith) were arrived at and sent for advertisement by agreement between all parties. It is, however, to be understood that although nobody dissented from these proposals, they were in no sense whatever a voluntary agreement on the part of anybody. On the contrary, on the Workers' Side, they were, it is understood, only obtained by considerable pressure from the workers' leaders. Many of the workers disagreed with them. Similarly, on the Employers' Side, there was not even a pretence amongst themselves that the proposals did justice to the whole of the country; on the contrary, the proposals were regarded as most harmful and injurious by the rural representatives, and particularly so as regards Cornwall, Devon and Somerset, which counties, owing to circumstances, are stated to be totally unable to pay the proposed rates of wages, but in deference to the views of the rest of the Employers' Side, the representatives of Devon, Cornwall, Somerset, Cumberland and Westmorland on the Board did not press their objection to the rates to a vote, but they expressly

stated to the Employers' Side that although they did not go to a vote at the request of the rest of the employers, they reserved the fullest liberty and intended to inform the Minister of Labour of the exact situation and that Cornwall and the other counties in question could not pay the proposals of the Board, even although they might pass into law, the rates of wages being totally beyond their ability, and Cornwall in particular being quite bankrupt in consequence of the closing of the mines and the failure of the fishing industry, which are the Cornish staple industries.

Minimum Wage: Average Minimum at date of Board.

21. At the institution of the Board grocery wages varied widely. There was no standard wage anywhere, and there was no uniformity of wage at all except in so far as provided by the trivial number of agreements entered into with the Unions for a few towns of the country. No particulars are available of the wages in agricultural areas, but, broadly speaking, in rural areas, the wages are understood substantially to have followed the agricultural rates of wages, the rise in which naturally compelled the local wages to correspond. It may reasonably be assumed, therefore, that in July, 1920, broadly speaking, the wages of adult assistants in rural areas averaged, men about 45s., women about 38s. on the average. Certainly this corresponds with the information given to the Employers' Side. The average wages in urban districts, boroughs, mining districts and towns also followed the prevailing wages of the respective localities, which respectively depended upon the wages obtainable in other local industries. The figures obtained by the employers show that there was a wide discrepancy in these wages both in different localities and in the same town, but the employers estimated the prevailing lowest average on the figures supplied to them at, men 50s., women 35s. In the chief industrial centres of London, Manchester, &c., the average lowest wage was about 60s. men, and women ranged about 35s. to 38s. These were average estimates; the wages in all areas varying with the different employers, some employers in each area paying more and others less, and these figures were for the *lowest grade workers*. This statement is based on the information obtained by the Employers' Side, but much difficulty was experienced in getting it, and many refusals were experienced, people not understanding the object of the request, being unwilling to inform their competitors and ignorant and distrustful of the Trade Board, which was and is looked upon as a bureaucratic pest; but, broadly and generally speaking, these were the average actual figures prevailing in the trade at the institution of the Board. Agreements had been entered into in various localities with the Union for standard wages in various towns and with different firms; these varied widely according to area, in Manchester 72s. 6d. being agreed for experienced assistants and clerks age 26; 65s. for porters; women assistants, 49s., age 28; women porters, 40s., age 25; in Plymouth the corresponding wages being assistants at age 28, male, 59s. 6d.; women, 47s. 6d.; porters, aged 28, male, 55s.; women, 43s. 6d.; general clerks at 21, male, 43s.; female, 34s. 6d. Wages were widely varying in these agreements, and these are fair instances respectively of high and low agreements; there are lower agreements with individual firms, but hardly any higher. Wages in the Co-operative Movement were for adult male assistants, 72s. at 21, rising to 80s. at 23; women at 21, 50s.; clerks, male, 72s. at 21, to 84s. 6d. at 23; women, 54s. at 22; adult warehousemen, 77s. at 22; porters, male, 72s. at 21. These figures show the wages level at July, 1920, the institution of the Board.

The Shop Assistants' Union has had a national minimum wage campaign for many years. The national minimum wage demand at Easter, 1919, asked for a minimum wage of 45s. for a male shop

9 November, 1921.]

Mr. MICHAEL FREDERICK CAHILL.

[Continued.]

assistant at 21, rising to 65s. at age 28, with 5s. extra for London. At the Easter meeting of 1920 the scale was increased to 65s. for a male assistant at 21, rising to 80s. at age 26, with 10s. extra for London, and this national demand of 1920 was persisted in by the Union continuously; and on the morning of the 20th July, the day before the first meeting of the Grocery Trade Board, a letter was received by a member of the Employers' Side pressing a claim for this 1920 minimum wage demand of 65s. at 21 and 80s. at 26.

Union's Demand at Board.

22. The Workers' Side of the Trade Board met for the first time in the afternoon of the 20th July. The Board meeting was held on the morning of the 21st July, and in the afternoon of the same day, the 21st July, a minimum wage demand was put forward for the lowest workers in the Grocery trade, males 90s. per week at 21, females 72s. at 21. Porters at 21, 5s. a week less. Or, in other words, there was asked as a minimum for the lowest grade worker 13s. to 18s. a week (male) and 22s. a week (female) more than the standard wage agreed for experienced workers with the Co-operative Movement, a body of generous working-class employers. But this was not all. Claims were put forward on the following day for what are known as first counter men, 5s. to 10s. a week above the 90s.; branch shop managers, £6 per week up to £100 turnover, and 1s. for every £10 above £100 per week turnover. Supervisors and shop walkers, £6 per week; inspectors, £8 per week; commercial travellers, £10 per week, plus expenses; canvassers, £5 10s. per week, plus out-of-pocket expenses; warehouse charge hands, 5s. to 10s. a week above the 90s.; the charge hand to receive £5 10s. per week; bacon boners, rollers and cutters to be paid £5 per week; head warehousemen and foremen, £6 per week; vehicle workers' minimum wages to be according to the demands made by the Central Council for the Transport Industry; overtime rates to be in addition to the foregoing. Claims were made for clerks at a later date—male at 25, 95s.; women, 75s.

It is to be noted that the claims paid were vastly in excess of the Union's National Minimum Wage demand set out above, and demanded from one employer on the morning of the 20th July. That is to say, that in one night the demands of the workers and the minimum living wage which they required had gone up by 25s. per week at age 21; and these wages were required for every part of the country, whether rural village or Metropolis, though it was intimated they would be willing to accept more in the Metropolis and in the large industrial centres. After the most strenuous discussion on all sides, lasting for nine whole days, the minimum wages were ultimately fixed by the Appointed Members, for male shop assistants at 25, 70s. in London, 58s. in rural areas under 5,000 population, and 68s. in the rest of the country; and minimum wages were fixed for female shop assistants at 24, at 47s. in London, 39s. in rural districts under 5,000, and 45s. the rest of the country. Clerks, male, at 25, 74s. in London, 62s. in rural areas, and 72s. the rest of the country, with corresponding rates for female clerks at 24 being 50s., 42s. and 48s. The wages were fixed according to age, increase being automatically given with each year, irrespective of the fact that the wages were not conditional in any way on experience, so that a worker coming in at age 19 would have the same minimum as one who had had five years' experience. Subsequently, in June, 1921, as will have been noticed above, although the cost of living figure had fallen 42 points, these minima, fixed nine months before, were still compulsorily thrust upon the employers by the workers and Appointed Members, and it was only by the appeal to the Minister of Labour and by his firm and impartial attitude that the employers succeeded, in August, 1921, in obtaining a small reduction in them. From the information given above it will be noticed that so far from being mini-

ma rates of wages, they are really in effect standard rates of wages.

Principles of Minimum Wage.

23. No reasons were, as a rule, given by the Appointed Members for their views; but two principles were expressed, touching the amount of the wages, in the course of discussion, viz.:-

- (1) That the wage fixed must be a living wage sufficient to provide a girl at 18 with independent maintenance and to enable a man at 21 to contemplate and prepare for marriage.
- (2) That they had endeavoured to have regard to the capabilities of the least fortunately placed shop in the poorest district of each area, though, unfortunately, this second principle has not been successfully carried out. The question of the value of the work has been wholly subordinated throughout the duration of the Board to the first of these principles, so that it follows that if the worker is not worth the money fixed his dismissal is made certain. It is respectfully submitted that principles should be laid down by which the Board is to be guided in fixing wages. If an individual is injured by accident there are voluminous rules laid down by the Courts for estimating the compensation due to be paid to him. If such rules are laid down for the purpose of a single case, how much more important is it that corresponding rules shall be laid down for the adequate payment of 400,000 workers? The principles upon which a minimum wage ought to be fixed are a matter for the Committee, but it is respectfully suggested that no better principle can be found than that laid down by the Industrial Court in March, 1920, that the remuneration of the various classes of workpeople should in ordinary circumstances depend on the value of the work done, and the value of the work done depends upon the state of the market and the demand for the products of the workpeople.

Necessity of Limit of Wages.

24. The Committee will have observed the high demands of the Union on the formation of the Board and the hasty manner in which those demands had been framed, and it is submitted that such demands are quite beyond any suggestion of a minimum wage, and are certainly not demands for the prevention of sweating. It cannot under any circumstances be seriously suggested that under the plea of sweating avoidance it is necessary to fix wages for the lowest grade worker in each class ranging from £234 to £520 per annum:—Commercial travellers, £10 a week, plus expenses; £8 a week for inspectors; £6 for shopwalkers, etc. Such demands the employers submit are, or should be, wholly outside the scope of a Trade Board, as also a scale for managers in the distributive trades (considered by the Union, but not hitherto put forward on the Board), rising as high as £1,200 a year. It is earnestly submitted that a statutory limit should be placed upon the operations of all Trade Boards, and that they shall be prohibited from fixing wages for any person beyond a specified limit. What that limit should be is ready to their hand. It cannot be suggested that persons liable to pay income tax are sweated, and it must be assumed that £135, the exemption limit, is an unsweated annual wage, so that the Board should be prohibited from fixing wages for any person over £135 per annum. In fixing such a statutory limit the Legislature would be doing no more than following its own practice hitherto in all cases affecting workers, there being an income limit already in the Workmen's Compensation and Health Insurance, and an analogous limit of rent (and therefore income) in the

9 November, 1921.]

Mr. MICHAEL FREDERICK CAHILL.

[Continued.]

Housing of the Working Classes Acts, the Housing and Town Planning Act, and the Increase of Rent Acts. Moreover, such a limit would go to mitigate the irremediable defect in Trade Board legislation mentioned in the following clause.

Co-ordination necessary but impossible.

25. At the present time the powers of a Trade Board to fix wages are wholly unfettered and unlimited, and it may fix wages on any scale, high or low, which it pleases. This being so, it is quite inevitable that the decisions of the various Boards will be uneven and inconsistent with each other, and there is no means of co-ordinating their decisions, with the result that it is inevitable that so far from promoting industrial peace, the Trade Boards will merely result in providing new and additional sources of dispute between employer and worker, with consequent unrest on either side. This is confirmed by the experience of Australia, as stated by the Secretary of Labour for Victoria, who writes, on page 18 of his said work, as follows:—

"Without doubt, the surest and shortest way to cause trouble from strikes is to fix disproportionate wages. If the legislatures which passed our Australian Labour Laws, setting up different tribunals for wage fixing, had realised this, it is hardly believable that they would have neglected to set measures and bounds to guide and limit the process."

It seems to him that nothing could be more certain to happen when we set up a large number of tribunals who work entirely without relation each one to any of the others, than disproportionate scales of wages, but no means of co-ordinating their decisions has been found, and he considers that no practicable and successful scheme of co-ordination can be found, which opinion is respectfully submitted to the Committee as correct. While the English Boards were few in number and under the chairmanship of one Chairman only, this difficulty was largely avoided, and possibly the various Appointed Members have by frequent consultation managed to evade it further; but it will be impossible to avoid it when the proposed 200 additional Boards are functioning, even if it be practicable (which it is not) to find a sufficient supply of Appointed Members to conduct them.

District Trade Committees.

26. It will be seen from the foregoing that the proposals of the Grocery Board provide a new cause of trouble in the trade (which has already fructified) in the definition of a Porter and the different views of the classification of workers proposed owing to variations of local usage. The difficulty is increased by the Scottish Grocery Board using the same name in a different meaning. As the same areas alike are prescribed for both wholesale and retail, the operation of the rates will work unevenly and unfairly on the retailers. The areas selected, while probably the best that a Central Board could select, provide anomalies in operation which can only be settled by District Trade Committees. In particular, rural districts and towns under 10,000 in population outside the Metropolitan Police District are subject to the lowest rate of wages proposed by the Trade Board, but similar towns situate within the Metropolitan district are subject to the higher wage, some 10s. a week higher. Uxbridge, on the border of the Metropolitan district, seems to be partly in each of the three areas proposed by the Grocery Board. A 48 hour week in the retail trade is in some localities inadequate for public needs. The hours should be settled in every district by that district. In the rural districts and smaller towns, and particularly in Cornwall, a county which is under the most exceptional depression at present, it is wholly impossible for the body of the trade even to pay the present proposed rates of wages. The South Wales district, impoverished and reduced by the coal strike, with many traders having parted with their stocks of food for Miners' Federation pledges at

present irredeemable, is in substantially the same position. From Devon, Somerset, Cumberland, Westmorland comes the same cry of inability to pay; the rates unfortunately mean in the present depressed circumstances an increase in wages in a great part of the country, and the burden is rendered heavier by the order to pay overtime after 48 hours; whereas the retailers' usual week is 52 to 56 hours. In the circumstances the employers think it impossible to work the Board without District Trade Committees, as they originally contemplated. The trade is not ripe for a national settlement of wages; they can hardly yet be said to have reached the stage of district settlements, as it is only in a few districts that district settlements have been arrived at, and the employers generally in the remainder of the country, before they can walk in a national settlement, must first be taught to negotiate district settlements: but the Employers' Side has been informed that district committees are impracticable. They are told that experience on other Boards shows that District Trade Committees only lead to varying and conflicting decisions over each area which are not consistent with the decisions in adjoining areas, and very seldom are consistent with the views or opinions of the Trade Board, with the result that there is a clashing and conflict between the Trade Board and its own District Committees, with the result that unless it is settled to the satisfaction of the District Committee, the District Committee resigns and there is an end to the District Committee; even if the District Committee does report, inasmuch as its powers are advisory only, and the ultimate decision rests with the Trade Board itself, neither side is disposed upon a District Committee to reveal its strength or to make any concession for the purpose of making an agreed decision on the District Committee. There would not be any object in doing so, as any such concession might be more usefully brought into play in the negotiations upon the Central Board. Experience, therefore, it is stated, shows that where District Committees are appointed, and it is essential that a decision shall be come to, District Trade Committees invariably make two decisions (1) that of the employers, (2) that of the workers, and send the matter back to the Central Board. There seems, therefore, to be a deadlock.

27. Finally, it remains to deal with administrative matters, as follows:—

(a) *Side Voting:—*

At the present time the voting is quite independent, but the workers always vote as a unanimous body; the result is that the interests of the whole of the trade may be placed in jeopardy by the vote of any single employer. This is not considered fair, and it is suggested that where a two-thirds majority are in favour of any particular vote, then the views of such majority should represent, *ipso facto*, the views of the side and be put forward as the vote of the side. Application was made by us to the Ministry of Labour for this method of side voting, but it was refused.

(b) *Nature of the Board and necessity for Court of Appeal:—*

It is clear from the foregoing that a Trade Board is simply a Court of compulsory Arbitration, in respect of those decisions which are arrived at by the vote of the Appointed Members, and that in respect of those decisions which are arrived at by the mockery of an agreement referred to above, the Board is really a Court of Conciliation. The ideal stated so frequently in the Press of employers and workers sitting round a table to settle their mutual difference is unfounded in fact, as it is not a meeting of employers and workers at all; it is merely a meeting of employers and Trade Union officials at which some workers act mainly as spectators. Putting it shortly, the Trade Board is nothing more than a Law Court to fix wages, and it is submitted, having regard to past economic history, that the

9 November, 1921.]

Mr. MICHAEL FREDERICK CAHILL.

[Continued.]

fixing of wages by law is not likely to prove any more successful in the future than in the past. In any case, the only remedy at present existing in the event of an unfair decision is an appeal to the Minister of Labour, who is thus compelled to undertake all the functions of a Court of Appeal and is necessarily brought into conflict with both sides of the Trade Boards alternately. It is suggested that that is not a position in which a Minister of the Crown should be placed, and that if the Trade Boards must continue, there should be a properly established Court of Appeal (which might conveniently be the Industrial Court) and that the power of confirming rates of wages should accordingly be transferred from the Minister to the Industrial Court and left solely in their hands.

(c) *Objections to Proposals:—*

(a) It is thought that objectors should be entitled to be heard by the Trade Board, if they so require, in support of any objection which they may lodge with the Board: and

(b) It is considered that the Trade Board should have complete power to deal with all objections received to its proposals, and should be able to give complete effect to those objections in any way, either up or down, without the necessity of re-advertising the proposals.

(d) *Enforcement:—*

The existing Inspectorate is wholly and totally inadequate, and it is not even suggested that it is adequate for the enforcement of the Orders of Trade Boards, but unless the Orders are uniformly enforced injustice is done. It is suggested that each Trade Board should be able to instruct and employ a Solicitor at the public expense to enforce its Orders. It would be a simple and inexpensive matter if several Trade Boards had one Solicitor between them, who might travel throughout the country during the intervals of the Board's meetings and prosecute offenders freely in large batches at each of the towns through which he passed. It is perfectly true that there would be many cases in which a decision of the Magistrates would be against the Trade Board, but this is inevitable.

(e) *Interpretation of Board's Order:—*

If any doubt is felt as to the legal interpretation of any Order of the Board, it is suggested that power should be given to the Trade Board to go direct to a Judge of the High Court for a decision upon the point, in the same manner as the Public Trustee is now authorised to go to the Court for guidance upon questions affecting Trusts under his control. At the present time the Minister of Labour gives advice gratuitously to the public, interpreting the Board's Orders. This is considered a wrong practice. No such course is followed with regard to other Statutes, and the practice appears harmful. If the applicant is advised that he is outside the Board's Order, something has been given away for nothing; if he is told that he is within the Order, the question is unnecessary. The decisions, moreover, are arrived at by *ex-parte* statements made by the applicant to the Minister of Labour, and the question is therefore decided upon interested statements probably made with a view to obtaining a letter of exemption or a letter which can be used before the Magistrates to mitigate a penalty.

(f) *Exemptions:—*

It is suggested that workers over 50 years of age should be outside the Trade Boards Act altogether, without the necessity of requiring permits at all. In any case, inasmuch as a permit is required by the worker to obtain employment, it should be applied for by him alone without the necessity of the employer's concurrence, but while in existence the permit should be handed to the employer for custody,

so that he may be protected from penalties by its production. If the employer is to apply for permits, he will usually prefer not to employ the worker rather than bother to obtain a permit, which would only be for a limited period, and require renewal from time to time. Moreover, it is bad to employ these subnormal workers with a permit without further trouble, inasmuch as such employment will probably lead to an accusation that the employer is employing sweated labour by permission of the Authorities. There is a danger also of conditions attached to such permits being overlooked.

(g) *Duration of Wage:—*

If the Boards are to continue, then it is submitted that the wage during the present unstable circumstances should be able to be altered much more speedily than as permitted by the present Statutes, and that it would be better that the duration of any Order of the Board should be wholly left to the discretion of the Board.

Suspension of Grocery Proposals Requested Pending Enquiry.

Finally, in view of the reasons set out in the foregoing statements, and in view of the fact that the whole situation concerning Trade Boards is now under review by the Committee, it is earnestly submitted that the Committee should recommend the Minister of Labour to postpone any decision on the Grocery Board's present proposals until the Committee has made its report and some measure of financial stability has been restored.

1262. *Chairman:* You come here to give evidence on behalf of the employers' side of the Grocery and Provision Trade Board?—Yes.

1263. I think your statement has been approved in advance by the majority of your side?—That is so. I ought, I think, at the very outset to make quite clear that the reason why we put in here "Given pursuant to a resolution of the majority of the side" was because our Co-operative friends, who also sit upon the employers' side of the Trade Board, have had no part or parcel whatever in this evidence.

1264. Are the others unanimous about the evidence?—The majority are in favour of this evidence. With regard to the evidence in general they are all unanimous, but there is some dissension amongst us as to whether or not we want a Trade Board at all, or whether we want a Trade Board with amendment. We all think that we do not want the present Trade Board as at present working under the present law at all; but when it comes to considering whether we want a Trade Board with amendment or not, then a large number of us would be perfectly willing to give the thing a fair trial, but there is a number of people also who do not want a Trade Board at all, either with or without amendment.

1265. Your Trade Board was formed, I think, in June, 1920?—That is so. Before, however, you proceed to take me through the evidence, the employers' side would like me to make a short preliminary statement, if I may. The employers' side would wish, this being a public occasion, first of all to acknowledge gratefully the very fair and impartial manner in which they have been treated by the Minister of Labour, and the great courtesy and assistance which they have received from his officials. Secondly, they would wish to dissociate themselves entirely from the vituperation of Trade Boards which has appeared in the public Press, and, in particular, from the attacks upon the Trade Boards office. We have found the organisation of the Trade Board office and its staff to be exceedingly efficient, and we should like publicly to recognise it. Then, thirdly, we should like to take this opportunity of paying a tribute of respect and goodwill to the representatives of the workers upon our Board. We have found that the more we know them the better our impressions are; and, so far as I personally am concerned, I think they will understand that, in giving this evidence, I do so as part of my duty to the employers' side, and as a further duty to the Committee in the public interest.

9 November, 1921.]

Mr. MICHAEL FREDERICK CAHILL.

[Continued.]

1266. Yours, I think, is a large Board?—It comprises 83 members. It is composed of 39 employers, 39 representatives of workers, and 5 appointed members.

1267. You yourself are a member of the Multiple Shops' Association, are you not?—I am in the employment of the Multiple Shops' Association. This evidence is not given on behalf of that Association, neither are they connected with it in any way. I give the evidence as Secretary to the employers' side, as a member of the Board, and as having had some years experience of the trade, although I myself am a Solicitor, as a matter of fact.

1268. Your Board deals with the Grocery and Provisions trade?—That is so.

1269. I think it is described at greater length in the order constituting the Board?—That is so, and that forms one of the greatest difficulties and objections which we have to the Trade Board, because when you once touch the Grocery and Provisions trade you immediately touch a large distributive trade; and owing to the way in which trade is conducted in this country you cannot touch one distributive trade fairly, without at the same time touching all distributive trades. Throughout the course of history in the trade practice and custom the articles sold by various distributive trades are so similar, and the various trades are so interlaced and interwoven that you cannot apply a Trade Board to any one of them fairly without at the same time applying the Trade Board to all. That, therefore, forms a very unfair treatment of the Grocery and Provisions trade because we find that large numbers of our competitors are excluded from our order, and therefore we are placed under a handicap with regard to them. Moreover, if I may press the matter further, it works out in this way, that these distributive trades are recruited very largely as regards the female side from those who would be domestic servants, and the result which we feel deeply is that if you are going to apply the Trade Board system to the distributive trades, that is tantamount to applying, and it necessarily follows that it means applying the Trade Board system to the whole of the nation. The problem of the distributive trades is to fix a minimum wage for the entire nation. Whatever wages are fixed in the distributive trades will automatically have an effect upon the wages of domestic servants who largely form our recruits. That will have a further effect upon the wages of domestic servants, and throughout the entire country you will have a direct and immediate effect of proceeding from the application of the Trade Boards system to the distributive trades.

1270. In the main, however, yours is a food trade?—Yes.

1271. In the main you deal with home-grown food, and I see you put the value of that yearly as £300,000,000?—That comes from the Census of Production of 1906.

1272. And as regards the imported food?—That comes from the Customs returns.

1273. That is £700,000,000?—Yes.

1274. The number of persons affected by the decision of the Board you estimate at 600,000?—The employers' side estimate the number at 600,000, and we arrive at that in this manner, that the Trade Boards Office has to have an official list of all employers affected, and the number of employers upon that list is 133,000, speaking of England and Wales alone.

1275. That is a known figure?—That is a known figure. In point of fact it is an inaccurate figure, because they have not kept figures of all employers by any means; the list that they have was compiled by the Ministry of Food, and it comprises only the list made up by the Ministry of Food: it does not comprise all persons who come within the scope of the Order.

1276. You think the figure should be larger?—I think the figure should be larger.

1277. What do you say with regard to the number of workers?—We estimate the workers at 400,000. They are unofficially estimated at 250,000.

1278. By whom?—By the Ministry of Labour officials. I got that figure from them in the course of discussion some months ago. Would you like me to justify my estimate of 400,000? I have the census figures.

1279. Yes, if you will let us have them I think it would be as well?—Taking the 1911 census in the grocery and allied trades, there were 192,552 males and 61,326 females. Those figures are, however, below the mark, because they do not precisely fit in with the definition of the trade comprised in our Trade Board Order. If you will refer to paragraph 3 of our Trade Board Order, you will find that it is not only grocery and provisions as scheduled which are subject to the Order, but the sale of all other articles as well, provided the main business is grocery and provisions within the scope of the Order. The result is that other trades, or rather trades known by other names, will also be largely affected, and numbers of the workers will be comprised within our Board. I have the census figures for the following trades: Bakery salesmen, 43,691 males, 66,242 females—

1280. Do you include all those?—No, I am giving you the figures, and I take a proportion of them; that is all. Corn chandlers, 17,946 males, 2,222 females. It may appear strange that I mention those, but they are undoubtedly within the Order to a large extent, and we have had objections to our proposed wages from the Association of Retail Corn Chandlers. Next come fishmongers, poultryers and game dealers.

1281. You have a long list, I expect?—Yes, I have a very long list.

1282. Perhaps we might take the total?—I think you may take it as fairly correct. I ought to mention one thing, however, and that is that during the war we had no less than 128,000 women coming into the trade extra, after allowing for the number of men who had gone to the war. I take those figures from Cd. 9164 of 1919. A large number of women must since then have gone, of course.

1283. What is the total number of those allied trades?—Something like 500,000 or 600,000.

1284. What proportion of them do you take as being the grocery trade?—That we are not able to estimate, but we think it is a fair estimate to say that if you take the census figures for the grocery and allied trades as 192,552 males and 61,326 females, and add on 128,000 women extra, then whatever proportion you add for those other trades it would need a very small proportion only to bring it up to 400,000.

1285. You take in some of the other distributive trades?—Yes, but those figures, of course, do not include the transport workers. With regard to transport workers, the trade unions themselves estimate that the number of transport workers in the distributive trades would be 20 per cent. extra. If you put it at 10 per cent. extra it is quite a simple matter if you take all the figures together to arrive at an estimate, and there is no reasonable doubt, I think, that the 400,000 is a reasonable and moderate estimate.

1286. You have been good enough to give us a preliminary statement of what you have to say; perhaps we might take this statement as put in?—If you please.

1287. You propose to deal first with the composition of the Board, its personnel, and the manner of their appointment?—Yes.

1288. The Board, you tell us, represents three interests: first, the private traders, wholesale and retail, secondly, the co-operative movement, and thirdly, the multiple shops?—Yes.

1289. Of course the size of a grocery business varies immensely from a small business in a village up to the great multiple shops in London?—That is so.

1290. You describe to us here the manner in which the small business may grow into a large shop: a man starts his business on a certain scale, and then

9 November, 1921.]

MR. MICHAEL FREDERICK CAHILL.

[Continued.]

he goes on, and in the end he takes in all kinds of businesses, and his business becomes an emporium?—Yes, as was the case with Sir Thomas Lipton.

1291. This is important: some grocers carry on certain manufacturing processes?—Yes, most wholesale grocers do.

1292. What kind of processes do they carry on?—You will find grocers manufacturing their own jams, pickles, sauces, sausages, biscuits and bread.

1293. Those are all food products?—Yes, they are all food products, of course. Incidentally you will notice that I have mentioned that they manufacture jam, which, of course, is already under the Sugar Confectionery and Food Preserving Order. The distributive part of the Sugar Confectionery and Food Preserving Order is now taken away from that Board and placed under the Grocery Board, so that while the rates under the Sugar and Confectionery Order are 54s. for adult men and 32s. for adult women, the distributive part are now having to pay 61s. to adult men under the Grocery Proposals, and 41s., I think it is, to adult women, speaking of London. That will have a peculiar effect in a jam factory, because, if the distributive side receive so much higher wages, that will immediately upset the workers who come under the Jam Board.

1294. Do grocers carry on any other manufacture? Do they make boxes, bags, and so on?—The large firms make tin boxes and paper bags, and are to that extent already under Orders.

1295. Under different Boards, of course?—Yes.

1296. Are the big firms under several Orders?—Yes, the big firms are already under several Orders.

1297. Can you tell us how many, and can you give us an instance of that?—If you take Lipton's, Limited, there are the Paper Bag and Tin Box and the Sugar Confectionery and Food Preserving Orders.

1298. Besides the Grocery?—Yes. I do not know of any other Board under which they are at present, but, of course, according to the intention of the Ministry of Labour they will be subject hereafter as regards certain of their businesses to the Catering and Refreshment Board, the Restaurant Board, the Meat Distributive Trade Board and the Fish, Poultry, Game and Vegetables Board; and I think there are one or two other Boards also proposed under which they will come.

1299. Those Boards, I suppose, fix different rates of wages?—Those Boards which I have just mentioned are not yet constituted, although I have had draft definitions submitted to me by the Ministry of Labour for consideration.

1300. My question referred to the existing Boards: Do they fix different rates of wages?—They do.

1301. So that in the same shop you will have different Boards fixing different rates of wages?—That already exists.

1302. And it will exist in a greater degree if those other Boards are formed?—That is so.

1303. Lord Weir: In some cases for exactly similar work?—I cannot say that. I do not regard tin box making as being the same as paper bag making, by any means. The only point is that if you take a building you may have paper bag making on one floor, tin box making on another, and then of course you have the jam factory in an adjoining building. So far as regards exactly similar work, I think that would apply largely to the labouring and unskilled work.

1304. Chairman: Do they come under more than one Board dealing with distributive trades?—There are only two Boards at present dealing with distributive trades: one is the Fresh Milk Retail Distributive Board, with which we are not concerned, and the other is the Grocery Board.

1305. Sir Arthur Pease: You mentioned other trades as coming within the description of distributive trades, of which you have seen draft definitions: are they distributive trades?—I have received those definitions from the Ministry of Labour.

1306. Are they distributive trades?—The definitions only relate to the distributive sides of those trades.

1307. Chairman: If the Boards are set up you will have many more Distributive Boards than one?—That is so.

1308. I want to understand this statement of yours: You say, "On the side of the workers there are no sharp divisions into classes of workers. Practically the whole of the workers are what may be described as general workers, the reason being that, except in a few highly organised businesses on the wholesale side, there is not sufficient work in any one operation to keep the worker continuously engaged." That, I suppose, is a criticism of the system of fixing different rates for the different kinds of work?—Quite so. It is intended to lead up to the attempt at classification made by the workers upon our Board. We say that you cannot take each individual operation and say that the persons performing that operation represent a separate and distinct class; because they do not. They will be shifted about from one operation to another, and will be engaged in exactly whatever work they are told to do. We were led to that attitude because of the demand put forward upon our Board, and we very particularly wish to keep the grocery trade free of all these sharp trade union distinctions. If I may give you an extravagant instance to show what I mean, a lady might come into a retail shop and ask for a pound of cheese, and then she might want a pound of bacon, and she might be told: "I belong to the Society of Cheese Cutters; you will have to wait until a member of the Amalgamated Union of Bacon Cutters comes in before you can get your pound of bacon." It sounds ridiculous, but there are things existing to-day in the trade union world which appear to my mind equally absurd.

1309. I think we will not enter into a general discussion about the trade union world, but you have here by this proposed order a division into porters, shop assistants and other workers except porters.—That is so.

1310. Is it those two classes which you say run into one another, some men performing both kinds of work?—Shop assistants are a well-defined class, being subject to the Shops Act, and there would not be any practical difficulty in putting those as a separate and distinct class, but trouble arises from a definition of porter in connection with shop assistants and all other workers. The definition of porter as given there when proposed by the Trade Board was understood by the employers to refer to the bulk of the workers in the wholesale warehouses, but it afterwards appeared that the workers did not so understand it. They regarded the name "porter" which originated from them, as applying only to persons of a very rough and unskilled type performing very heavy physical work. But if you take the words of the definition setting out the duties of a porter, they are sufficiently wide to include the great body of workers on the wholesale side, and in addition to that, that definition would also include by implication very many of the other operations not primarily included. That is a very great source of trouble to us, because, you have a definition of a porter upon which both sides have different views. It has, however, already fructified in a series of disputes in the country, and it forms an entirely fresh source of dispute which did not exist in the trade prior to the formation of the Grocery Board.

1311. I see a male porter gets a minimum of 48s.?—You are referring, I think, to the Agricultural Area, Area A, are you not?

1312. Yes, that is it. I was only comparing them. A porter in Area A gets 48s., and more, of course, in Areas B and C?—Yes.

1313. While the shop assistant or other worker gets 51s. in Area A, and bigger sums in Areas B and C?—Yes, rising to 63s.

1314. Does it sometimes happen that the porter and the other worker run into one another, and that a man may be doing both kinds of work?—Yes, and I may perhaps give you an instance of that. Take a bacon washer. Bacon is first of all washed,

9 November, 1921.]

MR. MICHAEL FREDERICK CAHILL.

[Continued.]

then it is meal, covered with pea flour, and then it is put into the stove to be smoked. These men, bacon washers and mealers, regard themselves as skilled workers, and very high rates of wages have been demanded for them by the trade union outside the Board. If you take our definition of a porter, we understood, and we still understand, that those men are included in the definition of porter. If you take our definition of porter, a man who is employed in moving goods, obviously the bacon washer carries the sides of bacon to the trough to wash. Then again a porter is one who is engaged in cleaning, and obviously the washing of the bacon is cleaning it. There you have a clear indication of a bacon washer being undoubtedly within the definition of porter, while at the same time the workers do not agree with that at all.

1315. *Lord Weir*: Were not those difficulties foreseen before you agreed to this?—These difficulties were an incessant source of difference between us almost from the time when the Board started; they have never been settled, and they still exist, and are now fructifying in disputes throughout the country.

1316. *Sir Arthur Pease*: Is bacon washing a skilled job, or is it merely a mechanical operation?—I could not say that it is unskilled, but at the same time it is not skilled.

1317. *Dame Adelaide Anderson*: Is it semi-skilled, perhaps? We might class operations as skilled, semi-skilled, and unskilled.—I am not sure that it would rise quite to that.

1318. *Sir Arthur Pease*: Were these men in fact paid a different wage from that of the ordinary porter before the Board came into operation?—We had no "porter" class before the Trade Board came into operation; the "porter," so-called, really only existed in places like West End Stores; and so far as the trade generally is concerned the name "porter" is an innovation.

1319. *Chairman*: I think you also said that there is some difficulty in deciding whether a man is entirely a wholesaler or entirely a retailer; some men are both wholesaler and retail traders, are they not?—Yes, a great many.

1320. You divide the traders, first into the importers, secondly the great wholesalers, whom you call primary wholesalers, who distribute to the lesser areas of the kingdom and sell to the secondary wholesalers, who are wholesalers on a smaller scale, and the larger retailers. From those wholesalers the goods pass to the retail tradesmen?—Yes, but subject to this, that some people combine all those operations, or one or two of them.

1321. But I suppose most of the importers and the large wholesalers deal in one class of goods, or a few classes of goods; they are specialised to a great extent, are they not?—That is so.

1322. Then as you get lower down the scale you get more multiplication of articles dealt in?—Yes.

1323. Until the retailer deals with everything he can?—Yes.

1324. The retailer, you say, keeps the general stores of the place so far as the poorer classes are concerned?—Quite so.

1325. You say "so far as the poorer classes are concerned, he is, in fact, the larder or cupboard by which they are daily supplied with food." As we know, in some places the small grocer carries on all kinds of businesses; he acts as the baker, baking and selling bread, and he sells other articles as well?—Yes.

1326. Some, I suppose, sell meat?—Some sell Colonial meat. The number of articles which they sell is practically unlimited, and I think it originates largely in the needs of the locality. A man, for instance, might start in a small locality, and as the locality grew he would extend his business.

1327. Some of them even sell tobacco, do they not?—Yes. I went into a shop some time ago, and to my surprise I found that that was the only tobacconist's shop in the place. He was a grocer and provision dealer, a greengrocer and a fruiterer all

together. I have also known haberdashery and hosiery sold at the same kind of shop.

1328. Some carry on a post office business as well, of course?—Yes.

1329. There is some competition, you point out, from street traders?—There is very keen competition from them indeed. They are not subject to anything like the same burdens as the retail grocer is, and we have had many complaints put up by way of objection to our proposals on the ground that some supervision should be extended to these street traders, or some protection should be given to the grocery trade against them.

1330. *Sir Arthur Pease*: They do not come under the Trade Boards Acts at all, do they?—They do not employ anybody, so they are outside all Trade Boards.

1331. *Chairman*: All this leads up to a criticism of the definition of a grocer; is that it?—Yes, it leads up to this, to show that until you bring all other distributive trades under a Trade Board you are handicapping the grocery trade by placing them at a distinct disadvantage as compared with their competitors who are not under a Trade Board; secondly, it shows, or is intended to show, that you cannot touch one distributive trade without at the same time touching all others. One difficulty of the Ministry of Labour originally was whether they ought not to have one Trade Board for all distributive trades, and the grave reasons which made them consider that matter so long all go to show how very right, as I submit, the grocery employers are in this objection.

1332. Your point is that a grocer may sell other things, such as wine, meat and so on, and is subject to a Trade Board, while the butcher and wine merchant are not?—That is so.

1333. Therefore, he is subject to unfair competition?—Yes, the grocer gets a very great deal of competition from dairies, butchers, corn chandlers, Italian warehousemen, oil and colourmen, bakers and confectioners, drapers, fruiterers, and so on.

1334. *Lord Weir*: Why do you call that a handicap?—I call it a handicap because the effect of Trade Boards is not to fix minimum rates of wages at all, but to fix higher and increased wages than those prevailing, and hitherto the wages in distributive trades have all had a relation and a proportion to each other. Now the Grocery Board's proposals are upsetting that relation and proportion, and are putting us upon a higher level while leaving the others at a lower level.

1335. *Mr. Pugh*: Is not that an argument for the extension of the Trade Boards to those trades?—Yes, certainly, if the Trade Board is to continue and to apply to the grocery trade.

1336. It is not an objection to the Trade Boards as such?—Not at all, except in this way: There are three main points in this evidence which I shall submit to you. The first is that if you are going to extend the Trade Board system to the distributive trades you must apply it to all distributive trades, and that will be tantamount to fixing a minimum wage for the entire country. That is one of the greatest difficulties that we have.

1337. I take it you base that argument on the relationship which has hitherto existed between the different distributive trades, and not on the argument that the grocer is now selling wine or ironmongery, or something of that kind. The substance of your case is that it has altered the relationship as between the different distributive trades?—That is one ground, and the other ground is more personal to ourselves: We say, if we have to pay higher wages, let the others do so as well.

1338. *Sir Arthur Pease*: Do you allege that the Trade Board has regulated wages in such a way as to place them above the wages ruling in similar trades?—The different distributive trades all have different rates of profit. I can show you balance sheets showing you the rates of profit which apply to these trades. It is very difficult to answer your question because of the different magnitude of each individual trader. The rates which the Grocery Board have

9 November, 1921.]

Mr. MICHAEL FREDERICK CAHILL.

[Continued.]

proposed will not hurt a large number of employers, but if you take the majority of the employers, take the particular area in which the business is situated, and take the special circumstances in each area, you will find that those rates are provocative of an extreme injustice. I have a comparative statement of the wages in all distributive trades here. The Grocery Trade Board would strike a mean upon the distributive trades as a whole, in my judgment, and I can give you full particulars, if you like.

1339. I gather from what you say that you do not consider the rates unfair as fixed by the Trade Board for certain districts, but they are too high for other districts?—They are too high for some employers in all districts.

1340. Why should not every employer pay the same rates in the same district?—I think the answer is this, that he cannot afford it. You cannot compare a West End emporium with a man in a side street. The West End emporium can afford to pay, and does pay, much higher wages. What you have to ask yourself, I think, is this: Are those small men to continue to live or not? If you bear in mind the way in which these country districts people have been employed hitherto, you will be able to conceive what an enormous alteration the Trade Board system is making. In those districts they are all friends together: A boy grows up, and he goes to the grocer, and the grocer takes him in and gives him whatever he can afford—it may be anything, and in some places it may be nothing—he is simply training the boy; but owing to the neighbourly feeling prevailing, the question of wages has never been regarded on this strict line of efficiency which is necessary under the Trade Board.

1341. Mr. Pugh: Should that type of business settle the standard of wages to be paid in a large trade of this kind?—No, of course not. I am simply pointing out that if you wish to settle wages in distributive trades on the lines of strict efficiency, that is a matter for our superiors; but I am warning you quite frankly what the consequence will be if you do so. I think the consequence will be inevitably that the smaller and middle-class employers will disappear wholly.

1342. What will become of their businesses?—The employees will be dismissed, and the business will be concentrated then in the great firms, who will rapidly extend, and whose trade will increase; but owing to the business being concentrated, naturally there would not be so many employees required as there were before.

1343. Lord Weir: Have you any evidence that has happened?—I can give you direct and positive evidence of that myself. Since the Grocery Board proposals were issued hundreds of the older workers have already been discharged, and I can give you the names and the firms, if you wish. I have heard of dismissals of old employees, and I myself, as Secretary to the Employers' side, have had employers coming up to me from the country, asking me what they are to do. One man in particular came up from the middle of Kent, and he said: "I have a young man of 25 who is rather dull, and I cannot afford to pay him these wages, while I have another man of 19 who is worth three times as much." I said: "Well, if you cannot afford to pay, your only alternative is to dismiss," and I believe the man has been dismissed.

1344. Mr. Pugh: Is not the tendency to larger and more efficient businesses the tendency of progressive industry at the present time, and does it not apply to all industries and all trades equally in which progress has been made?—I do not quite follow what it is that you mean.

1345. You are rather holding that if Trade Board arrangements are made it is going to eliminate the small man?—I think that has been the effect always.

1346. Is not that the tendency of industry generally, and can you say, because it is going to eliminate (shall we say) inefficient businesses that is a reason why you should not apply your Trade Board arrangements?—That is a matter for my superiors, but speaking for the smaller men I should say that it is

a question of the welfare of the country. We are a nation of shopkeepers; is it for the welfare of the country that the smaller traders shall continue to exist, or that business shall be concentrated in the highly efficient and organised firms?

1347. Chairman: All these small men will go to the wall, I suppose; that is what goes on to some extent?—Yes, that is so; they go to the wall.

1348. Dame Adelaide Anderson: Would not the same effect, though perhaps more slowly, be produced by organisation if it grew up in these callings?—I think it would.

1349. Would not some effect of the same kind also follow from imposing a higher standard of life and well being in the works, such as is imposed by the Factory Acts in small businesses?—The Factory Acts only apply to our wholesale warehouses; our retail shops are subject to the Shops Act, and so far as the retail shops are concerned, speaking within the limit of my own experience—I myself have only had about six years' experience in the trade, but I have visited every part of the country, and have visited retail shops throughout—I do not think that taken as a body (I am referring to the better class traders) you could have any material improvement in the conditions prevailing in the retail shops; and the factories are getting better and better the more newly they are erected.

1350. My question was merely directed to suggesting that by other means the same effect might be arrived at as by raising the minimum wage; first by organisation, secondly, as in factories, by a higher standard of safety being imposed?—That would undoubtedly have that effect, but in a slower manner.

1351. Lord Weir: To what extent is it having the effect of putting up the prices of the goods sold by these smaller employers in the smaller towns? Is there any tendency in that way—that as he has to pay higher wages he puts up his prices?—At the present time we have never had a rate in operation, so that I am quite unable to say.

1352. Would you expect that?—I am quite clear that that result must follow subject to two considerations: one is that a large number of employees will be dismissed—the trade is such that a large number can be dispensed with owing to its being intermittent in its nature—and secondly, the effect of higher prices would be mitigated by the keen competition prevailing in the trade already.

1353. Chairman: And also, I suppose, the consumer strikes after a time; if a price is put up too high the consumer comes in?—Yes, of course, that is so.

1354. He says "No. I will do without"?—Yes, that was particularly evidenced during the war when owing to the increase in the price of butter the consumption of butter even after supplies increased, was only one-eighth of what it was before the war.

1355. The trader will pass it on, I suppose, if he can, but there comes a point when the consumer will not stand it?—Exactly.

1356. Mr. Pugh: One would like to follow that up a little. You are rather pleading for the small trader who will employ, say, one or two assistants, I suppose? Let us take the country districts to which, I suppose, you are specially referring, and we will assume two persons employed at this figure of 48s. per week. I do not know what increase that would represent on the rate previously existing; but is it suggested that because he has got to increase his rate to 48s. per week, which is the highest rate of Scale A, the effect of that upon the commodities sold by the grocery and provisions dealer is going to affect his trade, so that he must of necessity get rid of one of the assistants, assuming that there are two one, or of the single assistant assuming that there is only one? That seems to be the direction in which your argument is tending?—That is based upon the large number of objections to that very effect (of which I have a large number here) which were received to our proposals; but apart from that, I should like to mention specially the position of the village grocer. The village grocer not only has to employ hands when his business is of sufficient

9 November, 1921.]

Mr. MICHAEL FREDERICK CAHILL.

[Continued.]

extent, but he has also to have a horse and trap. Owing to the scattered nature of his customers, he has to have his horse and trap to drive round and get orders and deliver goods. To that extent he is in a proportionately harder position than the man in the town. On the other hand, you have also to bear this in mind, which was an experience we found, and which the Ministry of Food found during the war, namely, that these traders in rural and country districts are necessary to the locality in order to keep up the supply of food. When the shortage of food occurred during the war, the wholesalers cut off the supplies to these country shops because the food was needed more at hand, and they could receive the same profit at hand without going to the trouble of sending it further afield. The result was that the Ministry of Food themselves had to undertake to some extent the feeding of these country branches, so that the country districts might have food. These shops in the country are an absolute necessity.

1357. Then being absolutely necessary to the local community, they would hardly object to pay 48s. per week to their people, would they?—I do not think that any employer whatever will object to any rates of wages whatever, provided he can pass them on to the public, and that must inevitably be the result: pass on to the public what you can, and what you cannot, save by discharging labour.

1358. If you pass it on to the public, the public has to pay; that is what it comes to; it comes back on the public in another way?—Yes, that is so with regard to all wages.

1359. *Sir Arthur Pease*: I suppose the turnover in these village shops to which you are referring is very small?—The turnover in these shops varies enormously. There are some shops, according to the objections received by the Board, which will only have a turnover of perhaps £20 to £30 per week, and you will find that such shops as those will only have a village girl or a village boy in to assist, and those are only employed because the proprietor happens to be a very old man or a very old lady. On the other hand, you will find, according to the size of the village and according to the number of people in the neighbourhood, that the turnover of those shops will increase, and you will find them gaining to £200 per week. Then of course when you get to thickly populated areas you will find grocery shops frequently doing a turnover of £400 to £500 a week.

1360. *Mr. Layton*: May we assume that these rates which we have before us have in fact been put into effect to any large extent in anticipation?—Do you mean these rates of wages?

1361. Yes, these Trade Board rates?—A large number of employers, the bigger employers, put the original proposals of the Trade Board into operation, because we gave a pledge upon the Trade Board in October of last year that we would do so, and they were put into operation by a large number of the bigger employers; but if you take the trade as a whole, the majority in number did not put either those rates or any others into operation.

1362. So that the present situation, with the proposal in suspense, is to increase the disparity between the different places to a certain extent?—That is so.

1363. *Mr. Pugh*: Would you suggest that the village shopkeeper should settle what rate should be paid in such a large trade as the Grocery Distributive trade?—No, I should not. Let me take this opportunity of saying at once that on the Trade Board we have not found the workers at all unreasonable. If we will only enter into their minds, we will see the reasons actuating them, and we think those reasons might be met, but they will not be met by a central board; if they are met anyhow they will only be met by having local committees which will meet the local inequalities.

1364. You think that if you had district committees that would assist you in making arrangements suitable to the districts?—Undoubtedly it would if we could have them, but there we are told—and I am afraid the opinion is correct—that they would be

unworkable and impracticable. At the very least—and I am now giving not only my opinion but that of a very experienced wage expert of the United Kingdom—we should want 50 local committees.

1365. *Chairman*: Why 50?—Practically one for each county.

1366. Is that really necessary?—It would be necessary. The variations in traditions, in customs, and the difference in meaning of the names of employees are very numerous. You will find that we are now intruding practically upon the social life of the kingdom, and that the classes of workers and their names and their operations vary very largely in different districts.

1367. Surely there are many counties which you could combine? Is there such an enormous difference between Kent, Surrey and Sussex, for instance, or Devon and Dorset? You surely do not want a Board for each?—You have to bear this in mind, that a very grave difficulty in the way of having local committees at all is the fact that the wholesale trade is included. Local committees will meet the difficulties of the retailers only. Naturally, the operations of the wholesalers extend over several counties, and, of course, the operations of other wholesalers overlap them. The result is that the only possible way of fixing wages really or properly would be to separate the wholesale from the retail entirely.

1368. That is another point—But that, unfortunately, we cannot do, because they are so combined.

1369. Still, that is not an argument for smaller areas, that is an argument for larger areas?—That would be an argument for larger areas, but, of course, the rates fixed for the larger area for the wholesaler would be inapplicable to the smaller retailers in many cases.

1370. If you are going to ask for a committee for every county, you make the thing impossible. I should have thought it might be possible to have district committees for larger districts—to divide the country into eight or ten districts?—I myself think that it would be impossible to do it under at least fifty. The number might be reduced; you could possibly work it down perhaps to forty; I do not know. So far as the trade unions are concerned, they themselves, or rather the Shop Assistants' Union when they started, divided the country up into areas, both Scotland and England, and they divided the country into a whole list of areas, something like 35 areas, and then ultimately they thought that there was very little difference, taking the distributive trades as a whole, which could not be remedied by a uniform increase, and so they made a national demand for the whole of the country with a slight increase for London. Their experience upon the point would no doubt be valuable; but, speaking from the employers' point of view, which has not been regarded at all by the workers—it was not their business—I do not see how we could start with less than 50 committees. The number might be reduced as they grew and as time went on, but to start, at all events, we should want at least fifty.

1371. *Mr. Layton*: May I ask a question upon paragraph 5, if you have passed that. You refer there to an estimate of the effect of an increase of wages of 1s. per week per person, and you suggest that it would, perhaps, mean adding £1,000,000 a year to the food costs of the country. Would you suggest that that is a comparable figure with the figures which you have given in your first paragraph, where you estimate the cost of the food of the country at £1,000,000,000?—We do not deal in all the food of the country; we only deal in a large part, and the figures, I think, coincide exactly.

1372. I was trying to see what proportion the cost of distribution bears to the total value of the food of the country. Have you attempted any estimate of that?—I can only give it, of course, on the basis of my experience; which has mainly been with the multiple shops, but we estimate that the wages on the gross turnover would average about 5 per cent.

1373. *Sir Arthur Pease*: Do you mean the wages in the multiple shops, without going outside the shops?—The wages in the business.

1374. *Mr. Layton*: In the grocery business?—In the grocery business.

9 November, 1921.]

Mr. MICHAEL FREDERICK CAHILL.

[Continued.]

1375. *Sir Arthur Pease*: Plus cartage and all things of that kind?—No.

1376. Not cartage?—No, I mean indoor servants only.

1377. *Mr. Layton*: May I pursue this point a stage further. You quote £300,000,000 as the cost of home-produced food. Is not that on wholesale prices?—Those are figures taken from the Census of Production of 1906.

1378. Prices would be more than double that now?—Clearly, I think.

1379. And you would have to add the cost of retailing?—Yes.

1380. Also you give £700,000,000 as the cost of imported food. That is wholesale?—That is the declared Customs value.

1381. I do not want to misrepresent you, but would it not be reasonable to deduce from what you said about those figures that the value of the food of the country would be nearer £2,000,000,000? I am just throwing out the figure?—Do you mean at the present time?

1382. Yes. I am merely taking it from those figures; I am not suggesting an estimate to you?—That I could not say. I might say that I tried to obtain particulars and figures, but I find that the Customs Returns are impossible of dissection on the lines of our Grocery Trade Board. I tried particularly to see if I could give you some considered estimate even by a Chartered Accountant, but I could not do so.

1383. But we may take it that the wages in the cost of distribution, if I may take your other figure, come to about 5 per cent. of the total value of the product distributed?—I think so—of the total price of the produce distributed.

1384. Yes, and therefore, taking it over the whole country, it is about 5 per cent. of the total cost of the product distributed?—Yes.

1385. *Chairman*: That it to say, the cost to the consumer?—No, the 5 per cent. is the amount which I estimate the trade pay in wages.

1386. 5 per cent. of what?—5 per cent. of the price.

Mr. Layton: Of the total value.

1387. *Chairman*: Value is one thing. It is 5 per cent. of the price to whom?—To the consumer.

1388. That is what I mean?—My Chairman, Mr. Thompson, corrects me by saying that that is only retail, and that you would also add the wages in the wholesale trade.

1389. *Mr. Layton*: You would have to add another percentage for wages in the wholesale grocery business, and you would also have to add wages in transport, of course. Wages will ultimately make up a very large proportion of the total cost, but what I was trying to get at is what fraction of the total value as sold to the public is represented by wages covered by this Trade Board?—On the retail side I estimate it at 5 per cent. On the wholesale side I could not give you any estimate. I am told it is 3 to 5 per cent.

1390. *Sir Arthur Pease*: That would be on the price as sold to shops?—On the wholesale, of course.

1391. *Chairman*: Is this trade an intermittent trade?—Yes, it is.

1392. It is sometimes hard-worked and it is sometimes slack?—Sometimes they are doing nothing; they will be doing knitting, or something.

1393. Some part of the day?—Yes.

1394. *Mr. Pugh*: What is meant by intermittent? Do you mean during the day—that they are not working at the same speed the whole day?—It is well known to the public that you can go into a retail shop and find the assistants sitting still, doing nothing, at certain times of the day.

1395. At other times they are very busy?—Yes, that is so.

1396. But of course they have to be in the shop the whole time?—Yes.

1397. *Chairman*: You may assume that we have read, or shall read, your statement very carefully. What is the next big point that you would like to deal with?—The big point to which I think all my

evidence is directed is this: that the Trade Board system is admittedly defective at the present time, and I want respectfully to urge that in no circumstances whatever will the Trade Board system be a success unless our superiors lay down principles limiting their powers and guiding them in the exercise of those powers. I have endeavoured to show in this statement that whether you have District Trade Committees or numerous Trade Boards, the effect in every case is discordant wages; the result of discordant wages, as was evidenced here so visibly during the war in the 12½ per cent., the dustmen's wages and the dockers' wages, has simply been to promote discontent and strikes. Unless the powers of Trade Boards are limited, the result of Trade Boards, as has been experienced in Australia, is simply to provoke discontent and strikes by reason of discordant and divergent wages which they get. The Secretary to the Department of Labour at Melbourne says that the Trade Board system is impossible without those divergent wages; those divergent wages are necessary in the Trade Board system, and he cannot see any way whatever of co-ordinating the decisions of Trade Boards.

1398. That is Mr. Murphy of whom you spoke?—Yes, that is Mr. Murphy. I am suggesting now in fact a way by which you might do it; I am suggesting that you should limit their powers so that they can only fix wages for persons who are in receipt of a wage below a non-sweated wage. If you say, "Let Trade Boards fix a wage for persons who are in danger of sweating," that is a defined principle; and you have the suggested limit ready to your hand at once, because under the Income Tax Act, £135 is the limit, and I am suggesting that the powers of all Trade Boards should be so limited that the moment a man gets £135 a year or more he is outside the jurisdiction of the Board. That is only the principle common to all working-class legislation.

1399. £135 a year is about £2 10s per week?—Yes, about £2 10s. It cannot be said that when the State imposes Income Tax it is sweating the worker.

1400. What is your definition of sweating?—I take the House of Lords definition, namely, inadequate wages, inordinately long hours of labour and insupportable conditions of employment. That is the House of Lords definition.

1401. "Grinding the faces of the poor," I think, is how they put it?—The House of Lords did not accept that. They thought that it was rather vague.

1402. So is the other. It is very difficult, I know, to define sweating. It is making an unfair and tyrannous use of the necessities of a man who wants work, and so putting upon him conditions which ought not fairly to be put upon him, or something of that kind. It comes to that upon your definition, does it not?—Quite so.

1403. You think that the Board ought to be confined to the duty of preventing sweating?—Undoubtedly.

1404. And that that could be done by saying that if a man has a certain minimum wage, wages above that are beyond the jurisdiction of the Board?—Quite so.

1405. *Sir Arthur Pease*: And women too, I suppose?—And women, of course. I do not see where we are going to get to unless you limit the powers in that way. If you analyse these Trade Boards you will find that great trouble arises from the divergent wages. There is no co-ordination. The Secretary of the Department of Labour in his work said that it seems impossible to go on as they were going on, indefinitely, and he did not quite see where Australia was going to. I am able this morning to tell him where Australia has gone to. If I may respectfully refer the Committee to the Royal Commission on a Basic Wage in Australia, which reported in April, 1921, you will see that there the federated trade unions demanded a basic wage of £11 10s. per week, and the Royal Commission reported and said £5 16s. per week.

9 November, 1921.]

MR. MICHAEL FREDERICK CAHILL.

[Continued.]

1406. *Chairman*: That was based, was it not, upon the necessities of a man with a wife and three children?—Yes, that is so.

1407. And applied to all the trades of the country?—Well, it was merely a theoretical enquiry which was intended to be given effect to by the various Tribunals. You will remember that in reply to the Supplemental Inquiry of the Prime Minister as to what the effect of the basic wage of £5 16s. would be upon the industries and exports of the country, the answer was: "We have not considered that, because it was not in our first reference; but now you have asked us, the effect would be that they would be ruined." I have the Royal Commission Report here, and that is the very word which they use.

1408. I suppose if you take all the trades in the country, you must get a higher figure, because you are taking in the big powerful trades, which, of course, press for a higher figure?—It would depend upon whether you take the highest or the lowest—on the principle which you adopt.

1409. *Mr. Pugh*: Is the Australian arrangement quite a fair analogy with your British Trade Boards, having regard to the fact that in Australia compulsory arbitration applies to all trades, whereas your Trade Boards can only be applied under two conditions, I think: under the 1909 Act to sweated workers, and under the 1918 Act to those trades where the organisation is not sufficient for the ordinary methods of negotiation? Taking the last Act, when you arrive at a stage of negotiation on both sides when the ordinary methods can be applied, then you can operate outside the Trade Boards, can you not? That being so, is Australia quite a fair analogy?—I think it is a perfectly fair analogy, because in Australia compulsory arbitration does not apply to all trades; that is only so in certain States; and, furthermore, not all workers in Australia are under Trade Boards; on the contrary, there are only about 50 per cent. I think Australia is a very fair analogy, because our Trade Board system was derived from there. It operates in Australia in the same way. The only unfairness that I can see of applying the Australian analogy would be the argument so commonly put forward in support of Trade Boards, that they prevent strikes, and the Australian experience has sometimes been cited as a proof that they prevent strikes, whereas, in point of fact, they have not done so. They have not prevented strikes in Australia at all; and, secondly, that has taken place although they have had laws in Australia prohibiting strikes.

1410. *Mr. Layton*: Arising out of that, you have referred several times in this proof to unrest in the grocery trade. What form does that take? In what sense is there now unrest?—Do you mean what unrest is there at the present time?

1411. Yes, in your industry?—The unrest which I personally know of at the present moment is in Manchester, where the whole dispute, or rather one of the disputes, is as to the meaning of the word "porter." The workers entirely refuse to accept the employers' understanding of the word "porter," and they are wrangling about it.

1412. But that is a discussion, not a trade dispute in the sense of a stoppage of work or a dismissal of employees?—No, we have never had any strike in the grocery trade outside the co-operative movement.

1413. Therefore when you speak of unrest you mean that the relations between the two sides are less satisfactory than before?—No, I simply mean that the workers approach us, and want more money. We are largely indebted to the trade unions, in point of fact, I was with a multiple shop firm during the war, and what happened there was this: that the trade union going throughout the country would come to us and say, "We find there is danger brewing in South Wales; you had better look into the matter"; and we looked into the matter with them, and we adjusted the wages reasonably—perhaps not quite so much as the trade union would have liked—and thus any trouble was averted. The trade union enacted that part practically throughout the chief districts of the country; but we never had any bother at all in

the grocery trade—no strikes, no cessation of work outside the co-operative movement.

1414. *Chairman*: Of course, that may be due to want of organisation?—It might be due to want of organisation. On the other hand, we have among our objections lodged with the Board numerous cases of employers who write that they have consulted their staff, and the staff protest against having a Trade Board, or against the proposed rate of wages, and the employer says, "They tell me they are quite contented."

1415. What is the proportion of workers in the grocery trade belonging to a union?—I have generously estimated it at 30 per cent. The trade unions themselves, I think, do not put it higher than 30 per cent. I have their publication, the "Shop Assistant," saying so.

1416. *Sir Arthur Pease*: Are the wages in the co-operative societies higher than in ordinary trade?—No, they are not. The co-operative societies pay wages agreed with the unions, but the higher employers, both on the wholesale and retail sides, pay wages quite equal to, and in some few cases superior, to the co-operative movement.

1417. Why should the co-operative societies have strikes? Perhaps that is not a fair question?—I do not know why they strike. The co-operative movement have had strikes, but I was not concerned to enter into the reason for them.

1418. It is not merely that they are paying lower wages than other firms?—No, the co-operative movement pay very fair wages.

1419. *Mr. Pugh*: Would not a small branch of a co-operative society in a village be in very much the same position as the small trader there so far as ability to pay is concerned?—Yes, some of them are, and we had objections from co-operative societies even against the present proposals, saying "They are too high"; and I have instances of agreements with small rural co-operative societies at much lower rates. There is one co-operative society in particular, in Cornwall, which is in the same position as the trade you refer to.

1420. *Mrs. Lyttelton*: May I ask whether there are a very large number of these border-line cases of which you are speaking, which come under the definition of "porters," and to which the workers object as coming under that definition?—Yes, it is really the worse case of all the warehouse workers. The classes of workers in the trade may be divided in this way: those in the wholesale warehouses and those in shops. Those in the wholesale warehouses do not require the knowledge or skill or salesmanship of those in the retail shops; their dress and appearance are not required to be so high; and those in the wholesale warehouses generally have rougher work which requires more physical strength. We intended and thought that our porters—

1421. I quite understand that, but I only wanted to know whether there were a very large number of occupations in which you would call the men porters where the workers would object to their being called porters?—We call them all porters.

1422. It seems that a good many skilled occupations could be called porters under your definition?—Yes. It is not our definition, it is that of the workers which we understood to apply.

1423. Your interpretation of their definition?—Yes.

1424. *Chairman*: I suppose there were some very low wages paid by some grocers before the Board was set up?—I have no doubt there were, although I am not aware of them. It is stated by the Unions to us that there were low wages paid by some employers, and I believe the Unions when they say so, but I have no knowledge whatever of any such cases.

1425. There was a good deal of pressure upon the Ministry, I think, to set up the Board?—We were never informed of any representations whatever made by the Trade Unions to the Ministry of Labour to bring about this Board. If we were going to be saddled with a Trade Board we think that the Ministry should have told us, "The Shop Assistants' Union has applied for a Trade Board, and has

9 November, 1921.]

Mr. MICHAEL FREDERICK CAHILL.

[Continued.]

alleged such and such against you; please let us have your views." That was never done.

1426. There were representations, were there not, by the Trade Union Congress, both in England and Scotland?—About the Grocery Trade Board?

1427. To set up Boards for the distributive trades?—Yes.

1428. And I think the Federation of Grocers' Associations are not opposed to it?—The Federation of Grocers' Associations will be giving evidence before you yourselves, I understand, but that is not my understanding of their attitude.

1429. Of course so far as the Board prevents sweating you have no objection to make to it?—On the contrary, we should wish to help as much as possible in doing away with sweating.

1430. *Sir Arthur Pease*: May I ask just one question: you referred a little time ago to the man, or to the woman it may be, who is not quite up to his job. How would you provide for a case like that if you had a minimum wage? How could you provide for it?—I see no way of providing for it except by lowering the scale, which would not be fair to the other workers.

1431. Under any conditions if you have a minimum wage you cannot provide for the semi-efficient worker?—I do not see any way of doing so.

1432. *Chairman*: It is difficult to extend the system of permits to that kind of worker?—We have had no experience of the permit system yet, because it has not come into operation, but I do not see any method of doing so.

1433. *Sir Arthur Pease*: Would not the same apply to a man who was getting old, who could do a light job but could not do a full day's work?—With regard to age, we have suggested that all persons over 50 should not require permits at all; they should be outside the Boards automatically. Of course where the great hardship of Trade Boards comes in at the present moment is in the matter of ex-soldiers. Large numbers have come into the trade, and they are not worth the wages they have had, because they have not had the experience; there has been no time for that.

1434. They cannot pull their weight yet?—No, not yet, and they will not get much chance with these rates.

1435. Because you will not employ them?—Exactly. You see, if a man comes to you aged 35, an ex-soldier, perfectly fit physically but with no experience of the grocery trade, he is a beginner, but on the Grocery Trade Board we have made no provision for him at all.

1436. *Chairman*: You have to pay him the full rate?—We have to pay him the full rate, so that he will get the same rate as if he had had so many years' experience in the trade.

1437. *Dame Adelaide Anderson*: Would it be possible to meet the difficulty by some intensive training suitable to this particular national scheme, so that they should be employed and given a chance?—Such training already exists. It was instituted, I understand, by the Minister of Labour, and they put forward a sort of subsidised scheme, but I do not think that it is in operation to any great extent, and I do not think that a very large number of people know of it.

1438. *Mr. Layton*: You refer on page 22 of your statement to the principles upon which you have to fix your minimum rates. If those principles had in fact been laid down, as you suggest they should be laid down, do you think that the rates fixed would have been substantially different from those which the Board in fact propose to fix?—I am not approving or disapproving of the principles which have been laid down by the Appointed Members. The great difficulty about the Grocery Board wages is this: because of the very unequal weight with which they hit the different classes of traders in the different localities. The only way we see out of it is district trade committees, so that the matter can be adjusted. But now that you have referred to principles, I might point out that it is a direct consequence of the first

of those principles that so much discontent has been excited against the Trade Board system, because the Appointed Members laid it down that the wage fixed must be a living wage sufficient to provide a girl of 18 years with independent maintenance, and to enable a man of 21 years to contemplate and prepare for marriage. The principle itself I pass for the moment, but the way in which it has operated in practice is this: first of all you agree upon a basic wage for a man at 21 years; when you have agreed upon that, if you have got, say, 65s. for a man at 21 years, then you are going to start a boy, and starting at the age of 16 you have got to make him up to 65s. in five years. The result is that the wages of juniors on all these Trade Boards seem proportionately too high.

1439. Perhaps I drew your attention to the wrong point. At the end of paragraph 23, on page 22, your definite suggestion is to adopt the ruling of the Industrial Court; that the remuneration of the various classes of workpeople should depend upon the value of the work done, and you go on to refer to that again. What I want to know is this: how you can give effect to that principle, and if you did do so, supposing for example it were laid down either as a regulation or in the Act or in any other way that that was to be a governing principle of wages, would the operation of your Trade Boards in the last 18 months have been essentially different, and if so in what respect?—It would have been different, because we put forward proposals on the Board at the start, but we were told that they would not do, because they did not provide independent maintenance for a girl at 18 years, or for the contemplation of marriage of a young man at 21. There was a distinct case in which the value of the work was overruled by reference to the first principle. We think that on our Trade Board, at all events, the question of the value of the work seems to have escaped attention from beginning to end; it seems to have been largely a case of considering only the requirements and needs of the workers, and nothing else.

1440. Where does this carry you to? How far would a general statement of that kind, which is your concrete suggestion to us, carry you in guiding the Trade Board?—If that were laid down as the only principle, it would have a very pronounced effect upon most of our Appointed Members. I am afraid that it would strike some of them with complete novelty.

1441. *Chairman*: They speak of a young man who contemplates marriage?—At 21.

1442. Is he supposed to require as much as or less than a man who has perpetrated marriage?—I do not think that a young man has been guilty of marriage before 21. It would not be reasonable.

1443. It means that it is not enough to enable him to keep a wife?—No, so that he can start saving.

1444. *Mr. Layton*: How would you test the value of the work done?—Our idea of fixing wages was largely based upon that of the trade union themselves. They published a very excellent little work called "The Case for Minimum Wages in Distributive Trades," and the principles which we wanted to follow were laid down by the trade union themselves. They say here: "Guided by the knowledge of actual wages in force, different minimum rates have been fixed"—by them, of course—"for the various trades; and a graduated scale for the various classes of workers has been provided. The present conditions, not only in the respective trades, but also in the different districts, vary to such an extent that it is not possible to name a uniform rate that would be practical, because a figure that would raise the standard of comfort considerably in one trade or district would, if it became the customary wage elsewhere, seriously impair existing conditions in other places. The best policy therefore is undoubtedly to take the rate of wages that are in force in each trade and locality as the starting-point, so that no advantage at present enjoyed may be in the slightest degree jeopardised, but all steadily

9 November, 1921.]

Mr. MICHAEL FREDERICK CARLIL.

[Continued.]

advanced." The result would be that if we had our district wage committees it would be a simple matter to know what the rate of wages previously in the locality was, and to strike an average, and that would be a rate which could be fixed.

1445. But is not that the principle of adjusting wages to the general conditions of the district really on the cost of living basis rather than the principle of adjusting wages according to the value of the work done?—In some cases that would be so, but not in others, because in some districts it is not only the cost of living basis which fixes wages, but the higher wages which can be obtained in competing industries.

1446. Then there are really two principles?—Certainly there are.

1447. *Mr. Pugh:* You and the trade union are in agreement there?—On that matter. We put this forward at the second meeting of the Board.

1448. How was it that you did not come to an agreement on the Board?—Because the trade unions have progressed beyond this now. When we pointed out to them that their demands upon the Board were in excess of their demand the day before, their answer was: "What we wanted when we were weak we are not satisfied with now we are strong." I am not grumbling at all; it is human nature.

1449. Taking this list of rates, you would not regard those as excessive, having regard to the present cost of living?—My personal opinion is this: those wages will not hurt the richer traders in the better localities, but there are some districts where they are wholly and physically unable to pay those rates. I can give you some names—I have given them in my printed statement. Throughout the bulk of the country as it stands to-day those rates will mean a levelling up in the majority in number of the traders.

1450. How would you manage in a district where you have got a branch of a multiple shop, but where you have a number of small shopkeepers? Would you make a difference between them?—Do you mean make a difference between the multiple shop and the others?

1451. Yes?—I do not see how you can; but in point of fact I do not think the multiple shop comes into it, because they are not affected by these rates.

1452. You mean they can pay them?—They are paying them, and more.

1453. *Chairman:* Have you any suggestion about the multiple shops? The point has been made that they are subject to different Boards, and that that causes inconvenience. Have you any suggestion about that?—About the multiplication of Boards?

1454. No, how to deal with the multiple shops supposing Trade Boards continue. It was put to us that the wages of one man in this kind of shop are fixed by one Board, and may be higher than the wages of another man in the same shop, and that that causes discontent. Have you any suggestion to make at all?—I have already suggested that the powers of the Board should be limited to £135 per annum. There will not be much margin for discontent then.

1455. When I was speaking of the multiple shops, I was thinking of the big stores?—Yes.

1456. *Lord Weir:* Would you relate the £135 per annum in any way to the cost of living?—I do not see why it should refer to the cost of living in any shape or form. Why should it? If the Government chooses to levy Income Tax from those people, it must be assumed that they can live all right. If they can pay tax they can live.

1457. Surely they have varied that rate of Income Tax in proportion to the cost of living?—They have made a variation for married people, but of course married people do not enter into this. Under the proposed rate laid down by the Appointed Members we have only to provide wages to enable a man at 21 to contemplate marriage. You cannot make any difference between married men, for this reason: if a man wants to marry, let him win his wife, and let

him deserve her by increased wages due to increased merit and ability in his trade.

1458. You have said several times, "the principles laid down by the Appointed Members?—Exactly.

1459. I do not quite understand that the Appointed Members have to lay down principles. Is that a part of their functions?—The Appointed Members dominate the Board from beginning to end, and we have no more voice in our own wages than Adam, really.

1460. Does that mean that all the decisions which have been come to by the Grocery Trade Board are not decisions through the joint efforts of employers and workpeople at all, but are the decisions of the Appointed Members? Do you want us to believe that?—That is exactly what it comes to. Neither the workers nor the employers are satisfied with it, and both the workers and the employers have very good reasons for what they say. I fully enter into the workers' views, and you will find if they come before you, as I understand that they will, that they will have good reasons for anything they may tell you; but so far as our Board is concerned, we consider that the wages have been fixed by the Appointed Members from beginning to end. They have listened to us, but whether they have paid any attention to what we have said we are not able to say, because they never give reasons for their decisions, and we think they ought to be compelled to do so.

1461. *Chairman:* What is the alternative to giving a casting vote to the Appointed Members or to the Chairman?—The alternative is this, that there should be no Appointed Members at all. You want a Chairman as a conciliator, and I think matters would be very much facilitated.

1462. As a conciliator without a vote?—Without a vote at all; but give legal effect to any agreement come to.

1463. *Mr. Pugh:* Who would you suggest should be the chairman—someone in the trade?—I should suggest that it should be agreed with the trade union, and, failing that, the chairman should be nominated by some outside authority, such as, for instance, the President of the Industrial Court.

1464. What really would be the difference in effect between having, say, Mr. Addington Willis as your chairman and having him as an Appointed Member?—Mr. Addington Willis—

1465. I just mention his name. It might be someone else, but probably he is a man you would get?—He personally, and all the Appointed Members, are persons of singular charm, and I would rather not mention any names.

1466. Take any one of your Appointed Members; shall I put it in that way, without mentioning names. Assuming one of your Appointed Members were appointed as chairman, what difference in effect would it make?—It would make this difference, that whatever we agreed to would be an agreement, and we should not be told, "I am going to put my vote up for auction, and that side shall have my vote which comes nearest to my views." That is what we were told.

1467. *Chairman:* He would not have a vote; that is the difference?—He would not have a vote.

1468. And if there is no agreement there is no order?—That is so; but knowing the workers as I do, and knowing the employers as I do, and knowing the good will of the majority on both sides, I find it inconceivable to think that an agreement would not be arrived at.

1469. You would have to make special provision for cases of sweating?—I have suggested that you should limit Trade Boards entirely to sweating.

1470. I mean with regard to your suggestion that the chairman or the appointed members should not have a vote, would you apply that to cases where there is sweating? It is conceivable that in those cases there might be no agreement. Is it then desirable that sweating should go on?—I do not think there is any sweating in the grocery trade even to-day.

9 November, 1921.]

Mr. MICHAEL FREDERICK CAHILL.

[Continued.]

1471. I am not thinking only of the grocery trade. What is done in the grocery trade must be done in other trades.

1472. *Mr. Layton*: You referred to the question of side voting as another administration point. Do you consider that the representation of employers is really representative of the whole country?—So far as our employers' side is concerned, we think that the membership of the side was chosen by the Ministry of Labour with admirable skill, but none the less I could not say that it adequately represented the whole country. There were a very large number of discontented bodies who applied for representation and did not get it.

1473. Is not there a possibility, then, of a group of employers representing a portion of the organised employers of the country, who, you told us, are 30 per cent., imposing a burden on other employers in the industry which might be to their detriment?—Undoubtedly that exists.

1474. Would not that danger be increased if you brought in this provision making it obligatory that the vote of the employers should be cast as a side if two-thirds wished to do so?—I think that is a risk which we should have to take, but I should like it clearly understood that we should like our evidence taken as a whole and not merely parts of it. The whole thing stands together as one logical, complete whole. If we are going to have a Grocery Trade Board at all, we think we cannot work it without local district committees, and we think that in any case the power of the Board should be limited to £135, and that principles should be laid down for the guidance of the Board in adjusting those wages.

1475. That is a point I wanted to get at. This suggestion of yours would be applicable provided you had district committees?—If we can have district committees.

1476. But would you still think it was desirable that one Board, with quite obviously a limited number of representatives of employers and of employees, should be legislating for the whole of the country?—Yes, we do. We have considered that, because it is a risk that we must take, otherwise we stand the risk of being let down completely by a single small man jeopardising the interests of a great majority.

1477. But if your Chairman had no vote, would you not permit of a vote being taken?—I should still want my two-thirds majority of our side to come in.

1478. In other words, if you have no Chairman, two-thirds of the employers, or, for that matter, two-thirds of the employees, who wanted a particular course would be in a position to impose their view on the whole Board, which would subsequently naturally get legislative authority behind it.—Exactly.

1479. And you think you could make representation sufficiently general all over the country to prevent any injustice arising?—We should want to have our local committees.

1480. That was the point I put to you just now: You would still urge this view, even if you had no local committees?—No, I want the evidence to stand together. We cannot exist without district trade committees.

1481. I understand that you will not separate your two suggestions?—No.

1482. *Chairman*: But the district committees do not finally settle the rate, do they?—At the present time they do not.

1483. Do you think they should?—If they do not, how are they to work at all?

1484. You think they should?—I think they should, providing the powers of the Board are limited to £135.

1485. *Sir Arthur Pease*: Would the district committee differentiate in its district? Take a place like Newcastle; would it make a different rate for Newcastle from the rate for the rest of Northumberland?—That would be for the district committee. I should say that it undoubtedly would do so. The wages in Newcastle are pretty high.

1486. It would differentiate wages even in its own district?—It must do so, because of the villages and towns.

1487. *Dame Adelaide Anderson*: With regard to the suggested limit of £135, in comparison with the Income Tax levy, the Income Tax is graded above £135. Would you not consider that some regulation was necessary to meet the case of the worker who was not, perhaps, according to your view, being sweated but was not very highly remunerated? I hope I have made that clear.—You are suggesting something in the way of gradation?

1488. I am taking your suggestion of £135. Have you given any consideration to the not well-paid worker above £135?—No, I have not, because I have taken the principles of the appointed members, and I have limited myself to those principles, and I say that £135 a year is quite adequate to meet the principles laid down by our appointed members.

1489. *Mr. Pugh*: Do I understand that you regard £135 a year as being the maximum to be paid in your trade?—Certainly not.

1490. If you did away with the Trade Board arrangement, how would you negotiate in respect of wages above that? What system would you propose to adopt of negotiating wages beyond the £135? Would you still use the Trade Boards?—No, personally and speaking frankly, I think Trade Boards are impracticable and inexpedient in this country. They were only appointed here with very great doubt for the purpose of dealing with sweated workers. I have the Royal Commission Reports here. I consider that they are now being extended without due consideration to unorganised trades, and I am trying this morning to show the grave difficulties which in my opinion render those Trade Boards inapplicable to the distributive trades of the country. I think the very best system that a worker can use for raising wages is first of all his own individual merit, ability and hard work, and subject to that the trade union.

1491. But supposing we did away with the Trade Boards in the grocery and distributive trades, what machinery of collective negotiation do you propose to put in their place?—I should say, Let us follow the practice of the highly-organised trades. They started, and we have started, first of all by negotiations with one firm; then for districts; and that is the stage at which the trade at present stands. We have numerous individual agreements between firms and unions, and we have various agreements for localities. The trade unions work up ultimately, and then you can, if they work up, get a collective body at the head of both sides, but you cannot accomplish the growth of years in one night or by a stroke of the pen at the Ministry of Labour.

1492. As I understand, a Trade Board ought to be established in your trade because of its being insufficiently organised, to make collective agreements?—Exactly. I never heard a more extraordinary reason in all my life, because collective bargaining is the result of a long process; it follows a natural course. You could no more expect to have collective bargaining imposed on an unorganised trade than you could expect to have a rose tree from a mere slip in one night.

1493. That may be, but does not experience show that in unorganised trades wages always stand very low, and do not wages generally follow where there is no organisation?—No, I think, if I may respectfully say so, you are wrong. I do not agree that the wages in distributive trades at the present time are low at all. I think, and I am prepared to give facts and figures to show, that wages throughout the grocery and provision trade have been substantially raised to meet the increase in the cost of living brought about by the war. Further, I think that if enquiry were made into it, you would find the same result in other trades. I notice particularly that in Scotland they had an enquiry into agriculture, and there they set out wages for Scotch agricultural workers ranging from about 39s. or 40s., and they expressly found that the wages had

9 November, 1921.]

Mr. MICHAEL FREDERICK CAHILL.

[Continued.]

in fact been brought up substantially to meet the increased cost of living brought about by the war. I am speaking now, of course, of that particular date.

1494. You would rather prefer that the Trade Board in your case should be disbanded and that you reverted to the original position in which, as I understand, there was no definite machinery for collective bargaining for the trade?—We have never had any trouble in the trade, but speaking for the employers' side, I am not able to say that. A lot of us think that we do not want a Trade Board at all, but that we can manage affairs ourselves; others say, "Let us try the Trade Board and see if it is any good"; but we are, I think, all unanimous, with the exception of the Co-operative representatives, that under the present machinery of the Trade Board we do not want it at all.

1495. Do you hold that view with regard to Industrial Councils generally?—Industrial Councils are only appointed in highly-organised businesses, and I have no authority to speak of them. If I were to give my personal opinion I think that something better might very well have been devised.

1496. *Chairman:* Have you given us your suggestions for amendment? Assuming that Trade Boards are to continue, what are the amendments which you suggest? You have dealt with appointed members, and you have dealt with the limit of jurisdiction. Is there anything else of practical importance?—And I have dealt with the principles.

1497. You have dealt with the principles, but I mean now specific amendment?—The only other point I think is the necessity of District Trade Committees.

1498. That I think you have mentioned?—We think that they are indispensable.

1499. Then you have some suggestion for appeal?—Yes, with regard to that, at the present time if either side is not satisfied with the finding of a Trade Board, our only remedy after the Board has confirmed the rate is an appeal to the Minister of Labour. He is placed in the position, whether he likes it or not, of being, in fact, a Court of Appeal from the decisions of Trade Boards, and the result is that as either side may be dissatisfied he is brought into opposition with one or the other side alternately. We think that that is not a position in which a Minister of the Crown ought to be placed, and if the Trade Boards are to continue we think that, undoubtedly—it is obvious from our experience upon the Boards—a Court of Appeal is necessary. If, on the other hand, you do have your Court of Appeal, I see no possible result except the cumbrous Australian system of the Trade Boards Industrial Court of Appeal, with all the paraphernalia of lawyers and what not, whom we emphatically do not want.

1500. A terrible prospect?—It is existing out there.

1501. *Sir Arthur Pease:* That is against your previous view that you did not want anybody to have a deciding voice, but you wanted to have it done by agreement?—Quite. We put this forward, and we pointed out that it is an objection to the existing machinery which you are considering. You are considering the existing machinery.

1502. *Chairman:* Then you suggest that objectors should be heard by the Trade Board?—Yes, for this reason, that notwithstanding that the Statute expressly provides for it—it is imperative and says: "The Trade Boards shall consider objections"—when we got to the Trade Boards we found that the Ministry of Labour legal adviser had ruled that we shall not, because we could not make any material alteration in the rates without re-advertising, which negated the whole thing.

1503. That is rather another point, is it not? You suggest that they should be heard, that is, that they should be allowed to come and talk to the Trade Board?—If they want to.

1504. Then your other point is what when objections are taken, if the Trade Board approves of them, they should be enabled to give effect to their decision without re-advertising?—Quite.

1505. To save time, and so on?—Yes, and whichever way it may be.

1506. We know that on the Grocery Board you have had some trouble in that connection?—Exactly.

1507. Also you suggest that the Inspectorate should be increased?—There are only 33 Inspectors at the present time, I am told, to enforce the Orders of something like 61 Trade Boards.

1508. *Lord Weir:* With regard to your suggestion of District Committees, in your opinion would that still more slow up the whole machinery for fixing rates or varying rates?—The District Committees would have to have power to do the business themselves I think, otherwise I think the whole thing is absolutely unworkable.

1509. *Sir Arthur Pease:* Then would you have an appeal from them to anybody?—If you are going to have an appeal at all there should certainly be an appeal from them, but it ought to be a direct appeal; in other words, they should be separate Trade Boards.

1510. They would not appeal to the National Board, they would appeal straight to somebody else?—I take it that there would be no National Board in that case.

1511. *Chairman:* They would be like the District Trade Boards really?—Yes.

1512. *Dame Adelaide Anderson:* Without appointed members?—We should prefer that.

1513. *Mr. Pugh:* How would you co-ordinate your arrangements over the whole country? You surely would have as many arrangements and rates as you would have District Boards? Would that be desirable?—No, it would not be desirable, but we are asked to assist in the Trade Board system, and we come here frankly and say that we cannot work without district Trade Committees, and we point out in our evidence that there is no means of co-ordinating the decisions of Trade Boards, neither can any means be discovered.

1514. In a single trade or a single industry surely there is. Do you not require to have a Central Board along with your District Boards?—I do not think that that would co-ordinate, because experience has shown that when the Central Board disagrees with a District Committee, either you have to give the District Committee what they want or they will resign.

1515. Surely the principal purpose of the District Committees would be to deal with special local circumstances which could not be dealt with in a national sense?—I do not see how they are going to work in that way at all. Then it means referring the matter back to the Trade Board, and there is no end to it. There is such a lot of red tape and referring backwards and forwards that I think it would be unworkable.

1516. I suggest that you would have a similar experience to what we have had in other well-organised industries which work through similar machinery of their own: that where you are dealing with work-people in similar occupations you can fix a rate for that occupation, but have regard to certain local conditions which may be different; but your chief body would be your central body, the districts being simply appointed to deal with local circumstances which have to be taken into account?—If you do that, then, of course, you have all the disadvantages which I think exist in the organisations to which you refer, namely, great delay.

1517. No, we have no delay. We do not admit that that is a disadvantage, because the Centre really decides the general arrangement, leaving it to the locality to apply it consistently with local conditions?—I was informed that that led to great delay.

1518. That is not our experience, at any rate, with well-organised trades.

1519. *Chairman:* Your last suggestion is that the duration of the wage should be limited. Is that so?—I think it should be left entirely to the Board for them to fix it themselves.

1520. *Sir Arthur Pease:* You would not alter a wage under three months, would you?—No, that would be ridiculous.

1521. Many of the main trades of this country have a rule that a general rate of wages shall not be altered under a three months' interval, and in some

9 November, 1921.]

Mr. MICHAEL FREDERICK CAHILL.

[Continued.]

of them a six months' interval. Why should not that apply to a Trade Board too?—I do not see as a practical matter that rates of wages can be altered under three months. I think that would probably satisfy us; but our idea was that the matter should be left entirely to the Board, and then they should say "This Order shall remain in force for" such and such a time.

1522. *Chairman*: Then you think that the machinery for changing rates should be expedited?—Undoubtedly.

1523. Then you have something to say about suspending the confirmation of the present Order of the Board?—I am asked to submit that the Committee might recommend the Minister of Labour to postpone the present proposals of the Grocery Trade Board for the reasons which I have set out. I have shown that they are unequal in their operation, that many districts are wholly unable to pay them, that they simply provide new sources of dispute in the trade, that the areas give great dissatisfaction, that the hours of opening and closing proposed by the Trade Board are contrary to the prevailing normal hours throughout the greater part of the Kingdom; and we think that that being so, and in view of the fact that this Committee is overhauling the whole machinery of Trade Boards, the Trade Boards should be held up entirely until the Committee has made its report. In other words, do not use a defective instrument until you have remedied it.

1524. *Mr. Pugh*: I would like you to assist us by suggesting how you can speed up the machinery. Will you say whether all the objections could be received and all the arrangements could be carried out to get the views of the interested parties, before the Board comes to a decision. I understand that at the present time objections may be made after the Board has come to a decision. Would you speed up by getting all these things done before the decision was come to, so as to get the Board's decision into effect within less than the month which is allowed?—I gather that you are suggesting that when the Board has made a recommendation to the Minister, the one month allowed to the Minister of Labour should be curtailed. Is that your suggestion?

(The Witness withdrew.)

(Adjourned for a short time.)

Mr. J. H. BARNARD, called and examined.

1529. *Chairman*: You are the Chairman of the Drapers' Chamber of Trade?—Yes.

1530. And a Member of the Dressmaking Board for England and Wales?—Yes.

1531. You attend on behalf of the Drapers' Chamber of Trade to give evidence?—I do. May I proceed?

1532. Just tell us of whom your Chamber consists?—With that object I have provided myself with what I might call the specification of the Chamber. It is really the agenda of our next meeting next Tuesday, and you will see from that document what the Drapers' Chamber of Trade is. (The same was handed in.) I may say that it was founded 20 years and more ago for the purpose of conference between all members of the textile distributing trade, upon any matters which interested them as tradespeople. We have been growing in those 21 years, and we have now between 5,000 and 6,000 subscribing members, but in addition to that we are affiliated with similar associations in various parts of the country, and members of those associations have the privilege or the right of meeting as in conference once a month, when the members of our Council meet in London.

1533. Are your members scattered pretty well over the country?—You will see from the first page the different towns and principal cities in the Kingdom which they represent. Further, I would say that these are all elected members. In every county and in every principal town the tradesmen may select one of their number to represent them on the Central Council of the Drapers' Chamber, and those selected

1525. I do not know that it is possible to curtail it, but my point is this: You have objections which can be raised afterwards, and that may mean the Minister referring it back to the Board again. I should like you to say whether all that could not be done previously to the Board's coming to a decision, and then all that would be necessary would be for the Minister to consider the proposed arrangement, and if he saw no serious ground of objection, to give effect to it. I want to get rid of the delay which arises from objections after the Board has come to a decision. —I do not myself think that that would be a fair thing. The Minister of Labour at the present time is a Court of Appeal from unjust decisions, or from what are considered unjust decisions, and the injustice of those decisions can only be made known to him by objections lodged when the Trade Board decision is made known. One way in which things might be expedited is by a little closer consultation between the Trade Board and the Ministry of Labour Legal Advisor, or Advisors, before the Trade Board comes to a decision.

1526. But is there really any difference between your grocery and distributive trades and other similar trades? Are not they worked by similar methods to the Grocery Trade Board with the view that every interest should be represented before a decision is come to, but the Board being representative of the trade, settles the question having regard to all those objections and then no further objections are heard?—In point of fact the Board does not settle, it is the appointed members who settle, and I have given you instances where real and valid objections, as I am positively assured, in Cornwall and the south west, are brutally disregarded. What is the good of telling us that we settle our own wages when we do not? What is the good of giving a decision which does not meet local objections; and we know that it does not meet local objections because they are simply overwhelmed by the voting, or the pressure brought upon them by the Side.

1527. Then you do not see how you can alter the present system?—No, I do not.

1528. *Chairman*: We are very much obliged to you for some interesting evidence.—I trust that I have not been unduly positive in making any statement.

and elected representative men are the names which you see on that front page.

1534. Then you are affiliated with several local associations, I understand?—Yes. In addition to those which are at the foot of that page, I may say that every member of our Council is a member of his own district Chamber of Commerce, not necessarily a textile one, but one in which all the principal drapers and grocers and tradesmen of the town meet in conference, so that by means of our Council we are in telephonic communication (I might almost say) instantly with every shade and side of the textile distributing trade. We therefore consider that we are a very representative institution. I do not know another which is of so parliamentary a nature as our Chamber. You will see on the other side that we meet for practical business: the Merchandise Committee, the General Purposes Committee, the Propaganda Committee, and the Parliamentary Committee discuss month by month all the business which comes within the purview of the distributive textile trades, and if it would interest you to see what we are talking of at our next Council next Tuesday, the agenda is there, and I think you will see that we deal with the matter in a very workmanlike and practical manner. So much for our representative capacity. One would have thought that a Council of that kind in being and with machinery of that nature to hand, would have been of enormous use to the Ministry of Labour when there was thrust upon their shoulders the onerous task of finding someone better than the textile trade (from whose hands the

9 November, 1921.]

Mr. J. H. BARNARD.

[Continued.]

management of the trade was to be taken) into whose hands the management of the textile distributive trade might be placed; but it may surprise this Committee to learn that we have always had the greatest difficulty in getting ourselves represented on the Trade Boards.

1535. You are represented, I think, on some Trade Boards?—We are, by two members on the Dressmaking Trade Board—by myself and the former Chairman of the Council—but on the Millinery Trade Board we have no one elected by ourselves to represent us, and on the bespoke tailoring industry Trade Board we have nobody either.

1536. Have you not three members of the Dressmaking and Women's Light Clothing?—Only two, myself and Mr. Cook, J.P., of Dudley, who have been appointed in the last two months. Mr. Coleing was our representative before then, but he resigned.

1537. That is why I thought there were three.—We have only two.

1538. Have you not two representatives on the Hat, Cap and Millinery Trade Board?—Not specially appointed, I believe. We had one, but he is not serving now. There are, of course, members of the retail, but they are not put there by the express stipulation of our Chamber.

1539. I understand that you will have representatives, probably?—We sincerely hope so. We have nominated them but they have not had any appointment.

1540. You have, I think, issued a Questionnaire to the members of your Chamber?—Yes, and I think you and the members of the Committee have in front of you typed copies which I have had prepared for your inspection. I sent them over here yesterday because I humbly thought that a correct atmosphere might be produced if you read through all those letters.*

1541. I am afraid they came too late for me to master them.—I am sorry. I think they will well repay a careful inspection, and when you have read them I think you will see that they constitute one of the most important pieces of evidence which can be produced from one trade as to one Trade Board, which can possibly be put before this Committee.

1542. I will read that carefully right through.—We shall be greatly indebted to you if you will.

1543. The first question is: "Have the Trade Board Orders reduced the number of workers in the Bespoke Dressmaking and Millinery Trades? If so, please give me some details as to the number of workrooms which to your knowledge have been closed or reduced in your district as a consequence of such Orders." Then No. 2 is: "Has the closing down of the workrooms or reduction in the number of workers been caused owing to customers refusing to pay the increased charges made necessary by the prescribed rate of wage for workers?" And No. 3 is: "Are the conditions under which learners have to be employed preventing their employment?"—No. 5 is the next question.

1544. No. 5 is: "If there are any other points you would like to bring before the Committee please state them." You have got answers to those questions from a number of your members?—We wrote to every member of our Council, some 195 to 200, and I received in reply 204 replies. All that reached me last week have been copied for your perusal, but many of them have reached me this week, and it was not possible to have those copied. The original letters are all here. You may notice that I have not put the names of the writers, though I have put the names of the towns from which they come, but for further confirmation or to know who are those people who have written, I have the original letters here which you can have.

1545. I have no doubt that they have been faithfully reproduced in this document.—Thank you. Those 204 letters and those which I have not been able to type come from all parts of the country, from every kind of employer, from the smallest dressmaker in a hamlet to the big West End multiple shop in

Keusiugtou, and I think you will agree with me that the verdict is almost unanimous that the Trade Boards as applied to the Dressmaking, Millinery and Bespoke Tailoring Trades, rather than serving and protecting the industry which they were elected or appointed to protect, have nearly, if not absolutely, killed the teaching of dressmaking throughout the whole of this country. Those letters are wonderful in the unanimity displayed as to the effect of the Trade Boards.

1546. That is on the question of the learners?—That is on the question of the learners. Upon that I would speak in detail. As to the importance of the dressmaking industry, I think I need hardly emphasise it at any length. The custom is this: not only the poor women of this country but women of good position are all anxious that their daughters when they leave their schools, or their secondary schools, should have a practical knowledge of dressmaking, and the method which has been adopted all over this country is this: that the mother or the guardian goes to her local draper or her dressmaker, whom she knows, and she says: "Will you take my daughter? I want her to learn dressmaking." Thousands upon thousands of women and young girls all over the country are taught year by year the art of dressmaking, a handicraft which enables them to earn an honest living in an honorable employment in the neighbourhood of their own homes, without going into the large cities of the Kingdom as factory hands. The knowledge of dressmaking is of great importance to them as a wage-earning business during the early years of their girlhood or their young womanhood, but it is of infinitely more importance to them when they are married and become mothers that they should have at first hand the knowledge of a handicraft which helps them to clothe their children, themselves, their mothers and their relatives with far less expense and far more satisfactorily than if they had to get their dresses made elsewhere. What would the womanhood of this country do if they had not this practical method of learning that wonderful handicraft of dressmaking? Now it is in the dressmakers' rooms of the drapery trade and in the dressmakers' rooms of the hamlets and towns of this country that the women of this country learn practical dressmaking. When you have read these letters I think you will come to the same conclusion as the writers, and as the members of our Council, have come to, that if the Trade Boards continue to regulate the teaching of dressmaking as they have done for the last two years, dressmaking as a handicraft throughout this country is extinct. It cannot be learnt. The regulations of the Trade Board have made every draper say: "I really cannot do it; I cannot conform to all these regulations." With that I will deal, when I come to the heading of learners.

1547. Are all these young women employed at the place of business?—Always.

1548. Or do they work at home?—They can, but principally and almost entirely in the workrooms controlled by Trade Boards.

1549. Some of them work at home, I suppose?—Yes, and in that case they come under the Trade Board, too.

1550. Yes, I know.—With drapers it is not so. A draper has his workroom, and, as I shall point out the anomaly is that in some workrooms there will be milliners, there will be dressmakers, and there will be coat and skirt workers all working under three different Trade Boards, but absolutely doing the same quality of labour.

1551. Before we go further, learners I think, according to the wage order, begin at 6s. per week?—Yes.

1552. That is when they are under 14; they get 1½d. per hour, and they run up in the eighth year of employment to 2s. per week or 7½d. per hour?—The 10½d. rate is 48 hours at 10½d. or 43s. per week. The principle of teaching dressmaking is that when a girl of 15 or 16—

1553. What is the 10½d. rate?—What is called a fully qualified dressmaker, as distinct I may say—

* Selection reprinted. See below page 164.

9 November, 1921.]

Mr. J. H. BARNARD.

[Continued.]

that is another peculiarity—from the qualified dressmaker. There is the qualified, the fully qualified, and the worker, all three working in the same workrooms on different rates of wages.

1553a. It is 10½d. per hour for how long per week?—For 48 hours. It comes to 43s. per week; but if a girl for instance goes into a workroom to learn dressmaking when she is 16, she has to be paid 19s. per week, and she knows nothing. She must have 4½d. per hour. Those letters will show that sometimes when a girl goes there she has to be taught plain sewing before she is any use, and over her is placed a responsible practical dressmaker who is teaching her her business. If she had to go into a secondary school she would have to pay a premium for such business.

1554. I see that I was looking at the wrong order.—Yes, the present wages are 6s. per week for the first six months, 8s. per week for the second six months, and 8½d. for home workers, with 8½d. for all other female workers; 9½d. for a qualified hand, and 10½d. for a fully qualified hand; but the trouble is that during the first year or two years of a learner she does not earn anything for her employer. Very often she spoils as much work as she does. She has got to become a practical dressmaker, and when she has acquired that, and when she is a practical dressmaker, this minimum wage does not work: there is competition for a qualified dressmaker, and she can get a good wage wherever she goes, and she does get a good wage; but while she is learning the business she is getting more than her wage because she is acquiring a very valuable knowledge of a very valuable handicraft. If dressmakers all over the country say that they cannot be troubled with the tremendous amount of red tape, headings, and that sort of business, the learners will cease to be occupied. May I go through my *précis* as I have supplied it to you?

1555. You have dealt with the importance of the trade?—Yes. I have dealt with the importance of that, and now I proceed to the Trade Boards which cover this industry. They are three: there is the Dressmaking proper, and there is Bespoke Women's Tailoring, which deals, strangely enough, with the dress which a woman wears out of doors, because a coat and skirt comes under a different Trade Board from the dress which she wears indoors; and then there is the Millinery Trade Board. All these work and control the dressmaking, millinery, and tailoring workrooms, and one of the great evils as we see it to-day is that on both sides of the Trade Board there are representatives who are neither workers nor employers. Under proper control that should not be much trouble, but in the printed paper which was handed to me when I was appointed a member of the Trade Board, I was first told that the principal objects of the Trade Board are to provide adequate machinery for the effective regulation of wages in industries in which no such machinery exists. I would just say in passing that the machinery does exist in the Drapers' Chamber of Trade and in the retail distributors, who between them and in conjunction with the trade unions, with whom we are always pleased to confer, could have produced a better state of things than the Trade Board have produced.

1556. To what trade unions do the workers in your trade belong?—I do not know that they belong to one. I very much doubt whether the little dressmakers' apprentices and assistants throughout the whole of this country have any great majority of workers in trade unions.

1557. Then they are not organised so far as workers are concerned?—No, but our side is. If they are not organised why is it that on the Dressmaking Trade Board, as a representative of the workers, is a trade unionist who complacently tells us in the columns of the "Times" that he is on 16 Trade Boards?

1558. He is the man appointed to represent the workers, no doubt?—No, he states "as workers' representative." If they are not represented in the

trade union they should not be there. That in passing. Another printed paper which was handed to me, dealing with the workers and non-workers on Trade Boards, which was supplied to me over the signature of Sir Robert Horne, the Minister of Labour, has a clause No. 7 which says this: "Any member representing employers who ceases to be an employer and becomes a worker in the trade shall vacate his seat. Any member representing the workers who becomes an employer in the trade shall vacate his seat; the question of fact in each case to be determined by the Minister." The essence of Trade Boards, I take it, is that on one side there should be employers, and on the other side there should be employees, and if a representative of a Chamber of Trade of employers or a trade union is selected, he or she should be also a worker or an employer in this particular industry. One of the growing evils, if I may say so, of the Trade Boards is that there are on the Labour side trade unionists who are not in the trade, have never been in the trade, and never will be in the trade. On the employers' side of the Trade Board that evil does not so grossly exist.

1559. It does exist to some extent, I gather?—I notice that the Secretary, for instance, of the employers' side is the Secretary of the London Employers' Association, and I say even on that side he should not be there. I do not say anything against him personally; I have not the slightest thing against him; he is an excellent man, and I know him very well; but if a man is selected either as employer or employee on a Trade Board, he should be personally acquainted either with the employers' side or the workers' side, and not have to rely upon second-hand evidence.

1560. You are speaking of dressmaking, are you?—Yes, as attached principally to drapers' businesses. When I say "dressmaking," I may be allowed to mean that I include the other two; they all refer to the textile trade.

1561. In considering the point which you are putting, I have figures here which show that of the workers' representatives on the Dressmaking Board there are 30, of whom 18 are actually workers, and 12 are full-time trade union officials?—Yes. That is a very heavy percentage.

1562. On the employers' side there are 30, of whom 29 are actually employers?—Yes. I have named the only one who is not.

1563. One is a full-time official?—I do not think that is a very bad proportion. I think that is what it should be on the workers' side.

1564. Let me take the Hat, Cap and Millinery; that is another Board with which you are concerned. On the workers' side there are 28 representatives, of whom 16 are actual workers?—Another very large percentage of trade unionists.

1565. Twelve are full-time trade union officials. On the employers' side there are 28 members, of whom 26 are actual employers?—Quite correct and quite what it should be.

1566. And two are whole-time officials?—Yes.

1567. What is the third Board?—The Bespoke Women's Tailoring. I do not know what is the actual designation of it, but perhaps I can give it to you from one of the tremendous bills which we are obliged to put up in our workrooms, upon which I will speak to you in detail later on. (After referring): It is called the Retail Bespoke Tailoring Board.

1568. Yes, I have that. There are 24 representatives of workers; is that right?—That would be about it.

1569. Thirteen are actual workers and the others trade union officials?—An enormously overweighted proportion of non-workers.

1570. On the employers' side there are 24 representatives, of whom 23 are actual employers?—I suggest that on the employers' side we have done quite rightly, but that on the workers' side it is overweighted with people who know nothing about the trade personally.

9 November, 1921.]

Mr. J. H. BARNARD.

[Continued.]

1571. *Sir Arthur Pease*: Do you distinguish between trade union leaders who are the leaders of the men or women in the particular trade, and a trade union leader who comes from some other trade?—I would say that if a trade unionist leader is on a different Trade Board as a worker, he is a worker in none, and I fear that you will find the proportion on that side works out at something of the same thing. The same person will appear on several Trade Boards, though he has no personal knowledge of the handicraft or the mystery of the labour which he is supposed to control. I think on inquiry you will find that that is so. On the employers' side we are legitimate employers; on the workers' side they are legitimate trade unionists, but during the last two or three years the weight of the trade unionists has overcome the prudence of the employer, and he has to give way where he would not have done if he had had legitimate workers on the other side.

1572. You mean that they have trade unionists who have not sufficiently long represented that particular trade to know the intricacies of the trade?—Or who have not represented it at all—who have not sufficient members in the trade union to give them a fair knowledge in the trade which they are seeking to represent.

1573. *Mr. Pugh*: That would be rather a disadvantage to the workers' side, would it not?—Not from trade unionists' point of view, who have their own axe to grind.

1574. I mean the workers must be handicapped if they have a representative who does not know the circumstances of their trade, and therefore the employer, I should say, would have an advantage in negotiating in that way?—I think not in the case of a trade unionist if I may say so. A trade unionist is out for the highest possible wages that he can get without respect to the earning capacity of the workers. The employer has to look upon the earning capacity of the worker before he fixes his wage, but the trade unionist does not do so.

1575. *Lord Weir*: Do you mean, for example, that in the dressmaking and women's light clothing trade there are representatives of trade unions who have nothing whatever to do with either dressmaking or women's light clothing?—I should like this Committee to make that inquiry from those who are actually on those Boards.

1576. Can you give us any example? Do you go so far as to say that there is a trade union representative on the Dressmaking and Women's Light Clothing Board who is, for example, the secretary of a woodworking society, or something like that?—No, I will not go so far as to say that, but may I suggest that this Committee should carefully look into that point? It is a matter upon which you should get direct evidence from the workers themselves, and I think it is well worth your inquiry. It does not do to come from me, perhaps, who am on the employers' side, to say exactly what constitutes the great proportion of these workers, but it is my opinion, and I believe I could get, if I were asked for it, direct evidence of it, that the great proportion of the trade union officials on the workers' side are not necessarily acquainted or connected with the particular industry of the Trade Board upon which they sit.

1577. They must be recommended by somebody who was connected with it?—Not necessarily. On the employers' side Mr. Alderman Cook, my colleague, who has unfortunately been detained by municipal work elsewhere, told me that he was talking to a lady on the workers' side, and asked her: "Where do you come from; who are you; whom do you represent?" and she said she did not know; she came from somewhere in the Midlands, and was not representing any district at all. The difficulty that the Ministry of Labour have had is to start an organisation without knowing anything at all about the business which they have got to organise. Put yourself into the position of the unfortunate Minister of Labour, who is told that he has got to

take away from a responsible, honest and successful body of men, such as the Textile Distributors—to take it away from them because they are deemed incompetent, and probably dishonest—and to put the trade into the hands of some other body not yet created who are to be more honest and more competent than they. How does he proceed? I cannot see for the life of me how he can do anything but make mistakes, and unfortunately the trade of the country is suffering accordingly.

1578. *Mr. Pugh*: I suppose that your objection would be mitigated if you knew that the trade union representatives were representatives of the trade, or that they knew something about it; or is the objection to trade union representation as such?—I should have no objection to a trade unionist as such if he was honestly representing the workers in the trade which he professed to represent.

1579. He might not be a worker in the trade?—I think he should be.

1580. He may have worked in the trade?—I think he should be a worker in it at the present moment if he is legislating for the workers in the trade.

1581. We will suppose that there are some thousands of workers in a trade who are organised, and they are going to be represented by someone who has ceased to work in the trade, but who knows all about it. What do you say to that?—I should say that he should not be eligible. He ought to be a worker in touch with his co-workers in the work-room, and not imbued with the trade union principle that a woman or a man must be paid a certain sum irrespective of his or her earning capacity because he or she is 25 years of age instead of 20, or 19 years of age instead of 16, although the person of 19 years of age may be less competent than the one of 16 years of age.

1582. Then the point of your objection is rather to the full-time trade union representative. You say that he must be a worker actually working at the trade, and not be an appointed representative of a trade union?—In saying so I have omitted to explain that I do not agree with Trade Boards at all—I mean in this particular industry—as constituted at present, but if it were re-constituted I should say that I should have no objection to a worker on the workers' side being a worker, and as clever a worker as you like, but I should object if the person elected by the workers was not himself or herself a worker.

1583. Actually working in the trade?—Indeed, yes.

1584. Not a full-time representative of an organised body of workers in the trade?—Of course I should object.

1585. *Dame Adelaide Anderson*: Your view of the industry of dressmaking is that it is on the whole a highly skilled handicraft?—It is, after the person has learnt his business. In the first three years it is quite a sorting-out process, in which the small people drop through the large holes and the others remain, and those who do remain are trained handicraftsmen earning excellent wages.

1586. It is an industry having very variable branches?—Yes.

1587. Your view is that representation should be only through those workers who are engaged in an engraving industry?—Yes, a highly-skilled dressmaker would be the most competent person to have on the workers' side.

1588. It is varying very much in different places and in different workshops?—Yes.

1589. How is the highly-skilled worker in one branch better able to grasp all the different intricacies of the trade than a whole-time representative?—A whole-time representative in a trade union need not necessarily know anything at all first hand of the work which he or she is endeavouring to control, but the dressmaker, who has spent ten or twelve years, it may be, in the process of learning her dressmaking, who knows it from A to Z, and who is in contact daily with the young members and knows their troubles and their grievances, and their good

9 November, 1921.]

Mr. J. H. BARNARD.

[Continued.]

luck if they are fortunate, is the better person of those two to be selected as a worker on a Trade Board.

1590. *Sir Arthur Pease*: The answer which you have just given is not quite consistent, is it, with what you said earlier?—In what way?

1591. That is, that you did not mind one or two representatives not being in the trade, both employers and employed?—That is a concession to human nature, purely.

1592. Is it quite fair to put a man who is actually engaged in the trade without a spokesman up against people who are trained in dealing with these things every day?—Therefore I say one is sufficient, and necessary, in a Trade Board if you are going to have a Trade Board. If you take away the regulation of a valuable trade like this from the hands of the people who have made their fortunes, and trained their staffs, and peopled England with good merchantmen—if you think that they are not competent to do the business and you put it into the hands of somebody else—you need a trained man, and a very skilled trained man at that. I give you one; but the whole principle is wrong to start with.

1593. *Mr. Pugh*: But you have still got it in your own hands, as far as the employers' side of the Board is concerned, of course?—No, no Trade Board in existence, or that ever will be in existence, could be better than being in the hands of the man who made the business, whose wealth or poverty depends upon the regulation of the business, and whose business it is to see that his work is done to the best possible point in order to please the customer.

1594. Carrying that to its logical conclusion, does that mean a Board consisting of employers' representatives only?—No, I do not want a Trade Board at all. I say that if you have succeeded in finding some method of controlling the merchandise of this country other than the hands of those who are controlling it, then you must have on the workers' side fully qualified workers, with a competent leader if you like, and on the employers' side fully competent employers, also with a leader if you like. It is not a better plan than leaving it to the people themselves controlling it, but if you institute it you must see to that.

1595. One is anxious to try to get at your difficulty. You were objecting to Trade Boards and to their constitution, and I am trying to get at what you would put in their place as machinery of negotiation between employers and workers to settle rates of wages?—I would have what I propose at the end of this paper to say: "A national minimum wage should be carefully considered with this end in view." "Some simpler method of defining sweating should surely not be beyond the capacity of Parliament; all sections of the textile distributive trade would gladly place their services freely at the disposal of the Government for that purpose." You have brought a mountain to labour, and you have brought forth this ridiculous mouse.

1596. Where do the workers come in, in that scheme of things?—We would confer with the workers in any shape or form that the Government may suggest. At present the workers are not elected by their representatives in the trade; they are dumped upon the spot by the unfortunate Ministry of Labour, who have to find some means of working out the Act of Parliament.

1597. Is that an argument against the Wages Boards or against the methods you adopt of applying the machinery of the Boards?—At present I urge that against the Trade Boards, and say that they could be bettered by forming a minimum wage, and could be bettered with the assistance of the trade generally, both workers and employers.

1598. *Chairman*: I rather led you aside. Your next point is "Wholesale and retail not identical"?

—Yes, and that is a very important point. On the workers' side they are workers probably on both sides, but on the employers' side you have the mass production merchant, the man who works the factories in the big cities and makes garments, not for the people in his immediate neighbourhood, but for distribution all over the country and overseas. He

produces an enormous quantity of goods. The young people in his factory are not learning dressmaking; they know no more about dressmaking at the end of their tenure than they did when they started.

1599. Of course, they are different, but are they not both represented on the Board?—They are both, but I say they should not be on the same Board, because far from their interests being identical they are exactly diametrical. The complaint of the dressmakers in these matters is that the ready-made trade, by reason of the institution of high wages, is swallowing up the industry of bespoke dressmaking throughout the country, and it is going into the hands of the wholesale ready-made man; and that is unfair. It is unfair to the Board, where sit representatives of wholesale and retail, the wholesaler knowing, for he may know, that the wages he is settling are killing the bespoke part of the trade and driving that trade into his own factory. The difference between the wholesaler and the retailer is this, that a factory does not depend upon its immediate neighbourhood for its clientele; the bespoke dressmaker depends upon the wife of the tradesman or the woman next door, or in her own hamlet or little town, coming to her and getting a garment made, and if that trade is taken from her by the Trade Board instituting wages which she cannot pay, her occupation is gone. She has got one department, the swings; she has not the roundabouts to make money upon, like the big draper has if the swings fail; and if her customer goes into that dressmaker's workshop and says: "What have I to pay for making up this costume?" and she is told the fact, she is horrorstruck at the cost of making up the dress, and the time it takes, and the hands it employs, and the hours spent upon it at the trade rate of wages, and she cannot do it. These letters are full of such instances. The value of the bespoke dressmaker is that she finds employment in her immediate neighbourhood for the girls of her own town; the wholesale man draws the girls from the village into the big town as factory hands; and for the two to operate on the same Board when their interests are diametrically opposed is not in the best interests of either side. They should be on separate Boards. I am told that it passes the wit of man, or at any rate of the Ministry of Labour, to know how to divide the wholesale from the retail, and when I first went to the Board only one meeting ago, I said, "Why are you trying to legislate for the bespoke dressmaker and the wholesale factory manufacturer when their interests are not identical but diametrically opposed?" They are no more the same than the baker and the ironsmelter are the same because they both use fire in the production of their work. I was told by the Secretary of the employers' side: "We cannot possibly divide the wholesale from the retail; we do not know how to do it." I confronted him with this question: "If you cannot differentiate between wholesale and retail, how is it that you have absolutely instituted different rates of wages for the wholesale and the retail?" and I have never had an answer to that question. If it is so impossible to take out the retail from the wholesale, how is it possible to make separate wages for the two classes of workers? I say that they have answered their own objection in that way, and it must be the easiest possible thing to delete from this particular Dressmaking Board the little dressmaker in the country town, who makes bespoke garments for her immediate purchaser, and to differentiate her from the mass production merchant, who makes garments by the thousand by machinery, not for his immediate neighbourhood; it does not matter to him whether he is here or in Newcastle or in Cornwall; his product that he turns out is not affected by his environment, but that of the dressmaker is. The dressmaker in the little town cannot pay her worker the same wage as the big factory hand; she cannot turn out the work; she cannot earn it, and she knows she cannot earn it; and these letters will show you that; and that Portsmouth case, if I may be bold enough to refer to it, will show you

9 November, 1921.]

Mr. J. H. BARNARD.

[Continued.]

that the workers see the difference even before the Trade Board people do, and are content with the wages that they have been receiving.

1600. *Lord Weir*: Were these matters carefully pointed out to the Board before you started fixing your rates?—In my A. heading under "Their Procedure," I say: "Objections from the trade receive scant consideration"—

1601. I simply want to know: did you make this case in front of the Board?—I think Mr. Quilter will tell you that we were told that this was not a concern of ours.

1602. But you are individually a member of the Trade Board?—Yes, for the last two months. I have only been appointed within the last two months.

1603. *Mr. Pugh*: Had you no representation when the Board started?—They would not accept our own Mr. Quilter, who would have been able to place at their disposal the whole of the experience of the Drapers' Chamber of Trade. May I tell you why? I think I am correct in saying that it was because they said: "This is not your business; this is wholesale; this is the manufacturing side"; and now they have roped in every little dressmaker in the country. We were not allowed to advise them, as we might have done.

1604. Had you no representation on the Board?—Afterwards we had one representative.

1605. *Chairman*: You had Mr. Coleing?—Yes. I might frankly say that when the theory or the idea of Trade Boards was first adumbrated we rather liked it. We thought: "Here is the end of our troubles; trade unions will no longer pester us and get at the back door of our assistants; we shall take all our troubles to the Trade Board"; but no such thing. It is not the business of the Trade Board to do anything of the kind. They are to fix wages and conditions of labour, and, if I may say so, with very little consideration for the information of the Drapers' Chamber of Trade. May I proceed?

1606. Yes, if you please.—I simply put that memo., which I think is a very wise one if I may be allowed to say so: "If Parliament deposes its legislative functions to any other body, that body should be representative of and elected by the industry it is intended to govern." May I simply illustrate it with one remark—that it was the same trouble which drove the colonists in Boston Harbour to throw the tea overboard.

1607. Are we not getting?—We are getting to the substratum upon which the freedom of this country is built; and I will leave it there. They were doing a very illegal act, like our friends in Portsmouth were doing.

1608. Please do not make speeches; Boston Harbour is a long way off.—Yes, but the principles behind it is eternal. My next point is: "Objections from the Trade received scant consideration," and I illustrate that with a very remarkable bundle of evidence. Eighteen months ago the Drapers' Chamber of Trade called the attention of the Trade Board to the increasing unemployment caused by the recent rise in wages, and we went before the Ministry of Labour in this very room and called their attention to it. We had a deputation here of 20 members of our Chamber from 20 different districts of this Kingdom, and each told his tale, which seemed to make some impression upon the gentleman who presided, who informed us that, so far as our deputation had informed him as to the rates of wages which had already been imposed, which were causing great unemployment and distress, that was a matter that he would give his personal consideration to, but so far as our evidence had referred to the new rate about to be imposed they referred it to the Trade Board governing the trade, and recommended us to write to our representatives and obtain direct evidence as to the unemployment, specifically so, which had been caused throughout the country. We did so, and we went before the Trade Board by special permission to tell them our story. They listened. I pointed out to them that already 246 drapers had closed down their workrooms; that 262 had effected or would have to effect drastic reductions in staff, retaining only the

most efficient; that 42 would, if the proposed increase became operative, further reduce their staffs; and that 21 would try to carry on as before, trusting that their customers would pay the higher charges. I addressed that Trade Board and told them of the importance of the teaching of the industry of dress-making, and of the habit that it was making in dress-making, and asked them to reconsider their verdict that they would there and then increase the rate of wages for dressmakers. A two months' interval had elapsed, and has to elapse before a rate can be confirmed after once it has been formulated by the Trade Board, and during that two months the people affected are asked to send in their objections if they have any to the proposed increase. There are 60 members of our Trade Board, and when I addressed that Trade Board that afternoon each one of them had a bundle of this size of objections which they had received during these two months to the proposed increase in dressmaking wages. First of all I would refer to the tremendous expense of producing 60 bundles like this for the consideration of one Trade Board—the expense in money and the expense in time. Each of these letters has been carefully and properly gone through, and they are scheduled according to their origin. There were 40 objections from Chambers of Trade—the Horsham Chamber of Trade, Cambridge, Chichester, Bedford, London, Chatham, Kirkby Lonsdale, Portsmouth, Ipswich, Wrexham, Doncaster, and all the lot—Chambers of Trade, mark you—who stated their objection. There were 412 objections from firms and individuals stating their objection. These had been gone through and a précis had been made of their contents, and when I made my little speech to these people, and told them of the objections which had come to us as a Chamber, each one of those 60 members had before him this bundle of objections. Did it have any weight? Not the slightest. They had already agreed together, employers and employees, that when the time for fixing the rate should come along in two months' time it should be established, and this was mere waste of time. They may say that they looked most carefully through each one, and possibly they did, but their verdict had already been agreed upon two months before, and I say that a Trade Board which works on that system is not representing faithfully the best interests of the trade that they are intended to protect.

1609. *Mr. Pugh*: May we assume upon that that all these documents having been looked through, as you were assured they were, the Board could not find any reason in them why the increase should not be confirmed?—I have no doubt that as honest men they found them, but I "hae ma dots."

1610. I suggest that an objection of an employer to an increase of wages is not necessarily a good reason why the increase should not be given any more than an objection from workmen to a reduction is a good reason why the reduction should not be made; so that we cannot regard these objections as necessarily conclusive?—But you will see here that there are five objections from workers; but if people are to object, and they are not to be considered, what is the good of objecting?

1611. I understood that the Board did consider them?—I assume that they did. May I take five objections received from workers, since you mention the matter—5 out of 600. The first is from Beccles—the Beccles Men's Co-operative Association, Limited: "In small towns a national flat rate causes such discrepancy between the wages of a trade where it is operative and other trades that considerable dissatisfaction ensues. The present rate is quite equal to the wages paid in general industry in this town." That is to the point. The next comes from Bournemouth, and is from the Dressmakers' Society of Bournemouth; this is in your favour, or in favour of the workers: "The proposed rate of 10½d. per hour for skilled women is not sufficient to meet the extra cost of living." Then from Chichester five workers "protest against the proposed increase which will cause many workrooms to close if made effective. Workers are not agitating for constant increases, neither do they need them. The majority of workers

9 November, 1921.]

Mr. J. H. BARNARD.

[Continued.]

employed in this town"—that is Chichester—"have only a short walk to work, there are therefore no travelling expenses to take into consideration." Then from Upper Clapton Miss H. Cheek "urges consideration of special rates for pressers," and from Portsmouth Miss D. E. Fairchild says: "23 workers protest against the proposed increase which would lead to a great number of further discharges." There you have the objections which were before this Trade Board twelve months ago, when it was acknowledged throughout the country that trade was dropping, prices were falling, and there was no bottom to the trade at all; and we warned the representatives of the trade that the result which has followed would follow. In the discussion which followed, when questions were asked by the workers' side of me, it was evident that they regarded the whole thing as a manufactured piece of evidence—as perhaps they were entitled to do—got up by our Chamber of Trade, so much so that, although we had the whole of the original letters which showed this tremendous falling in employment, they did not even look at them, and they did not want to. We told the Chairman that he could have them for his inspection, and they were never asked for.

1612. That is rather an objection to the manner in which the people on the Board are doing their business; it is not an objection to the Board itself, is it?—Yes, it is; it is both—the overweighing of Trade Boards at present, if I may put it in that way, by trade union officials—

1613. Supposing we did away with the trade union officials, and had a Board constituted as you want it, you would have no objection to the Trade Board?—I have every objection to the Trade Board, because I do not think it would fairly represent the trade unless it is elected by the trade committees. Parliament is elected by the people of this country. If you take away the control of property from its owners, the least you can do is to see that the people you appoint are appointed by the trade themselves.

1614. Then the objection is to the Trade Board?—Absolutely.

1615. *Mrs. Lyttelton*: However constituted?—How they are constituted at present.

1616. I said "however constituted?"—And the impossibility, if I may say so, of constituting them in a way more satisfactory than the present, the management of merchandise and trade by the traders themselves.

1617. *Chairman*: You cannot have election under present conditions in unorganised trades?—I never say "cannot" to anything.

1618. I thought that was your view?—I think under some such management as the Drapers' Chamber of Trade have inaugurated in the last 20 years ourselves in collaboration with other textile trades we could form some central body; something better than this could be done.

1619. *Mr. Pugh*: Where would the workers come in in that scheme? I quite understand that the employers would do very well; you have your Chamber, which is well organised, and they undoubtedly could represent the views of the employers; but you cannot have one-sided machinery of negotiation. How do you propose to meet the workers' side?—The workers can be invited, in the same way as the employers, to meet on a joint board and consider the question of providing a minimum wage to protect the country from sweating.

1620. To whom would an invitation be sent?—It would be sent to the trade unions representing the different trades.

1621. And then you would still have that objection which you have now, of having the trade union representatives on your board or on your committees?—I do not object to trade union representation provided the representatives are connected with the trade which they are intended to represent—not the slightest.

1622. You have no objection to trade union representation?—Not the slightest, if they represent the trade—if they are workers in the trade,

1623. But your objection is to the man who may be a trade unionist, but is not actually working in the trade?—He has no right to be on the Trade Board governing the particular trade.

1624. Supposing he has had 20 years' experience of the trade, and he is appointed collectively by the other workers in the trade to represent them permanently, do you object to him then?—No, if he has had 20 years' experience in the trade he is a representative man for the trade.

1625. If he has had less than that?—If he is a practical worker in the trade he has every right to be there, but if he is merely a leader of trade unionists sitting on 16 Trade Boards, he has no right to be there.

1626. *Lord Weir*: You mean he has a right to be on one of those Trade Boards, the one with which he is identified?—Absolutely. If he is a good worker in his trade, no one in the world would object, and no employer would; we would welcome him.

1627. *Chairman*: You are rather going back to what I put to you just now. Will you go on to your next point: "Any alteration of rates requires at least four months' to mature." We are familiar with that.—That is very short, is it not—four months. I would just like to read one letter, typical of many. I think it is letter 20. It puts it rather tersely. The original letter is here, and it is from London, E.C.4. It says "Speaking generally, the Trade Boards are always six months behind, and out of touch with the conditions of trade. This I think is proved by the increase last spring, which was demanded at a time when trade was rapidly decreasing in volume." I need not emphasise that. I think it is well known to this Committee.

1628. No, we are familiar with that point.—Then I would point out that "Similar work is controlled by separate Boards, causing friction and discontent." A little country draper has a workroom in which he has a few dressmakers, and a milliner, and the dressmakers will also work on bespoke tailoring, and then on another day they will be making a dress for indoor wear, and on another day will be making a coat and skirt for a customer for outside wear; but this same workroom is controlled by three different Trade Boards, all doing similar work with different rates of pay. One hour a girl is making a costume for a lady—is making a coat and skirt; the next hour she is under a different Trade Board, and is paid a different rate of wages, and is entitled to it. That is totally unnecessary, and an exceedingly costly manner of running. If Trade Boards are to be established for little dressmakers with little workrooms, surely some simpler method of avoiding sweating might be discovered. I will not labour that. It must be self-evident to everybody, but I would like to refer to the petty restrictions.

1629. *Mr. Layton*: Before you leave that, will you suggest what your solution would be for this problem of different trades in one workroom?—I would say that the minimum rate of wage—one minimum anti-sweating rate of wage—would be perfectly sufficient.

1630. Have you in mind any minimum rate of wage for all the textile trades, or for every industry in the country?—I would say that that is too big a question for me to answer straight away, but I am perfectly certain that it can be solved, and solved without difficulty, by the various sections of the textile trade in alliance with a properly constituted committee of the Government. I am perfectly certain that the difficulty which appears now would not be nearly so great, or would disappear altogether. You have a girl working here at a certain rate, and a younger girl working next to her at another rate, doing the same sort of work, who has passed the same apprenticeship. It was never intended that drapers should do that finicky sort of work, surely. It is too paltry.

1631. Your evidence extends in two opposite directions: one is that wholesale and retail could not possibly be dealt with on the same Board?—Quite so.

1632. The impression on my mind was that you were suggesting to us the possibility of dividing so as to get self-contained parts of the industry?—Yes.

1633. You now are moving in the opposite direction?—Not quite, I think, because the wholesal-

9 November, 1921.]

Mr. J. H. BARNARD.

[Continued.]

might be absorbed in another wholesale. The conditions of work in a wholesale factory are very much the same whether a man is turning out skirts or whether he is turning out broomsticks, for the matter of that; he is a worker in a trade at a specified price per hour. It does not so very much matter in the wholesale what he turns out, but the retail dressmaker is a very different class of worker.

1634. Then you have in mind a certain sort of machinery for all retail branches of the textile trade?—I think the dressmaker, milliner and bespoke worker, who are all exactly the same class of thing and in the same workroom, should be governed by the same Trade Board, if you like, or the same minimum rate of wage.

1635. And the factory would be in a different class?—Yes, the factory is a factory.

1636. *Chairman*: That would have to be a time rate, I suppose?—Yes, I think so.

1637. You could hardly have minimum piece rates?—No, and it is not necessary to do it.

1638. *Lord Weir*: Is there not a tendency for the minimum to become the standard?—It is becoming the standard here.

1639. But would it not be so?—No, I do not think so. Competition for good work is very keen in this country, and it is sufficient to establish good wages. It is no good endeavouring to make out that all girls of 19 are of the same value. It cannot be done. It is not practicable. No business man would ever build anything upon such a foundation as that.

1640. *Mr. Pugh*: Surely there is no difference between that and other industries? In all industries?—There is a great difference. An iron-smelter who does a certain amount of work turns it out at so much per hour, but a dressmaker—

1641. No, he turns it out at so much per week, say, but he gets the same rate?—And if he is a good man and his value is known by his employer, he will get far more than the minimum.

1642. That is just one of the conditions of the employment: that if a person who is 19 does not do the work that he wants, he can have somebody else. If he has to pay the same rate, he selects his workmen?—You take a business, and see what dissatisfaction it causes, and how the lazy person is getting just as much as the others. You do not want to be dismissing your people every week because they are incompetent. You do not want to drive even a person who is incompetent through no fault of his own into the street. You like to work them, but you want to give them less wages because they do not turn out so much, but you cannot in dressmaking. You must not employ anyone, no matter how poor they are in the produce of their work, at a lower wage. You do not want to turn them into the street, but you cannot keep them. If they are 26 years of age and they cannot earn their wage, the alternative under the Trade Board is to dismiss them, but if you have any sympathy with a woman of 26 who has got a family to keep, you cannot keep her unless you are going to lose money on her every week, and that cannot be done *ad infinitum*.

1643. *Chairman*: That is the problem of the slow worker, as it is sometimes called?—It is immensely intensified by the system of a uniform rate of wages among dressmakers. Without referring to my own particular business—and I have been in the textile distributive business in the City of London for more than 43 years—we say that work in a workroom under Trade Board wages takes twice and three times the time to turn out it did before, when the worker knew that her wages for weeks and weeks on end were assured in the old days; but now she knows that when her job is done she goes outside the door. It is wrong and it is cruel in principle, but it is the trade union method.

1644. *Lord Weir*: Do you mean that apart altogether from the increase in cost of the garment due to the increase in the wage, there is a further increase due to the influence of the Trade Board?—The regulations of the Trade Board?

1645. Yes.—Certainly—that the regulating of a fixed wage to a worker according to age and not to ability means the weeding out of all incompetent workers, or rather all workers below the top method of production. If a girl is not worth 42s. per week, but she is worth 38s. or 36s., you must not pay her the 38s. or the 36s.; you must pay her 42s. Under the old system—I refer to it later on—employers kept their workpeople on all through the year: they did not turn them out when for a temporary period work was scarce, and the worker knew that she could work as fast as she liked and she was not going to be sacked when the work was over, but her bread and cheese was safe for twelve months. Not so now. There is not a workroom in the country to-day which works full time. You can hear a woman say, "What is the good of hurrying over that? There is nothing more coming in to-morrow." It means extra cost on the particular garment she is producing, in addition to the extra wage which the Trade Board demands that you should pay them, and that is an evil going on all over the country which is not attributed to the Trade Boards.

1646. *Mr. McCallum Scott*: Is not it the same with engineering and shipbuilding?—Yes, I do not pardon it there.

1647. There are no Trade Boards there. Is not that the general condition of industry just now?—It used not to be until Trade Boards were established, for dressmaking. I cannot speak of any other industries, and I cannot pretend to libel them for a moment. I know nothing at all about them.

1648. *Mrs. Lyttelton*: How would you protect a worker who is able to do good work, but whose employer is not willing to pay more than the minimum rate? You cannot pretend that economic conditions would raise her rate without any attempt at protection?—If an employer in the old days found that one of his employees was able to do good work, he would pay her more. There is no limit to the wages that he would pay her.

1649. It is very odd, then, because if those things operated we ought not to have had any such thing as sweating?—May I suggest that it is a very unwise thing to baffle the whole of the trade of honest men because a certain percentage of people in the trade (who can be got at in a much simpler and more thorough manner by other means) are "sweating"? It is unwise that the whole of the trade should be hampered and bound by quantities of red tape because a certain percentage in that industry are "sweating." There is no more horrible word in the textile trade than the word "sweating;" we hate it; we deplore it. Any man amongst us who was known to be sweating would come under the lash of the Drapers' Chamber of Trade. But why should every man in the trade be called a dishonest man and be treated as such, and his business be taken away from him, because .02 per cent. of the employers of the country have been sweating? I was going to quote—and I will do it—that in an old Book it is recorded that one just man in the city would have been sufficient to save it, but I am afraid that Trade Boards and trade unions and the legislature generally have reversed that dictum, and it is one unjust man in the trade that labels the whole thing as unholy. But that is by-the-bye.

1650. *Mr. Layton*: May I take that point a little further? You said that there was a tendency for the minimum to be the maximum?—Under Trade Board regulation.

1651. Is that only a small tendency, or are the great bulk of employees paid the Trade Board rate?—The minimum would not become the maximum if the minimum was a minimum, but if a minimum wage is established and it is called a minimum when it is a wage above the capacity of the worker to earn for the employer, it is a maximum, and it is beyond the maximum. It is unfair of the Trade Board to make a wage which that particular industry in present circumstances cannot earn, and to call it a minimum.

9 November, 1921.]

Mr. J. H. BARNARD.

[Continued.]

1652. Was there before the Trade Board came into operation a substantial difference between the earnings of workpeople in the same workshop or factory due to differences in their skill?—I cannot speak for the whole trade, as there was no regulation of wages, but speaking for the industry that I know, my own, I was asking my own manager of the workrooms the other day what proportion there should be between to-day's wages and the wages in the workroom before the war. He said that if the people in my workroom were paid half as much again as they were paid before the war, they would get a very excellent wage and they would be perfectly content.

1653. That is not quite my question.—That is more than the minimum which we consider, but it is less than the maximum.

Chairman: You do not follow the question.

1654. Mr. Layton: That is an answer to another question. The question asked was whether in the workshops, before the Trade Board came into operation, there would be a considerable variety of wages paid to workers for the same sort of work owing to the fact that they had different ability?—Yes, decidedly.

1655. Was there a large wage distribution at a given time in a workshop?—Wages were paid in those days according to ability and according to merit, and not in any shape or form according to age.

1656. What sort of difference would there be between the highest and the lowest wage?—I could not say. None, so far as the upshot of the wage was concerned; but I may say, if this would be illuminating, that when the wages were fixed first by the Trade Board at 6d. and 7d. I do not think that there was so very much complaint—

1657. Chairman: You are really not attending to Mr. Layton's question.—6d. and 7d. are the wages we would settle to-day.

Chairman: That is not the point.

1658. Mr. Layton: I am trying to get at this: whether there was, before the Trade Board came into operation, a standard wage which was in fact the wage paid to all workers, or whether in fact economic conditions had produced a wide dispersion of wages at any given time?—My answer to that is distinctly that there was no standard of wages that I know of in the dressmaking trade, or any other trade perhaps, before Trade Boards were established, and that wages were paid entirely by the value which the employer put upon the economical turn-out.

1659. May I take it that the answer to my question is Yes, that there was a dispersion, but you cannot give me the statistical measure of it?—Absolutely.

1660. What I want to ask follows on that: whether there is such a dispersion to-day with the Trade Board in operation?—Only in very select workrooms in the West End, where money is no object.

1661. Why is there such a dispersion in such workrooms where money is no object?—Because in the best workrooms they can get any price they like, and when a garment is 50 guineas it does not very much matter whether the worker is getting 1s. 6d. or 2s. 6d. per hour.

1662. What is the basis of that higher wage? Is it higher skill?—Certainly, absolutely. There is a great demand for it, and a highly-skilled dressmaker will be taken by another firm if she is not paid good wages where she is.

1663. Then the answer to my question is that before the war economic conditions tended to make a dispersion of wages in relation to skill, and that that remains now to a small extent?—Yes, in the best class workrooms—in the workrooms which have the richest and most select clientèle.

1664. And that is the only evidence in support of your statement that a Trade Board rate tends to become a maximum?—That is rather an involved question. My answer to that would be, as it was before, that the minimum rate becomes the maximum if the Trade Board fixes the minimum rate too high.

1665. Mr. Pugh: But having regard to your experience previous to Trade Boards, would not the minimum in all cases tend to become the maximum

except in the case of the most highly efficient worker, who could go elsewhere and get a job?—No, it would not.

1666. Who fixed the wages previous to the Trade Board?—The employer.

1667. The employer only?—Yes, subject to the intervention of any trade union whose members appealed to him.

1668. Would there be a difference between the wages of workers belonging to trade unions and those who did not?—If they belong to a trade union, yes, but on the premise that justice ruled, and that the employer knew his business sufficiently to see that if he had a good worker it was to his interest to pay him well.

1669. That depended upon the goodwill of the employer?—No, the employee could leave if he was not satisfied.

1670. Chairman: The employee was not bound to stop; he could go away if he liked?—It was the desire to keep good employees which always raised wages.

1671. Mr. Pugh: As a matter of fact economic conditions decided whether he should or not?—Absolutely, as they should.

1672. Mr. Layton: Would it be possible for you to give confidentially to the Committee the wages book of a representative workshop showing the wages actually paid before the war, and to-day, by some firm?—I think we shall be able to show you something of that sort.

1673. Showing how many people there were; and the different rates, so that we can see the dispersion of wages before the war and now?—I think we can undertake that.

1674. It will have to show the particular workers, of course?—Yes.

1675. It is no good averaging?—No, not a bit. May we take dressmaking as a trade?

1676. Lord Weir: It would be best if you could take one particular workshop in 1914, and that same workshop now?—I have with me Mr. Beaumont Wallis of Portsmouth; he is the Chairman of the Drapers' Chamber of Trade of Portsmouth. Will you allow him to deal with that?

Mr. Beaumont Wallis: Before the war the first bodice hand, who was the highest paid worker in the dressmaking workshop in my own place, got from 25s. to 30s. per week.

Mr. Layton: A weekly time rate?

Mr. Beaumont Wallis: Yes, for a week of 44 hours.

Mr. Layton: A weekly time rate?

Mr. Beaumont Wallis: Of 44 hours; and she got 27s. 6d. Then her assistant came down to about 22s. 6d. The workers who were not assistant bodice hands got 17s. 6d., and the lowest ones in that room, immediately after they had served their apprenticeship, got 12s. 6d.

Mr. Layton: They are all time rates?

Mr. Beaumont Wallis: All time rates for 44 hours. Then to-day, taking just the same workers, the youngest one starts at 8½d., which for 44 hours, comes to about 28s., and she works up to the maximum of 10½d., which is 45s. per week. That is the difference in wages. I was going to bring out the point that before the maximum, or what you call the minimum, was fixed, some of our good workers were getting more; they were getting 9½d. when 8½d. was your minimum. Competition, as has just been said, governed the rate of wages, and we frequently had good workers coming to us and saying that our neighbour had offered them more money to go to them, and they left to get the higher wage, but we had workers getting 9½d. as the stated wage per hour in my own workshop when your minimum, which Mr. Barnard calls your maximum, was 8½d.; it has since gone up by 1d., I think.

Mrs. Lyttelton: What does the principal bodice hand get now?

Mr. Beaumont Wallis: The rate for a fully qualified bodice hand is 10½d., and that is what the worker was for whom I was summoned, because I was not paying 10½d. You bring out a schedule, and describe

9 November, 1921.]

Mr. J. H. BARNARD.

[Continued.]

her as a bodice hand, and then you describe her as "fully qualified, who works without supervision"; and we have since found that our workers all work under supervision, and they are only "qualified" at 9½d., which they were getting.

Mr. Pugh: Is the 25s. to 30s. the pre-war wage?

Mr. Beaumont Wallis: Yes, in 1914.

Mr. Pugh: And the 28s. to 43s. is the post-war wage?

Mr. Beaumont Wallis: Yes, it is now.

Mrs. Lyttleton: Will you give me your pre-war figures again?

Mr. Beaumont Wallis: 12s. 6d. per week when the worker was out of her apprenticeship. That would be a girl of 17. It runs up from there in our own workroom—which is not a very high-class one—to 27s. 6d. for the first bodice hand.

Dame Adelaide Anderson: How long was she on apprenticeship?

Mr. Beaumont Wallis: Three years. We always had a three years' apprenticeship.

Lord Weir: Then the range according to ability was from 12s. 6d. to 27s. 6d. pre-war, and the range according to ability is 28s. to 43s. now. Is that right?

Mr. Beaumont Wallis: That is right.

Mr. Pugh: That is only for bodice hands.

Mr. Beaumont Wallis: It applies to our workroom really. That is right.

Dame Adelaide Anderson: Both after three years' apprenticeship?

Mr. Beaumont Wallis: Yes.

Mr. Pugh: I think there is some little misunderstanding here. I understood that you simply quoted the bodice hand when you gave the figure of 28s. to 43s., as against 25s. to 30s. pre-war, but you have not given us the present figures so far as the assistant hands and apprentices are concerned.

Mr. Beaumont Wallis: I have not touched apprentices in either case, I have only given the first bodice hands, assistant bodice hands, and workers.

Lord Weir: The range after they are out of their apprenticeship?

Mr. Beaumont Wallis: Yes. You have got no intermediate stage now; it comes in later on. Directly they are out of their apprenticeship you call them all 8½d.

Lord Weir: Mr. Layton's point is made then, that pre-war the dispersion was over 100 per cent., and post-war it is considerably less than 100 per cent.

Mr. Layton: The margin, in fact, remains the same in shillings in both cases; it is 15s. in each case?

Mr. Beaumont Wallis: Ought I to say that that, of course, is a country town? Do not take those figures to be London. That is a low wage for London, but it is not low for the country—12s. 6d. for a girl of 17.

Witness: In London, as I say, the competition is very keen for top hands. There is more room at the top of the ladder than there is at the bottom, as they say, and a competent dressmaker can receive, and does receive, in our own house, and more especially in the West-end, wages far in excess of the minimum.

Mr. Beaumont Wallis: May I say that before the war we gave them tea in the afternoon, and that was extra on their salary; we made no deduction for that. Now that is all knocked on the head, and there is no provision for meals in the retail trade.

Chairman: You are in Southsea, I think, are you not?

Mr. Beaumont Wallis: Yes.

Witness: Shall I proceed?

1677. *Chairman:* Yes, if you please.—I have referred to the point that "petty restrictions and intricate regulations handicap trade, and employers refuse to carry on." You will quite understand that the dress-making trade is in the hands of very simple people—nice quiet people who live in the villages and towns of this country, and employ a few hands. Just think what they have to do. I wrote the other day of a complete set of the posters which have to be exhibited in the workshop of a dressmaker who employs milliners, dressmakers and bespoke garment workers. (A bundle of posters was produced.) These had to be exhibited under the penalty of being hauled before

the police; they had to be exhibited in one little room. Just look at the detail of instruction and verbiage and all the conundrums which are put here for little dressmakers who have never had anything to do with it, and for small drapers. I have been looking through one or two of them, and upon my word, I could not answer half the questions that are put here, or understand half the qualifications. This is one set which is required to paper the walls of a small country dressmaker's back parlour.

1678. Are those proposals for rates of wages?—Yes, that the employer and employee may understand what she has to pay or receive.

1679. Are they proposals?—There would be double that set if there were proposals; that is only one single set.

1680. *Mr. MacCallum Scott:* Those are the fixtures?—Yes, but when a proposal to revise a wage comes in those remain stationary, but room has to be found for another set, and where, goodness knows, I do not. Then we have been referring to "qualified" and "fully qualified." I should like you to imagine the sort of correspondence which is bandied between Montagu House and the Dressmaking Trade Board as to who is to receive and who is not to receive a specified rate of wages. "Fully qualified" was dealt with in an agenda paper which was supplied to me, and in paragraph 8 is a long correspondence which has taken place. I will only read one paragraph just to show you the conundrums which must arise and the difficulties between two sets of people who know nothing, or very little, about the trade which they are endeavouring to control. "Interpretation of terms 'fully qualified worker' and 'qualified worker.'" First of all the Board of Trade here or the Ministry of Labour want to know if there is any difference between "qualified" and "fully qualified." "The Committee considered a letter from the Ministry of Labour (as set out in Cyclo No. 99th circulated to all members of the Board) raising a question as to the interpretation of the term 'fully qualified worker' used in Section 11 of Part 1 of the Schedule to the Notice W.D. (4) together with a question raised by a correspondent as to the distinction between a 'fully qualified worker' and a 'qualified worker.' It was agreed to inform the Ministry of Labour that it had been the intention of the Trade Board that the terms 'fully qualified worker' and 'qualified worker' should carry the interpretations which have now been given in the definitions set out in Part V of the Trade Board's Notice W.D. (5), and that if, in fact, a worker took bodices, skirts, gowns or blouses direct from the fitter and made them up without supervision other than general supervision, such a worker would be regarded as 'fully qualified.' In the case of the question raised in correspondence, it was agreed to reply to the effect that if the supervision referred to were only general, the worker would be regarded as 'fully qualified.' If, however, the worker required direct or detailed supervision she would only be regarded as 'qualified' and not 'fully qualified.'" That is only one paragraph of lots of stuff which was bandied about between the Minister of Labour here and the Trade Board. A Committee is formed and argues the thing out for hours and hours; it is brought before one meeting of the Trade Board and before another, and eventually we find that people in Portsmouth are prosecuted and brought before a Police Court because they cannot understand, nor can anybody else, the particular division in their workroom between the 8½d., 9½d., and 10½d. worker.

1681. *Chairman:* Your next point I think you have dealt with?—With your permission, if you perfectly see the importance of that, I will leave that. It is borne out in these letters, if you will kindly look through them.

1682. I will read it through once: "If discretion were allowed, employers could give full employment at lower wages during slack periods, and did so under pre-Trade Board conditions. They cannot do so under a Trade Board. This encourages slow work and

9 November, 1921.]

Mr. J. H. BARNARD.

[Continued.]

increases unemployment." I think that speaks for itself.—Yes, I need not read anything.

1683. Then your next point is: "No smaller wage may be given to inefficient workers without permission being obtained for each case from London; hence increased unemployment." You have dealt with that.—Yes. If you will allow me to do so, I will leave with you a very illuminating paper which gives the particular discipline under which people must suffer if they are going to be employed at a less rate of wages than that ordered by the Trade Board. You have to write up to London and fill up a form giving the date of birth and a doctor's certificate. Fancy a draper in a little country town having to send up to 60 people in London to know whether he can keep on Mrs. Jones, who has been working faithfully for him for 20 years, but cannot produce her 45s. per week worth now. He has to get permission from the Trade Board up in London and it may take weeks before he can get a reply; and what on earth do they know better than the persons themselves as to what they might pay? It is too silly for words.

1684. Then you say, "One flat rate for the whole of the United Kingdom impossible"?—Does not that suggest, as I have emphasised, that the bespoke tailor or the dressmaker makes for the little people in his or her own neighbourhood? If she lives in a back street in Spitalfields she has not got a wealthy clientèle who can afford to pay high prices for their bespoke garments, and therefore her workpeople cannot hope to turn out work equal in value to the dressmaker in some more wealthy and popular neighbourhood. That is in the towns only. In London the rate must vary for that very reason, but if you go to Cornwall, letters here from Cornwall will surprise you. There is an agricultural district where the labourer to-day is getting less than the little dressmaker. The dressmaker must be able to produce labour which will be paid for—which the customer can pay for. It is not the high price of the material which is used. The customer goes into the shop and buys her material and pays for it, and she takes it to the dressmaker. She has been used to paying so much but now she is met with a bill altogether beyond her imagination, and she declines to buy it. The trade is driven out of the small villages, out of the small towns, for bespoke dressmaking, and it has been driven into the ready-mades. That means that you are going to have, and you have got, greatly increased unemployment throughout the country villages and little towns of England.

1685. Mr. Loyton: Is not your complaint rather that the rate fixed is too high, than that it is a universal one?—Both. A rate which can be considered high for Cornwall would not be considered high, perhaps, for London.

1686. Clearly, but if you fix a rate for Cornwall as the national minimum, that would meet you?—Absolutely. We go in for a national minimum rate above which you can pay anything you like.

1687. Is that your suggestion?—Subject to consideration. I would not say off-hand in five minutes without going into it very thoroughly how a minimum wage should be established, but that a minimum wage should be established for each industry is, I think, the desire of the Drapers' Chamber of Trade and of the textile distributing trade generally.

1688. For the country?—For country and town.

1689. Not one rate for the trade; you would have a variety of rates?—No, it could not be done; and it has been fixed. That is the same mistake that the Trade Board has made: they have fixed the same rate for the dressmaker in Cornwall as for the dressmaker in the West End, and they prosecute a person for not paying it.

1690. You said just now that you could not have one rate for the whole of London?—No. I do not emphasise that so much as I do for different districts, but to my mind, personally, I think it would be very difficult for London.

1691. If you fixed a rate which was suitable for Spitalfields, as you said just now, is there any reason why you should fix a higher rate in any other part

of London?—I do not think so. If you accept the principle of a minimum rate which would prevent sweating, I think that is the simplest and most practicable method.

1692. Then your previous observation means that you could not have a rate for London if you were fixing a standard rate for different branches of trade?

—No. You could fix a minimum rate.

1693. But you could fix a rate for London if you were fixing a minimum to do away with sweating? Certainly.

1694. Dame Adelaide Anderson: Then that would add the word "standard" to "one flat rate"; it would be "one standard flat rate for the whole of the United Kingdom impossible"?—Yes, if you please, but there is this difficulty about this, that if you are going to fix a minimum rate for Cornwall, it might be suggested, and wisely suggested, that that should not be the minimum rate for a large town of 500,000 inhabitants.

1695. Mr. Layton: As your Chamber says, the question is one of allowing variations in the minimum?—It is a matter that would have to be considered very carefully before ever a minimum or standard rate were fixed, whether it should be applied to a district or made universal.

1696. Your Chamber has not decided its policy upon that point?—No. We are perfectly prepared to consider it. The principle has been agreed to, not the details.

1697. When you say "the principle" which principle do you mean?—The principle of a minimum wage; but whether the minimum wages should be many or few has not been decided. This next point is: "The public cannot pay the increased charges caused by increased cost. Trade Boards increase the prices to the consumer unnecessarily." I think I have suggested that. "The trade in bespoke garments is decreasing, and going into the hands of the large town factory ready-made industry." I think I have dealt with that.

1698. I think you have.—Then we come to the learners, and it is really the learners who are the principal trouble. Just fancy! A lady goes to a dressmaker or a draper and says, "I wish you would teach my daughter dressmaking"—not necessarily a poor woman, but a woman who would be willing to pay a premium if she were allowed. Of course, she is not allowed; it is a criminal act to take a premium for teaching dressmaking to-day. She has to get her proposed worker to fill up this elaborate form and send it up to London to get the approval of the Trade Board before she can teach a little girl of 14 or 15 the art of dressmaking—or attempt to teach her. That Trade Boards were intended to impose such restrictions upon the poorer woman I could not conceive. I can hardly believe it.

1699. Mr. Pugh: Are those cases to be taken for setting the standard as to what arrangements and wages should apply in the trade?—I suggest that the case of a lady who wanted to send her daughter to learn dressmaking is so exceptional, having regard to the whole trade, that you cannot take that as a criterion.—Exceptional?

1700. Yes.—Pardon me, every mother wants her daughter to learn dressmaking, and she would send her to a dressmaker.

1701. They can learn dressmaking at the secondary school; they do not necessarily want to go to dressmakers.—And they have to pay for it.

1702. You would not take those cases as being the criterion which would decide the conditions for the whole trade?—I should say that they formed a very important consideration, but I do not base my argument upon that. I say that every woman who wishes to have her daughter or her little girl taught dressmaking cannot go, as she used to, to her local dressmaker, who has known her all her life, and say: "Please take my little girl into your workroom." Before she even pays her the minimum wage she has got to get one of these forms filled up, and, believe me, throughout this country there is hardly a dressmaker who knows that this has got to be done yet, and yet they are prosecuted for not filling them up. Take, for

9 November, 1921.]

Mr. J. H. BARNARD.

[Continued.]

example, a little girl of 14 who has not filled up one of these forms; they have to pay her 8½d. per hour—34s. per week.

1703. *Dame Adelaide Anderson*: Is not one of the objects to secure that the instruction given to these young learners is right and adequate—that the learner is not being employed without teaching to carry on the dressmaker's business?—That is perfectly legitimate, but do you not think that the trade of this country is sufficiently to be trusted to have the good end in view? They want their people to become good dressmakers. What is the use of them unless they are to teach them dressmaking, so that in three or four years—they have to sign for four years here—they will be practical dressmakers and of use to them in their business? Over and over again they say that the girls' services during the first 12 months are of no use from a commercial point of view. They hope that in time they will be; but how much more does the Trade Board in London know of the little girl down in the country who sends up this form? How is it more safe or more binding upon the draper than if he did it himself?

1704. *Mrs. Lyttelton*: You admit that some regulation is necessary for the employment of these young people?—That is so in every trade, most decidedly.

1705. What would you suggest?—I would suggest that the guardian and the employer, or the mother and the employer of the young girl, are sufficient guarantee in the case of a learner. A national minimum wage should not be fixed for little girls and little boys when their parents who are responsible for them, and the employer whose interest it is to turn out a good article, together undertake that the child shall be taught. Why should we assume that every mother in the country and every employer is dishonest, or grinds the faces of the poor? It is not so.

1706. *Dame Adelaide Anderson*: Is it not perhaps parallel with education? They found that they had to impose a standard of elementary and secondary education?—I do not think it is necessary. I really do not think that the teaching of a little girl—

1707. You do not think inspection is necessary?—No, that the Trade Board is any improvement on the draper and the mother. Surely the best people to know the terms upon which a young girl should be employed are the employer locally, who knows what he wants to train a hand, and the mother or the father who wishes the child to be trained.

1708. I merely suggested to you that it was not found sufficient for the schoolmaster and the parents to consult together; standards had to be set up for elementary education?—Yes, a standard of elementary education, but this is not a standard of dressmaking.

1709. No, but I am merely suggesting some control to secure that the teaching is adequate?—I suggest that with the control of the parent and the employer, and the local competition, and the *esprit de corps* of the neighbourhood, and the criticism which would arise in the neighbourhood, it is perfectly sufficient for a learner and an employer not to be subjected to all this red tape stuff, which really does not advance the matter a bit. How does it do any good? What does the Trade Board know after they have signed this as to whether they are signing an agreement with an epileptic or a person of unsound mind?—They know no more about it than they did before they started.

1710. *Mr. Pugh*: You are taking the point which I gather you say is an objection, that the Board in London cannot settle things for localities. Would you regard it as an improvement if you had District Committees which would take into account district circumstances?—I think that if there is a District Chamber of Commerce, as there is in most counties and most principal towns, a reference to that body would be far better and far more expeditious and far more economical and of less cost to the State than all this red tape business.

1711. I am not thinking of employers alone, I am thinking of District Committees connected with your Trade Board. I am assuming the continued existence of the Trade Board. But with regard to the point you mentioned about the Committee in London not being able to deal with local circumstances, assuming the continuation of the Board, would you consider that it would be an improvement if you had District Committees to deal with local conditions and circumstances?—I certainly say that any local machinery would be far and away an improvement on subjecting the mother and the child herself to the necessity of filling up a form and sending it away to London where the people can know absolutely nothing about it.

1712. Of course that is only one objection?—I should prefer local decision on such matters to a central decision, though I think neither necessary.

1713. *Lord Weir*: In connection with learners, if you state what appears to you to be a very high rate of wages for a learner, is there any danger that that of itself may lead to poor training of the learners? Is there any danger of the employer using those learners in a specialised way—keeping them always at the same work for the sake of greater output?—I suppose there is a danger, but it is one of those dangers which are common to every-day life, and which cannot be evaded.

1714. Is it a danger which might develop under an irksome system such as you complain of?—Does this make it nugatory; does this kill it?

Chairman: You are not understanding the question.

1715. *Lord Weir*: You evidently feel that these rates and prices for learners are rather irksome to you?—Yes.

1716. Let me put it quite plainly—that they are rather expensive?—Yes.

1717. Is there a danger, for instance, of your own firm specialising the learners and keeping them always at the same job, so that they may become more proficient at that one job and turn it out cheaply?—I have not come across it. One man would and one man would not. The bespoke trade is different from any others in that way.

1718. *Chairman*: I think there was some evidence before the House of Lords Committee that some of the small drapers and milliners made a practice of employing quite young people at nominal wages for a time, and as soon as they become too old for that they turned them off and took on fresh young people. Is it not desirable to stop that kind of thing?—Yes, certainly; but unfortunately the Trade Board rate of wages, which is a maximum, makes it compulsory to turn a person away when she cannot earn the wages formulated by the Trade Board.

1719. You say it is a maximum?—Yes, it is a maximum in dressmaking. It is an evil, but it is an evil which is not killed by Trade Boards.

1720. Perhaps not, but it is an evil which ought to be dealt with?—Yes, which every honest trader would endeavour to kill and does endeavour to kill.

1721. I am sure of that, but still it is desirable to kill it?—Yes, absolutely, and I wish Trade Boards would do it; but the regulation of making a maximum wage rather increases it with regard to learners, and therefore I say that the restrictions should be removed, or done away with, to some extent—that they are at present very irksome, as these letters prove. I see that in Cornwall not a single apprentice has been engaged for the last 12 months, and I make bold to say that it is the learners' certificates that I have referred to that is the cause of that. I simply refer to the inspection which would be necessary all over the country, if you are going to enforce Trade Board regulations. It is easy to inspect a factory; it is a big building in a big town; but you have got to go into every dressmaker's house and every little dressmaker's parlour all over the country, and in these days to put such a burden upon the State is intolerable. You would have to have an army

9 November, 1921.]

Mr. J. H. BARNARD.

[Continued.]

of inspectors; and unless you do inspect, you will have people acting unfairly, and if you do inspect it is going to cost you goodness knows what.

1722. *Dame Adelaide Anderson*: You know that these small dressmakers' places are already inspected by the local sanitary authority and by the factory inspector?—Yes, but not to the extent which would be necessary under these Trade Board regulations. Factories are inspected, but not little dressmakers' workrooms.

1723. Yes, dressmakers' workrooms are inspected. —Yes, on paper, but you would have to have an army of inspectors to inspect them all. Think of the thousands of little dressmakers there are in England; and if they are all to be inspected you will want an army of inspectors.

1724. *Mr. Pugh*: Does it mean that if they are not inspected they will not pay?—They need to be inspected if they are to be made to pay. Then you have the case of the woman who works herself. She is coming into competition with the workroom, and she is not under the purview of the Trade Board until she begins to employ somebody else. Several people have said to us: "I have been obliged to close my workroom and rely now upon my own hands." I did hear when I was at Portsmouth of a dressmaker who told me that when she had paid her staff off the preceding week she had 15s. 3d. for herself. If that is not sweating by Trade Board regulation nothing is. It is substituting one kind of sweating for another. She had determined that she must close her workroom and earn her bread as best she could with her own hands. She then does not come under inspection, and she can charge what prices she likes. She comes at once into competition with the workrooms although, of course, she can only do the work of a single pair of hands; but, as I say, if you are going to have inspection, you must inspect every room where a woman can only employ one worker.

1725. I suppose there are other dressmakers in that neighbourhood?—Yes, perhaps all doing the same thing.

1726. I suggest that the other people will get her trade?—The trade is being killed entirely and going into ready-mades. It is not being made in the town. You are making unemployment in the country towns.

1727. If it were to go into ready-mades it would be evident that you would be killing the dressmaking trade, but in an isolated case, such as you mention, one would like to know what she was paying previously, and what was the increase as the result of the Trade Board decision, and what were the charges which she was making.—Yes, that is a matter which can be well brought under the consideration of this Committee, and I am sure you can get evidence upon it.

1728. You may find that in present circumstances the present condition of industry in the country has affected the dressmaking trade as well as every other trade very badly.—Yes, but it is the wages which have done it in this case.

1729. *Chairman*: Then your next point is the Portsmouth case. You have said something about it. Do you wish to add anything?—No, not myself, but if you wish to ask my friend, Mr. Beaumont Wallis, he is here for the purpose.

1730. Then will you go on to the next point?—Then I come to remedies. No. 1 is "Bespoke dress-making, millinery and woman's tailoring as distinct from goods made in mass production for the home and overseas markets, should be removed from the purview of the present Boards." I think I have emphasised that.

1731. You have. That means that there should be no anti-sweating regulation at all?

1732. *Lord Weir*: I think you meant that there should be more Boards to cover the same field?—If it be thought well to establish more Boards, which I do not suggest, this would come under the purview of another Board, but whatever happens to it the Wholesale Factory-Made Garment Board is not the Board for the bespoke dressmaker.

1733. *Chairman*: That is what you mean?—That is what I mean.

1734. You would not object to an Anti-sweating Board?—I would welcome it, and so would every trader in the country. Then No. 2 is: "Trade Boards should not be extended to the distributive trades: it would be practically impossible to give efficient inspection and control to all shops, bazaars, markets and street trading throughout the kingdom." There is again the impossibility of sufficiently controlling the trade. You have to control the markets and the street selling, and every man who distributes any article comes under it, and if he is to come under a Trade Board he has to be regulated. The distributive trade is not like a productive trade. As I said, a factory can be easily run; you turn out a thing with a machine; but the distributive trade depends upon the energy and efficiency of the man behind the counter, and also upon the *clientèle* of the person who is selling. I say that the distributive trades should not be saddled with Trade Boards. I think that is the very general opinion of the whole of the textile distributing trade. I then further say, that "some simpler method of preventing sweating should surely not be beyond the capacity of Parliament; all sections of the textile distributive trade would gladly place their services freely at the disposal of the Government for that purpose." The next point is, "The small proportion of offenders in this matter should not be allowed to penalise the whole trading community"; and I illustrate that by the presence of the one just man rather than the one unjust man. Then the last one is, "A national minimum wage should be carefully considered with this end in view."

1735. Do you mean a wage for all trades?—Yes. That would come under the consideration of a committee, which I think would be able to give some first-rate information to the Government on this subject. May I just sum up from one of these letters which came from Glasgow; it is No. 19.† I think if you read that and have not time to read any other this afternoon, you will find that it is a synopsis, and a very excellent one, made by a practical man, evidently, as to the effect of the Trade Boards in Scotland, and, therefore, in this country too. May I read it, or would you prefer simply to look at it?

1736. It is long; perhaps we had better look at it, but I will mark that specially, and it shall be read. —If you please. It sums up the whole of my contention, and I think that, with the information which I have left with you among all these papers from Trade Boards showing the peculiar nature of the matters that are discussed, the length of the discussion that follows, the abstruse questions which are supposed to be settled by the dressmaker before she knows what she is to pay, and the disabilities which are heaped upon the trade by having to conform strictly to the letter of Trade Board regulations, will lead you to the conclusion that that is what is causing so much unemployment throughout the country and distress, which I am sure it is the object of this Committee, as it is the object of the Government, to obviate as much as possible. With the withdrawal of Trade Board regulations from the dressmaking trade, dressmakers all over the country will begin to re-engage. We have a very difficult winter before us; trade is at its lowest ebb, and I very respectfully suggest that the considerations which we, the Drapers' Chamber of Trade, have laid before this Committee deserve the careful consideration of your Lordship.

1737. *Mr. Layton*: There is only one question I wish to ask: Is there any substantial amount of piece-rate work in the trade?—Speaking for myself with regard to dressmakers, I know that for 30 years we have had no piece-work. It cannot be done in the bespoke work.

1738. What is the purpose of this piecework basis time-rate which has been fixed?—It refers to the wholesale trade. I cannot see how it can refer to the workers in retail dressmaking. In the first

† See below page 164B—Letter No. 8.

9 November, 1921.]

Mr. J. H. BARNARD.

[Continued.]

instance that Trade Board was intended to refer to manufacturing processes in factories. Then it was found that there were dressmakers' workrooms, and they were all scooped in.

1739. That part of it falls outside your province?—Yes, it does not affect the trade.

1740. *Dame Adelaide Anderson*: I would like to ask a question about the absolute distinction which you wish to make between bespoke, that is retail bespoke, and mass production?—Yes.

1741. There is such a thing as wholesale bespoke in tailoring, I understand?—Yes.

1742. I suppose they reach pretty near one another sometimes?—Nothing to do with the retail, no.

1743. If you have this tendency for the trade to go over to wholesale mass production, would you not, by drawing an absolute line between them and making the burden heavier on the big producer, tend to send the trade back into an unregulated firm?—I should hope not.

1744. It was found in the laundry trade, when they first began to regulate it under the Factory Act and the small laundry was left out, that the larger laundry occupier objected?—The generic difference between the wholesaler and the retailer, I think, is this, that in the wholesale, whether the bespoke or otherwise, he does not make direct for his customer who wears the goods, but in the retail the dressmaker makes her garment for her customer who wears it. The one makes for the trade generally, whether it is bespoke or otherwise; the other makes for the individual wearer. That is the general distinction between wholesale and retail, and would serve, I am practically certain, as a dividing line between the two Trade Boards.

1745. Where would you draw the line?—There.

1746. But how would you absolutely distinguish between a factory and a workshop?—A factory makes not for individual purchasers to wear but for the trade generally; the goods may go to Constantinople, Truro, or Newcastle-on-Tyne; they do not go in the immediate neighbourhood of the producer.

(The Witness withdrew.)

Selection of Letters handed in by Mr. J. H. Barnard.

(1)

Bournemouth,
27th October, 1921.

The Trade Board orders have been even more disastrous to our Southsea business than here, for to commence with we had a very much larger workroom there. Considering the facts which have been staring us in the face for so long now, it seems almost ridiculous to have to assure the Trade Board officials that the Acts have reduced the workers in the Bespoke Dressmaking and Millinery trades, for surely it is a matter of common knowledge.

I cannot say that it has interfered with our Millinery trade to any great extent, for this is on a rather different footing from the ordinary Dressmaking. I am aware that we lose heavily on our Millinery workrooms, but I am afraid that the loss is made up on the general profit on so much of the ready-to-wear articles retailed in the Millinery show-room, but with the Dressmaking workroom it is an entirely different matter. I can truthfully say that every new Trade Board order has caused Dressmaking workers to be discharged from here and at Southsea, and I personally have had distressing interviews with parents who could not understand why their girls were discharged.

I should say that, roughly speaking, our workrooms here stand at about one-third we originally employed, and at Southsea the percentage must be even greater than this.

I have no personal knowledge of workrooms closed

1747. *Chairman*: It is a mystery to me: How do you get wholesale bespoke tailoring?—Because the draper, not making himself, sends particulars up to the wholesale man, who has perhaps ready-made garments which he can alter to fit those particulars.

1748. It is very near to ready-made?—Yes. It sounds contradictory in terms, but he does not act for the individual buyer but takes the order from another man who distributes.

1749. Indirectly he gets it from the original buyer?—Yes, and indirectly there are two profits.

1750. *Dame Adelaide Anderson*: The work shifts backwards and forwards according to the measure of control and other causes?—Yes, but it is in the interest of the country that the trade in small towns should be kept there, if possible. The bespoke trade is very valuable to the country; it keeps its women-folk honestly employed. At present they are turned out into the streets, and they are on the dole. They are receiving pay one week and next week the dole. I should be sorry if all the young folks of the countryside could no longer find employment in an honourable, cleanly, honest employment under the control of their parents and living in their own homes, but had to seek for their bread and cheese in the big towns. I do not think it is a healthy trade; and it is coming. It will be done by Trade Board regulations. It will be a great misfortune if the next generation of women are not practical dressmakers because, by the action of the Trade Boards, dressmaking rooms have been closed. It is one of the greatest considerations that this Committee should bear in mind in dealing with the dressmaking industry.

1751. *Chairman*: We are very much obliged to you for coming here.—I would just say that Mr. Boardman of Stratford is here, if you want to hear anything that he has to say.

1752. *Chairman*: If he has anything to add, we will hear him.—And Mr. Beaumont Wallis of Portsmouth is also here.

Chairman: I expect they are fairly satisfied with what you have said.

in our district, but undoubtedly the Secretary of our Chamber of Trade might afford you some information; but I do know that at a meeting I attended some time ago it was then definitely stated that 600 workrooms had been closed in Hampshire alone through the operations of the Trade Boards Acts.

In reply to your further question, the closing down of the workrooms, or part of them, has of course been due to the fact that customers refused to pay the high charges, and in heaps of cases I know it was not because the customers would not pay, but because they could not.

We practically have no learners now, conditions of their employment rendering it impossible, and we cannot even take on the children of quite well-to-do people, who would willingly let their children come to an establishment of this class at a low wage in order to thoroughly learn the trade. I may say that in the case of really good hands we have no difficulty whatever in paying them well above the prescribed rate, and unfortunately the Act has worked in such a way that there are many small dressmakers, without doubt, employing hands who escape its operations.

We have had many cases of customers coming to us for garments, and, even when we have cut our prices, refusing to order because of the high charge, and they have then brought evidence to me showing that they have been able to go into our piece goods department, buy the goods there, and get them made up outside at a fraction of what we would charge in our own workrooms. One case referred to a child's coat, and another to a child's dress, that is to say, a girl of some eleven years. In the one case brought to my notice by the customer, the coat was made up outside for 3s. 6d. and the dress for 4s. 6d., and we

9 November, 1921.]

Mr. J. H. BARNARD.

[Continued.]

could not have attempted either of the garments at quite four times the price.

You have the same thing exactly happening in the Bespoke Tailoring Trade.

(2)

Bristol,

October 27th, 1921.

There is not the slightest doubt, so far as Bristol is concerned, the order has been the means of greatly reducing the number of workers in the Dressmaking and Millinery trades. I personally have heard of at least half-a-dozen rooms being closed, and fear there may be many more.

I also know that there are hardly any workrooms that are at present running at anything like their capacity. So far as our own business is concerned, we are employing about two-thirds of our usual numbers. It is generally felt that it is impossible to get the public to pay the increased charges, taking into consideration the prices of ready-made garments, and I doubt very much if any workrooms are anything like paying their way. If it were not for the ready-to-wear departments to which the workrooms are attached, there would be a wholesale closing down on all sides. So far as we are concerned, our Dressmaking is run at a considerable loss, and has been ever since the Acts came into full operation.

The wages fixed for learners have undoubtedly prevented their getting employment, as I know from my fellow traders, hardly anyone is taking on learners at the present moment in consequence of the great increase over old rates, which, in my opinion, were too low; but the new rates have gone to the other extreme, and so brought about the present unsatisfactory state of things.

It is generally considered there ought to be a different rate in the Provinces from that fixed for London.

(3)

Dudley,

October 27th, 1921.

I have got your letter with regard to the evidence to be given to the Trade Boards Committee, and in reply should say that owing to the Trade Boards we have had to close our own Dressmaking workroom and reduce a number of the workers in our Millinery workroom.

I believe in our own district a large number of workrooms have been closed, and numbers of dressmakers are refusing to take apprentices or learners. The fact of the matter is the customers refuse to pay the cost of the making-up owing to the heavy charge of labour. The conditions under which learners are taken on, in having to fill up forms, etc., are far too vexatious, and the consequence is that learners are not being taken on. In fact, we have only two learners on the premises.

I consider the action of the Trade Boards is killing the craft industry of Dressmaking and Millinery. The fixing of wages without any relation to the output or skill of the worker is demoralising to the character of the worker, and will not fit in with the terms of business. Trade Boards create confusion, vexation, and make business very, very difficult. It also creates jealousy, envy, and a spirit of injustice amongst the workers themselves. The sooner trade is freed from these Boards the sooner the great wheel of the industry will again "get going."

(4)

Haverfordwest.

In reply to yours of 25th inst., I have seen all the drapers in this town who have Dressmaking workrooms, and I enclose particulars in each case of the effect on the workrooms of the said Boards.

1. "At present trade is very quiet. Customers will not pay the charges required for making up. On November 1st we will have to put our workers on short time, and unless things alter we may have to close the workroom, causing unemployment for 12 hands."

2. She intends closing her workroom. She cannot get the price for work, so cannot make it pay.

3. The number of workers reduced from 15 to 1, and will probably close altogether soon.

4. He has sent away the apprentices and 5 out of the 10 workers.

He attributes the mischief entirely to the action of Trade Boards.

When the minimum rate of 10½d. per hour was enforced I had to dispense with 4 out of 12 workers, besides 2 apprentices, and have tried to make the dressmaking pay, but customers will not pay the charges necessary, and as I am losing money every week, I am closing the workroom to-morrow night, October 29th.

There will thus be 8 girls out of work and with no immediate prospect of getting another situation. Some have been with me 15 years, others 10 years, so I regret very much having to do this.

There are four other drapers in this town, who have no dressmaking workrooms.

To answer your question, I may say that in my opinion:—

1. The Trade Board Orders have certainly reduced the numbers of workers here.

2. The closing of workrooms or reduction of staffs is certainly brought about by customers refusing to pay increased charges.

3. There are no new learners (or apprentices) being taken on by any firm here. We cannot pay them the minimum wage.

(5)

Poole, Dorset.

In reply to your letter dated the 25th inst., with reference to the Bespoke Dressmaking and Millinery Trade Boards our experience is as follows:—

At our largest branch in the Dressmaking workroom we employed 30 women in 1914. Now we employ only 5. This is entirely due to customers refusing to pay the increased charges due to the rates fixed by the Trade Board. For the same reason we cannot employ learners, because the wages that would have to be paid would further enhance these charges.

The same conditions apply in the Millinery workroom at all our branches (six in all).

We are considering whether we can any longer continue to carry on Dressmaking and Millinery workrooms. This will depend on the further action of the Trade Boards.

We should also like to state that previously we kept on employees in the workroom during the slack periods, but it is quite impossible for us to do so under the present conditions brought about by Trade Boards.

(6)

Birmingham and District Drapers' and Needlecraft Employers' Association.

As stated in a letter addressed to your Chamber by this Association on the 11th ultimo, it has been ascertained from the members that the effect of the operations of the Trade Board locally has been to render the maintenance of a full staff impossible, and has resulted in the closing of workrooms.

The reply to the questions contained in the succeeding paragraphs of your letter is as follows:—

Para. 2.—Yes; it is impossible to state the exact number of workrooms that have been closed

9 November, 1921.]

Mr. J. H. BARNARD.

[Continued.]

in consequence of the rates fixed by the Board, because so many dressmakers in a small way of business who are affected are not members of this Association. The information obtained goes to show that the number of drapers in a small way of business who have been compelled to close their workrooms is considerable, and that the staff has had to be drastically cut down, because of the inability of the firms to pay the rates demanded by the Boards.

Para. 3.—Yes; it is felt that if it were possible to make reductions in prices trade would be stimulated.

Para. 4.—Yes. Many members of this Association were very willing to take learners, from whom numerous applications for employment have been received, but are prevented from doing so because they cannot afford to pay the high rates fixed by the Board.

(7)

Leamington Spa.

In reply to your enquiry *re* Millinery and Dressmaking Trade Boards. I do not find that the action of the Boards has to any extent affected the Millinery workrooms but it certainly has the Dressmaking in this district; under present conditions it is quite impossible to make a dressmaking room remunerative, with the result that in several cases workrooms have been reduced and in some cases entirely closed down, a few hands only being retained for alterations to stock gowns.

The increased charges rendered necessary have undoubtedly been the cause of a serious reduction in the number of workers employed; ready-to-wear factory-made goods are being purchased in place of bespoke garments, with the result that there is very little scope for learners at all.

We ourselves used to keep between 30 and 40 hands in our workrooms, but have now reduced the number to 8, although we are doing a larger gown and costume business than we have ever done before.

The revised scale has certainly improved the position as to the employment of learners; at the same time there is very little demand for dressmaking hands at all just now, as traders are not encouraging the dressmaking branch, but are rather giving their attention to the ready-to-wear garments.

There also is no doubt that the system of payment by age, and not by merit, has been the cause of many elderly women, who are not quite so quick, becoming unemployed, as their capabilities do not justify such a high rate of pay; they are therefore dispensed with, and their places are filled by younger workers, and thus the ranks of the unemployed are swelled.

(8)

Glasgow.

(1) The foolishness of selecting Appointed Members whose one essential qualification is that they know nothing about the trade whose affairs they are deciding, and who apparently must have neither trade, financial or commercial experience.

(2) The ignoring of the fact that in the distributive trade at least, the majority of employers are to be found in country places and in small businesses, and as such these should form the majority of the Board and decide its wage policy.

(3) The anomaly of appointing as Trade Board representatives, managers, i.e., employees of Co-operative Societies, who, at least for income tax purposes, declare that they are not ordinary traders at all.

(4) The appointment as employees' representatives of Trade Unionists almost solely, notwithstanding the fact that probably the majority of employees are not Trade Unionists.

(5) The ridiculous system of appointing Trade

Union officials with no knowledge of the trade in altogether disproportionate numbers as employees' representatives. One we consider quite enough.

(6) Voting should be by sides, the majority on each side should represent the vote for that side.

(7) The needless multiplication of Trade Boards.

(8) The fixing of standard instead of minimum wages.

(9) Failure to recognise that no Trade Board minimum scale can be satisfactory that does not take into account the difference between large industrial centres and country districts.

(10) That no trade can welcome a Trade Board system which is not enforced and which penalises conscientious and law-abiding employers to the advantage of unscrupulous ones.

(11) The absurd tendency of many Boards to attempt to regulate minutely instead of broadly the working conditions of the trade. The majority of employers, in our trade at least, are small men with little experience in interpreting involved regulations.

(12) The time taken up before an alteration in rates can be effected. This ought to be capable of being carried through within one month instead of four to six months as at present.

(13) The Minister should have no power, as at present, to veto new alterations within six months. For seasonal trades this may be a serious matter.

(14) The Ministry of Labour must recognise the expenditure of time and trouble involved to employers by the Trade Board system. Each Trade Board meeting involves for him attendance at a Trade Board representatives' meeting and an association meeting prior thereto; in all, three meetings. These men are in charge of businesses by which they make their living, and the time involved is therefore a very serious consideration. For this reason we find it almost impossible to secure a lady representative on our Trade Board, their business being so much a personal one.

(15) For this, the last reason, Chairman and Appointed Members should be highly skilled persons, and there is much to be said in favour of their being employed whole time.

(9)

Grimsby.

In reply to your memo *re* dressmaking. When the Trade Board orders came into operation, of which I was rather in favour, I cheerfully submitted to the conditions laid down by them. As an experiment, with a workroom of 35-40 hands, we found that in a short time it was evident that there was a necessity for the weeding out of inferiors, with the result that we are now down to about a quarter. This is also the experience, I find, amongst other traders, although I fear there are still a lot of private dressmakers who have never paid these rates of wages. Customers were not objecting to the charges we were making at first, but now expect them to be less.

I think it is the great advance which has been made in the making-up trade, that under any conditions dressmaking would have to give way, as it is quite obvious when you come to consider the matter, that the demand for made up goods in the future will predominate, and I have no hesitation in saying that the action of the Trade Board has sounded the death knell to the Dressmaking trade.

Referring to the Millinery section, the conditions apply very much the same. We have usually employed about 30 hands, which we have now reduced to 10.

(10)

Malton.

Re your request for particulars respecting how the Trade Board wages affect our Dressmaking and Millinery workrooms. We have suffered very much through the fixing of wages for a small town like ours

9 November, 1921.]

Mr. J. H. BARNARD.

[Continued]

(5,000 inhabitants) at the same rate as London or the large provincial cities are paying. Our ladies' Tailoring workroom, which employed about five or six, is closed.

Our Dressmaking workroom, instead of employing about 14 or 16, is working with about four.

In our Millinery workroom we are working half-time. Much of the unemployment in our way we think could have been saved had the fact been recognised that in small towns workers live at home (mostly about three or five minutes' walk from business). Not having tram or train fares, not having to purchase any meals in town, with other out of pocket expenses, means that they could be very happily employed at wages firms like ours could have arranged with them.

(11)

Northampton.

Replying to your letter of October 25th, I am glad to know you are giving evidence before the Committee of Enquiry on Trade Boards, and sincerely hope the Chamber's efforts—expressed through you—will be the means of abolishing Trade Boards (so far as Retail Drapers' workrooms are concerned) before the Dressmaking Trade is killed.

In our own business at the present time we are running our workrooms on a smaller staff of workers, having had to dismiss those whose limited ability did not warrant the prescribed wage. Even on a reduced staff we are at the moment making a loss, and it is probable that on the twelve months' trading our loss will be somewhere about £200. "Why keep it on then?" some may ask: Because, as all drapers know, it means losing customers in other departments if they have no facilities for making up materials for them.

Up to the introduction of the hourly wage system introduced by the Trade Board, we paid weekly wages for regular hours of employment. Now we intend to go on short time as soon as we possibly can and so try and reduce some of our loss.

I have made enquiries of the leading firms in this district, with the following results:—

A very old established business closed down their workrooms altogether, and dismissed the whole of their staff. The Dressmaking section only just paid its way prior to the attentions of the Trade Boards, but their firm could not face the obvious loss which the Trade Board proposals would cause, and took immediate steps to close the making-up departments altogether. Almost all the workers dismissed by them went on the Labour Exchange unemployed list.

Another old established Northampton business state that they are running at a loss, despite the fact that they have reduced the number of their hands. Shortest possible time for workers between seasons is their only hope of avoiding a serious loss on the year.

Another, who specialise in high class dressmaking, inform us they are running at a loss, and would long ago have closed their workrooms except for the fact that by doing so they would probably lose customers who patronize other sections of their business.

In our Millinery workroom we used to employ 17 hands; we now employ 6.

(12)

Huntingdonshire.

In reply to your request asking for particulars re Trade Board regulations affecting Dressmaking and Millinery departments in the County of Huntingdonshire, we beg to state the following facts. There are four towns in the County of Huntingdonshire—Huntingdon, St. Ives, Ramsey and St. Neot's. Since the Trade Board wages were introduced all workrooms in connection with drapery business have been closed in Huntingdon, Ramsey and St. Neot's. In St. Ives there are two drapers carrying on; one

employs five girls and is very seriously thinking of closing down; the other is our own business. Our particulars are as follows:—We have not taken on any learners since the Act came into force; we used to employ 30 girls but now have 17; we have much difficulty in keeping them fairly employed; every week customers refuse to pay us Trade Board wages. We stand at a serious loss every week, and our girls would be willing to accept much lower wages. We say Trade Boards ought to be abolished, or if this cannot be, then a different pay for London from the country. We have applications every week from parents asking us to take their daughters as learners, but cannot entertain them.

(13)

Shrewsbury.

I have called on the principal drapers who do Dressmaking and find that the feeling is that if the Trade Board orders are in force much longer Dressmaking will cease. None are taking on learners.

The following is the present state of workrooms:—One firm formerly employed 48 hands; now 28, working every other week; one week they are paid by the Labour Exchange, so they keep on the 28, else they would only require half. Another formerly had 25 hands and two fitters; they now have five and only one fitter; contemplating closing down altogether. Another formerly had 10; now four; also going to close soon. Another formerly 14, now seven; and another formerly 27, now 12, while one room has been closed.

Customers cannot and will not pay the price for making, consequently the trade is going on to the ready-mades.

(14)

Torquay.

In response to your letter, I have much pleasure in making the best response I can concerning the effect of Trade Board regulations upon the Dressmaking, ladies' Tailoring and Millinery workrooms in this area. I will put the salient facts as concisely as I can.

At a meeting of these trades held under the auspices of our local Chamber all the firms represented reported a diminution of their workroom staffs amounting to approximately 25 per cent. I know of only one trader who has closed down altogether, as most firms are continuing in the hopes that the regulations will be modified, and they prefer the present loss rather than to discontinue the organisation altogether.

The diminution in the number of workers, and the abnormal increase of short time, arises entirely from the fact that customers cannot afford to pay the increased charges rendered necessary by the prescribed rates.

This state of affairs is intensified by the notorious fact that a large proportion of the concerns engaged in the trade, especially private dressmakers working in their own homes, with a few hands, do not pay the prescribed rates, and are consequently in a position to undersell and quote lower charges than those firms who carry out their legal obligations. The workers generally do not complain, for they are well aware that if they did they would be dismissed and have little chance of obtaining employment at all. A much more adequate inspectorate is an essential if Trade Boards are retained.

The prescribed rates for learners are such as to effectively bar all entrance to the trade. Our local Juvenile Employment Exchange has only placed one learner during the past twelve months.

It is misleading for the Ministry of Labour to measure the diminution of employment by the Live Registers of the Exchanges. There is a normal loss of staff through girls leaving to be married and other domestic causes, no learners coming on to take their place; there is a steady wastage of the numbers

L 4

9 November, 1921.]

Mr. J. H. BARNARD.

[Continued.]

employed in the industry. We have lost several girls during the past twelve months, and in no case have we replaced them, but this does not show upon the Live Registers of the Exchanges as increased unemployment.

The firm I represent has five workrooms, and in each case the wages paid to the workers during the past six months are more than the amount we have been able to obtain from customers to the extent of 12½ per cent., apart altogether from the establishment charges which the workrooms should properly bear.

We are enduring this loss for the present in the hope that the prescribed rates may be modified at least 25 per cent. If that does not ensue, we intend to close down two workrooms at the end of the year and dismiss the staffs. Many of these women have been in our employment for 10, 15 and 20 years, so naturally we desire to avoid so drastic a step if possible.

The prescribed rates are illogical in being based on age rather than skill or productive power. A large proportion are only slightly skilled, and have no ambition or desire to become qualified. Their object in entering a workroom is just to fill in the time from school to marriage, and to treat them as fully qualified workers able to do expert work is unjust to the employer, for they cannot earn what they are paid, and unjust to the workers, for it deprives them of a wage which satisfies their requirements and with which they are content. Fully qualified workers have always been scarce and well able to secure adequate remuneration for their services.

Under the prescribed rates the cost of bespoke clothing is rendered so costly that the great mass of the population cannot buy it, but are compelled to obtain factory-made garments. This means the practical suppression of the bespoke industry, and in localities where there are no factories there is no alternative employment for the workpeople.

Finally, if the industry is to survive, the two essentials are that the prescribed rates must be lowered, and the inspectorate must be increased so

that all engaged in the industry shall work under the same conditions. At present this does not obtain.

The varying conditions of different areas would seem to require a varied rate rather than a single national rate applicable under all circumstances. To insist that the prescribed rate which is suitable for the West End of London and other large industrial cities must also apply in the remote country village must seem to be unreasonable.

(15)

Cambridge.

EFFECTS OF TRADE BOARDS ON THE DRESSMAKING AND MILLINERY TRADES IN CAMBRIDGE.

A. It has led to a reduction of at least 25 per cent. in the number of the staff employed, and in the case of many private dressmakers this percentage would be considerably increased. In some cases the workrooms have been entirely closed.

B. The increased charges necessitated by the prescribed rates of wages are responsible for the loss of a serious number of orders which as a consequence has led to the reduction in the number of hauds employed and to short time being worked by the remainder. It is also the cause of a considerable amount of unpleasant friction with customers.

C. The conditions of employment for learners still leave much to be desired—the principal change required being payments according to capability and not according to age. There is no doubt that this condition is standing very much in the way of employees taking learners at present.

D. There are great numbers of small private dressmakers who do not receive the various notices emanating from the Trade Board, and it would appear that some distinct improvement in the method of informing the trade of any change is required.

E. Since the Trade Board has been in existence our reduced staff has been compelled to go on short time for a considerable portion of the year, whereas previously short time was practically unknown with us.

Mr. BEAUMONT WALLIS, called and examined.

Witness: If I might be allowed to make one or two observations, I should be obliged. There was one point with reference to learners. One of the lady members of the Committee asked how you would get over these learners' certificates. What objection is there to the three years' apprenticeship indenture drawn up by the Law Society, which we have used for many years? Many of the workers will not come for four years, but that is a trouble which you have with these learners' certificates and why there are so very few in use. I will mention that again in a moment. Then you made a small mistake, Sir, when you said that a girl starts at 14 years of age at 1½d. per hour, and in eight years she gets 7½d. It is four years.

1753. *Chairman:* I had the other paper before me at the time. I mentioned that directly afterwards.—Then when Mr. Barnard read out a letter from Bournemouth they said they could pay higher rates. Bournemouth is a very high-class town; Portsmouth, which is very near, is a very poor town. He also mentioned about the competition; and then the inspection of factories, of course, would be an endless job. I made a note of that because we found in our own dressmaking association in the town—we have some hundreds of them—many of them have never got a single one of these notices; they had never heard of them and had not got them up. I want just to give you a letter from our own dressmaking association, which, I think, speaks for itself. The dressmakers in Portsmouth are very well organised, and the writer says: "Two years ago when a canvass was made it was found we had

quite 200 dressmakers who were employing from 10 to 15 girls. 150 of those have closed their workrooms; 25 others do not employ at all—they only employ themselves—and the remainder are not employing more than five at the most, where previously they employed from 10 to 15."

1754. Hundred and fifty out of how many?—Out of 200, 150 have closed their workrooms—women who earn their living making themselves.

1755. Who says that?—The head of the Dressmakers' Association at Portsmouth. When a year ago the rates were being increased, the dressmakers appealed to us because we are well organised in Portsmouth—we have the biggest Drapers' Association out of London, I think—and they said: "Can you do anything for us so that we do not have to give up our workrooms?" and there was a joint meeting at which we agreed to continue the rates which we were then paying and to refuse to put the 10½d. rate into operation. You must have known what that summons meant to us, and how we have been pilloried about it, but I think you ought to know the whole facts of the case. We were not paying 10½d. but, as I explained to you when I interrupted a few minutes ago, we were not due to pay 10½d. When we got the description of what a qualified worker was we found that most of them were getting 9½d., which they were entitled to.

1756. Did you not tell the Magistrates that?—That is why we got off.

1757. You did not get off, as I understand?—Certainly, we did.

9 November, 1921.]

Mr. BRAUMOST WALLIS.

[Continued.]

1758. You were dealt with under the Probation of Offenders' Act; that involves conviction?—The other case, where you can call it a conviction, was on the learners, where we were paying the learners' rate as set out in W.D. 5, but we had not learners' certificates. There is one of the cases that I want to mention. In my own establishment an inspector who called in April told us that two of the workers should be getting 5jd., or whatever the rate was, instead of 4jd., and we paid that rate immediately. A month later we were summonsed for both of those girls—they were included—merely because we had not learners' certificates for them; but how are you going to get a learners' certificate if you take a girl who has been with another house a year or 18 months and comes to you as a learner? There is no provision made for that girl. She has either got to be a learner for four years (for which time no one will take them) or come on the 8jd. rate.

1759. *Mrs. Lyttelton*: You want another grade; you want learner, improver, and something else?—The Ministry of Labour has dealt more with Portsmouth, I should think, than with any other town. They have corresponded with us and asked our views right from the first, and we have had inspectors down to address us because we have an immense amount of unemployment of women. It is a town where there are no factories such as there are in Leeds and Bradford, and they are all in the dressmaking and millinery establishments in the town. When the inspectors came down we asked them questions, which they, unfortunately, frequently could not answer, and that was one of the points. They asked us what rates we could pay if we took these girls from the elementary education schools at the age of 14. We suggested 5s. per week the first year, 10s. per week the second year, and 15s. per week for the third year. We are prepared to take them for three years, but no one will undertake to take them for four years, paying them 29s. per week for the last six months. A girl of 16½ is to be paid 29s. per week.

1760. *Lord Weir*: Why do you make those recommendations to visiting inspectors instead of to your representatives on the Trade Boards who are going to fix the rates?—We have done. Mr. Barnard did not mention that in three of our own local workrooms every girl in the workroom signed a petition that that rate should not be put into force, without any suggestion from the heads of the firms; and the inspector when he was prosecuting us was asked if he had those protests against the rates being increased, and he said he had seen them.

1761. *Chairman*: I did not know that you were going into the question of these cases at Portsmouth?—I did not want to, but I was only showing you the difficulties that we had.

1762. You are going into more general questions than that. I understand that you are already paying the Trade Board rate?—We have paid up the arrears. In my own case, every girl who has not a learner's certificate, whether she is 14, 15, 16 or 17 years of age, has been paid up to 8jd. per hour to date, and we are now endeavouring to pay them these rates, but it has meant that a large number have been dismissed. Our own education authorities will turn out 400 girls from the elementary education schools this Christmas, so they tell me. About 200 have been taken into the dressmaking trade, as a rule, but this Christmas there will not be one. I think that is all I have to say.

1763. *Mr. Pugh*: Where has the trade gone?—It has gone to the wholesale.

1764. Would not the loss of trade be due to the general industrial conditions in Portsmouth?—Not half of it.

1765. *Dame Adelaide Anderson*: In the wholesale they are paying the workers the same rates as are required in your trade?—They can afford to, because they turn out the things by machinery, and a girl is practically only working on a machine. In our case one of the members asked how it was that we could not pay piece-work. There are no two dresses alike.

Every girl has to work on different garments every day—a sleeve one day and a collar the next. I think Lord Weir asked if they could not get one particular thing going on continually and exploit them by making them make one garment. You cannot do that. There are no two things alike. A girl could learn to make a bodice, but there are not two alike. In the corset trade, of course, a girl can stitch up a corset in a few minutes and learn the whole trade, but in the bespoke tailoring it is impossible.

1766. Is it not partly a question of the old struggle between hand-made and machine production?—Yes, and we do not want to lose the whole of the hand-made trade from the town.

1767. In Portsmouth, you said that there were no other occupations for the females?—Only the corsets; there are no other factories. They employ a certain number, but a very small proportion of the girls that there are out of work at the present time.

1768. *Mrs. Lyttelton*: It is not the rate established to which you object, but it is having this year between the full wage and the learner's wage that you cannot cope with; is that it?—For three years you pay the rate?—We are prepared to take apprentices for three years, paying them a lower wage than you are asking in these four years. It is impossible to pay that. No dressmaker will take them on and teach them their trade and pay these rates. We estimate that it costs us 10s. per week for the first year of their apprenticeship for teaching—that is, occupying the time of the fitter who teaches.

1769. The rate is too high and it goes on for too short a time; that is what you mean?—How do you mean too short a time?

1770. For too short a time they are graded as learners; they are put on as being fully qualified too soon. Is that what you mean?—After their three years they are not worth the 8jd. which they have to go to.

1771. That is what I mean?—Yes. We have suggested an intermediate stage. They have had our figures officially from Portsmouth, rising from 1jd. per hour at first right up to 8jd. or 9jd.

1772. *Mr. Pugh*: Do you think that if you had two Trade Boards that would assist you to deal with the particular classes of trade according to the conditions of the trade?—The wholesale and retail?

1773. Yes,—I think we satisfied the gentleman we saw here a year ago upon that. He said, that he was perfectly satisfied that there could not be one body for the two sections, wholesale and retail.

1774. *Chairman*: Who was that?—Would it be Sir Montague Barlow? We met here a year ago, and he said that we had perfectly satisfied him that they could not be worked together, yet nothing has been done in all that time.

1775. I was told that the Ministry were considering that, but of course I know nothing about it personally?—The report a month ago was that they could not be separated; they thoroughly investigated it before they fixed the Board.

1776. Was that an official letter?—An official report in the trade press that they could not be separated; they had tried when they first formed the Board.

1777. *Dame Adelaide Anderson*: Because the two branches so fade off into each other?—I cannot see how they do. I cannot see that there can be any connection whatever between wholesale and retail.

Mr. Barnard: They have different rates of wages, too.

The Witness: The wholesaler who makes up goods in the factory and sends them to the draper to sell will have a dressmaker in his establishment who cuts out the garment and fits it once or twice before it is finished. There is nothing of that in the factory of the wholesale man, who simply makes 20 garments on a machine and sells them in the wholesale trade.

1778. *Chairman*: I understand that the announcement to which you refer was not made by the Minister of Labour; it was a resolution of the Trade Board?—Is that so?

9 November, 1921.]

Mr. BEAUMONT WALLIS.

[Continued.]

1779. I am told so. I am told that the Ministry is considering it now.

1780. *Mr. Layton*: Is the retail trade in a minority on the Trade Board?—That I could not answer. *Mr. Barnard* may know that.

Mr. Barnard: I think it must be. I have not the figures, but it was established for the manufacturing trade, and I know, I think, about four of the employers' side who are retailers.

1781. *Dame Adelaide Anderson*: Would you suggest that hand-made dressmaking—retail dressmaking—has a rather higher value from the point of view of life and training than wholesale work?—Yes. The wholesale worker could not make a dress when she had been at it six years; the retailer could directly she is out of her apprenticeship. That answers another question which was raised: the retail apprenticed child is taught her trade to the utmost advantage. We have always refused to take them for two years, because we said that we could not teach them in the two years—that they did not learn it sufficiently to be of service in their second year. Therefore we said, "If you make it three years it will be to the advantage of the dressmaker to get the girl thoroughly experienced so that she will be of some use to her during the last year of her apprenticeship." That is in a way spoilt by the four years, because they will not come for so long. I have mentioned the unemployment caused in my own town by it and the number of dressmakers who have given up. They say most certainly that the conditions under which learners have to be employed are preventing their employment. I fail to see how anyone can be expected to teach girls a trade and compelled to keep them and to pay them the rate of wages prescribed by W.D. 6. I ought to have mentioned that when we agreed to pay the lower rate of pay to a certain extent we agreed to keep the girls on during the slack time. Now, I think, without exception, immediately there is any slack time they go on it. Retail dressmaking has so many slack months in the year: February, March and April, or January, February and March, when you could do with them for half a week, whereas the wholesaler can spread the work over the whole year. The trouble has been that in the retail you have to put them on three-quarter time or half-time during those three slack months, and again in July,

August and September, so that they are only earning their full pay for six months in the year, which they will continue to do now, but in my own case, as it came out in evidence, we had paid them during January, February and March the full rate; 27s. 6d., I think, was the lowest that a girl at 9½d. per hour had been taking—that was the lowest she had. One of the girls said in evidence that in some cases she did not do anything—that the whole of the week's work she could have done in an hour. That came out in cross-examination. But we kept them on, because I have always argued that they have got to live whether it is winter time or summer time. My dressmaker has said: "Cannot we put the girls on short time?" and I have said, "No, they want as much food now as they did before"; but that is the objection to paying these higher rates; you cannot afford to do it.

1782. *Chairman*: I understand that you have had to dismiss some?—Personally I have dismissed everyone under the 9½d. rate.

1783. You say that many fewer are going to be taken on this Christmas?—I do not think that a single one will be taken on. We have had our meeting of the drapers and dressmakers together. If we are breaking the law by taking them without learners' certificates we are not going to break the law again, and we refuse to have learners' certificates because we are not going to keep secluding these papers to the Trade Board to be reviewed every few months or few years. It is a tax on the employers, and life will not be worth living if we have to do this sort of thing.

1784. Your information is that some workrooms have been shut down?—One hundred and fifty of the private dressmakers who work at home have been shut down; which brings up another subject: In our town there are many women who only have one or two daughters of their own that work in their own houses and in factories, and they are undercutting the dressmakers who are or should be factory-inspected—women whose husbands are in the dockyard, as a rule. The complaint is that women whose husbands are at work employ their spare hours at home with the aid of their daughter, or two daughters, making dresses for their neighbours, and they need not come under inspection, and can charge what they like.

(The Witness withdrew).

Mr. J. A. BOARDMAN, called and examined

1785. *Chairman*: What are you?—I have a general drapery stores and a dressmaking and millinery business at Stratford, in the East of London. The two points with which I should like to deal are as follows: the class of learner that comes into the dressmaking and millinery and, I may say, into the bespoke tailoring trade is quite a different class of girl from those who go into the factory, and I think that this distinction should be realised. For instance, we find, although we are in the East of London, that the parents who want their children to come into the dressmaking are civil servants—the middle or better middle class—and they do not send their daughters along until they are 16, 17, 18, or even 19 years of age. We find that they are girls who are better educated, possibly, than those who may go into the factory, and who know that they are going to remain in the factory practically all their lives.

1786. Yes, I should have assumed that. I quite understand that.—In consequence of that, there are many of them who have no intention whatever of staying in the trade all their lives. Some are preparing themselves in handicraft work for marriage, but also for own home life. Where there are several daughters and a mother they go home after three or four years, and they make the whole of the garments of the household. I may say that I have had just upon 40 years' experience in connection with workrooms, and that I know intimately the state of things in

connection with this, not only with my own business, but with many others in business as well. Since the Trade Board has come in we have refused to take any girl whatever as a learner, simply because we could not possibly pay to these girls who come in at 17 or 18—well-educated girls—the rate which we should have to pay them. We should be heavily losing on them every week that we had them, in consequence of which we simply have had to drop learners; and owing to the rates which are being paid now, I quite distinctly say that our customers will not pay the amount required, and the result has been that trade has dropped off in connection with the dressmaking exceedingly heavily, and for the first time in my experience of 40 years we have had for very many months to work half time or three-quarter time. We used to keep at work right throughout the year on full time, but now it is a case of working three-quarter or half time. I think for several months we have not even been able to go on full time at all, and we put it down mainly, and almost entirely, to the action of the Trade Board, which has brought upon us an impossible rate of wages. I want to say, though, as regards the higher rate of wages, that many of our workers are still over the Trade Board rates.

1787. Your work is retail?—Yes. I think that is all I need say about that point, unless you wish to ask any questions. The other point I would like to mention is the matter of the many Boards. Up to

9 November, 1921.]

Mr. J. A. BOARDMAN.

[Continued.]

a fortnight ago I thought we were under two, but a fortnight ago I found that we were under three. Owing to my being away in America, when one of them came out, I missed the third, and I suppose that if an inspector had come in—and he might at any moment come in, but I give this information here so as to be absolutely candid, and show you the position of the Trade Boards—one would come under the law. I am now organising to see that the third Trade Board is brought in, but I want to give the position of the third Trade Board. In one of our dressmaking rooms there are a set of girls; they have the same materials, the same machines, the same thread, and, in fact, the same everything, with the same heads and the same cutters-out; but it seems that some of them make coats and skirts, and some of them make costumes, and the two classes come under separate Boards. At the moment the rates are the same, but a little while ago I found that one should be paid about 3d. an hour different from the other. There is a case, I believe, that I could actually give which occurred in my own room, of a younger sister coming into the trade after her sister, and being put on work which would come under bespoke tailoring, and she would have had to have been paid more, and now will have to be paid more if the dressmaking rates are altered shortly, than her elder sister who has been longer in the trade, and is more experienced. It is a most preposterous thing, and there is no working between the two Boards—no cohesion. Then we are threatened with several more Trade Boards. There is the Furnishing Trade Board which is likely to touch me; there is a possible Boot and Shoe Board, and there are several others

—I forget the list now, but I reckon that if they all come into being there will be at least 10 affecting my business. Where are we going to put these extraordinarily great placards? I think I have at present 9 np. Where we are going to put all of them I do not know. Then there is the constant friction, the constant irritation. Some of the distribution men will see, perhaps, that the furnishing man or some grade of assistant has a different rate, and it will mean irritation and constant ferment in the place. It makes business life absolutely not worth living. In fact I dread being in business when all these Trade Boards come into being. Instead of that, personally I go in most heartily for a Royal Commission being formed to see if a minimum anti-sweating rate cannot be put up for all kinds of labour. There would have to be, undoubtedly, local and district committees formed, and therefore there would have to be a sliding scale related to the cost of living rate; but that would do away with the irritation, and at the same time you would not have Trade Boards coming to manage businesses and trades which are at present in the hands of skilled and trained men who have been all their lives in the business. At present we feel that we are not managing, but that the Trade Boards are managing for us. Instead of that there would be the minimum wage preventing sweating, and still capable business men would be managing the businesses which they have been brought up to. I do not think I need occupy your time further, unless you wish to ask any questions.

Chairman: No, thank you.

(The Witness withdrew.)

Mr. H. B. FOWLER, called and examined

The Witness handed in the following statement:

That in quiet residential districts such as the Isle of Wight the minimum wage policy has had a most detrimental effect. It has thrown many girls out of their chosen trade and much reduced the volume of business done in making-to-order by drapers and dressmaking firms locally. It drives customers to ready-made garments, many made abroad.

That the interference of Government with the industry was, in districts such as the Isle of Wight, wholly unnecessary. The employees were perfectly content with their working conditions and wages. For harmony and goodwill in the workrooms there has been substituted friction and dissatisfaction and much absolute injustice. A few girls have been retained at the excessive rates for the sake of keeping the connection together until better times, but there is no alternative but to press and harass them in the work so that they turn out the greatest amount possible in the working hours. This irritates the girls and is most distasteful to the employer, who was content before with a moderate output carefully done and who paid a reasonable weekly wage in quiet as in busy periods. If work was not very plentiful or urgent the girls took things easily and the employer was content they should. In busy times they were ready to do their best—both sides considered the other, and most workrooms had a very happy air and were a pleasure to run and to work in. Though many firms have kept their departments going on the smaller scale for the sake of their trade in the future—when, as it is to be hoped, common sense will return to the legislature—yet they cannot do so for very long. The loss is serious and in these days of depression cannot be faced indefinitely.

That girls are drawing 7s. 6d. a week out-of-work pay who could be employed at 15s. to 20s. according to ability and are quite willing to accept this, their economic worth. Why should they not be allowed to earn what they can?

The wages for apprentices were fixed at an absurd level and are now much too high; 6s. weekly may sound small, but the fact is children fresh from school cannot earn even this, and employers will not take them and teach them their trade for three years if they are to have so much (for this rate rises rapidly in the second and third years). Parents are perfectly willing to support their children while learning and it is right and reasonable they should do so. It should be left to the parent and employer to fix terms mutually satisfactory. A clever girl will soon be pushed on and earn more than duller ones of the same age (let them be free to leave and do better when they like).

The uncertainty of employment is having a very mischievous effect in several ways. It demoralises the girls and is, moreover, very inconvenient to them. They much prefer a regular and moderate weekly wage to high wages and high pressure work for a short time and then frequent periods of complete idleness.

The unemployment dole might be entirely saved. There is work for all who care to learn dressmaking if wages are left free, and the girls will be quite content with the wages that local employers can afford to give. *They know their value quite well*, and will soon move away to other employers if one does not pay them their worth.

1788. *Chairman:* Your firm is Messrs S. Fowler & Co., who are drapers and dressmakers, of Ryde?—Yes.

1789. You come here to give evidence on behalf of the Isle of Wight Drapers' Association?—Yes, I have been asked to put the matter of the Isle of Wight before you.

1790. You have put in a statement which I think is admirably concise, and perhaps we may consider that as part of your evidence, and we will have it printed?—Yes, if you wish. I can confirm it in any way you like by any figures or documents.

9 November, 1921.]

Mr. H. B. FOWLER.

[Continued.]

1791. You say that "in quiet residential districts such as the Isle of Wight the minimum wage policy has had a most detrimental effect. It has thrown many girls out of their chosen trade, and much reduced the volume of business done." Can you say that of your own knowledge?—I can say that as regards my own business, very distinctly.

1792. Where does the customer go to?—May I add to that that the Secretary of the Isle of Wight Drapers' Association furnishes me with statistics showing that as a result of their inquiries simply among the members of their Association 96 girls have been dismissed in consequence of the rates.

1793. Where does the custom go to?—It is very difficult to say. It is very difficult to trace where trade goes when you suppress it. Ladies have to be dressed, we know, but when rates are very high they may still have one dress or one costume made where they would have had two if the prices had been less. Then again a great many ladies, of course, who are in the habit of studying their dress like to be specially made for, but if the rates are too high and beyond their income they cannot buy; and that is the trouble in the Isle of Wight, where there are so many residential customers who have not benefited in any way by the war, but whose incomes have less purchasing power than before. Although there are ladies of good social standing who make it a pride to dress well, and have to dress well, they have to economise very greatly, and I should say in answer to your question that the trade has disappeared rather than gone elsewhere—that they have economised. The customers of the Isle of Wight all economise by having less articles, and of course less labour is required for them.

1794. In other trades when work is slack the workers are put on to short time. Do you adopt that principle?—Trade has been very slack; but we never engaged girls by time rate. We interviewed a candidate and engaged her on salary, perhaps £30 a year, in the house. We did rather a high-class business, and we took girls in the house and boarded them—the better workers—because sometimes one cannot get the skilled workers locally. We paid them a salary, and did not deduct anything because they were ill for a day or a week, or when work was slack for a week. We paid them their salary as agreed upon.

1795. Are you able to keep the same number going?—I got out particulars last year or up to the last balance sheet date, and there was only one week in which in our workroom they were not working the whole time, and were paid the whole wages. There might have been 20 weeks when we could have done with half the girls, but we paid them the full rate, and we kept them on.

1796. Shall you be able to continue that?—It cannot be done. It cannot be considered. You are killing an industry. It may be the national policy to kill it, but you are killing it, or the Trade Board is killing it—the industry of the local bespoke dress-making trade.

1797. *Mr. Layton*: Is the rate still at its maximum?—So far as I know, yes.

1798. Is the figure of 96 girls discharged the figure for the Isle of Wight?—That is the figure given to me by the Secretary of the Drapers' and Dressmakers' Association of the Isle of Wight.

1799. Have you any idea what percentage of the total employed that is?—I have not any idea. If it is any guide to you, our own workrooms employ about half what we did before the war, or what we could employ now if rates were left to ourselves to settle.

1800. When did this reduction start taking place—a year ago?—Before that, naturally. There was a great slump in business for the first two or three years of the war, and business went down somewhat then, but any revival has been prevented by these high rates.

1801. Is 96 the difference between the present employment and pre-war employment?—I could not say; I have not got that information; but what he says is: "In reply to our inquiries we find there have been 96 employees dismissed in consequence of the Trade Board rates."

1802. How many of those dismissals have been in your own work?—From when?

1803. From the date of the Trade Board figures?—I should say about 13 or 14.

1804. Out of how many?—Out of about 30.

1805. You would not be prepared to offer any information as to how much of the trade which you have lost has gone elsewhere, in other words has been transferred as the result of the Trade Board, and how much has been absolutely lost to a large extent as the result of the condition of trade in the country as a whole?—No, I could not say that. Of course a great deal of business has gone into ready-mades. The English lady to-day is of smaller means, and is less well-dressed than she used to be, and must be, because she buys a ready-made article which is cheaper rather than having things made specially for her. A good deal of business has gone into the ready-made. Is it any information to say that a great deal of that ready-made trade goes abroad? It does not go to English workers in English factories, or at least a great deal of it does not. I think I could supply the whole of my requirements in ready-made frocks from Paris houses.

1806. Supposing it were stated that this unemployment is the result of trade depression, what sort of argument would you use to prove that it was the result of the Trade Board, and not of trade depression?—I should not be able to use any argument. I should say it would be true that probably business would not be so good if we were left free to manage our affairs as we used to be. I do not suppose for a moment that business would be so good; but the way to revive it is to produce things at better value, not at a higher price.

1807. In other words, you would not regard those 96 girls as the measure of the harm done by the Trade Board purely?—I am not prepared to say. I am only giving you that figure from another source.

1808. May we get at it in this way: what is the Trade Board rate?—The same as all over England.

1809. Will you give it to me?—I should have to look it up. Do you mean per hour?

1810. Yes.—It is 10½d. per hour for a fully-qualified girl.

1811. Supposing that it were reduced from 10½d. to 9½d. or 8d., would you expect to recover much of your trade?—No, I should not.

1812. What rate do you think would recover much of your trade?—I do not think those flat rates are much good at all. I do not think many of us would make much if we were forced to pay flat rates. I am quite prepared, and we are all quite prepared, to pay 10½d. to a girl who is worth it, or even 1s. to specially clever ones, but the workroom has room for all sorts—for a slow girl, and a quick girl, for an intelligent one and a dull one. The dressmaking supplies them with an occupation. Some of the duller ones may not be able to earn high wages, but still they are useful, and it is useful to them. But I do not think that if you made a flat rate of 9½d. it would be very much help to the Isle of Wight.

1813. There is presumably some rate which would be helpful?—Yes, no doubt there is. It would be fixed of itself. Someone gave you an illustration of a bodice room just now: there is one bodice hand, there is her assistant, and then there is a sub-assistant, you may say, and perhaps a couple of learners or apprentices. That constitutes a little unit in the workroom. Perhaps there are four or five such units, all bodice hands. Then again in the skirts there would be the same: a head one with an assistant, perhaps, or two assistants, and an apprentice or two apprentices, each forming little units amalgamated in the larger unit of the workroom under one supervising head. That is the

9 November, 1921.]

Mr. H. B. FOWLER.

[Continued.]

system. Each one of those really competent ones, the head of each unit—the head bodice hand or the head skirt hand—can perhaps earn, in some cases, the 10½d.; it would be possible to pay it to a very clever girl, but not to all of them. You should be able to differentiate according to the ability of the girl.

1814. It would not help you if such a district as the Isle of Wight were allowed to pay 1d. or 1½d. or a percentage below the rate of the country?—I do not think that would help—not if it were made a flat rate. I do not believe that flat rates will be useful. I do not think they are in the interests of the employee. I think they are doing a vast deal of mischief. I have girls walking about in Ryde—I am Chairman of the Unemployment Advisory Committee, and some of these girls come before me and ask that their weekly out-of-work pay shall be continued at 7s. 6d. per week; and I could employ them in my workroom, we will say, at 18s. if you like, or perhaps £1. In one case the other day the girl was getting 26s. It seems extraordinary, and against the public interest and against the interest of the girls, that they should be stopped and crushed out of their industry just at the time when they are beginning to get efficient, and sent out either into some other work which they perhaps do not care for, and perhaps they do not get, or to do nothing at all.

1815. About what proportion do your workroom wages bear to the value of your products?—I think I am right in saying that the value of the product was about 20 per cent. less than the cost of it, during the last year. At the present time—we will say last month—the work done and the charges necessary for doing the work, such as the heating and lighting of the room in which the work was done, and the wages of the employees, came to more than the price we get for making the garments.

1815A. But under pre-war conditions, what percentage would your wages in the workshop represent?—I should expect to make an average of something like 20 per cent.

1816. I do not quite understand that?—That is the profit on the department without overhead charges.

1817. What percentage of the value of what you sell is represented by the wages in the workroom?—That depends entirely upon the quality of the material which the customer chooses.

1818. What is it approximately; is it a quarter, or a half?—You could not say. The material from which they make the dress, as these ladies know, might be 3s. 6d. a yard or it might be 33s. 6d. a yard. Those ladies will confirm that, I am sure.

1819. If you take your turnover during the year, what proportion would your wages bill bear to the total output in the workshop?—I should think possibly it might be half.

1820. In that case it would be probable that a substantial reduction of wages would make a considerable difference to the amount of orders you would get?—Yes, undoubtedly it would. It would tempt back business from the ready-mades to the bespoke work. I am sure it would.

1821. *Mrs. Lyttelton*: May I put one question? I expect you recognise that quite independent of all these considerations there is a tremendous movement among women in favour of using ready-made garments? It has nothing to do necessarily with prices, but is concerned with the convenience, the quickness, and the greater style that can be got by ready-made clothes?—Yes.

1822. There is a very great tendency which has nothing to do with these economic conditions; would you not agree with me?—Do you think that is correct, or do you not think that it is rather the result of prices?

1823. *Dame Adelaide Anderson*: I was going to put something like the same question?—Do you not think that it is really the result of higher prices?

Mrs. Lyttelton: No, I do not—not entirely.

1824. *Dame Adelaide Anderson*: Is it not within your knowledge that early in this century, somewhere about 1902 or 1903, that movement began?—In favour of ready-made clothes?

1825. Yes.—Yes.

1826. It began just about then, and it has continued to grow and grow, and during just the last year or two, apart from Trade Boards, has it not gone forward by leaps and bounds?—I should say during the last decade.

1827. Is it not within your knowledge that a great many private and other dressmakers have put in electric power and have begun to compete with the ready-made trade?—I should think that possibly that might be the case in very large towns, but it would not affect the smaller districts.

1827A. Is there anything to prevent them using electricity?—It would not be economical, that is all. You could not make a dress by electricity.

1828. I mean by machine work instead of by hand work?—But not to fit a person. You could not make a dress by electricity to fit anybody. You could turn out dresses to pattern, a hundred all alike, and they could afterwards be altered to suit the figures of the ladies who were going to wear them, but hand work would be necessary to make the thing fit, and that would not be practicable in a small workroom in a small town. Ladies would stand in horror at the prospect of having one hundred garments all exactly the same; and any number of them would be the same.

1829. But in these big drapery and dressmaking establishments in London and some of the other large towns, such as Manchester, does not a lady look at the models and choose one, and have it adapted for her?—No, copied. They would not be satisfied with that; they would have a fresh one made to fit them.

1830. But it is possible, is it not?—I do not think that it is. It is not a practicable method of doing business.

1831. *Lord Weir*: You have mentioned previously the tendency which Dame Adelaide Anderson speaks of. Is the foreigner getting the advantage of that?—He is getting a great deal; not during the war, of course.

1832. I mean now?—Yes, now he is.

1833. Are those substantial figures?—Very substantial figures.

1834. *Chairman*: I suppose we export ready-made clothing as well as import it, do we not?—In men's clothing, yes; Huddersfield, Leeds, and places in the North do, but very little in ladies' clothing except a few to our Colonies.

1835. To our own Dominions are there not a large number of houses exporting costumes, dresses, and so on?—Yes, that is true, there are, but we export to Europe scarcely at all, because they are more clever than we are at making ready-made things. But we do export to the Colonies I know, and also of course, the Colonies buy as we do in the Continental markets. Still, there is an export trade done in ready-made dresses; I do not wish to say anything to the contrary of that; but my point is: Is it not worth while to keep local industries? There is nothing more useful for a young woman coming into life than a knowledge of dressmaking when she is married. It is not a vital point in my own business because we have other departments, but the fact is that we are on the border-line throughout the country to-day of a decision whether we shall abandon these workrooms, or whether we shall continue them, and everything will depend upon the rate of wages. There has never been the slightest dissatisfaction in my experience with the wages in good class workrooms in the Provinces. I have no doubt that there has been a certain amount of sweating in large towns; I have heard of it; but there has never been the slightest agitation or general sense of dissatisfaction. There has been the happiest of feeling in the workshops that I

9 November, 1921.]

Mr. H. B. FOWLER.

[Continued.]

have had experience of, and mothers to-day are most anxious to put their daughters out. I have had some mothers coming to me in the last week and saying: "Will you take my girl into the dressmaking department?" and I have to say: "I cannot take her because I cannot pay her 6s. per week to start with, 10s. in the second year, and 15s. in the third year. She is not worth it." The mother knows that perfectly well. She says: "I know she is not worth that, and I do not want her to have it; I do not want a child of 14 who has just left school to be bringing home 10s. or 15s. a week. I want her to learn the business." When

we dismiss girls over these high rates they come to us in tears about it. Putting the interests of the employers on one side, which no doubt in these inquiries will not get a great deal of consideration, I am quite sure that it is a hardship on the girls in the country districts. They like to live at home, and they like to learn a useful industry. In small towns there are no large factories or other occupations, except domestic service. It does seem a pity that they should not be allowed to learn a useful trade like that. However, I do not think there is anything else I can say.

Chairman: We are much obliged to you.

(The Witness withdrew.)

(Adjourned till Wednesday next, the 16th instant, at 11 a.m.)

SIXTH DAY.

Wednesday, 16th November, 1921.

PRESENT:

THE RIGHT HON. THE VISCOUNT CAVE, G.C.M.G. (*Chairman*).

THE RIGHT HON. LORD WEIR OF EASTWOOD.

DAME ADELAIDE M. ANDERSON, D.B.E.

THE HON. MRS. ALFRED LYTTELTON, D.B.E.

MR. JAMES BELL, M.P.

MR. W. T. LAYTON, C.H., C.B.E.

SIR ARTHUR F. PEASE, Bt.

MR. A. PUGH.

MR. A. MACCALLUM SCOTT, M.P.

MR. H. D. HANCOCK (*Secretary*).

Mr. J. D. MOUNSEY, called and examined.

1836. *Chairman:* I think you are a representative of the employers on the Hat, Cap and Millinery Trade Board for England and Wales?—That is so, the unorganised employers. That is the point I wished to emphasise. We represent those employers who are probably not in any association or board or comprised in an employers' union.

1837. How many seats have the employers on the Board?—I should think about a couple of dozen.

1838. You represent really the smaller employers, do you not?—I represent those who are not in, shall I say, employers' associations, or anything of that kind. I was appointed by the Ministry of Labour, and I believe there is only another one, a lady, who is also in the same position as I am.

1839. Is there any difference of opinion between you and those members who are appointed or nominated by the employers' association?—Yes, it often does happen. This lady, with all due respect to her, who is no doubt a very charming person and a good business woman, but all the time I have been there I have never heard her open her mouth—though I do not know that there is much harm in that, perhaps. The position is that I claim to be the party to represent probably the largest number of employers, and yet anything that I may have to say is practically useless, and I can only protest.

1840. What kind of differences arise between you and the other members?—Differences do not always arise, but when they do arise the reason is that invariably the day before an official Trade Board meeting the employers' side hold a meeting of their own, to which it is only fair to say I am invited. I think notice is sent every time to me, but I am not a member of the employers' association, and though I certainly went on one occasion, I shall not go again. I felt that I was intruding where I ought not to be. Therefore when a matter comes to the

official Trade Board meeting the following day, anything which has been said or agreed upon the day before is said or agreed upon. I can only protest against it. At the last meeting I attended, before I went into the Trade Board meeting I was handed a paper of the various things that had been under discussion on the previous day: "That is what we are going to say and do," and it is said and done, and I can only offer my protest, and that is as far as ever I get.

1841. But you are invited to the meetings?—That is quite true, but I feel that not being a member of the employers' association I am, shall I say, intruding in their private meetings.

1842. Are they not willing to listen to what you say?—I daresay they would be, but anyhow, I have been there, and I shall not go again. I leave it at that. My idea would be that if it is worth while at all, and if the Ministry of Labour consider that the unorganised employers should be represented, there should be more representatives, or a reduction on the employers' side.

1843. I have the composition of the Board before me, and the list I have seems to bear out what you say.—There are two of us.

1844. They are all nominated or suggested to the Minister by the employers' association?—Yes, that is exactly so.

1845. What is the kind of point upon which you do not get quite at one with the other representatives of employers?—I will give you one instance. This is the paper which was handed to me at the last meeting which I attended: "This meeting of employers' representatives in the Hat, Cap and Millinery Trade Board (England and Wales), having considered the Minister's letter of 9th September, is of opinion that the formation of separate Trade Boards for the wholesale and retail branches of the

16 November, 1921.]

Mr. J. D. MOUNSEY.

[Continued.]

Hat, Cap and Millinery Trade is not practicable, this question, as the Minister points out, having been exhaustively discussed before the existing Board was set up, and no clear line of demarcation could be found. This meeting is further of opinion that on the grounds of economy alone no further Boards for the Hat, Cap and Millinery Trade should be established at present." I am clearly of opinion that it should be divided.

1846. The wholesale from the retail?—Certainly; and I may say that I presume that the majority of the employers sat and carried that the day before. At the same time there were certain other representatives there who were in entire agreement with me; they were, shall I call them, the representatives of the retail section of the Board; and I certainly think it should be done and could be done with advantage. I protested against it, I did not agree with it, and that is all; that is as far as I could get.

1847. *Lord Weir*: Is it a function of the Board at all to consider whether there should be additional Trade Boards?—I could not tell you. One of the reasons for my view of it is this: I am in the wholesale millinery trade in London; I know nothing whatever about the straw hat trade of Luton, or the felt hat trade of Stockport, and I do not think they should be mixed up together. I think that, say, Leeds, Stockport, Hyde, Denton and Manchester should have a local or district Trade Board, and their Chairman or someone appointed by them should be empowered to come to London to sit on the central Trade Board.

1848. *Chairman*: Has the question of district committees been mooted at your Trade Board?—I do not think it has. If it has I do not remember it. It may have been, but it is not to my knowledge.

1849. It is within the power of your Board to form district committees, but perhaps that has not been considered yet?—I do not think so, but I do not remember. Just take the retail trade of Cornwall, Yorkshire or Northumberland: what on earth do we know about it in London? What do we know about the millinery worker in a small village in the country? That is why I say it should be divided.

1850. You have members from certain parts of the country?—Yes.

1851. You have members from Luton?—Yes, and I think Luton should settle its own affairs.

1852. You have none from Cornwall?—No. I am simply mentioning that as a country place where probably there are a lot of small retail shops, and where the circumstances are so different that we sitting in London know nothing about them.

1853. You yourself are a wholesaler, are you not?—Yes, I am a wholesale millinery manufacturer in London.

1854. Are there representatives of small retail shops on the Board?—There are representatives of the Board of retailers. Mr. Nuttall, of Lancaster, I think is one, and there is a gentleman from Birmingham whose name I do not know.

1855. However, you think the wholesalers and retailers ought to be divided?—I do.

1856. *Sir Arthur Pease*: You mentioned the trade of making straw hats in Luton: that is a specialised trade for one district, is it not?—Yes.

1857. When you come to other things, they are much more scattered over the country?—Yes, the retail would be, but there are very few manufacturers in the straw hat trade outside Luton—none at all that I know of.

1858. Is your suggestion to have a district Board only where you have a specialised trade?—I would have a district Board, say, at Luton, and one at Manchester or Leeds; probably one at Stockport for the felt hat trade. The Manchester and Leeds trade is more a cap trade as we know it.

1859. The other trades are scattered all over the country; would you have district Boards for them?—I would divide the Trade Board up, and then we would get rid of those representatives such as Mr. Nuttall and some from Northumberland and Newcastle—the retail trade.

1860. *Chairman*: Then as for the rest which are left, you would have district committees?—Yes, the rest left would be London, Luton, Manchester, Leeds and Stockport, mainly.

1861. That is what was rather suggested to you. There might be district committees for places where there is a special trade?—Yes, there might be one for the Midlands, which might include Birmingham and Leicester, where they make children's millinery.

1862. Then I think you have something to say about the scope of the Board?—Yes, I have made inquiries of the people that I represent, or the people in the trade as far as I know, as to whether it should be abolished or, shall I say, improved or altered in any way, and I must say that the unanimous opinion is that it should be abolished altogether. At the same time I must tell you that that is not quite my view. I think that the scope of the Board should be no more than to fix a minimum wage, and it should stop at that. When you get to a girl of 18, 20, 21 or 22, who has to have a certain wage paid to her, then it knocks all initiative out of everything. There is too much red tape about it, that is the general view expressed by people in the trade as far as I have found out; and I think there should be a minimum wage only, and that it should go no further.

1863. A minimum wage for adults?—Yes. Because a girl has been in the trade three or four years she is called a skilled worker, whereas some of them are skilled in a year or eighteen months, while others are not skilled in as many years.

1864. I want to know what you suggest. You suggest a minimum wage for adults?—I have nothing in my mind as to the amount of the wage.

1865. I am not putting that to you, but you said you thought it should be a minimum wage?—Yes, a minimum wage.

1866. And a minimum wage for learners?—Yes.

1867. We want to know what you mean by learners. Do you suggest that there should be only one minimum wage for learners, whatever their experience or length of service?—No. At the present time, as you probably know, if a girl goes in at 15, 16 or 17 years of age, she starts on a certain schedule of wages; that is perfectly in order, and I quite agree with it. 1868. And it goes up now according to age?—Yes.

1869. Do you approve of that, or what do you suggest in its place?—I approve of it.

1870. That it should go up according to age?—Yes, and when she is 18, or has done her three years' apprenticeship or service as a learner, I would not suggest that she should go on three years more, and when she is 21 should have another 2d. an hour. I think they should be thrown on their own ability.

1871. I want to be quite sure that I clearly understand what your wish is. Some people tell us that the learner's wage ought not to rise according to age, but according to the length of her education or instruction: which do you think is right—that it should rise in stages according to age, or according to length of service?—I think a bit of both. I do not think a girl learning at 17, 18, or even 19 or 20 years of age, should start at the same money as a girl of 14; I think she should be paid a little more, anyhow.

1872. You are not very definite as to what plan you would suggest?—I would suggest that it should be on the line of the wages that are down for learners.

1873. That they should remain?—On that principle, according to the cost of living and according to what the trade can pay. Some can and do pay even more than that; others, of course, say they cannot afford it. They may be in a different trade.

1874. Will you say clearly what you mean about the minimum wage for adults?—Do you mean one rate only?—Yes, a minimum rate.

1875. Whatever the work is, you think there should be a minimum rate?—Yes. If a girl is worth more she will soon get it.

1876. What about piece work?—It should be based on much the same principle, that an average worker should earn when on piece work as much as

16 November, 1921.]

Mr. J. D. MOUNSEY.

[Continued.]

the weekly wage—she should be able to earn the same amount.

1877. The piece-work rate should be fixed so as to enable an ordinary worker, I suppose, to earn the minimum rates?—Yes, and if she works harder she gets more.

1878. *Lord Weir*: Would you guarantee the piece-worker the minimum wage?—Yes, that is my view, though of course it is not the view of those people whom I have been in consultation with. They went on ability altogether, but I think a minimum wage would do no harm.

1879. Is that your own experience as an employer?—Yes. I dare say we pay more; in fact I know we do in many cases.

1880. *Mr. Layton*: Does your Board fix a piece-rate?—Yes, we have both.

1881. It is a general minimum piece-rate; it is not what is called a piece-work basis time-rate?—Yes, we have both. We have a piece-rate and we have weekly rates, that is, so much per week. It should be 8½d. an hour, I think, and 9½d. for piece-workers. They should be able to earn at the rate of 9½d. an hour. I am not falling out at all with the prices that have been settled; that is a matter for the Trade Board.

1882. *Mr. Bell*: So that the minimum is not a minimum piece-rate, but the minimum is fixed so that when they are working on the piece-rate they must get 9½d.?—That is it.

1883. *Dame Adelaide Anderson*: I am not quite sure that I am clear about your proposal for the organisation of the Trade Boards locally. You want them right through the country, wholesale and retail?—Yes.

1884. And separate local Boards, so that, say you set up Boards in Manchester, you would have a retail Board and a wholesale Board?—That would be so, definitely.

1885. And in Manchester you would get in the wholesale trade the silk hat trade, the ready-made cap trade, and the millinery—any wholesale millinery that there is?—Yes; there is a lot of wholesale millinery in Manchester.

1886. Do you think that the millinery trades in Manchester and London are so different that they cannot belong to one wholesale Board?—The Manchester trade is not so different from the London trade; it is when you get to the men's felt hat manufactories which there are in London as well as in Stockport.

1887. Hat and cap manufacture?—Yes; there are men's cap manufactories, that is soft caps, and then there are men's felt hat manufactories; but the cap trade is mainly in Leeds.

1888. Do you not think you could get under a central board along with the district committees which are already provided for in the Act regard for local circumstances?—That is what I think. There should be these district committees. I see very little use in our sitting in London saying yes or not to anything that may happen in those neighbourhoods such as Stockport in the felt hat trade. I will give you an instance of that. At the last meeting I attended we spent a considerable time in discussing whether the fireman at a felt hat factory, a stoker for an engine, came under the scope of the Board or not. Felt hats cannot be made without an engine; consequently there is a fireman, and we spent a considerable time in talking about whether he came within the scope of the Board or not. That was a subject absolutely foreign to us in London, because we have no engines in our trade here, and that should have been settled locally.

1889. *Mr. Bell*: Are you of opinion that for dealing with the different circumstances say in London and in Manchester, it would be better to have one Board in London and one in Manchester?—I am.

1890. But suppose that the Manchester Board fixed a minimum rate which was, say, 2d. per hour less than the rate which the London Board fixed, would

not that have a tendency to send the trade to Manchester?—That would, but I would not give power to do that. The minimum wage to be paid should be settled by the Central Board in London. If it transpired that the country people could not pay the flat rate demanded by the London people, then I would suggest that a certain percentage less should be accorded to those towns or districts which have a smaller population, and where, consequently, living is probably cheaper—say up to 20,000 or 10,000 inhabitants, or whatever number you like to settle. In a large town like Manchester I should say it should be the same as London. A town with a population of anything over 100,000 people should be the same as London.

1891. I take it for granted that in your particular industry you would not like to go back to the conditions which obtained previously to Trade Boards being set up, would you?—I do not think that the conditions in the particular branch to which I belong were at all bad in any way. I have made enquiries as far as I possibly could, and people who have been in the trade for periods, say, up to 40 years never remember a strike. We have very little trouble in our trade in London. I do not know what may be the case in the felt hat trade or the cap trade in Leeds; they may have had trouble there, but we in London have never had any trouble.

1892. My question was an attempt to ascertain your opinion as to the value of the Trade Board in your district—whether you would like to be without it now in your industry?—No, I have already stated that my personal view is that it should be maintained, but should only have power to fix a minimum wage; it should not go any further than the living wage.

1893. *Dame Adelaide Anderson*: Your trade covers simply wholesale caps and hats, and wholesale millinery?—Do you mean the present Board as established?

1894. No, you were speaking particularly of the local division of particular trades?—No, the wholesale manufacturers.

1895. But except for the special trade, say, in Stockport?—No, I should include that in the wholesale trade as well.

1896. You would include it in London in cases where it was found there?—I should keep the wholesale trade distinct from the retail whatever class of trade it was, whether hats, caps, or millinery, but I would not split it up and say that there should be a Trade Board established for the felt hat trade. I would not go so far as that. I should leave it as the hat, cap and millinery trade, but keep the wholesale distinct from the retail.

1897. Really you would be satisfied with District Committees to settle variations?—To settle their district affairs.

1898. I mean to advise as to variations?—Yes, certainly.

1899. But subject to a real control by the Central Board?—That is my view.

1900. *Mr. Layton*: You said that you considered yourself representative of more employers than anyone on the Board. Have you any idea what percentage of employers in this industry are organised?—At present as the Board is established with the retailers there, I should say by far the majority.

1901. Do you mean that the majority are not in an organisation?—The majority are not in an organisation. There are so many small people.

1902. You are in the position of representing the unorganised employers. Have you any means of ascertaining the views of the unorganised employers in London?—Yes, those I go to in my own immediate neighbourhood in the city where particularly the wholesale trade is done. There are a good few of them.

1903. But you have to collect their views by a sort of personal canvass?—Certainly, I meet them and say: "What do you say to so and so?" and I get their view in that way.

16 November, 1921.]

Mr. J. D. MOUNSEY.

[Continued.]

1904. It therefore amounts to this, that it is impossible for an unorganised employers' representative to speak for any one but those who are locally in contact with him?—That is so; and if the Ministry of Labour consider that there should be more and they could not be got, then I would suggest that the Ministry of Labour themselves should send an official to the various Trade Board meetings to represent the unorganised employers.

1905. But how would that official ascertain the opinions of the unorganised employers?—I have gone into that. He would probably go into a certain neighbourhood and he could find out I think fairly quickly anyone who was not organised. Say he went to Leeds or to Manchester, he could very soon get a directory and find out the hat, cap and millinery manufacturers, and then at once he could go and interview them and ask: "Do you belong to any organisation?" and the answer would be: "No, I do not" or, "Yes, I do," as the case might be. Then he could say, "What is your view?" Once he had that he would be able to ascertain their views.

1906. When you say that you represent a very large numbers of employers, are you thinking of this local group with which you are in actual personal contact?—At present I am representing a large number, but if the retail were divided from the wholesale it would reduce the unorganised employers considerably.

1907. Are you able to find the views of the retail people?—I daresay that there is a majority of employers in the wholesale trade who are members of organisations, but of course, not all of them by a long way. Still, I think there would be a majority in some society or other.

1908. Your answer is that in the wholesale trade there is an actual majority of organised employers?—I should say so—all organised in the wholesale.

1909. And a large number of whom you are speaking here are the retailers?—They would be; that is so.

1910. Is it possible for any unorganised employers' representative to collect the opinion of so large a number of persons?—Well, they would get the opinions of some; they could not get the opinions of a great many, I think. They would probably go into a town and they would very soon find out those engaged in the hat, cap and millinery trade, and they would walk into a shop and say: "Do you belong to any association?" and ascertain their views. That is how I should approach the subject.

(The Witness withdrew.)

Mr. J. C. EATON and Mr. D. BRODIE, called and examined.

The Witnesses handed in the following statement:—

(1) The Retail Bespoke Tailoring Trade Board, Great Britain, is fundamentally faulty, in that instead of making for the harmonising of conflicting interests, its whole tendency in practice is to foment dissension. This is attributable to the fact that the two sides, instead of getting together to compose differences, bend all their energies to the task of influencing the appointed members, and in so doing are driven to the elaboration of extreme views.

(2) It is unrepresentative, in that, particularly on the workers' side, on which the representative members are all, or practically all, Trade Union officials, the persons most affected, *i.e.*, the rural workers, have no direct representation. The Trade Union officials are, perhaps naturally, only concerned with the large number of workers congregated in populous areas. The effect of Trade Board determinations upon rural workers has never been seriously considered by the Retail Bespoke Tailoring Trade Board, and the result is that many workshops in country towns have been closed, and the work sent to be made up in wholesale bespoke factories.

(3) It is inefficient, in that it cannot adequately provide for varying conditions, nor can it classify workers satisfactorily. These functions have, in the past, been performed with much success by Employers' and Workers' Associations. Its determina-

1911. Assuming that the Ministry of Labour had followed that idea, and had taken, let us say, half the Board and had appointed 15 persons from different parts of the country, do you think that that would have given a better opinion than the opinion of the organised employers' association?—No, I do not say that it would give a better opinion.

1912. A more representative opinion?—No, I do not know that it would give a better one, but when they were there, if certain points arose, like the point which I have specified here, probably they would say to the Ministry of Labour as a Trade Board that they approved of it being split up, because I can find that that is undoubtedly the opinion of those in the Trade Board who represent the retail interest.

1913. But assuming that the organised employers have an opinion different from that of the Trade Board, clearly the Ministry of Labour could only give effect to that by giving a larger representation on the Board, so that the voting powers of the unorganised employers' representatives would be larger; is not that so?—If you divide up the Board and get the control away from the wholesale to begin with, then, after all, if a District Committee, say, in Manchester, which would embrace Stockport and Leeds, were formed, one man from there could be empowered to come to London and sit on the Central Authority and voice the views of that particular district.

1914. *Sir Arthur Pease*: You are representing the wholesalers?—Yes.

1915. Is there nobody at all representing the unorganised retailers?—Yes, a lady. I think she represents them.

1916. Do you mind saying how many men you employ?—Myself.

1917. Yes?—Two.

1918. Are the rest women?—Yes, from 200 to 250 women.

1919. From whence does your competition principally come?—London.

1920. Does it come from Manchester, and so on, or does it come from abroad?—Personally I have no competition from Manchester. If I may say so, I make perhaps a rather better article, as many of us do in London, than they can produce in Manchester.

1921. You are not afraid of competition really?—No, because they make a cheaper article in Manchester. A lot of cheap goods are made in London, but not by myself.

Chairman: We are much obliged to you.

tions are not comprehended by one half of the persons responsible for their drafting, not to speak of those, both employers and workers, engaged in the trade affected.

(4) It is harassing to the employer, in that he does not know when he is keeping within the law, nor can he get requisite guidance either from the Trade Board Department or from the Board itself, which cannot agree upon the interpretation of its own determinations.

(5) It is wasteful, in that it takes from useful and productive employment a goodly number of persons for considerable periods without any corresponding benefits, except, perhaps, to the several classes of officials, on all sides, connected with it.

(6) It is cumbersome in its action, and cannot cope with conditions which may undergo drastic change from month to month.

(7) Its cost to the State is best known to the Treasury officials, but that it must be considerable is apparent to anyone who has experience of the frequent meetings, the prolonged and often futile discussions, and to the number of persons unproductively employed in its operations.

In the view of the Minister of Labour the Trade Boards Act imposes upon the employers the obligation to keep time records in the case of piece-workers. Having regard to the long-established

* L

16 November, 1921.]

Mr. J. C. EATON and Mr. D. BRODIE.

[Continued.]

habits and traditions of the trade, this obligation is utterly impossible of fulfilment. Evidence of this fact is in the hands of the Department.

In the course of an address to a meeting of traders at the Grocers' Exhibition, the Minister of Labour deals with a criticism of Trade Boards which has often been made, viz. :—

"That the period—from three to six months—before an amended rate can become effective is too long," and he says: "To-day, with a falling market, it is the employers' side which urges this. When markets were rising it was the workers' side who urged it. But that is human nature.

"In fairness to employers it must be pointed out that Trade Board rates are minimum rates, and that, should circumstances warrant, it does not necessarily take from three to six months to raise rates (although it is illegal to lower them even by mutual consent). In fact, the employers on more than one of the then existing Trade Boards, during the period when cost of living, etc., was rising, agreed to put amended rates into operation without delay."

With reference to the question of Differential Rates for Rural Areas, the Minister said that if such rates were not fixed the responsibility was with the Trade Boards themselves, as they had the necessary power.

In as far as this Board is concerned, the statement is a misrepresentation of fact. Strenuous efforts were made on several occasions to secure special rates for rural areas, but these were rendered abortive by the Government appointed members, for whose nomination the Minister is directly responsible.

The reason given was the difficulty of finding a suitable line of demarcation, albeit from time immemorial until the establishment of this Board differential rates were in operation throughout the whole country.

The failure of the Trade Board to fix suitable rates for rural areas has led to evasion of the Act, and complaints from workers have reached this Federation to the effect that their opportunities of employment have been reduced through the action of their fellow-workers, who, during slack periods left the workshops, and at home worked directly for the public. In so doing these workers were in a privileged position in not being compelled to exact the Trade Board minimum rate.

The following letter was sent on 6th September by one of our members to the Minister of Labour:—

"We have been in communication with the Secretary, Retail Bespoke Tailoring Trade Board, regarding an endeavour on our part to create work for our men, and find it hopeless.

"May we point out how these absurd restrictions are injuring trade and creating unemployment? Our trade is entirely bespoke. Now is our quiet season. The men are idle and drawing the 15s. dole, while we could create work for them by making up cloth into overcoats 'ready to wear,' not to order; but they must be made up cheaper to sell as such, and the men would gladly do it, but the Trade Board won't allow it, and so the men must go and draw the 15s. dole in place of four times or thereby the money which they could earn. Moreover, men would be saved from acting inconsistently by the law, for operatives all over the country are accepting work which would have come to their employers, and doing it at home at a third of the minimum rate and drawing the dole too. Can you blame them? They can't live on 15s. a week.

"Our trade is not one which requires expensive plant and hard and fast rules to carry on. A sewing machine is all that is necessary, and one can set up as a tailor (we have even a Government servant in this town—a postman—who carries on as a tailor too), and this these men do for the slack time and at prices far below the minimum rate.

"You see how these foolish restrictions are not suited to our trade and are paralysing business, creating unemployment, and causing men to break the law."

1922. *Chairman*: I think, Mr. Eaton, you are a member of the Retail Bespoke Tailoring Board?—(Mr. Eaton): That is so.

1923. And you come here as representing the Scottish Federation of Merchant Tailors?—That is so.

1924. What have you to say about the Retail Bespoke Tailoring Trade Board?—I think you have in your hands a statement which has been sent in giving a summary of the evidence upon which we expected to be examined. I think that summary states pretty fully what our view is, and I do not know that I have very much to add to it at the moment in the way of supplement. The only thing that I should like to say is that this trade is one which is carried on in every city, town, and village in the country, also that it is a trade where an employee can very easily become an employer. I say that just to give emphasis to the fact that in very many instances men in country districts particularly who are carrying on the trade are tradesmen, and have not a great deal of commercial or business experience.

1925. We will take your statement as part of your evidence if we may, but I will ask you a few questions upon it. Your first point is that the Board does not tend to harmonise conflicting interests; the tendency is rather that each side should press its own view?—That is so.

1926. I suppose if you do that you have to convert the appointed members?—Yes, every important question is really decided by the appointed member, who acts as the arbiter or as judge.

1927. Have you had it occur on your Board that the appointed members have exercised the casting vote?—We never have had any question of importance decided otherwise, in my recollection.

1928. It has not been a case of the two sides agreeing, but of the two sides differing, and the appointed members deciding the question?—That is so.

1929. There is, I suppose, an attempt to reconcile the two sides before the extreme step of a vote is resorted to?—I do not think that I could even say that there is now a serious attempt made. There have been attempts made, certainly, to reconcile the two sides—

1930. But they met with so little success that they are not continued?—Yes. It is always discussed with an appointed member present, and the result is that the one side makes an extreme statement and the other side probably does likewise, and you cannot get to common ground, whereas in the past when only employers and employees were meeting together they both understood the position, and their common interest and their common desire was to accommodate one another.

1931. *Lord Weir*: That is to say, that the decisions now are not what you might call decisions made by the trade as a whole, comprising the employer and the worker?—That is so; they are not at all decisions come to by employers and workers.

1932. *Chairman*: Are your employers all of them appointed or nominated by Associations? I think they are?—Yes, that is so.

1933. I see that four of them are officials of Associations?—Not of our Association. None of our Scottish Federation representatives are officials.

1934. No, I see that that is so, but four of them are officials. On the workers' side there are eight of them who are officials of trade organisations?—I should have thought there were more than that on the workers' side who were officials.

1935. You may be right. I think the number which I gave you represents the number of full-time officials?—Yes, I think that is so.

1936. There are others who are part-time officials?—Yes. I think they are practically all officials.

1937. I do not think they are practically all officials; I am given 11 out of 24 as representing those who are officials, either full-time or part-time. Does it

16 November, 1921.]

Mr. J. C. EATON and Mr. D. BRODIE.

[Continued.]

have an effect upon the working of the Board that many of the members are officials of organisations on one side or the other?—Naturally where you have a rural area interested, these officials—I am not going to blame them—cannot help but be particularly interested in the larger districts from whence they are getting the larger body of their workers, with the result that as regards small shops where there is only a man or two, or a girl or two, these people are not represented; and these are the very people who are suffering most from Trade Board regulations.

1938. Thus the decisions tend to be more suitable for the big employers than for the small ones?—All the illustrations when discussions are taking place on the Board are from London and the larger towns. Those are the places which are always given as illustrations.

1939. Does that create difficulty in the country districts?—Very great difficulty.

1940. In what way? How would you describe it?—I have here a number of letters from various parts of Scotland, from one end to the other, giving instances of businesses which have had to be closed down entirely on account of the regulations of the Trade Board.

1941. Are those in a form in which we can see them?—Yes, I can leave them or I can read them. I have a summary of them. To deal only with the closing of workshops I have letters from Orkney, Kilmarnock, Peterhead, Elgin, Pitlochry, Forfarshire, and Banffshire. Each of these gives instances of workshops which have been closed on account of Trade Board regulations. I might add that before getting these letters it was particularly put before them that we did not want anything that was hearsay; we wanted letters which people were prepared to substantiate and stand by; so that I am prepared to hand in the letters with the letter which we sent out asking for this information.

1942. I shall be glad if you will do that?—I will do that.

1943. Mr. Bell: Can you tell us how many employees were affected?—I cannot do that.

1944. I do not altogether understand your reference to the Trade Board and your criticism of the Trade Union officials, because you say that things were better when the negotiations were conducted between the two sides. At that time when the negotiations were conducted better, the whole of the workers' representatives would be Trade Union officials and they understood the business better, and were more efficient, according to your own statement. I do not altogether understand it.—No, when we met them before the representatives were not Trade Union officials at all. The only official present would be the secretary and perhaps the president for the time being—the presidency was an office which changed from year to year—and the others were representatives from the local districts. In each case at that time the secretaries of local districts (if it happened to be the secretary who came as a delegate; it might not be) were men working at their work as journeymen; but the effect of the Trade Board has been enormously to increase the number of whole-time or part-time officials.

1945. Is your point then that these whole-time officials do not know anything about the business?—Not exactly, but my point is that the whole-time official is much more likely to consider his constituents in the larger areas than he is to consider the small numbers in scattered areas.

1946. I take it according to your experience of these Trade Union officials they have mostly been chosen from the ranks of the workers in the particular trade, and they know the conditions.—So far as Scotland is concerned, I think they have all been at one time or another workers. I think that is quite right.

1947. Mr. Layton: Would you just elaborate that point a little as to your negotiations? Is it true to say that before the Trade Board was established practically the conditions of the trade were regulated

in fact by agreement of employers' and workers' associations?—They were regulated by agreement. There might be exceptions in the very small outlying districts where it was difficult to supervise and organise, but in all the places of any size an agreement was come to between the two associations.

1948. Both sides were organised fairly satisfactorily in Scotland?—Both sides were organised sufficiently for us to grade practically every place of importance in Scotland into one of three categories. We had an agreement with the workers' side whereby we had the places all graded and the rate fixed; they were all paid to the one log. That is a thing which you will probably not understand, but they were all paid to the one statement—the one count-up of a garment—but at different rates per log hour.

1949. Was that arrived at by agreement with one association or were there several associations in Scotland?—There was just the one association.

1950. And it was a standing organisation?—Yes.

1951. It was a permanent organisation with permanent machinery?—It was our organisation, the Scottish Federation of Merchant Tailors.

1952. When the Trade Board was formed, did you represent to the Ministry of Labour that this organisation was sufficient to place it outside the category of unorganised trades?—I do not think that that was done. It may have been referred to. I know that some of our members thought that it was sufficiently organised to be placed outside, but with the coming into force of the 1918 Act the objection which many people had was overcome, because of the fact that it seemed that every trade was coming under the Act. Before that a trade which was brought under the Act was looked upon as a sweated trade.

1953. Do I understand your argument to be, therefore, that the degree of organisation in Scotland was really sufficient to have placed it outside the Act of 1918?—So far as material trades were concerned, that is so, but I am not going to say for one moment that outlying districts were properly organised, although even Stornoway was organised. In Stornoway the Operatives' Society had a branch of their association. At the same time I can quite conceive that there were a number of outlying districts which were not thoroughly organised.

1954. Dame Adelaide Anderson: Has any fresh movement towards the organisation of these rural retail bespoke tailors begun since?—On both sides, of course, the Trade Board has had the effect which it has had in other trades: it has developed organisation on both sides very considerably.

1955. Was this log to which you refer in Scotland agreed on at about the same time as the London log?—No, I think the London log is based upon the Scottish log.

1956. At about what time was the beginning of that; was it in recent years?—It was in the 60's—in 1866, I think.

1957. And that has been in operation ever since?—That is so. Someone behind me is saying that it is since 1804. It certainly was revised about 1866.

1958. I do not want to go into history; it is only to get an idea how far it is operative?—Practically wherever the piece-work system was in operation, and that was throughout the country.

1959. Evidence was given of this at the time of the proposal to form the Board?—No, I do not think there was any strong case put up for keeping us outside.

1960. You say that the organisation of the rural worker is going on?—Yes, it is increasing.

1961. Would not that meet your difficulty of representation on the Trade Board, if they organised sufficiently to express their opinion?—No, we feel, and feel very strongly, that, apart altogether from the employer, the worker in the rural area is suffering very badly at the present time, and he has no method of letting it be known.

1962. Do you think that there is perhaps something parallel in what has happened in factory industry in other ways? For example, the textile industry being ousted through power and the small hand worker

16 November, 1921.]

Mr. J. C. Eaton and Mr. D. Brodie.

[Continued.]

scattered all over the country?—There is no doubt that the trade is gradually—

1965. And that was done without any Trade Board or any regulation of wages?—Admittedly the trade is drifting towards factory work, and in my own view it will drift more in that direction.

1964. *Chairman*: Has the Trade Board any effect upon that?—The point which I was just going to put is this: No doubt the development was in that direction, but the Trade Board has hastened the event and that is our objection: that if the trade was going to die it might be allowed to die in peace and should not have been killed by the Trade Board.

1965. *Dame Adelaide Anderson*: I am afraid that you would not find the poor textile worker died in peace; it was a long drawn-out agony, was it not?—Of course that is another matter.

1966. *Lord Weir*: Is this rural trade which is dying out a large trade?—It is in every village.

1967. Can you give us an idea of the number?—No, it would be almost an impossibility to give an idea of the number.

1968. *Dame Adelaide Anderson*: Is not perhaps the only course the organisation of the rural workers? If you have got a process like this going on, the transformation into a great industry, the only chance for the rural worker is to organise, is it not?—I do not quite see your point.

1969. In order to express the needs of the rural workers?—But they cannot express them. They cannot be expressed, because they would not be represented on a Trade Board.

1970. *Mr. Bell*: Why not, if they are members of an organisation?—Because they are isolated members, and they have no say when it comes to the appointment of a representative on the Trade Board.

1971. I should like you to try and explain how the Trade Boards have affected these rural workers, and why?—As I said, I have a number of letters in which it is clearly stated that workshops have had to be closed. One of the points is that there is no provision by the Trade Board for the differentiation of rates in rural areas. This is a question which has been discussed on the Board on more than one occasion, and we have been told by the appointed members that owing to the difficulty of finding a suitable line of demarcation it is impossible to fix differential rates for the rural areas. Incidentally, I should like to say that, as I have already pointed out, the two associations have been able in the past to do that. If the Trade Boards are not able to do it, then they are not, to our mind, able to fulfil their function.

1972. But I understand that a minimum is fixed. Is the contention that the minimum in the rural areas is too high?—The minimum is not a minimum at all. It is a minimum legally, but it was based, as I said earlier, upon the requirements of London and the larger towns. I have only got to say that the rate fixed for girls on a week of 48 hours, and the rate which the workers' side claim that most of the girls are under—that might be open to dispute—works out as 1s. 0½d. per hour, or 48s. per week. Now, while there are many workers who are getting that, there are a great many who are not value for it, and there is no scope beyond that for raising the efficient worker.

1973. *Chairman*: You have something to say as to the form of the Order. You say that it is difficult to know whether a man is keeping within the law or not?—Yes.

1974. What is the meaning of that?—I have here the notices which have been issued in a matter of a year and ten months. These are they. (*The same were produced.*) I put it in my opening remark that a great many of the people in the trade are tradesmen first and businessmen second, and I will leave it to the Committee to decide whether the average tradesman can get order out of these dozen notices.

1975. Would these all be put up in one shop?—Yes, they are all put in one shop.

1976. Not all at once, of course?—Yes, all at once. Some of them are superseding others, but in many

instances there is a reference back to a previous bill, which makes it necessary to put up both. These are what are on our walls at the present moment.

1977. *Mr. MacCallum Scott*: May I look at them? (*The same were handed in.*)—There is one there which is duplicated to make the bulk, because I have not the number, but it is right in number.

1978. *Chairman*: Is the point that they are very lengthy, or are they difficult to understand?—They are very difficult. It would require a legal mind to understand them.

Mr. Bell: Do I understand that all the bills referred to, Mr. Chairman, are posted on the wall behind you?

Chairman: They cannot be all of them.
Witness: The notice on the wall says so. I do not think it is so. I noticed that when I came into the room. I should like to know what the number of the last one is.

Mr. Layton: It is R.B. 12.
1979. *Chairman*: Some of the earlier ones may have been superseded by these, I think?—I think there are references back in some of them, which make it necessary to post the earlier ones, I think some of these which I have were proposals, and they would be superseded by the fixing notices.

1980. Probably these six are the effective ones to-day?—That is so. At the same time, it is very difficult for a great many people in the trade to understand the difference between the proposal and the fixing notice, and many start to pay when they have got in the notice of proposal.

1981. What do you say about changes of conditions in the trade and the manner in which they are dealt with by Trade Boards?—That would refer, I think, to the differentiation of rates between the different districts?

1982. I was considering rather the question of a change of rates—conditions changing so that the rate has to be either increased or reduced?—The chief objection there is to the time that it takes. I know that it is the same time upwards as it is downwards, but I should like to point out to the Committee that before this Board was set up I sat on the Wholesale Board, and that was in the time when rates were rising; and it was agreed—I understand the same thing happened on other Boards, but I know that it was agreed on this Board—that immediately the new rates were proposed the employers would put them into operation at once. My point is, therefore, that in raising rates it is possible to put the new rates into operation at once, but in lowering it is, I think, bound to take—I say here 3½ to 4 months; it is bound to take almost more than that.

1983. You think that is too long?—Yes, I think that is too long.

1984. *Mr. Layton*: In that connection may I ask whether the upward movement of earnings during the war and up to the time of the Trade Board was carried on by your association?—Yes.

1985. Could you tell us whether that was done rapidly?—Of course, it generally rested with the operatives to ask for an increase; and supposing that it was arranged, say, to-day—this is Wednesday—it would come into operation not later than Monday week.

1986. Was that movement carried out quite independently of any movement in England?—Yes, it was certainly independent of England. We made our own arrangements. I could not speak for England.

1987. *Mr. Bell*: Prior to the war when the two associations met and the employers' side asked for a reduction, how long did it take them?—There was not a reduction.

1988. *Chairman*: You have spoken of workers losing their employment. What becomes of men who are discharged owing to the Trade Board?—The letters which I have here will show that in many instances they are in the receipt of unemployment benefit. That is particularly pointed out in the letters, I think.

16 November, 1921.]

Mr. J. C. EATON and Mr. D. BRODIE.

[Continued.]

1989. I suppose some of them would be engaged by the larger concerns?—Of course, in a rural area there is no larger concern to take them on. Factories, I know, are established in the larger centres, but these workers are not in places large enough.

1990. So that unless they have opportunities of migrating into employment elsewhere they must go on to the unemployment benefit?—Yes, that is so; it means migration.

1991. *Sir Arthur Pease*: Are many of them half-timers? Are many of them doing other work for part of their time as well as doing this work, or are they mainly whole-time workers?—They are whole-time workers.

1992. Even in the rural areas?—Yes, I think so. There is a letter here which says that a postman is doing some tailoring, but that is an isolated instance.

1993. *Chairman*: Was there what I might call "sweating" in this business before the Trade Board was set up?—No, I do not think so. I am quite prepared to admit that a tailor's wage, taken on the average over a year, was a poor one, but in my view it was not because the amount paid for the making of a garment was small, but because of the amount of slack time throughout the year, which brought down the average. I do not think the amount paid per garment was ever lower than other tradesmen were earning.

1994. So far as it is directed against sweating you would have no objection to it?—No.

1995. *Mr. Layton*: You say about a Board that it cannot agree upon the interpretation of its own findings; I presume it is the fact that the secretaries on both sides who were formerly engaged in the work of these associations are on the Trade Board?—That is so. The employers' secretary until recently was a man carrying on the trade. We have no outside man like a member of the Board acting as secretary.

1996. My point is that the people who got skilled in the drawing up of a joint bargain, such as the kind of agreement you had before the Board came into existence, are in fact represented on the Board?—The secretary is on the Board, and will probably give evidence here; on the other hand, if your point is that those secretaries should have seen to it that the determination was such as could be understood and administered, then what I would say in reply to that is that the determination was not the result of the vote of the employers, but the result of the vote of the appointed members.

1997. I am not at the moment talking of the amount of wage, or anything of that kind, but of the form of the agreement?—That is exactly what I refer to: it is the difficulty of administration which you are dealing with, I take it?

1998. Yes, my question is this: If you have had a long experience of drawing up agreements between the two sides, and the personnel conversant with the particular kind of work are now on the Trade Board, why is it that the Trade Board cannot put into effect an agreement which is a practicable one and which has stood the test of time? I am now thinking of the definition of workers and of the kind of consideration of the agreement?—To begin with, I am not prepared to admit that the personnel on both sides was capable of drawing up an agreement which was going to be administered by law.

1999. The personnel of the old associations?—Yes; they are not capable of drawing up an agreement which could be legally administered. We are quite capable of coming to an agreement with the operatives which could be understood by each side.

2000. Because it had to be interpreted by each side, and therefore on an elastic basis?—Yes; but when it comes to be put into a document which is a legal document to be administered by civil servants—this Department itself—we are told that our determination cannot be administered.

2001. Then the root of your difficulty is not so much the question of representation, and so on, as putting a complicated agreement into a legal, enforceable form?—Yes, our point is that the Trade

Board cannot satisfactorily classify workers or deal with varying conditions. So far as the minimum rate is concerned it may be able to deal with that, but the present powers of the Board are much too great, and it cannot adequately perform them. The amount of time which is taken up to no purpose is wasteful in the extreme: it takes from both employers and workers time which would be much more usefully occupied in attending to their business, and it would be more satisfactory to the workers as well if they were doing so.

2002. Supposing a Board had the power and the desire to take your previous agreement and say: "We will not go into this question all over again, we will give legal sanction to it," would that have been possible?—It might be possible, but having regard to the construction of the Board and the fact that we are from Scotland and we have three representatives on either side, I do not think it is very probable.

2003. I must limit my question: Assuming that it were applicable to Scotland—I suppose there is a further difficulty arises with regard to England and Wales—but assuming it were merely applicable to Scotland, was the agreement such that it could have been given legal sanction?—Speaking generally, I should say yes, but of course you will quite understand that a lawyer might find objections to the phraseology, and so on, and say that it could not be effectively administered. I am not prepared to say that the agreements were drawn up sufficiently legally to be administered by an outside authority, such as the Department here.

2004. You are acquainted with the suggestion for the formation of Whitley Councils in certain trades as compared with Trade Boards in others?—Yes.

2005. Is it your view that the Scottish trade as represented was one in which you could have suitably formed a Whitley Council?—I am not sufficiently familiar with the operations of the Whitley Council to answer that. I see difficulties of inspection, and I see difficulties of expense if we were under a Whitley Council as compared with a Trade Board, where the Department is paying the expense. That is the difficulty which I see with a Whitley Council.

2006. Now I want to take you to an entirely different point. You say in your proof that strenuous efforts were made on several occasions to secure special rates for rural areas; could you tell us a little more about that? What were the objections raised? You seem to imply that it was the appointed members who turned that down?—Yes, I think I have already stated that we have made efforts on more than one occasion to get special rates for rural areas.

2007. A discount on the usual rate?—Yes; but the appointed members distinctly said that there was a difficulty in finding a suitable line of demarcation as between one district and another.

2008. But you had been prepared to tackle that problem in your Association before the formation of the Trade Board?—We have tackled it in the past, and put a suggestion forward, but it was turned down.

2009. I understood you to say that in the pre-Trade Board times you rather left the rural workers out of your agreement?—No. When I tell you that Stornoway was within the agreement you will see that the rural worker was within the agreement. But I would not say that our old agreement was all comprehensive of the country. It embraced a number of rural areas, but I would not say that it embraced them all. My colleague corrects me with regard to that. We had a general statement at the end that those not mentioned were in a certain category. (*Mr. Brodie*): We by agreement with the operatives unanimously divided the whole of Scotland into three grades, and in each of the three graded towns there were two rates, so that in effect we had three grades in operation by agreement covering the whole of Scotland. The Trade Board has on three different occasions failed to do that for the reasons that Mr. Eaton mentions, the difficulty of

16 November, 1921.]

Mr. J. C. EATON and Mr. D. BRODIE.

[Continued.]

funding a proper line of demarcation and the difficulty of administering any such thing. Our argument is that if in Scotland, leaving England out altogether, we can come to a satisfactory agreement with the workers and solve that problem, we should be far better left to do it without the formation of a Trade Board at all. That is one of the main reasons why we ask to be demobilised, as it were, or set free from the Trade Board.

2010. Suppose you failed to agree, what would you suggest then?—(Mr. Eaton): We have in the past failed to agree, but we have agreed upon an arbitrator and accepted his decision.

2011. I wanted to get that from you. You have gone to arbitration?—Yes, we have done that in the past.

2012. When you have a trade unorganised, at all events on the workers' side, and you fail to agree, is it certain that arbitration will always be effective on both sides?—Do you mean is it certain that the unorganised portion of the trade would agree with the arbitrator's decision?

2013. No. I meant with the workers unorganised and the employers organised, and the two sides failing to agree, is there any risk of the employers saying: "These are our terms, you must submit to them: We will not arbitrate"? I am putting an extreme case?—Is not that a case which, as far as we are concerned, does not arise because of the fact that the workers are organised?

2014. If they are organised in this trade, really what Mr. Brodie has said is directed to the case where both sides are fairly well organised?—(Mr. Brodie): Yes, the workers are really more highly organised than the employers, and were organised before the employers.

2015. Dame Adelaide Anderson: Even in the rural districts were the rural workers organised?—The rural districts, of course, are not completely organised, for this reason, that you will find in many of the villages and small towns there are probably no more than two or three journeymen tailors working in the whole place.

2016. Lord Weir: Do you suggest that the constitution of this Board was unjustified, and it did not fulfil what is laid down—that there was adequate organisation?—(Mr. Eaton): Do we think it was unnecessary? I would scarcely like to submit that, because the workers approached us with the view of coming into the Trade Board, and we had no objection. I would say at once, yes, to your question but for the fact that we compromised the position when the Trade Board was set up.

2017. Mr. Bell: I asked a question some little while ago as to how many employers would be affected in these rural areas that you said the Trade Board had practically eliminated?—Yes.

2018. This is the point I want to refer you to: We have just been told that in some of these rural areas there may not be more than two or three journeymen tailors: Would I be safe in assuming that that is a safe guide as to the number who have been affected?—As I said in my opening statement, the trade is carried on in every village, town and city, and it depends entirely upon the size of the place. There may be little villages where there are only two or three, and the number will go from that up to anything. The letters here refer to shops with six, or seven, or eight employees where the workshop has been closed. There is a town like Kilnarnock, where there was a trade which has been given up, and that is a town for which it is quite impossible for me to give a figure.

2019. In pre-Trade Board days supposing you had 75 per cent. of the employers organised and 75 per cent. of the workpeople—I think I am putting it fairly high for Scotland—what happened to the other 25 per cent. who were not organised when the two associations had agreed upon a rate?—Practically without exception they fell into line with what was arranged.

2020. Is that your experience?—That is my experience.

2021. That the 25 per cent. loyally carried out an agreement come to by the two associations?—If you are going to bring it up to 100 per cent. I am not prepared to say that you got 100 per cent., but I will say this, that in any place of any material size the result of the negotiations between the two sides was followed. It must be followed, because the workers take care that that is the rate which is paid, and they take care to get it. (Mr. Brodie): The employers themselves see that it is paid, in order to prevent undue competition.

2022. But there are some employers themselves who are not members of your organisation; what happens in their case?—They might want to pay under the rates, but we have more and more encouraged the workers' side to organise, even taking in all the small traders. There is a distinct movement in that direction at present encouraged by the employers, as Mr. Eaton has said. The operation of the Trade Boards Acts has compelled those, and we quite realise that it would be very much more satisfactory and more effective in every way if we could settle our own affairs and be allowed to do so: we should prevent the resentment which is felt all over the country, especially in rural areas, against having rates of wages imposed upon them by men who really know nothing about the conditions. I mention that as being the statement which is made by men carrying on the trade in these small places. They do not understand all the little details of Trade Board operations, but that is the view they take about it.

2023. Mrs. Lyttelton: What was it that influenced the workers to ask for a Trade Board in the first instance?—I cannot say as to that, but as a matter of fact a good many of them joined in the wholesale Board under the 1909 Act, and then when the 1918 Act was passed and the powers of the Board were very largely extended, it was the unanimous feeling that rather than be legislated for by a wholesale Board where the retailers would be very much in a minority, we would be very much better off in a Board of our own, a retail bespoke Trade Board. That was really at the bottom of the formation of this Board.

2024. Dame Adelaide Anderson: I want to be sure of one thing: is it your opinion that if you could get a really representative Trade Board, a Board representative of the different interests, the rural workers as well as the others, you would not object to the Trade Board?—(Mr. Eaton): We might still have an objection to it; we would object to any black and white classification of workers beyond the minimum rate. We think that a Trade Board is not competent to classify workers into various grades: the trade being so widely scattered, the conditions in the workshops being so varied, and the operations that they do possibly being so varied, a Trade Board dealing with a district—say, for instance, Scotland were divided into one district—the variations in Scotland are so great that a Trade Board could not classify the workers and fix different rates for the various classes. With that qualification I quite agree that a Trade Board, if it were representative, would suit all right if it fixed only minimum rates. (Mr. Brodie): On this point, may I say that we have special observations: it appears as if the Trade Board was set up in order to meet the status of the rural workers, and at the present time we are finding nine-tenths of the objections to the Trade Board and its operations coming from those rural areas. I am quite certain of this, that if the rural workers themselves were to be asked frankly for their opinion on the subject, they would admit that the Trade Board, instead of having done them good, has done them harm.

2025. Chairman: By causing unemployment, do you mean?—Yes. The fact of the matter is this, that in small areas rates of wages have been set up by the Trade Boards which have been found to be too high for them to pay, and in order to keep business they can still send their work to a wholesale factory

16 November, 1921.]

Mr. J. C. EATON and Mr. D. BRODIE.

[Continued.]

to have it made up. The employer can still carry on business, but when he does that the employee loses his occupation. That is what we feel about it, that the hand workers is being crushed out of existence much sooner than he need have been.

2026. *Dame Adelaide Anderson*: Has he represented this to the Board?—I do not know that he has, but we have had it pointed out to us lately. (*Mr. Eaton*): Really it is more a question in the rural areas for the workers than the employers, because the employers can carry on business as merchant tailors pure and simple. The employer takes the orders and the measures, and sends to the factory, and he can get the stuff back to be fitted on, and send it back again to be finished. Those letters bear out that that is being done in an increasing number of cases, so it is really the rural worker who is suffering more than the rural employer.

2027. *Lord Weir*: Have you had personal experience of the 1909 Act?—Yes, I was on the Board from the time when the retail bespoke section was taken over. I was six years on the Wholesale Board as a representative of the retail section.

2028. Was there much dissatisfaction?—No, I do not think there was, because the conditions in the old days were entirely different. If I might mention what they were, in the first instance you had a permanent chairman and you had one set of appointed members who were chairmen and appointed members for all the Boards. It was one business, and they got a good knowledge, and the Board was particularly fortunate in the Chairman whom they had, who took great pains. Many a time in those days an agreement was reached between the two sides; but now we have Appointed Members who are Chairmen on this Board and members of others; they are on several different Boards, and there may be important points up for discussion on an administrative committee, and recommendations are put forward and a decision reached. Then it comes to the Board—we had an instance of this ourselves—and one Appointed Member says, “No, I am not prepared to vote for this unless you do so and so,” and that one vote, though he was on the committee but was not present at

(The Witnesses withdrawn.)

Sir ARTHUR PEASE took the Chair.

Mr. P. B. ADAMS and Mr. J. GORDON, called and examined.

2034. *Sir Arthur Pease (to Mr. Adams)*: You are representing the National Federation of Merchant Tailors?—Yes.

2035. Does Mr. Gordon give evidence with you?—He may probably supplement anything I may say. He is the Secretary of the Federation.

2036. Are you giving different evidence from the last witness?—Somewhat different.

2037. Do you agree generally with him?—I do not know. He represents Scotland. We are not opposed to Trade Boards as such, but we claim that for a trade so very diverse in methods of manufacture, grades, and value of he work, and with varying customers' requirements, they are unsuitable for the retail bespoke tailoring trade. Even if restricted to the 1909 provision they could not be worked satisfactorily on a national basis. I am speaking now of a national minimum rate, as obviously while a minimum rate may provide just a living wage in London or in a big industrial centre, it may mean affluence in a country district. Speaking generally, what will be enough for the country may mean starvation for the Londoner. We say that Trade Boards are had in so far as they have, in this trade, made a large number of workers unemployable who would have been, without their restriction, able to obtain a fair living. There are many male workers in the tailoring trade who are old, and many females who do nothing but plain sewing, but by virtue of the rates which have obtained in this trade even as high as 1s. 0½d., those workers are absolutely

any meeting where the particular subject was discussed, throws the whole thing back where it was after we have spent days and days coming to an agreement.

2029. *Lord Weir*: I should like to revert to a question which Mr. Layton put to you: has any suggestion been made that your retail bespoke Board should be given up and become a Joint Industrial Council?—The resolution of our Federation is in favour of abolition. I must state that, whether it be my own view or not. That is the resolution of the Federation, but no doubt that is largely caused by the disgust with the whole proceedings, and naturally, in the case of a man who is not in touch, his feeling is on a thing like this to get it out of the way. Some of us may think that a certain amount of regulation is desirable, only we think that it should be a minimum rate, and a minimum rate such that the economically poorer district can continue to exist while safeguarding a subsistence rate for the workers.

2030. *Chairman (to Mr. Brodie)*: Have you anything to add to Mr. Eaton's statement? I understand that you agree with him?—(*Mr. Brodie*): I agree with the opinions expressed by Mr. Eaton, and the only point I had to make, I made a few minutes ago, and that was that I wanted the matter to be considered from the point of view of the local workers as much as of the employers, because the workers stand to lose more than the employers. (*Mr. Eaton*): Shall I leave the letters, or shall I send them in to the Secretary?

2031. *Chairman*: You might give them to the Secretary. Perhaps you had better send the whole of them in to the Secretary of the Committee?—I only brought representative ones with me, because I thought probably you would not want to go through them.

2032. We want a fair selection.—I will send in 40 or 50.*

2033. Perhaps you would like to have them copied, and to keep the originals yourself?—I could do that if you would be satisfied with copies, but I want you to be satisfied that we have the letters.

Chairman: We can trust you for that.

unemployable, and have been discharged in a large number of cases, whereas if they had been paid at the minimum rate they would have been employed even to-day.

2038. Is 1s. 0½d. the minimum rate?—No, there are three grades in the female rates, 9½d., 10½d., and 1s. 0½d. Those will be altered presently, but that is not yet confirmed by the Ministry. There is no provision for a sub-normal worker or an otherwise deficient worker unless they have some physical infirmity. There have been no end of cases, and it must be obvious to anyone who knows anything about the trade that there are no end of people who are slow. One cannot always say why, but they are slow and you cannot get a permit to pay those people anything less than the rate, because they have not any physical infirmity. The result is to-day that a lot of those men are unemployed. Even if you take those who have some physical infirmity, it is such a long time under application. I have known 8 to 12 months elapse between the time of the application and the time of the decision of the Board, owing to delays between the Office and Montagu House, and if the legal position were followed the sub-normal workers would be unemployed during the whole of that time. There is a sort of unwritten law by which an employer is allowed to employ the man until he gets the decision, but supposing in any instance that decision is adverse to the employers' application, there is nothing in law

* Subsequently handed in—not printed.

16 November, 1921.]

Mr. P. B. ADAMS and Mr. J. GORDON.

[Continued.]

to stop the worker making application for the whole of the difference between the rate which was paid and the Trade Board rate during the whole of that time.

2039. He would be entitled to it?—Yes, notwithstanding that the man himself had agreed that that rate was a fair one. The provision under which members may sit on a number of Boards prevents a true perspective being taken of the matter before an individual Board.

2040. Before you go on to that, is your evidence directed to show why there should be no fixing of rates by a Board at all or different rates?—I say they should be confined to a minimum. The position which we take up is this, that we would have no objection to the 1909 Act provided the district committees had power to fix rates. Under the Act the district committees have only power to recommend and then they have to go back to the whole Board to get those fixed. They have not any power to fix them themselves.

2041. You are not objecting to Trade Boards altogether?—No; we fully recognise that there should be some power to make the rates obligatory. We would prefer the lines of the agricultural committees: that is what we are strongly in favour of. We have already split up the country into 14 areas. We have had a unanimous resolution between our Executive and the Executive of the Amalgamated Society of Tailors and Tailoresses—I know there is another Union—but there has been that resolution between those two bodies in favour of that principle, which would have practically amounted to conciliation committees of those representing 14 areas of the country.

2042. Would a decision of a district be binding, or would it need confirmation by the Central Board?—The agricultural committees have an Act whereby it becomes binding in that district. We recognise that we cannot have power without an Act of Parliament, so while that is what we wish for, we think the only way of getting what we want now is to go back to the 1909 Act, the minimum rate, with power to the District Committees to suggest minimum rates for those respective areas, and to fix them; not to have to go back to the parent Board, because when you go back to the parent Board the whole thing is reviewed from a different standpoint, with the result that very often the district committee finds all its work rendered nugatory.

2043. Would you suggest having appointed members on each district committee?—No, I would suggest that in most cases they would agree, but in the event of their not agreeing there would be an arbitrator. For over 20 years our Federation and the Amalgamated Society of Tailors and Tailoresses have had this Conciliation Board, and we have never had a strike: we have always settled these things. Each of the branches has had local autonomy. They have met the men and they have had no difficulty.

2044. Your argument is that if both sides came to an agreement locally, that should be made binding without any further steps being taken?—Yes.

2045. If there were a dispute in that district, what would you suggest? Would you suggest that it should be referred to the Central Board?—No, I think they would try to come to an agreement.

2046. And if they could not come to an agreement?—Then we would refer it to the Chairman of the Board, who, we suggest, should be a legal chairman.

2047. Mr. Layton: The Chairman of the local Board?—If you had an appointed member on your local Board, then it would be to him, but what the Chairman suggested was that we might not have an appointed member on those local committees.

2048. Sir Arthur Pease: I asked whether that was your suggestion that you should have an appointed member on each local committee?—We do not mind having him, but we do not want to refer to him so long as there is a possibility of agreement.

2049. You would only call him in when you had come to a deadlock?—Yes.

2050. Mr. Layton: On these district committees what size of districts do you propose? Is it simply geographical areas of the country?—Practically that.

2051. Perhaps I can put the point which I want to put more simply. Is it not so much a question of geographical areas, but of the difference between town and country—a difference between the minimum in the towns and the minimum in country districts? In any county there are some industrial towns and some country districts.—No, our idea was this, that much the same thing should be done as has been done by the public authorities. They have agreed on gradings. They take a crowded part of a county, and the part with a lesser population. They have an urban district and an urban district with a lesser population, and then there is the rural district mainly industrial and the rural district mainly agricultural; and there are seven rates within what one might call the midland area. What we suggested to the workers' side was that in those areas you would have this joint committee meeting and taking, for instance, the midland area, you would agree upon what was a fair rate for the rural part of the area, and you might agree on a special rate for Birmingham and a special rate for Worcester, Malvern or Cheltenham, which, while being lower than Birmingham, would be higher than Evesham, which was truly rural.

2052. So your suggestion is that you should have 14 districts in England, and within each of those districts there might be several minima?—Yes, and they were in agreement with the principle of it.

2053. Who?—The Amalgamated Society of Tailors and Tailoresses. There is another society, of course, which represents the division of labour system, but we have had no difficulty hitherto in agreeing before the Trade Board in my own district; those were the merchant tailors, the middlemen, and the middlemen's employees. With regard to the middleman, he is often called a sub-contractor or an outworker, and what we did in our own district was to have a joint conference of the merchant tailors, the middlemen, and the operatives. They worked on the division system, and worked out what was a fair wage for the men, giving the middleman a reasonable profit on that, and that was the rate that we paid. We did that and we had a joint agreement which I have in print. Then they came for an advance on it, and we had another joint conference, and saw that the operatives got a fair proportion of the rate paid to the middleman; and now during the last three months there has been a reduction on the same principle.

2054. Was this all before the Trade Board?—Yes.

2055. Were both sides organised before the Trade Board?—Yes. I am telling you about something that took place in May, 1919, and the Trade Board was not established until December, 1919. I have a printed agreement dated May, 1919, signed by the three parties.

2056. They have been organised for a long time?—Yes.

2057. Do you mean to say they were so organised that it was not necessary to put the Act into force?—I do not think it was, speaking for myself, and I was at the conference, but I did not feel that we had any option. The Act was to be put into force, and it seemed to me to be a question whether they were to come under the Wholesale Board and be swamped, or whether we should have a Board of our own, and once it was an accomplished fact that we were to come under a Board we fought tooth and nail to have our own Board.

2058. Dame Adelaide Anderson: What was the extent of the organisation?—As regards the extent of the organisation of the workers, I can only say that what was claimed was this: they claimed on the Trade Board that they represented them fully. When we claimed that they did not represent the rural workers, they claimed that they did.

2059. And they go through all towns in Devonshire and Yorkshire and Cornwall?—Yes, Cornwall in particular. One man practically lives down there, and while they may represent those workers, what we

16 November, 1921.]

Mr. P. B. ADAMS and Mr. J. GORDON.

[Continued.]

claim is that they are not representative of them. I think you will appreciate that there is a big difference, and that is what we say, that on the other side, while they may not be paid officials they are members of their Council, and spend most of their time either in organisation work or in Trade Board work. I notice that you gave the numbers out as 11 out of 24, but I think there must be more than that. There are men there who have not put in a needle for years, because they have been busy on their Union labours.

2060. Eleven full time?—Most of the others are more than 50 per cent. of their time.

2061. *Mr. Bell*: What is the objection to that?—I am not speaking of the objection to the men as such, but what I say is that they are not truly representative of the rural worker, neither do they give voice to the disabilities under which the rural worker is suffering by virtue of these high rates.

2062. *Sir Arthur Pease*: Your real point is that the rural worker is swamped by the members in the towns?—Yes, and by the outlook of the town worker. You get members in Cornwall and Devonshire of whom it would be wrong to say that the secretary of the organisation to which they belong did not represent them, because he does represent them; but to represent them and to be representative of their wishes are two different matters. That is my whole point, and that is what we contend for on the Trade Board. When we were asked to nominate someone on the other side to represent the rural employers we put up a gentleman from Louth, which it will be admitted was a purely agricultural district, and he did represent the tailors in that district. Mr. Brodie, the last witness, was the representative of the rural areas of Scotland, and they spoke from that point of view; but we had no one on the other side representing the views of the rural worker. What we have gathered has been from letters sent by the workers themselves asking for lower rates so that they may get more work. We had an application for a permit on the Administrative Committee from a man at Porlock, and he mentioned the infirmity. I pointed out a little while ago that unless a man has an infirmity you cannot get a permit. Now he gave the nature of the infirmity as a diseased hip. In forwarding the application the worker states he has worked for his employer for the last 61 years and has "always had satisfaction on both sides. Should you not grant me a permit (being married) it will mean being out of work and breaking up my home. Seeing that all wages are now on the downward grade"—this came up before the Committee on the 10th August, 1921—"I consider you ought to grant me a permit, as you must admit that the above wages is very decent for this part of the country." The offer was 60s. a week of 53 hours, while the Trade Board rate is 76s. for 48 hours. That was sent to an investigating officer to report upon, and he said: "The case was considered by the Committee at their meeting held on the 19th May last, when it was decided to await the receipt of a report by an investigating officer. The following report by an investigating officer has now been received: 'I attach the report I made on this case on 21st April, 1921, when I visited this firm'—"

2063. *Sir Arthur Pease*: Perhaps you might hand this in?—If you do not mind I should like to read it; it is not very long. He says: "The man was discharged in consequence of my inspection. At the time of my visit no mention was made of his infirmity. He was certainly sitting at the machine while I interviewed him, but as he can sit at a machine and can do his ordinary hand work as a tailor, I do not think he is in any sense physically a permit case. The worker says he must go to the workhouse if he cannot be employed at his present wage. There are only two tailors in Porlock—this employer and his brother—and both dismissed all their workers as a result of my visit. The trade done is absolutely non-competitive with the firms round, being confined to the agricultural labourers and tan-

nery workers of the village. Rents in the district range from 1s. to 2s. 6d. weekly—with a garden, and food is very much cheaper there, as I found when I stayed. I cannot recommend the man as a permit case on the grounds of physical infirmity, but only state that the wage appears to me for the district and class of trade a fair one." This is bearing out the point that I made that you get slow workers in different grades of work, and where a man is able to do it you cannot employ him because of this Trade Board, and so the man is unemployed.

2064. *Mr. Bell*: Was not that a case where the employer took up this attitude: "If you compel me to pay a certain wage I shall discharge all my men"?—No, he said he could not employ him and pay the rate.

2065. The men were discharged as the result of the inspector's visit?—Yes. This did not go to the inspector again until August, and this man had not been employed by the tailor in the meantime.

2066. What date was the inspector's visit made?—Hitherto the tailor had not been paying the Trade Board rate; he was unable to pay it and conduct his business.

2067. When he was made to pay the rate he discharged his workers?—He discharged his workpeople. He suggested he should pay a piece rate of 1s. 0½d. per log hour, which is the artificial rate for this trade. "Mr. Perkins said he was not paying the Trade Board wages and could not afford to do so. He gave both his employees notice when I told him he must pay Trade Board wages. The applicant is aged 31—in the trade since age 14. He is a tailor on coats and due 1s. 7d. per hour. He is paid £3 a week for a 54-hour week. When this worker was at once dismissed I went into the question of paying him on piece rates. Mr. Perkins was not familiar with the log rate—but I went over the average prices of garments made up on the London log basis and stated that the general district rate was 1s. 0½d. on the log hour. Mr. Perkins said this would not be a solution because the class of work done did not permit of that price for labour. His average price for a suit was £5 10s. A little of his best work would be £7. It is clear that in supplying good woollen tweed there is going to be little profit to the employer—when he has to pay 34s. for the labour only on a coat and probably over 12s. for trousers and 8s. 6d. for a vest."

2068. I think the Committee fully understand your point of view on this now; will you go on with one of your other points?—"Mr. Perkins said he was, however, very slow. His intention, however, was to some extent borne out by the statements of the man at the other Mr. Perkins' shop. They said they put in better work on what they knew was a 'good-class' order. It was not in the 'extras' of the suit but in the general finish of the work." This shows that there are different grades of work. Then you have Mr. Nicholson of the Ministry of Labour; he came down to the Trade Board two meetings ago specially in reference to this differentiation of rates. He said: "The experience of inspectors who have visited retail bespoke tailors in the villages and small country towns, both in England and in Scotland, indicates that the time-rate and the piece-work basis time-rate for men have operated very harshly upon a certain class of employers in such districts. Recent inspections have been made in Somerset, Norfolk, Lincolnshire, Shetland, and the North and East of Scotland, and it has been shown that there are a number of small master tailors employing 1, 2 or 3 hands whose businesses are seriously affected by the enforcement of the Trade Board rates." Mr. Nicholson is the Chief Executive Officer. He goes on to say: "These employers make a rough, strong type of clothes for agricultural labourers. The time usually taken to make a suit, though the work could not be called high grade, is rather above the average for medium class work. A few months ago the price charged to the customer for a suit of clothes by such tailors in England was from £5 to £7. The enforcement of the Trade

16 November, 1921.]

Mr. P. B. ADAMS and Mr. J. GORDON.

[Continued.]

Board minimum rates would, it is stated, cause this amount to be increased to between £6 and £8; and the increased charges necessitated by the minimum rates are stated to be beyond the means of these customers who are therefore compelled to buy cheap ready-made clothes. The wages paid are usually about £3 a week, and the profits of the employers appear often hardly to exceed this amount. In these circumstances enforcement of the Board's determinations becomes a matter of the greatest difficulty in the case of such employers in the rural districts, and in small towns; and the Board may wish to consider whether it would not be desirable to fix a lower rate for the type of work done at the establishments to which reference has been made." I have read that last page because from the employers' side we have put up two propositions for the differentiation of rates. We first put up one on the rural area basis on the lines of the public authorities that I have mentioned, and the appointed members voted against that, and then we put up one on the population basis, and they did the same thing on that occasion, because they contend that the value of a man's work is the same wherever it is done.

2069. *Lord Weir*: What did the men say? You are speaking of your own proposals on the Board as an employer?—This is where you have had this town representation of the workers.

2070. Do you mean that they agree with the appointed members?—They say that you can have a trade in London, and you have a trade of equal merit in Totnes, which was one of the places, or Cheltenham, and why should a man in Cheltenham pay less money for the same class of trade than a man in London? We say so long as you pay the proper value for the man's work in Cheltenham, having regard to the Cheltenham conditions, that is all you are required to do: it does not matter what the class of work is so long as you pay the man a fair rate. It is obvious that if you paid a man the same rate in Totnes as you pay a man in London, the man in London would be far worse off, owing to the conditions under which he lives in London, than the man in Totnes. That is the principle on which we have gone hitherto in our voluntary agreements between the two sides.

2071. *Mr. Bell*: Does not that also apply to the employer?—What do you mean?

2072. Are not the expenses as much greater in London to the employer as they are to the workman?—Yes, but that does not affect the rate that you pay for your labour.

2073. You are arguing that the worker in London should be paid a higher rate than the worker in Cheltenham on account of the higher cost of living in London, and I say that those disadvantages apply to the employer equally to the worker.—The employer is not complaining.

2074. No, but he is asking for a differentiation of rate. He is complaining about the present system.—Yes, he says that it acts disadvantageously to the worker and therefore to the employer, in these smaller districts.

2075. Would not all these arguments that you are advancing apply to other work? Take the cotton trade: the same rate is paid in the small village of 100 inhabitants as is paid in Manchester.—I say in most of these cases that the grades of work are not the same. Probably in the instances you mention you get the same grade of work where you have those 100 workers as where you have a 1,000; but as I have said, and as Mr. Nicholson says, the grade of work that they do is totally different. While we want a low minimum rate for these rural areas, there is no suggestion, and it has never been suggested, that it should be the maximum. The higher skill always gets the higher rate.

2076. Do you differentiate between the places that the men live in, or the number of people employed in an establishment?—The places the men live in.

2077. In the case of a factory or a small shop employing, say, half a dozen, do you differentiate?—I am not dealing with factories: there are no

factories in our trade, they are all workshops. Then, as I say here, another thing which does not help to come to an agreement is this, and we have never come to an agreement on our Trade Board. Although we had these agreements for all these years, since we got to a Trade Board we have never had agreement between the two sides, but have always had to go to the appointed members. When you get on to the Board there is so much playing off of one trade rate against another, because the members that are members of our Board are members of very many others. I remember one incident where a member came straight down from the Tin Box Trade Board and said: "They have just proposed a rate upstairs for the tin box trade, and here you are proposing this rate for the tailoring trade." We said that that had nothing to do with it. There are two classes of trade, and I have already mentioned the divisional system and the individual garment system.

2078. *Dame Adelaide Anderson*: Which is the larger of those two?—The divisional system, I suppose, taking the whole country through, would be the larger: there is absolutely no consideration given as to how heavy a rate a trade itself can carry, and by virtue of the position and qualification, or lack of qualification as far as my trade is concerned, with the appointed members there has been playing to the gallery—it is not confined to the workers—with a view to getting the vote of the appointed member on their respective sides. These appointed members have not a trade knowledge, and very often there are red herrings drawn across the path, not always by one side, with a view of influencing them and getting their vote. I say that that ought not to be, and if we have still to have a Trade Board I would prefer that there should be one Chairman of legal ability, that we should endeavour to come to an agreement ourselves, and only call him in if we could not.

2079. Would you have him sit with you as a conciliator?—I would not mind that, but preferably not: I have instances of cases which we have had during the last few weeks, where we came to an agreement over this area system, and there were two other matters in which we came to an agreement between the two sides, but as soon as we got the appointed members there there seemed to be a totally different atmosphere.

2080. *Mr. Bell*: Can you explain that?—I should think it would be better explained from the workers' side.

2081. Before those appointed members were there, if you did not come to an agreement, what would be the result?—That we should go to arbitration.

2082. Or strike, I suppose?—I have told you that for over 20 years we have never had a strike.

2083. But there was always that in the background. That if you did not come to an agreement there was the possibility of a stoppage, and perhaps that assisted you to come to an agreement, but when you get the appointed members on your Board, is there not a desire on both sides, both on the part of the employers and of the workpeople, not to give way to each other but to rely on what they regard as the neutral numbers, perhaps giving them something more than they were prepared to give up themselves?—No, I do not think there is that, because I have one instance in mind where we had a meeting one night and there was general agreement on both sides that a reduction was desirable in the interests of the trade: in fact there was a resolution to that effect; and then the next day at the Trade Board they fought tooth and nail all the other way. Simply because there are people there who know nothing about it, they try to draw a red herring across the track. That has been our general experience.

2084. Taking your own statement, would you say that a Chairman who was a legal gentleman would know anything about it? Would he not be liable to be influenced by the arguments of either side, or of both sides?—We do not think that if you had a legal Chairman there you would get the same influence brought to bear on him, or that he would be

16 November, 1921.]

Mr. P. B. ADAMS and Mr. J. GORDON.

[Continued.]

subject to the same influence as you get now. We have had a very bad experience of the appointed members on our Board. They made all sorts of reservations, and in one case they had these side meetings, first with the workers, then with the employers, with a view of getting an agreement; and when I went into the room after the workers had been in, one of the appointed members spoke about a thing that had not been brought up on the Board at all. I have no objection to side meetings if they are for the benefit of giving the appointed members some information, or about something which has been discussed, but I do contend that they ought not to bring up anything in a side meeting that has not been discussed on the open Board. This matter was mentioned at this side meeting, and it was put to me when I went into the room, and I refused to discuss it: it had no bearing on the matter before us. We said that the appointed member ought to refuse to vote and ought to wait until something had been done on this particular matter. In another instance we had 800 objections to a rate, and one of the appointed members said he did not consider so much the contents of the objections as whether they justified him in hanging up the rate for two months. I said before him that it was vital for us to consider the objections if that was the line they were going to take up, because if the rate was unjust, as all those objections from 800 people made it look, it did not matter if it was hung up for six months: that would be better than to have an unjust rate. That is one of the things that we have to contend with.

2085. I do not want to say anything as uncomplimentary about employers as you have said about appointed members, but should I be right in assuming that the chief objection to the Trade Board is that the minimum has been fixed too high?—No, it is not only the minimum rate, but definitions have been laid down which are unworkable. The minimum rate is too high, but our complaint is that they have no minimum rate for the districts. It is a national minimum rate which is unworkable. You say that my remarks are uncomplimentary to the appointed members, but they are not intended to be uncomplimentary to them. As individuals I have the greatest respect for them, but I say that they have not the requisite trade knowledge to enable them to sit there as arbitrators over the rates which have to be paid in this trade. They are not conversant with the intricacies of the trade, nor the variations of the work, classes of trade and labour.

2086. *Sir Arthur Pease*: But you all must have a say, I suppose. They are permanent people, are they not?—Yes, they are permanent, but then you see they fluctuate between these different Boards. They are on several Boards. We have had two-day meetings; we had one in particular where one member who had been up on another Board the first day came down on the second day and voted on a matter upon which all the arguments had been heard the first day. He had not been present to hear the arguments. We say that that is not fair.

2087. *Mr. Bell*: I understand from your general remarks that the appointed members are very unsatisfactory?—I say that the method of appointment or selection of them is.

2088. And that the workpeople's representatives do not represent the whole of the workpeople; so that there is only one efficient side of your Trade Board, is there?—I do not think I put it in that way.

2089. I will leave it at that?—There is another thing that we say is not in accordance with English justice. You send out a proposal; that goes out,

and they are asked to send in objections to the rate; and as I have instanced, in one case there were 800 objections. We do not think that it is altogether fair that the same people as had heard it in the first instance should sit and hear the objections and arbitrate on those objections. It is not usual. It really is in a manner a sort of Court of Appeal against the first proposal.

2090. *Sir Arthur Pease*: You think there ought to be a further court?—Yes, or a differently constituted bench, I put it.

2091. You would then run the risk which you have just been arguing against: that you would get somebody who did not really understand the position, like the people who had heard it thrashed out in the first instance?—I am not speaking of the employers' and workers' side.

2092. No, the appointed members?—Yes, I am speaking of the appointed members.

2093. Your complaint recently was that the appointed members were not sufficiently conversant with the details of the trade?—Yes.

2094. Those appointed members have heard the whole thing thrashed out in the first place?—Yes.

2095. If you hand it out to an appeal court you are going to hand it out only to possibly another body who are even more ignorant than the first?—I was arguing from the point of view of a legal chairman. I have a rooted objection to these four or five different people always—on principle, not as individuals. As individuals there is nothing to be said against them.

2096. That is a different point; but you want to have one arbitrator instead of three or five; that is your point?—Yes, that is so; that is the point. Another complaint is that in the Trade Board system there is no elasticity at all. If you propose a rate of 8½d., and then you get all these 800 objections, and if it may seem equitable to the whole of the Board—I mean to the appointed members as well as to the two sides—that a slightly higher rate should be fixed, or that a slightly lower rate should be fixed, they have no power to confirm that rate; they are bound down to the 8½d. or nothing. We will assume that earlier on a higher rate or a lower rate might have been suggested by one side or the other, and 8½d. went out: and then you have to confirm that or nothing. If you want to do anything different you have to send out a fresh proposal for another two or three months. We think there should be more elasticity given to the Board, to give them more power than that, if you are going to have a Board. I am taking the view now that the Boards will remain.

Sir Arthur Pease: I think the Committee appreciate that point.

2097. *Mrs. Lyttelton*: On the general question of Trade Boards, you stated that your trade would not have asked to go under a Trade Board except for fear that they might come under another Board?—We asked for a Whitley Council.

2098. For fear that you might go under a Whitley Council or a Trade Board?—We did not object to a Whitley Council.

2099. No, and therefore for that reason you asked for a Trade Board?—We did not ask for a Trade Board.

2100. You asked for a Whitley Council? That is what I did not quite understand?—Yes. When it was suggested that we should have to go under a Trade Board, we asked for a Whitley Council.

2101. I thought you asked for a Trade Board because you feared a Whitley Council?—No, the point I made was that we had to go under a Trade Board, and we said that rather than go under the wholesale we would have our own Trade Board.

(Adjourned for a short time.)

2102. *Sir Arthur Pease*: The evidence which you gave us before we adjourned was spread over more than one of the items in this summary. You have practically dealt with Nos. 1, 2 and 3, I think, have you not?—I am afraid I have not a copy of that.

That was sent on by the secretary of our organisation.

2103. I do not want to stop you saying anything that you wish to say.—No, I appreciate your point. Of course, Mr. Eaton did deal with the delay, but

16 November, 1921.]

Mr. P. B. ADAMS and Mr. J. GORDON.

[Continued.]

the delay in getting these orders formed or fixed is far too great, and it is partly because of that that it works so disadvantageously to the retail trade. I want you to bear in mind that with, I think, one exception, we, the tailors, are the only retail trade under the Trade Board. Most of the others are wholesale or manufacturing. If you are to be able to compete with varying conditions, such as we have had of late, you do want to be able to deal quickly with the fluctuations in wages.

2104. Both upwards and downwards?—Both upwards and downwards. There has never been any difficulty upwards, because we have always, without exception, given the workers the benefit of that. As soon as we have appreciated that the conditions are such that they are entitled to a rise we have given them the benefit of it.

2105. Do you mean during the Trade Boards or before the Trade Boards?—Before and during the Trade Boards.

2106. If there is a proposal you give effect to it before it legally comes into force?—Yes; but as regards reductions there was a proposal first made in March, and then it was hung up for various reasons connected with the definitions; I mean it was brought forward in March; it was proposed officially in July, but it was not confirmed by the Board until October, and even now, which is over a month since that Board was held, it is not fixed, and it has not become operative; it is awaiting the Minister's confirmation. That is a delay right from March to November, and that concerns the females' rates which are concerned to a greater extent with the ladies' trade than with the men's trade. The ladies' retail bespoke tailoring is going through a slump now such as they have never experienced for years and years, and still they are faced with those high rates from 8s. 6d. to 1s. 0d., and you cannot get them down until the Minister has fixed these rates; and we have been waiting all this time for that, so that practically the whole of this autumn season has gone. The proposal for the reduction of the men's rates came up first in July, and then it was voted down. It came up again in October, and it was proposed on October 12. That proposal has not gone out yet. Although it was proposed on October 12 it has not yet gone out from the offices. After it goes out a period of two months has to elapse for objections to come in. That takes you to January. Then there has to be time to collate the objections and send them out to all the members of the Trade Board and call a meeting of the Trade Board. Having regard to that, the earliest date at which they will be able to confirm that is February, and then we have to wait for the Minister's confirmation, and you have the spring trade on you. It is of no advantage now for the autumn trade, when we all wanted it so much, and if they are not very quick about it, at the end of it we shall lose the spring trade also.

2107. Lord Weir: You wanted it so as to bring down prices?—Yes. There is no question that tailors generally have brought prices down, but it has all been done out of the cloth or profit; it has not been done out of the labour at all.

2108. Sir Arthur Pease: What has happened to the trade? Is there less bought, or has the trade gone elsewhere?—There is less bought, and, of course, there is a good bit being bought of the ready-to-wear stuff. There have been a lot of sacrifices in the ready-to-wear end of it. There has been realisation of stock everywhere; the tailor's difficulty has been that he is dealing with raw material, and that while he is prepared to lose on his cloth which he has in stock under the condition of realisation, he cannot afford to take anything off what he has got to pay to-morrow for wages. If it is a manufactured article you can face a loss on the whole article, but he is dealing with the raw material. That is what does not occur to a lot of people when they talk about tailors' prices.

2109. Lord Weir: I take it that there is no question whatever of foreign competition in the trade?—

No, our competition comes from the wholesale bespoke, principally, as Mr. Eaton instanced, in the "cut, make and trim," where a man can sell his cloth, and he may even cut it out and then send it up to a factory to be trimmed and made under factory conditions. That is one of the points which I wanted to raise: that this Retail Bespoke Tailoring Board does not cover the whole of our trade. A section of it comes under the Ready-Made Board. The definition setting up that Board reads that where a firm work for three or more shops they come under the Wholesale Board. That works in this way. If you take a multiple shop—I mention names that you are all conversant with; there are Lockwood & Bradley, there are the Rego Clothiers, and another one which has been instanced a lot on our Board, namely, Montague Burton and Cusson Brothers—they have a factory, and because they make for three or more shops, although they are their own shops, they come under the Wholesale Board, whereby they are able to pay to their women a flat rate of 8s. 6d. per hour for the same labour for which we in our trade have to pay 1s. 0d. per hour, and we say that that is unfair competition in the same class of trade. You have got to go a long way to make the public understand the difference between that class of tailoring and handcraft tailoring, but to all intents and purposes they are all retail shops, and they compete with us unfairly to the extent of 3s. 6d. per hour.

2110. Sir Arthur Pease: Would the rates of wages be different before there were Trade Boards?—I do not know how they would be. That class of trade has been under the Trade Board—under the old Wholesale Trade Board; but then there were only two representatives of the retail trade on that Board as against the 22 wholesale representatives. Last week there was a resolution passed by the Retail Bespoke Tailoring Trade Board to this effect:—"In the opinion of the Retail Bespoke Tailoring Trade Board (Great Britain), administration of the minimum rates fixed by the Board would be simplified by the deletion of paragraph (3) of the exclusions to the definition of the Trade Board"—that is the one applying to the three or more trades—"and that the Regulations governing the Board should be amended so as to provide that all workers employed in the production of bespoke tailored garments, which are ordered direct by the individual wearer from an employer carrying on business as a bespoke tailor"—now, this is the point—"whether such workers are employed on the premises of such employer, or as an outworker, or by a sub-contractor for such employer, shall come within the scope of the Trade Board." That was passed unanimously by the Trade Board with the idea that all retail bespoke tailoring should be under the same regulation.

2111. That would bring them all under your Board?—All under our Board.

2112. Who passed that resolution?—The Retail Bespoke Tailoring Trade Board.

2113. Lord Weir: It is a question of administration whether that is carried out or not?—Yes. They are at present altering the definition, and they passed this resolution, that it is not fair that one section of the retail tailoring should come under a different rate and a different Board from another section.

2114. Mr. MacCallum Scott: There are two Trade Boards, one for the retail trade and one for the wholesale trade?—Yes, there is the Ready-Made and Wholesale Bespoke.

2115. What is the proper title of it?—That is it, that is ours.

2117. Sir Arthur Pease: Which was the paragraph to which you referred?—Paragraph 3 of the exclusions on our Board.

2118. Mr. MacCallum Scott: I was struck by the difference in wages, but I do not see that here in the summary which I have. Did you say that one figure was 8s. 6d.?—Yes.

2119. Is that the Ready-Made Wholesale Bespoke Tailoring?—That is it.

16 November, 1921.]

Mr. P. B. ADAMS and Mr. J. GORDON.

[Continued.]

2120. The rate, I think, is 1s. 2d.—I am speaking of females. That is 8½d., is it not?

2121. It varies from 8½d. up to 1½d.—You are on the piece rates, but the flat rate is 8½d.

2122. And in the retail bespoke tailoring?—They start at 9½d. and go on to 10½d. and up to 1s. 0½d., and the same class of labour for which we pay 1s. 0½d. they are able to get at 8½d. The paragraph of the exclusion is on R.B. 4, page 3:—"But excluding all or any of the above-mentioned operations where carried on in a factory where garments are made up for three or more retail establishments." That is the one we wanted excluded.

Another point about the representation of the country districts is this. What obtains on the workers' side of our Board is that they have the side vote, so that if you had one or two representatives of those districts, so long as you kept the side vote, they would be over-weighted by the others; they vote as one. That is the reason why we are so anxious that the district committee should have power to fix rates. We contend that they know what is good for themselves in their own district, and it is not fair that they should make a recommendation and send it up here to become the shuttlecock of the different interests at the meeting of that Board, which would probably come to a decision against what they had decided was in their own interests for their own area.

2123. *Sir Arthur Pease*: Would not they be over-weighted by the large population in the district just as much as in the whole country?—In their district?

2124. Yes.—No, I do not think that for a moment. We have never experienced that. There is always a better understanding when you are down there in your own area. Take my own district; who would suggest that what was a fair rate for Birmingham would be fair for those small villages in the market garden districts—Evesham, and places of that sort? No one could count that. You could not do it. There you are on the spot, and you would have too much regard for the knowledge of the people there. There is another thing, although I do not want to make too much of it. A question was put up to me at the last Board meeting, when a suggestion for a reduction came up from one of the appointed members, as to whether I could agree to the present rate remaining for towns, the reduction only to apply to the country. To that we could not agree, because in the towns there are small shops who do cater for the cheap class of trade and compete with the ready-made trade, and who do experience quite as much difficulty to make a living as some of those in the country districts. That is a matter which has to be considered as well. That is not solely for the rural districts, but there are small shopkeepers in the towns. Even here in London there are three grades, Grades 1, 2 and 3. The shops in the West End of London are graded by the Association of London Master Tailors, and have been graded for years past.

2125. Then how would you deal with those—simply by leaving them to the district committees?—Leaving the district committees to deal with them. They have never had any difficulty before. There is an agreement here between the union and the employers; there is an agreement in Liverpool, there is an agreement in Manchester, and I do not anticipate any difficulty. We all recognise the different classes of trade that one does.

2126. *Dame Adelaide Anderson*: Then within one area you would have two or more district committees?—No.

2127. Or at least different grades?—You might possibly have sub-committees, but you do not have two district committees.

2128. *Sir Arthur Pease*: I understood that your suggestion was that you would have one district committee and have various grades, and grade the shops according to the standard of work which was going on from them?—Yes, that is right. There would only be one district committee—only one controlling authority.

2129. *Lord Weir*: You would try to make the district committee operate as your old organisation?

—Yes. They would really be like District Trade Boards with the power of the Minister to veto.

2130. *Mr. Pugh*: How many district committees would you want?—There are 14 areas into which we have split up the country, and the Workers' Union and the Amalgamated Society would be prepared to have a smaller number. They have areas of their own.

2131. *Mr. Bell*: Do you not think that you are manufacturing difficulties? What do you mean by "small shops"? When you speak of a small shop in a large town, what do you mean?—The shops in the poorer districts which cater for the labouring classes. There are labouring classes in large towns just as much as there are in the smaller places.

2132. But is it not a fact that the lower grade of cloth is very often more difficult to work than the higher grade?—No, it all depends upon the method of manufacture. If you put the lower grade of manufacture into the lower grade of cloth you will get an "eyeable" garment, but if you put a good class tailor on to your lower grade of cloth he will spoil it.

2133. Supposing you put a good class tailor on to a good class of cloth, and you put the same class of tailor on to a poor class of cloth, which would he prefer to make up?—The better cloth, as I have said.

2134. Of course he will; so that your system of grading would not work, would it?—What system do you mean?

2135. You talk about a lower rate for the poorer class of material?—I did not say a lower rate for the poorer class of material. It was you who suggested material, not I. I suggested the shop.

2136. You talked about the poorer neighbourhood where they could not afford to buy the higher class of cloth?—The higher class of suit.

2137. It was you who introduced the grade?—I introduced the grade of shop; you introduced the grade of material; but while the poorer shop might have a higher-grade material, the shopkeeper would not for his customer necessarily have to have such a high grade of work in, even if he had a higher grade of material. That is my point. There are to-day cases innumerable where the small shopkeeper has a bagged coat—an absolutely bagged coat. That is a trade term. I mean that the whole of it is machined; and then it is turned inside out. It is very often drawn through the sleeve here and then just finished off. There are other cases where there is a little bit of hand work put in, and then there is the other case where the collar, sleeves and shoulders are done by hand and the rest by machine; and there is another case where it is all hand work. There are all those different grades. Where there is the division system which I have spoken of, there are Grades 1, 2 and 3.

2138. *Sir Arthur Pease*: I think you have made that point quite clearly.—There is another point which I did not get quite clear this morning about the workers on all the different Boards. There are certain members whom we have on our Board, and they are on several other Boards, and they do seem to take the view: "How will this rate affect us on such-and-such a Board if we pass it here?" What we do feel is that the workers' representatives should be engaged in the trade. I do not want to be uncomplimentary, as I have been charged with once before, but with all respect I think that they should be practical people for all intents and purposes, not professional Trade Board members.

2139. Do you consider it impossible that the employers might be influenced in that way too—that if they fixed a rate which was too high or too low in this particular trade it would have some indirect effect on others?—We have not got them on our Board. With the exception of Mr. Gordon they are all engaged in the trade, and Mr. Gordon up to 12 months ago was actually engaged in the trade. All of them are actual merchant tailors, excepting that there are two from the middlemen, who we think ought not to be on our Board; I mean two from outworkers—sub-contractors.

16 November, 1921.]

Mr. P. B. ADAMS and Mr. J. GORDON.

[Continued.]

2140. *Lord Weir*: Is there not a little inconsistency in that connection, because you have just pointed out to us the very large difference between the rate settled for the same class of work on two Tailoring Boards, so that the fact that the employees' representatives sat on those two Boards does not apparently co-ordinate at all? You have just told us that one was 8½d. and the other was 1s. 0½d.—Yes.

2141. And you have the same people settling those inconsistent rates?—We did not agree on our Board; on the Wholesale Board they did agree.

2142. So that they had no influence in bringing about co-ordination. The fact that some representatives sat on both Boards did not achieve co-ordination of the rate?—In our case they have graded the workers from the Trade Board; in the other case they have a flat rate, which is the legal minimum, and then they grade the workers inside the factory according to their skill.

2143. Does that mean that the Board which does that is the old Board based on the 1909 Act?—Yes, that is the old 1909 Act, one of the first that was set up, the Tailoring Board, which was to combat the sweating in that particular trade.

2144. So that in that Board there are attempts to fix a minimum rather than the regulation of wages?—Yes, they fix the minimum and work out their own salvation, according to skill, in their respective factories. They have what they call a piece-rate list inside the factory, and we contend, and have always contended—and it is so in practice—that the skill does get its value. The minimum there is 1s. 0½d., and I have girls in my own employ who are getting as much as 1s. 7d. an hour, and they are worth it.

2145. *Dame Adelaide Anderson*: May I just ask whether in your proposals for these district committees to take account of different grades of work, you are contemplating a minimum rate or the regulation of wages? You propose these district committees in order to grade the wages for different degrees of skill?—Yes. That would be for different classes of labour.

2146. Is there any sending out from one town, say, of a high class of garment, to a maker elsewhere to do the work? Does one district send work to another district?—There are cases of that. We have been told by the workers' side—and we have no reason to doubt it—that that is done in some cases.

2147. How would that work out, then? Would it not tend to increase that if you had different rates in different districts?—I can give you an instance which has been put to us. There is a firm in London who also have a branch in Suffolk, and they send their work for their London place down to Suffolk to be made. That, I think, is the point which you mean.

2147A. Yes, I wanted to know whether there was any movement already. If you have different rates, do you not think that it will tend to increase that movement?—It might tend to increase that movement, but I do not myself see how it would be a disadvantage to the worker if the worker got the fair rate for his labour which he put in, having regard to Suffolk. There is no disadvantage to the worker.

2148. *Mr. Pugh*: Except that the trade would all tend to gravitate to the lowest rate, and, consequently, the workpeople in the districts with the highest rates of pay would be prejudiced, would they not?—No, they would not be prejudiced. There is the transport, and there is the competition; and then in our own trade you must know that in so much of it there are as many as two fittings. It is only in certain cases where they can do a thing like that.

2149. It is only a matter of information, but if you are paying a lower rate in a district, and if you had the practice extended of firms sending their work to the lower rate, it must tend to prejudice the workpeople in the district with the higher rate of pay. That is the point which I make.—(*Mr. Gordon*): Our reply to that is, that under the District Committee we should be able to trace all work of that

sort, and if a London firm sent to a rural firm or to a town of smaller importance, where there was a lower rate prevailing, that shop would be classified and paid the London rate, so that there would be no evasion. (*Mr. Adams*): The broad suggestion I made—I did not commit myself solely to it—was that they would have to pay the rate which obtained at the place from which the work was sent out. That was the main basis of it. If you did not do that it would mean unfair competition between one shop and another in the same area.

2150. *Sir Arthur Pease*: I think the Committee have had sufficient information now on this point about the differentiation of wages. If anybody wishes to ask a question, I think it would be convenient to have the question now before going on to another point, but I think it has been made perfectly clear.—On the question of inspection, I think you have already heard from Mr. Wolfe that it only covers a very small percentage of the trade. In our trade it has been very indifferently done. The tendency has been to go to those people who kept proper time books and rates of wages and to leave alone those who did not, and it is those people, naturally, that one wants to cover. The inspectors at present are not only not sufficient, but they are not qualified for their work. We have had instances in which inspectors have gone into a tailor's shop and have asked what "felling" is. It seems really ridiculous that a man should go and inspect work and have to judge of it having regard to the female definitions, and not know that. Then they have not any trade knowledge; and they have to inspect other things as well; in some cases, I believe, they are using the Health Inspectors for the Trade Board work. There are a number of instances in which the Orders have not been posted at all, and we say that if you have a Trade Board system it ought to be thorough, and the inspection ought to be so thorough that everyone has to obey it. It is not being obeyed to-day, and it is common knowledge that it is not being obeyed, and that acts very unfairly on the good employer. You have already heard, too, that in this trade there is an artificial time system which has obtained, as I think a previous witness said, since 1804. Under that system there is a log which they work out, and the artificial time for a job is set out, and you have to pay that price no matter what time the job takes. That has been the practice in the trade, but these inspectors are insisting that the employer shall keep a record of the time which any of these log workers, as we term them in the trade, occupy on a job.

2151. Were the log rates agreed between you and the trade unions?—Yes, we have agreed upon a log equation of the Trade Board piece-rate. That is what you mean, is it not?

2152. Yes.—We have agreed on that, and we contend that so long as the other side are agreed that it is the equation, we are doing all that we are called upon to do, so long as we do that. The inspectors come along and say: "You must keep a register of the time that a man occupies on a job to see if he can earn this Trade Board rate." We say that that is impossible, having regard to the habits which have grown up in the trade. Without fear of contradiction I say that the ordinary journeyman tailor is the freest labourer that there is in the land: he comes when he likes, and he goes when he likes; he takes up his paper, or smokes; and we have no control. It may seem extraordinary, but that is the habit of the trade: you have no control over what a workman does on a piecework job. He says, "So long as I only ask for the log rate for what I do, it matters not when I do it or how I do it." That is another one of the difficulties that we have been experiencing in this matter. They say, "You must clock a man in and clock him out," but then you have got to stand over him with your watch to see if he works, if you are going to time him properly. There is one case up in Cambridgeshire in which the employer gives his men the key of his shop, and each man

16 November, 1921.]

Mr. P. B. ADAMS and Mr. J. GORDON.

[Continued.]

comes in when he likes and goes out when he likes. We say that the responsibility of the employer should end when he pays the equation of the Trade Board rate. That is one of the difficulties with the inspectors: they do not seem sufficiently qualified to take into account the difficulties of the trade.

2153. What is the position of that now?—It is in a state of flux. Broadly speaking, we cannot agree that the Trade Board has been any benefit either to the worker or to the employer. The tendency is all the other way, and in fact, as far as unemployment goes, it is undoubtedly against the worker. Broadly, taking the whole country through, the action of the Retail Bespoke Tailoring Trade Board has been against the interests of the worker.

2154. Do you refer to both the 1909 Act and the 1918 Act?—We have only had the 1918 Act, generally speaking. The 1909 Act was practically not worked as far as the retail trade was concerned.

2155. Mr. Bell: Are you of opinion that you have more unemployment in the tailoring trade than in trades which do not come under the Trade Board Acts at all?—I cannot answer as to unemployment in other trades; I am only speaking of my own, and we know that there is a good deal of unemployment caused directly by these rates. I have had a tremendous number of letters sent in which I produced to the Trade Board; and in any questions that we have sent out we have asked particularly that they would separate any unemployment caused by the slump from that caused by the high rates.

2156. Is not that very largely a general statement which is made throughout by trades: that one of the causes of unemployment is the high rates?—I do not think so, *uo*. (Mr. Gordon): That may be, but we have particular instances. One occurred last week in Tiverton. Trade has been very slack there. It is a country district where naturally low prices prevail. The employer, who was very anxious to keep his staff together, made a proposal to the men that he would make up a number of overcoats for sale if they would accept a lower price for the making; he said that the Trade Board rate he could not afford to pay, but that if there were a difference made he also would cut his profits and substitute this instead of buying overcoats from the warehouse. The workers were quite willing to agree to that, and submitted it to their secretary who, of course, replied that they could not possibly accept an agreement of that sort; the Trade Board was against it, and that it would be sanctioning an evasion of the Trade Board rate; with the result that the man has to give his order to the wholesale people for ready-made goods, and the workpeople are idle; and that is not an isolated instance.

2157. Would not the natural result of that be that if they had agreed and he had been able to make those overcoats, the people who made overcoats for the ready-made firm would have been out of work?—Each speaks for his own trade, of course. The trade is so interlaced that it is difficult to follow its effects, but each speaks for his own and naturally seeks to serve his own.

2158. Mr. Pugh: That is an instance, therefore, not of Trade Boards causing unemployment, but rather of Trade Boards preventing the creation of employment to meet an abnormal condition, is it not?—It shows the inadaptability of Trade Board methods, whereas prior to the advent of the Trade Board the workers in his employ could have agreed.

2159. It is rather a matter of adaptability to the special circumstances than anything else?—Yes.

2160. Sir Arthur Pease: You were speaking just now of differentiating between unemployment which was due to the slump in trade, and unemployment which was due to the Trade Board rates. How can you possibly know to which cause it is due?—(Mr. Adams): You can tell in a good many cases. Our experience has been that while you could price an article at a certain figure and could do no business, should you put the article in your window and ticket it at a lower price—I am speaking of my own experience and the experience of people in my own neigh-

bourhood—you could sell that article, showing that people want the clothes, but they have only a certain spending capacity. To produce the article at that lower figure you cannot employ the expensive hand; you must get cheaper hands. There are cases where you have to stand girls down; and I have had an application from a girl, who came with her mother, asking if we could employ her, and I said: "I cannot employ you at the rate which I would have to pay you." The mother said: "But the girl is willing and I am willing; what more need matter?" I said: "I cannot do it. At 3s. per week I could find you employment"—it was 3s. for the time we worked; we did not work eight hours—"but I cannot pay 4s.," and that girl had to go. That was a direct cause of unemployment, simply caused by the rate. I could have found her a job remunerative to me at the lower rate, but not at the higher rate.

With regard to the question of the overlapping of the different sewing Trade Boards, one of the suggestions made by the Ministry of Labour is that the shirt-making trade should include the making of linen, cotton, flannel, or similar textile fabrics, into shirts, cricket blazers, and trousers. If they include that under the Shirt-making Board, our competitors will be able to get those made under whatever are the shirt rates, while we will have to pay the tailoring rates. That may be an argument against the Ministry in their definitions, but that is one of the difficulties over this Trade Board system and the definitions they set up.

2161. You want your wages co-ordinated between the two Boards?—Yes, or left to our own proper sphere.

2162. Have you any other points that you wish to make?—I think not, thank you.

2163. Mr. Pugh: I should like to put two questions which perhaps you will answer, Mr. Adams. Under the regulations you complain of the delay. What do you suggest to facilitate the procedure as far as regards getting effect given to the decisions of the Board?—I do not think it is necessary to have so long as two months for objections to be sent in, and I think that there ought not to be so long taken for the Minister's decision. There is a tremendous lot of delay in sending out the first proposal. You may have difficulties with regard to printing, but there is that point. There is another matter with regard to apprentices. I sat on the Joint Committee which got out that indenture. We got that out and then it came before the Administrative Committee and then before the Trade Board, and then went out as a formal proposal, and that was out two months. Those objections came in. The Trade Board confirmed it, and after all that we had a notice saying that the Legal Department of the Ministry said that this would not work, and that would not work, and we had to go over the whole thing again. Surely they could have done all that while this thing was out without waiting for four months before they did it, and hanging the thing up. It has only just now become operative.

2164. Is it possible to get all the views of the trade with regard to proposals to fix rates before the rates are fixed, and then for the rates to become applicable as soon as possible afterwards, say, in the course of a month at latest?—(Mr. Gordon): You would if you had district committees. (Mr. Adams): Yes, your district committees would do that.

2165. Sir Arthur Pease: You must not get mixed up.—Mr. Pugh is speaking of the Trade Board system as at present, is he not?

2166. Mr. Pugh: After your rates are fixed you have to notify all the trade, and anybody who has an objection can raise that objection. That means, I take it, that the thing has got to go back to the Board again, so it seems to me that you have interminable delay?—Yes.

2167. My question is directed to ascertaining whether it is possible to get the views of your trade previous to fixing your rate, so that the rate may become applicable, say, within the month allowed to the Minister?—That is what I say. There should

16 November, 1921.]

Mr. P. B. ADAMS and Mr. J. GORDON.

[Continued.]

be a month for objections, and then 7 days for the Minister's decision, so that in six to seven weeks you would get the whole thing done.

2158. I gather that you hold the view—and you rather say that the workers' side hold the same view—that really the Boards are not wanted. Is it not your trade in which the Minister proposed that you should substitute for the Board now an Industrial Council, on the ground that you had sufficient organisation, and did not your trade object by representation from both sides?—No, we never had that. It was just the other way. We asked for a Whitley Council, and it was the Minister's contention that we were not sufficiently well organised.

2159. I thought it was the tailoring trade that was the best organised of the trades connected with the Boards?—No, it was the other way about.

2170. *Sir Arthur Pease*: I think there is rather a division in your Board, is there not? There are different interests besides yours, I think?—Yes, there are different interests. There is one thing that we do feel. I have already instanced many cases where the rates are being observed, and I do not think that the present method of just sending out the notices to all known tailors is sufficient. We are not all saints in our trade any more than in any other trade, and in plenty of these villages we do know that the notices are being torn up and the workpeople have never seen them. I think it has gone so far as a resolution on our Board that better methods should be adopted of advertising the rates, either by public poster or by advertisement in the local Press, so that everyone may know. It is in the interests of the trade generally if a rate is going to obtain that everyone should observe it, and that workers and the employers in all those districts should know, and I think it might be done either by placard or by advertisement in the local Press, instead of just sending it to the employer and leaving it to his discretion whether he posts it or not.

2171. Thank you for the very full information that you have given to the Committee.—(*Mr. Gordon*): Will the Committee allow me to say one or two words?

Viscount CAVE resumed the Chair.

2173. The retail bespoke trade?—Yes, the retail bespoke trade. In administration it was found necessary, I suppose, to make regulations, and at Moutagu House here under Mr. Besso, a regulation was introduced that any garment for a male person made by two females or three males—why they should place women under that disability, I do not know—should be brought under the operation of the Wholesale Board, because they said that it was sub-division of labour and assimilated to the methods which operated in the wholesale trade. Against this we protested very much, and we were forced in against our will, because it was a practice which prevailed in most of the places. In London, my first knowledge of the trade was that a coat was made in the highest-class trades by thirds and fourths. Mr. Lawrence, the President of the London Master Tailors' Association, and Mr. Corelli, the Secretary, will confirm what I say. So that it was no new practice, but it brought us under the operation of the Wholesale Board. Then when we found that these regulations were irksome and inapplicable to the retail trade, with its varying conditions, we besought to be released, and when this new Retail Board was being formed we had a deputation to the Minister of Labour or the President of the Board of Trade, and protested against being brought in, and reminded him of the promise which was given by Mr. Churchill. We were told then that we were not sufficiently organised, though why we were told so we could not see, because we, on examination, find that we are organised quite as well as, and better than, many of the trades that were left outside; but we were brought under it. The fatal step has been the flat rate which was instituted. You see, it swept away

I am sure you are all getting very much bored about the tailoring trade, but there are one or two points that I want to put that I think have not been made sufficiently clear. One point is that the portion of the trade which we represent, the retail tailoring, is fairly well organised; we have branches extending from Newcastle in the North to Penzance in Cornwall, in all the large industrial towns.

2172. Both sides?—I was going to say that the Amalgamated Society of Tailors are even more highly organised than we are, because they are a very old Association. We had a number of local associations each in their own locality exercising a more or less efficient form of organisation until 1880. At that time, owing to disputes, the principle of federation was adopted, and then the whole of those branches were united under the Council—the Federation. That has later been extended to the formation of areas with their representation, so that we have the country well covered. I should like to make known to the Committee through you that there has always been—I was born in the trade, and my forebears were in the trade, and so far as my knowledge of the trade can go there has always been—this principle of differentiation existing in the rates. In London, and in all the large centres of industry, and in the provincial towns, there has been more than one rate of pay prevailing, so that what we are asking for is no new principle. This prevailed right up to June, 1920, when this Board, the Retail Tailoring Board, was formed. Prior to that, when the 1909 Act was framed, we had a deputation—and I think it was to the President of the Board of Trade, but I forget; it is so many years ago, but Mr. Winston Churchill, I believe, was the President—and we protested against the application of the 1909 Act to our trade, and showed, I think to his satisfaction, that we were then in such an organised condition that the cry of sweating which was raised through the Sweated Industries Exhibition did not apply to the section of the trade that we represented, and we were given a promise that that 1909 Act should not be extended to the retail tailoring trade.

all the old conditions which existed throughout the country.

2174. *Sir Arthur Pease*: I do not want to interrupt you, but of course the evidence-in-chief was devoted very largely to that point of the flat rate?—I do not think this point has been made quite clear, that these differential rates prevailed and that the introduction of the flat rate has just brought about a ruinous condition in the industry. That is what we are appealing against, and we appeal because we feel that we are sufficiently organised and that we ought to be liberated from the Trade Board, and a Whitley Council instituted, so that we might make the conditions and regulations as to payment and hours of labour, and other things, adaptable to the changing conditions of the trade, such as do not obtain under the Trade Board.

2175. *Lord Weir*: Have you made that appeal?—Yes, we had a deputation and were turned down. I could bring the records of the appeal.

2176. *Mr. Pugh*: Was it a joint application of workmen and employers?—No, it was an appeal by the employers alone. I may say that prior to that we had in existence a method of settling disputes in the trade, which acted efficaciously for quite 20 years and preserved the peace. We had in all our branches arbitration committees, consisting of three to five employers and the same number of workers, and these met together to consider all local disputes—all disputes from whatever cause they arose. If they could be settled locally, so much the better; if they could not be settled in the branches, then we had a joint tribunal composed of a number of the executive of the workers' side and the employers' side. We never had a chairman or anyone brought in from

16 November, 1921.]

Mr. P. B. ADAMS and Mr. J. GORDON.

[Continued.]

outside, and there was no dispute that was brought before us that we did not settle. Sometimes we sat three and four days together, but we settled them. The weakness of that was this, that where we had come to an agreement it only operated upon those members who were loyal; we had no power to enforce it on others in the industry. The result was, of course, that the effect of this agreement was only partial. The workers had not the power to enforce it, neither had we, though frequently we acted jointly, and if it was not illegal, I may say that we have frequently withdrawn the workers from employers who would not conform to the rates. I quote this to show that we had this system of organisation in the trade. Against sweating we set our faces altogether. We are quite agreeable to a minimum rate; we should like to have some mutual agreement below which we shall not fall; but we think that for all the rest there ought to be that principle of collective bargaining upon which British industry has been built. What is the case at present? It means this: that we meet at the Trade Board, we have our organization, as our Chairman has told you, and it is settled by the votes of the appointed members. What does that mean? It means compulsory arbitration, and we do not see why we should be singled out and other industries let free. It is compulsory arbitration. The workers themselves disagree with that principle, and they will not have it applied. Why should it be applied in our industry? Strip it of all outside language, and that is what it comes down to: it is compulsory arbitration. Had it not been for the operation of the Board a great deal of employment which exists would not have existed. We speak from experience, and we feel sure that we should have been able to adapt ourselves more easily to the conditions. (Mr. Adams): Would it be helpful if I were to put in the compilation of our 14 areas? You have referred several times to our area committees. Here is the division of them into 14 areas.

Northern.

Area No. 1.—Northumberland, Durham and Cumberland.

(The Witness withdrew.)

Mr. T. ERNEST JACKSON, Secretary of the Incorporated Association of Retail Distributors, and Mr. E. J. Pegg, called and examined.

The Witnesses handed in the following statement as their evidence-in-chief:—

1. Preliminary Statement.—The Incorporated Association of Retail Distributors is an organisation consisting of 85 distributing firms who are in the nature of departmental stores, and which are situated entirely in the British Isles. The scope of the trades carried on by members of the Association can be judged by quoting the largest store, which has 225 departments, each carrying on a separate trade under the roof of the main building, or in adjacent and branch buildings. There are very few trades and industries, outside the great national key industries, which are not carried on by such a firm. The business of the members of the Association is carried on primarily with a view to distributing merchandise to the consumer at the lowest price consistent with quality, and, quite apart from the distributing side of the business, members conduct a large number of the smaller manufacturing and "making-up" trades as a necessary part of their distributive interests.

The members of the Association employ between sixty and seventy thousand distributive workers, and between twenty and twenty-five thousand workers in the manufacturing and "making-up" trades. The total paid-up capital employed by members of the Association is approximately £35,000,000. Every possible desire or need of man from his birth to his final dissolution can be satisfied by a typical firm which is a member of the Association.

2. Application of the Trade Board Act.—Under the Trade Board Act of 1909 the firms whose views are expressed in this statement were not directly affected.

Area No. 2.—West Lancashire, comprising say Blackpool, Preston, Leigh, Southport, Wigan, St. Helens, Warrington, Liverpool, Chester, Hanley and Shropshire.

Area No. 3.—East Lancashire, comprising say Barrow, Lancaster, Kendal, N.E. Lancashire, Blackburn, Accrington, Bolton, Rochdale, Bury, Manchester, and Westmorland.

Area No. 4.—Yorkshire.

North Midland.

Area No. 5.—Notts., Derby, Leicester, Rutland, Lincolnshire.

Area No. 6.—Staffs. (part), Worcester, Warwickshire, Northampton, Gloucester (part).

South Midland.

Area No. 7.—Oxford, Bucks; Bedford, Herts.

Eastern.

Area No. 8.—Norfolk, Suffolk, Cambridge, Essex (part), Huntingdon.

South Eastern.

Area No. 9.—Kent, Surrey, Sussex (excluding Metropolitan area).

Area No. 10.—London, Surrey (part), Essex (part), Middlesex (part), Kent (part).

South Western.

Area No. 11.—Cornwall, Devonshire, Somersetshire, and Gloucestershire (part).

Central Southern.

Area No. 12.—Hampshire, Dorsetshire, Wiltshire, Berkshire.

North Wales.

Area No. 13.—Denbigh, Flint, Carnarvon, Anglesea, Merioneth, Montgomery.

Monmouth, South Wales, and Hereford.

Area No. 14.—Hereford, Monmouth, Radnor, Brecknock, Carmarthen, Cardigan, Pembroke, Glamorgan.

Chairman: We are much obliged to you.

The Amending Act of 1918, however, seriously changed the situation. It was not generally realised by traders at the time that the Bill before Parliament would put such drastic powers in the hands and at the discretion of the Minister of Labour. In the difficulties of transition from war to peace conditions the Bill was placed upon the Statute Book before its import was fully appreciated.

3. Manufacturing and Making-up Trades.—Under the amending Act of 1918 the Minister of Labour proceeded to schedule manufacturing and "making-up" trades; definitions were drafted and Trade Boards were formed, the following directly affecting the large stores:—

Boot and Shoe Repairing Trade Board,
Brush and Broom Manufacturing Trade Board,
Coffin Furniture Trade Board,
Corset Trade Board,
Dressmaking and Light Clothing Trade Board,
Fur Trade Board,
Hat, Cap and Millinery Trade Board,
Laundry Trade Board,
Linen, Cotton and Household Goods Trade Board,
Made-up Textiles Trade Board,
Paper Bag Trade Board,
Ready-Made and Wholesale Bespoke Tailoring Trade Board,
Retail Bespoke Tailoring Trade Board,
Rope, Twine and Net Trade Board,
Umbrella Trade Board,
Wholesale Mantle and Costume Trade Board,
and many others.

16 November, 1921.]

Mr. T. ERNEST JACKSON and Mr. E. J. PEGG.

[Continued.]

4. *Distributive Trades.*—In 1919 the Minister of Labour convened a Conference to consider the application of the Acts to the distributive trades, and it was realised immediately that there were so many interests involved that it would be very difficult, even if legally possible, to establish one Trade Board for the whole of distribution. Naturally each organised section of employers and employees who occupied their own particular corner in the distributive trades began to agitate for a separate Trade Board which would add to their dignity and importance. The tendency was at the outset for employers and employees themselves to create a demand for an unlimited number of Boards. This association from the beginning requested the Minister of Labour to consider the formation of one Trade Board only for distribution, on the ground that for the purpose of fixing a minimum standard of life, all distribution was one trade and the basis of salesmanship the same. When this was found to be impossible, the association suggested to the Minister that the just definition of distribution should be within three Trade Boards, i.e.,

- (a) Food and Provisions,
- (b) Furniture and Hardware,
- (c) Textiles, Drapery and Clothing.

This, in the view of the Minister, was not possible as the three sections could not be legally defined under the Acts. The Minister then proceeded to frame his plans for the distributive trade. It was early announced that there would be a Trade Board for the

Drapery and outfitting distributive trade,
Grocery and provision distributive trade,
Milk distributive trade,
Meat distributive trade,
Fish, poultry, game and rabbit distributive trade,
Fruit, flower and vegetable distributive trade,
Hairdressing trade,
Catering and light refreshment trade,
&c., &c.

The formation of these Trade Boards has in many cases been delayed, and has not been advanced further than the preparation of a draft definition. The Boards actually formed and functioning are:—
Grocery and Provision Trade Board.
Milk Distributive Trade Board.

If the application of the Trade Boards Acts to distribution proceeds upon the lines indicated above, there will be almost as many Trade Boards for the distributive trades as there are for the manufacturing and "making-up" trades. It would have been simpler for the Minister to have secured a slight amendment of the Acts to enable broader definitions to be framed, rather than to accept the legal limitations placed upon him by the existing Statutes, and thereby multiply the Trade Boards beyond reasonable limits.

5. *Unorganised Trades.*—It has been generally recognised by employers that the original Trade Board Act achieved a good purpose in raising the standard of life in the "sweated" trades, contained in the Schedule of that Act, and that the subsequent extension of that Act to certain other recognised "sweated" trades by sanction of Parliament also achieved a good purpose. The Amending Act of 1918, however, gave power to the Minister of Labour to apply the Trade Board Acts to any trade or industry which, in his opinion, was not sufficiently organised to give a reasonable basis for the mutual adjustment of rates of wages and conditions of employment. This was in accordance with the recommendations of the Committee upon Relations of Employers and Employees (the Whitley Committee) for covering those trades which were not sufficiently organised to form a Joint Industrial Council or an Interim Reconstruction Committee.

It is necessary at this juncture to describe the position in the distributive trades, and to explain why it can be classified within the Minister's conception of an "unorganised" industry. The employers are organised to the extent of between fifty and sixty thousand, the great majority of unorganised distributive employers being the smaller shopkeepers,

of whom many thousands are only "one-man businesses." The majority of the organised employers are organised sectionally through the local branch of their trade association; such as:—

- The Butchers' Association.
- The Bakers' and Confectioners' Association.
- The National Federation of Boot and Shoe Retailers.
- The Association of Caterers and Purveyors of Light Refreshments.

etc., etc.

They are also organised geographically in local traders' associations and chambers of trade, which are mostly federated nationally through such bodies as the National Chamber of Trade and the Drapers' Chamber of Trade. The larger distributing firms, which are carrying on many different trades under the roof of a central store and in adjacent or branch buildings, are organised in this association. The firms which are in the nature of multiple shops are also organised in their own associations.

The distributive trades, it is submitted, still give to the employee a clear field for advancement in accordance with experience and efficiency. The salesman who has been trained in the various stages has the ambition and opportunity in the progress of time to become a buyer; the positions of managers of departments or sections of stores are recruited from the ranks of buyers, and it is further observed that the principals of most distributing firms have themselves risen from the ranks of buyers and managers. By the very nature of the distributive trades it is always desirable that the control of the business should be in the hands of men who have had practical experience of every grade of the business, and the result is that employees in the distributive trades do not generally desire to have any coercive restrictions from outside organisations which will tend to produce the levelling up in their position, remuneration and prospects. It is for this reason that the employees' side of the distributive trades can be brought within the category of "unorganised" trades.

During the war, when there was a serious shortage of labour in the distributive trades, inexperienced labour was introduced which had had no previous training or knowledge of salesmanship and the various other grades of work connected therewith. Since the end of the war, owing to the state of trade, a large number of these untrained and temporary employees were continued in employment; and it is generally recognised that it is these employees who have been the majority of the organised employees of large distributive firms.

6. *Composition of Trade Boards.*—Under the Trade Board Acts a Trade Board consists of a panel of an equal number of representative employers and employees, together with a number of "appointed" members, who are selected by the Minister of Labour to act as an unbiased mediator between the two panels. These appointed members are in theory to protect the interest of the consumer. In fact they have usually been ladies and gentlemen of excellent academic qualifications, many of them University professors and efficient social workers, but in few cases, if any, can it be shown that an appointed member of a Trade Board had any technical knowledge of the particular trade concerned by the Board, or of the practical economic relationship of that trade to other trades.

The selection of the representative employers and employees by the Minister has also been a subject of criticism. It is quite appreciated that the Minister has great difficulty in selecting representative people from either side, as he has to bring on to the Board representatives from so many geographical areas. Naturally, in dealing with an "unorganised" trade a so-called representative employer will be more of a "typical" than a representative one. On the employees' side there is usually some nucleus organisation which is quite capable, and only too eager to nominate an employees' panel.

In the case of one Trade Board recently the rates were sent forward to the Minister for confirmation

16 November, 1921.]

Mr. T. ERNEST JACKSON and Mr. E. J. PEGG.

[Continued.]

by a vote of the employees' panel and the appointed members, either with the abstention of the employers from voting, or after they had left the room. Subsequently the Minister referred the rates back for reconsideration, and with a view to securing agreement the appointed members themselves prepared rates on the basis of meeting half way the rates put forward by each panel, and when it was found how hopeless it was to contest the matter further, the employers reluctantly voted for compromise in the interests of industrial peace.

7. *Rates fixed by Trade Boards.*—If the original purpose of the Trade Board Acts, namely, to prevent "sweating" by fixing a minimum wage, had been adhered to, a considerable part of the objections raised by employers would be unnecessary. The result of the application of the Trade Board to the seven trades scheduled in the 1909 Act met with the general approval of employers, and it is not desired that the particular Boards appointed under that Act should be disbanded until some other means for adequately protecting the conditions in these industries has been devised. There has, however, been an increasing tendency on the part of Trade Boards to fix a standard wage instead of a minimum wage which was the original intention. This may have been due to the fact that the same organisations both of the employers and employees have been affected by, and represented upon, a number of Trade Boards, and have been tempted to use the machinery of the Trade Board for forcing standard rates covering a large group of workers up or down by playing off one Board against another. It is this fixing of standard rates higher than the economic minima of the trades, and the fact that a number of Trade Boards cover sections of what are generally looked upon as one large industry, which has caused so much dislocation. In the large stores, whose workrooms and workshops come under so many Trade Boards, it is customary in times of pressure to transfer a certain class of employee from one workroom to another in order to cope with a rush in business, but owing to the various rates that are now in existence, and the discontent amongst the employees themselves caused by transfer to workrooms coming under different minimum wage rates, this practice has had to be considerably curtailed. It should be generally appreciated that whilst it is possible to define for the purposes of Trade Boards such trades as (a) dressmaking and light clothing trade, and (b) the wholesale mantle and costume trade as separate trades, also the ready-made and wholesale bespoke tailoring trade and retail bespoke tailoring trade as separate trades, the employees in the less skilled trades are more or less drawn from the common pool of labour.

8. *Learners and Juniors' Rates.*—The result of Trade Board decisions in regard to learners has had serious results. It is frequently the experience of employers that mothers bringing their children who have just left school to seek admission for them into one of the "making-up" trades state that they have been informed by many employers that they will not be troubled with taking children owing to the Trade Board regulations and rates. A departmental store has its own educational system into which learners enter under the requirements of the Education Act, 1919, for continued education; thus learners in the same school who happen to be employed in different workrooms starting at the same time, are in receipt of varying rates of wages, with the result that there is considerable dissatisfaction among them and their parents at the outset of their careers. In order to escape trouble arising out of this, many employers as long as adult skilled labour is available set themselves against the ever-increasing expense of taking on learners and training them. During, and immediately following the war, a large number of employees wished to enter workrooms at a later age than they would have done in the ordinary course of events. They were eager to learn a skilled trade, but owing to the prevailing rates of wages fixed by Trade Boards they could not, and they cannot be profitably employed. It is now possible in the near future that

the making-up trades will be faced with a serious dearth of skilled labour. Further, the fact that a junior knows that on a certain date, because he happens to have a birthday, he will, *ipso facto*, have an increase in his wages, quite apart from any merit or efficiency. The general experience of a large number of workrooms which has been carefully collected shows that this causes (a) lack of application, and (b) lack of healthy competition. Good workers are greatly handicapped owing to the impossibility of increasing their wages beyond a certain point, whilst high rates have to be paid to a large number of less efficient employees, and the good workers therefore receive no encouragement. Inefficient workers, owing to the fact that their path is made easy by the Trade Boards, do not trouble to improve, and sub-normal employees, if they manage to secure employment, get little or no chance at all.

It is submitted that the high rates fixed by Trade Boards for learners during and immediately after the war has led to a diminution of the number of juveniles which can be accepted in the various trades, and has had a serious effect upon the employment of young children immediately upon leaving school.

9. *Adult Employees.*—What has been submitted in regard to juveniles is also generally true of adult employees. It is again found that the method employed by the Trade Boards of fixing wage by age leads to a lack of initiative in the individual employee and a general reduction in the standard of efficiency. The adult, similar to the learner, seldom understands the Trade Board notices, and a great number of small manufacturers employing a few hands make no attempt to explain these notices, or to pay the rates prescribed, being quite willing to risk the possibility of prosecution. The employer, therefore, who religiously interprets the Trade Board notices, and explains them in detail to the employees, is penalised. This is particularly true in the gentlemen's tailoring trade, the fur trade and the toy trade.

10. *Alteration of Rates.*—It is submitted that the time occupied in the procedure of Trade Boards to secure an alteration in the rates of wages, is a serious handicap to trade; that with the fall in the cost of living, the high wages reached by Trade Boards cannot be reduced quickly enough to save the particular trade from serious results. The organised employees submit that employers did not make this complaint when wages were rising at a less rapid rate than the cost of living. "Two blacks do not make a white," however, and the fact remains that this complaint is justified and is true. It must be comprehended that in the cost of production, wages whilst being a first and essential charge, is only one of many. During the last year, when the serious slump in trade has taken place, high wages have been largely maintained over that period, and simultaneously heavy stocks have had to be liquidated. Taxation and other charges and levies made upon industry by departments of State have also heavily increased. The whole of the items which go to make up the cost of production and distribution of a given article have been maintained at a high figure, whilst there has been a demand through the Press for a considerable reduction in prices and the inability of the consumer to purchase the articles at the price which present economic conditions permit them to be sold.

12. *Expense of working the Act.*—Firms report that when Trade Boards operate in departments of their business the work immediately becomes difficult and intricate. It is necessary to employ extra staff varying in size in accordance with the number of Trade Boards, and to insure that the firm are within the law. This is a non-productive charge, which is occasioned to industry by the existence of these Boards.

It is increasingly difficult for employers to find the time from their business to attend the protracted conferences and meetings which are preliminary to the defining of a trade under the Act, the actual formation of the Board, and the ultimate meetings

16 November, 1921.]

Mr. T. ERNEST JACKSON and Mr. E. J. PEGG.

[Continued.]

of the Board itself. The employees are also experiencing the difficulty of securing suitable representatives for such a large number of Boards.

13. *Summary.*—The Association has endeavoured in this statement to summarise the position as it affects the larger distributing houses. It is the custom of the distributing trades to grade the staff throughout the whole of the stores into such grades as (a) salesmen and saleswomen, (b) clerks, (c) packers and skilled porters, (d) porters and lift attendants, messengers and cleaners. The division can be said to be horizontal and the minimum rates are paid to employees in each grade so as to permit the more efficient and experienced employees being paid a rate commensurate with their skill and knowledge. The advent of the Trade Board in the distributive trade, however, brings a further division, which can be said to be perpendicular. It considerably complicates the administration of the personnel side of a large business house through dividing it up into a large number of still smaller sections. The less skilled grades of labour which will be brought within the distributive Trade Boards should not be included therein. This particularly refers to such grades as porters who are available for employment in a large number of trades and industries and can migrate from one to another. Their minimum rate is therefore generally determined by the minimum rates prevailing throughout the district for the same grades of labour.

The same chaos which has been apparent in the manufacturing and "making-up" department of large manufacturers will be a still greater chaos in the distributive trade of the business. If, for instance, a heavy demand in the tailoring and costume department of a business is forthcoming, porters, etc., may have to be temporarily transferred from the grocery and provision department, and during a period—which may be of hours, days, or weeks—paid at a different rate.

Past experience has shown that Trade Boards covering the food distribution trades, such as the Grocery and Provision Trade Board (formed and functioning) the proposed Fish, Poultry, Game and Rabbit Trade Board, the Milk Distributive Trade Board, the Fruit, Flower and Vegetable Trade Board, may only result in one Board being played off against the other by ever-varying rates which have no relationship to the economic situation of the different sections of what is generally recognised as one trade.

The Association desires to urge upon the Committee of Enquiry that they should recommend the suspension of further action in regard to Trade Boards that are pending until some constructive alternative can be secured. The Association feels that if some scheme can be developed which is based upon the unanimous proposal made by the Joint Committee of the National Industrial Conference which, the Prime Minister addressed at the Central Hall, Westminster, in the spring of 1918, i.e., a national minimum wage, it would be a simple, economic, and constructive alternative to the present costly and cumbersome Trade Boards. The Association suggests that it is along these lines that the Committee of Enquiry might investigate further, if their terms of reference permit. It is obvious that a recommendation made unanimously by representative employers and employees is capable of some development in a definite Act of Parliament.

On behalf of the Association.

(Signed) T. Ernest Jackson,
Secretary.

125, Pall Mall,
S.W.1.

8th November, 1921.

2177. *Chairman:* You are the Secretary, Mr. Jackson, of the Incorporated Association of Retail Distributors?—Yes.

2178. What is the association?—The association consists of 85 large firms who are in the nature of departmental stores. The principal London and provincial stores are members.

2179. Such as Harrods, Selfridge's and Whiteley's?—Yes, and the other large houses. I have set out in the preliminary statement of my written evidence the exact scope of the firms which we include in our membership. I have quoted there for the information of the Committee the largest departmental store which has a large number of departments, 225, and there is I suppose hardly a human want for which these firms do not cater. It is quite unnecessary for me to go into the detailed activities of a large departmental store; they will be known to all the members of the Committee.

2180. They are mainly distributive, I suppose?—Yes, but incidentally they have a large number of small manufacturing industries and workrooms attached to the firms.

2181. What is that for—repairs, and so on?—Repairs, mainly, but some firms are also manufacturers on a fairly large scale.

2182. How many workers do these firms employ?—In the second paragraph of the first section of my evidence I say that they employ between 20,000 and 25,000 workers in the manufacturing and making-up trades, and between 60,000 and 70,000 distributive workers. That includes the main distributive houses in London, Manchester, Liverpool and Birmingham, and large stores in most of the other principal cities, such as Leeds and Bradford, and the whole of the South Coast towns. The association was formed to deal entirely with questions which are peculiar to departmental stores. We are comparatively recent in growth, having been formed on our present basis only for a period of under two years, and we have peculiar functions to fulfil. We deal with every problem connected with distribution from the time the goods leave the manufacturer's workshop until the time they reach the consumer's door.

2183. Did your firms come under the Act of 1909 at all?—None, except in so far as they may have been concerned with the wholesale bespoke tailoring. Apart from that they would have no direct connection with the 1909 Act. They would be incidentally connected, I suppose, with the chainmaking trade, because they were distributors of the finished articles, but they were not directly manufacturers.

2184. Of course, you have come, or may come, under the Act of 1918 so far as the trades with which you are concerned are not organised?—That is so.

2185. Under how many Trade Boards do you come now?—So far we are only directly affected by the Grocery and Provision Trade Board. A great number of our firms have large food departments, and that is the only Trade Board upon which we are directly represented, and which is at the moment functioning and affecting stores.

2186. Are there proposals for new Trade Boards which may affect you?—The Trade Boards with which we have already been threatened, shall I say, are Drapery and Outfitting (which I understand from the latest information, the Minister has practically agreed, although there will only be one Board, is to have two committees, one for dealing with drapery and one for outfitting), the Milk Distributive Trade Board (which does not affect us), the Meat Distributive Trade Board, the Fish, Poultry, Game and Rabbit Distributive Trade Board, and the Fruit, Flower and Vegetable Distributive Trade Board, the Hair-Dressing Trade Board (which will affect hair-dressing departments), and the Catering and Light Refreshments Trade Board. Those are the Trade Boards which the Minister has definitely announced his intention of forming in the trades affecting the stores, and upon which we have been consulted at various times with regard to the scope and definition of those Boards.

2187. Were you consulted at all before the passing of the Act of 1918?—No, there was no such association in existence then, except in nucleus, and they were not at the time consulted.

2188. Have you been consulted as to the formation of these new Boards?—Yes, we have had fairly frequent visits from officials of the Ministry, and we

16 November, 1921.]

Mr. T. ERNEST JACKSON and Mr. E. J. PUGH.

[Continued.]

have also attended a considerable number of conferences on Trade Boards which the Minister has convened.

2189. I think there was a conference, was there not, about the application of the Act to distributive trades?—Yes, and I believe my association were represented then, not through the official body but by one or two of their members.

2190. What view did you take?—We had no association then formed. When the stores found that they were coming under the definition of unorganised trades under the Trade Boards, and that the Minister would apply the Trade Boards Acts to the distributive trades, they took the line then that there should be one Trade Board for distribution on the ground that salesmanship is the same for all purposes of minimum rates, no matter what you are selling.

2191. The man who sells meat and the man who sells grocery are both just people who sell over the counter?—Yes, for the purpose of minimum wage rates.

2192. I think you recognise that that was impossible under the Act as it stands.—Quite. After that the Minister informed us that it was not legally possible for him to define distribution as one trade, and we then put up a proposal to him that there should be three Trade Boards, and at the time we were quite prepared to accept this as a way out of a very difficult situation. The three were to be: Firstly, Food and Provisions, which would be a comprehensive Trade Board covering all food and grocery requirements; secondly, Furniture and Hardware; and, thirdly, Textiles, Drapery and Clothing, which would include the whole of the textile distributive trades. That was our second proposal.

2193. That would be a reasonable classification?—That, in our opinion, was a reasonable classification for three Boards.

2194. Did you contemplate district committees at all in connection with those Boards?—No, we did not, because at that time we were entirely a London organisation. It is only since that time that we have extended our organisation throughout the provinces.

2195. Have you any views now as to the formation of district committees?—We have not. We are endeavouring, as far as we can, to put it to you to-day that the Committee, if it has power under its terms of reference, might investigate the possibilities of a national minimum wage as an alternative to this system.

2196. Would that involve the formation of district committees?—That might, but we have not gone into details. We are simply putting forward the general principle.

2197. Mr. Pugh: I suppose you will agree that if you were going to form a single Board, or even three Boards, for the distributing trades it would not be workable unless you did have district committees?—Personally, I think so.

2198. You could not get proper representation on a single Board or even on three Boards of the whole of the distributive trades, could you?—I think my reply to that would be that the distributive trades are so large that even under the present definitions you do not get what we should call adequate representation. I think, for instance, the grocery and provision trade, wholesale and retail, being on one Board is such a vast trade that you could not say that the present Board was truly representative of the whole industry with its ramifications, and I do not think that any Trade Board for any distributive trade, unless it were very small or, perhaps, divided and sub-divided into very small Boards, would be truly representative.

2199. While your proposal for your three Boards might be suitable to trades or traders such as those whom you represent, would it be suitable for the smaller traders? Could you bring the smaller traders into your scheme?—I think you could. Certainly I think that small traders could be covered by these three groups, because they are, as I stated in my Statement of Evidence, organised in some way on

a very large scale now through their various organisations, such as the National Chamber of Trade, which has, I believe, twenty thousand members associated with it, mostly small shopkeepers.

2200. But is it your opinion that if you had either a single Board or three Boards such as you suggest, you could get rid of many of the difficulties which now exist?—Yes. I would like, if I might, to touch on that point later, because I am coming to the peculiar position in which our stores are. I have set out in paragraph 5 the reason why, in our opinion, the distributive trades are in such an unorganised condition. Various attempts have been made to organise the distributive trades on both sides, and have failed. I think, to-day, possibly the employers are becoming more organised, but on the employees' side the general feeling is that there is no trade in the country to-day which gives so much opportunity for advancement from the lower grades of the staff to the higher grades than the distributive trades, and as evidence of that I have stated that most of the buyers in the distributive trades are recruited from the ranks of the salesmen, and most of the higher managerial posts are ultimately filled from their ranks, so that there is an opportunity for the ambitious man or woman to-day in the distributive trades; and for that reason they seem rather to resist organising in organisations which might have the effect of levelling up opportunities in the trade.

2201. Crystallising them in their particular rank, I suppose?—Yes, quite so.

2202. Mr. MacCallum Scott: Would it have the effect of crystallising in that way? I mean, are the two necessarily connected? Would it prevent a man from rising up to be a buyer?—Do you mean by organisation?

2203. Yes?—No, but if the trade becomes completely organised on the employees' side it would tend, as it has done in those firms where there has been organisation and a measure of collective bargaining, to level up throughout the stores the whole standard so that, as has been the case in the work-room, the efficient worker would be paid at a lower rate than he has at present in order to provide a higher wage for the least efficient worker.

In paragraph 6 we refer to the composition of Trade Boards, and in passing I only want to mention this point; and I think it will deal with Mr. Pugh's point on paragraph 2: that there has been a feeling that on both sides, and particularly on the employers' side, it has been very difficult for the Minister to secure a truly representative person; and we have not been quite happy over some of the selections to serve on these Trade Boards. It does show the difficulty, and we quite appreciate the difficulty which the Ministry of Labour has had in securing these representative employers, and we feel that they should rather be called typical employers than representative.

2204. Mr. Pugh: How would you get over that difficulty?—We cannot see any way out of the difficulty, except by some statutory alternative to the whole Trade Board system; and I am afraid I must keep coming back to that, as from our point of view the Trade Board system as proposed will be absolutely unworkable and chaotic.

2205. Chairman: You recognise that the Ministry of Labour had very great difficulty under existing conditions in selecting a representative employer?—Quite so; we fully recognise the difficulties which the Ministry of Labour have in applying the Acts. We also realise that if employers had known when this 1918 Act was going through Parliament what powers it put into the hands of the Ministry, there would have been much stronger opposition to that Bill; but I do not think it was realised in the change-over from war time conditions to peace time conditions that it put such tremendous powers into the hands of a Government Department.

2206. You are speaking of the power to form Trade Boards?—Yes, without parliamentary sanction.

2207. Mr. Pugh: Supposing you did away with the 1918 Act, what method do you suggest of collec-

16 November, 1921.]

Mr. T. ERNEST JACKSON and Mr. E. J. PEGG.

[Continued.]

tive bargaining to take its place? Do you suggest that you will have sufficient machinery for collective bargaining under the 1909 Act?—The only alternative which we have to put forward is that there should be some national minimum wage which would guarantee to the least efficient worker a subsistence level, leaving all higher rates to be fixed, as they are at present, by collective bargaining and other methods of bargaining, in accordance with experience and efficiency. If there is a minimum wage which affects the least skilled of the distributive workers, the trade is so naturally graded that there would be a rising grade of wages for each more skilled grade above the lowest.

2208. Accepting that as being in some degree satisfactory from the point of view of the trades which you represent, would that be satisfactory when you consider the large number of small businesses and so on? Is not that where your difficulty in maintaining anything like standard conditions exists?—The advantage I see in the national minimum wage is that by publishing each month in the daily Press that the cost of living figure is so-and-so, the minimum wage will therefore be so much for a certain district, and every worker employed in the smallest shop would know exactly what wage he or she had to have as a minimum in that district, and you would get away from the great difficulties which you have at present of adequately inspecting under the Trade Boards to see that the minimum wages fixed by the Trade Boards are being paid.

2209. *Chairman*: You are speaking of the distributive trades only?—Yes.

2210. *Mr. Bell*: Your system of grading might apply quite well to a large firm which was employing scores, or even hundreds, of shopmen and shopwomen, but suppose you had a small country shop which only employed one person who was general labourer, errand boy, and all the rest of it, how would it be possible to grade him?—I admit that difficulty, and I am not here to-day to speak on behalf of the small shopkeeper. I do not know whether the Committee has yet received evidence, but I understand that there will be evidence submitted to the Committee from the point of view of the small shopkeeper. Mr. Pegg reminds me that his position would be no better under the Trade Board because you have still got to define under which grade of labour he comes.

2211. *Mr. Pugh*: You have not got to define which Board he comes under, I hope?—You have not got to define that, but you will have to if the plans for the distributive trade are carried out. I want to come on to that point later on.

2212. *Chairman*: Before you leave the question of the constitution of the Trade Boards, have you anything to say about the system of appointing members?—We have a feeling there that the appointed members should be, as far as possible, people who have some understanding of the economic position of the trade. As I say, so far we have only had one experience of a Trade Board in the distributive trades, which is the Grocery and Provisions Trade Board, and the reference which I have made in the third paragraph of Section 6 of my evidence refers to that particular Trade Board, where the rates were sent forward to the Minister for confirmation and they were referred back by him for reconsideration, and, finally, the rates, I am informed, were agreed to by the vote of the appointed members and the employees' panel, the employers either having abstained from voting or having actually left the room before the vote was taken, and those votes are now pending confirmation by the Minister. We feel sure that had the appointed members had more knowledge of the economic conditions of the food trade to-day they would not have supported those rates.

2213. There would be a difficulty, would there not, in appointing members who had been engaged in the trade, because it would be said that they were biased in favour either of the employers or of the employees?—It is quite possible, I think, to get one Chairman who would be the only appointed member, apart from the two panels, who would have

sufficient knowledge of the economics of the food trades to act as a presiding genius over the meetings of the Board, rather than to have a panel of such varied people as we have to-day.

2214. When you say "to act as a presiding genius," do you mean with or without a vote?—I think without a vote.

2215. *Mr. Pugh*: Is there really any difference, or any material difference, between the functions of the appointed members and an Arbitration Court? Can you say when you would get men with greater experience in an Arbitration Court than you have in your appointed members, who are continually attending your Boards?—I think that usually in Arbitration Courts the Court consists of gentlemen who have some knowledge of some of the industries of the country. They are usually selected from panels, I believe, from another industry, or even from that particular industry, who are to arbitrate on the particular dispute; but in the case of a Trade Board, I think you would agree that most of the appointed members have little or no connection with any trade at all.

2216. Of course on the panel the representatives from the trade act as assessors, but have you not actually got that in the representatives of the two sides of your Board, and therefore will not your appointed members be in the position of a chairman who is not necessarily conversant with the trade, and who might sit on an Arbitration Court? I am wondering what advantage you are going to get from doing away with your appointed members, assuming that you are going to apply arbitration methods to settle disputes which the Boards themselves cannot settle, or which your people cannot settle?—I have no personal experience of the working of a Trade Board, and I am only informed indirectly that in the case of the one Trade Board the Board are practically agreed upon the employers' panel that the appointed members have not functioned properly; and that is the case of the Grocery and Provisions Trade Board. In my written statement I have referred in certain paragraphs to the rates fixed by the Trade Boards in the "making-up" trades, which affect indirectly and through the members of my association, but I find now that evidence has been given on those points by Mr. Barnard on behalf of the Drapers' Chamber of Trade, and I do not want to go any further into those points; but I have with me Mr. E. J. Pegg, who is the staff manager of Messrs. John Barker, of Kensington, and who has the actual management and control of a large number of workrooms, who would be prepared to answer any questions on those paragraphs which you or any of the members of the Committee desire to put.

2217. *Chairman*: We will make this statement of yours part of your evidence if we may; it is easier to follow what you say. Have you anything to say about the effect of these Trade Boards on a big concern such as you represent? I suppose you come under, or will come under, a number of Trade Boards if matters go on as at present?—We estimate that if the full plans of the Ministry are carried out, and the distributive trades are covered on the same elaborate basis as that on which the food trades are covered, where at least four Boards are already threatened, we shall be covered by between 25 and 30 Boards in the distributive trades, adequately to cover on the same basis the whole of the distribution.

2218. So that the different employees of your firms would come under different rates, although they were doing very much the same kind of work; is that the point?—That is just the point. At the present time, as I have stated, you may say that in a large departmental store the staff are graded horizontally in an average of four or five grades, the highest being the salesman and the saleswoman, and what we call Grade 1 clerks. They receive the highest minimum wage in the stores. There are those five grades. If the Trade Board applied throughout that store you would be cutting up those grades perpendicularly as

16 November, 1921.]

Mr. T. ERNEST JACKSON and Mr. E. J. PEGG.

[Continued.]

well as horizontally, and possibly turning the five grades into something like 25 or 30 times five, leaving you with a store with minimum rates applying to anything between 120 and 180 different classes of labour. Furthermore, you would have to decide whether a porter who on Monday and Tuesday was handling meat in the butcher's department of the store, which happened to be busy, and on Wednesday and Thursday was helping to move pianos in the piano department of the store, was mainly engaged in the butcher's department or the piano department, and under which Board he would be paid.

2219. *Mr. Pugh*: Omitting the case of the porter, have you not already got a vertical division of your business which would largely minimise the difficulty of which you speak, that is to say, it is divided by departments, and would not a particular Board be applicable only to the particular department so far as the general staff are concerned, leaving out of account the case of the porter which, of course, one appreciates?—That, of course, is rather involved, because you have got so many different types of organisation. For instance, I could not say until I saw the definition of the various Trade Boards how far they would affect the other grades of the staff.

2220. Perhaps it will save time if I put this simple question: Do you say that there would be overlapping by the different Trade Boards between the different departments?—Certainly. In busy times you would get the selling staff transferred from one department to another in order to meet a rush, and assuming that their wages were fixed by Trade Boards they would have to be paid under a different Board for a portion or the whole of their week during the time they were serving there.

2221. *Chairman*: One often sees in these big stores sweets sold on one side of the room, and other goods on the other side; the same room is sometimes subdivided?—Yes. You have only to quote the case of what we might term "the village Whiteley" or "the village Selfridge," where he has in one fairly large shop almost as comprehensive and varied an array of merchandise as a store of considerable size, and you would have to determine in which trade he was mainly engaged, and under which Trade Board his employees would come. There would be the case of a man who was possibly serving out bacon at one corner, and in the other corner of the same room was dealing with draperies, one man doing the whole work.

2222. *Mr. Pugh*: Would your proposal for three Boards for the distributive trades largely get over that?—It would help matters considerably.

2223. *Lord Weir*: Would not the extreme case be the Woolworth shop?—Absolutely.

2224. They sell everything?—Yes.

2225. *Chairman*: Does that lead to difficulty among the workers?—It always has led to difficulty in the making-up trades, when what we term like grades of labour, seamstresses and others, have been transferred from one workroom to another during times of rush. One of the points in our evidence is that there are varying rates for like grades of labour. It is practically impossible for us now to transfer hands without causing discontent amongst employees. They cannot understand why, if they go into another workroom, they are paid a different wage for precisely the same labour, and it has in the past caused, and is at the present time causing, discontent in the workrooms of the stores.

2226. Their cost of living, of course, remaining the same?—Quite.

2227. You have something to tell us about learners?—In clause 8 of our evidence we have tried to summarise the experience of a large number of stores. At the end of that paragraph we state, "The general experience of a large number of workrooms, which has been carefully collected, shows that the high rates which have been prevailing for juniors, and the fact that a junior gets a rise automatically each year, because he happened to have a birthday, causes (a) lack of application, and (b) lack of healthy competition. Good workers are generally handicapped

owing to the impossibility of increasing their wages beyond a certain point, whilst high rates have to be paid to a large number of less efficient employees, and the good workers therefore receive no encouragement. Inefficient workers, owing to the fact that their path is made easy by the Trade Boards, do not trouble to improve, and sub-normal employees, if they manage to secure employment, get little or no chance at all." On that, Mr. Pegg is quite prepared to answer questions on the practical side, as the manager of workrooms.

2228. What happened before this Act; when a learner came in, was he or she paid at all to begin with?—(*Mr. Pegg*): Yes, they were paid a salary, and their salary was increased as they grew efficient.

2229. Not as they grew older, but as they improved?—No, according to efficiency.

2230. Who fixed that?—The managers of the workroom, who would generally be the fitter.

2231. Now they must be paid more as they grow older?—Yes, automatically.

2232. You are with Messrs. Barker, I think?—Yes. (*Mr. Jackson*): Do you want any further evidence on the question of learners' wages? This was rather fully covered by Mr. Barnard last week.

2233. We have had a great deal of evidence upon this point. I just want to know whether your experience shows that the effect is to prevent learners being employed at all?—Absolutely. I have here in writing a large number of statements from different stores. It is owing entirely to the non-employment and consequent decrease of skilled labour available at this time, and the high rates appertaining to Trade Boards, that workrooms are being closed down. I have letters from the firms already quoted before this Committee, the Portsmouth and Southsea Stores concerned in the recent dispute. Two of those firms are members of my Association, and have supplied me with written statements which have already, I believe, been received by you from other sources. I have a letter from a large store in Liverpool which states that "making-up departments are giving way to the ready-to-wear department, owing to the high cost of hand work production under Trade Board rates."

2234. I was thinking more of the learners. We were told by the Trade Boards that the effect of these rates was that they would not take learners at all. Is that your experience?—That is so. Very few learners are being taken at the present time, and I believe a child has got to show particularly good characteristics to have an opportunity of getting into employment to-day.

2235. That must affect the supply of skilled labour in future years?—It is already, I believe, affecting it in many trades. Owing to the high rates which were reached by certain Trade Boards during the war, and at the end of the war—in 1918 and 1919—among the young people who are now reaching 19 and 20 years of age, there is great scarcity of skilled workers.

2236. *Mr. Pugh*: What do you suggest is going to be the ultimate result if you are not getting the learners? If that means that you entirely lose your skilled workers, who is going to make your goods? Are they not going to be made?—They will be made in factories. It is driving the trades to factories now.

2237. That is the point, is it? It is increasing the factory trade at the expense of the handicraft?—Yes.

2238. *Chairman*: Does that affect the proportion of workers employed?—Ultimately, yes, because of the mass production in factories, and the fact that the employee in a factory is only a machine minder, whereas in the workroom they have a definite handcraft, and are not handling so many garments naturally as one worker would in a factory.

2239. So that for the same number of garments more people would be employed in private trade than in the factory?—Yes, a good many more.

2240. *Mr. Bell*: The factory system cannot affect the distribution, can it?—The factory system affects it in this way, that a lady who came in to buy a

15 November, 1921.]

Mr. T. ERNEST JACKSON and Mr. E. J. PEGG.

[Continued.]

costume would say that she would take a ready-made costume—I think Mr. Pegg will confirm this evidence—and then have it altered to suit her. She would be told that the cost of alterations in the workrooms which are under the Trade Boards would be so much, and she would then refuse to have the costume altered. It has even affected in many cases the factory trade, because a ready-made article comes in and the customers frequently refuse to pay the cost of altering to suit them. The ready-made trade has been considerably injured by it. In Mr. Pegg's case they were employing 41·3 per cent. more employees in the dressmaking this time last year than they are employing this year, and yet the trade in that particular department has tremendously increased this year as against last year's, showing, of course, that extra trade has gone into the factory-produced goods.

2241. *Lord Weir*: That is a tendency which has not been brought about wholly by the Trade Boards? You will not submit, will you, that that is entirely due to the Trade Boards?—No, I would not be so foolish as to suggest that that was due entirely to the Trade Boards. We know as a matter of fact that the high costs of the hand goods under the Trade Board have facilitated it, but I think it is generally lamented throughout the trade that the handcraft is departing, because it has generally been finer work and a more useful article.

2242. *Mr. MacCallum Scott*: Then you do not lay so much stress upon learners' rates? I thought just now we were on the question of the difficulty raised by the high rate for the learners—the juniors?—There will always be enough work coming into a workroom to keep a certain number of skilled workers always employed under any conditions.

2243. How have they got over that difficulty of the learners' rates in the factories? You cannot answer that perhaps, but there is in the factories also the problem of the learners?—(*Mr. Pegg*): May I say that I think when a girl goes into a factory she is almost immediately a wage earner, but when she comes into a workroom I am afraid she is not. So far as we are concerned I do not know whether it is quite clear that we were last year employing 41·3 per cent. more dressmakers: I had that worked out for me. We do ourselves consider that in our own workrooms that is due expressly to the Trade Boards. That is our opinion, because we are doing more trade in the department, consequently the workrooms, which are largely concerned in dealing with the manufacture of the goods which we have already bought, should be more busy still. They should be correspondingly busy with the department, and they are not.

2244. *Lord Weir*: Is it possible for you to give us an idea of the increase in the cost of a particular product which you would attribute to the action of the Trade Boards?—I think they could tell you that more in a factory than we could in a workshop. May I say that it is something of the atmosphere which you have got into the workshop. Our juniors have got an idea that they must be worth what we are paying them or we would not be paying them that salary. The people who are really good servants to you are discouraged because you cannot increase their salary. Why can you not increase their salary? We made a very substantial loss in our workrooms last year. I happened to take up a trade journal, and I noticed that our chairman said that we made between £2,000 and £3,000 loss in our workrooms last year. I put it down entirely, roughly, that that is due to the Trade Board. I think if our chairman had gone a bit further he could have found a bigger loss than that. Only yesterday a girl came to me, and I said: "What can I give you to do here? Why did you leave?" and she said: "I am 22, and we are paid on the scale. We girls of 22 are doing the work and the seniors are getting the money, and I only get on advance when I am a year older. There is that killing of initiative and the incentive to excel which, in my opinion, is what

we shall be up against if we get a Trade Board established in our house and throughout the distributive business.

2245. *Sir Arthur Pease*: Do you mean that the loss is due to too high wages or to too little work?—A little of each—some of each.

2246. *Mrs. Lyttelton*: And to the uniform rate not allowing for competition?—Yes, I think so.

2247. *Sir Arthur Pease*: Upon which would you lay most stress—that the rates were too high or the impossibility of increasing the remuneration of people according to their work, which would increase their efficiency?—Yes, it would increase their efficiency in my opinion.

2248. To which of those two do you attach most weight?—I think to the opportunity of increasing their efficiency and getting their interest in the work which they are doing. I think that is the whole substance of it.

2249. *Mr. Bell*: But is there anything under the Trade Boards to prevent you paying for an increase of efficiency?—If your workrooms are losing thousands a year you cannot very well throw much more away.

2250. I want to ask you a question about that. With the same rates in operation have you not made a profit in previous years?—I am afraid I could not answer that question. Have we, with the same operations? We did not have the same operations, did we?

2251. I said, with the same rates in operation.—If we have the same rates in operation without the Trade Board, can we make a profit; is that the point?

2252. No, I said: With the same rates in operation, have you never made a profit?—But we did not have the same rates. I could not say they were the same rates in operation without a Trade Board. I do not think we ever paid a girl of 14 9s. per week, or whatever the wage was. I do not think we did that, because her economic value would be about 2s. 6d. When I came to look into things I found where this money was going, and I said: "Get rid of them; we cannot afford to carry it."

2253. *Mr. MacCallum Scott*: How long has the Board been in operation?—About 18 months, I suppose.

2254. *Lord Weir*: I should like to put my question to you again: Supposing you take any one product of your workroom—let us say repairing a skirt—assuming that in 1914 your wage cost for that was 10s., what is it to-day, and of the difference how much is due to the general inflation in values, and what is due to the Trade Boards? Is it possible for you to answer that?—May I put it in this way? I am speaking as a general manager. If you have not got the same energy put into that, although the rate of wages is the same, the cost will be more. May I ask my practical person who is here? (*Mr. Jackson*): Might I say, while Mr. Pegg is getting his answer ready, that we do not consider that any age is too high for adequate service, and it comes back to the old question of output. According to the evidence that I have, the output in the workrooms has decreased by the introduction of the wage for age with the automatic rises, and that has been one of the main causes which added to the costs of alterations and products in workrooms, in the West End of London, particularly. It has been the fall in the output consequent upon the lack of ambition on the part of the employee which is caused by the automatic rise each year. If you had the output and the efficiency of the worker which you had before the war, I think there is no doubt about it that conditions might improve.

2255. *Sir Arthur Pease*: Had not the output gone down before there was any question of a Trade Board? (*Mr. Pegg*): No. (*Mr. Jackson*): No, I should give an emphatic answer to that. Before the Trade Board came into the workrooms there was no decrease in the output.

2256. Not compared with pre-war?—Not compared with pre-war, except that during the war you might have found that certain firms had to take into their

16 November, 1921.]

Mr. T. ERNEST JACKSON and Mr. E. J. PEGG.

[Continued.]

workrooms a less skilled type of employee, because they were busy and many of the employees went off into munitions, where they could earn more money, and they had to take workers where they could. During the war there was that experience.

2257. *Chairman*: That was dilution.—Yes.

2258. *Mr. Pegg*: Is it possible for your Association to support that with actual figures?—Actual figures as to output before the war?

2259. You said that on the application of the Trade Board system to the business, production went down. That statement, of course, would be based upon certain experience.—Quite so.

2260. Is it possible to demonstrate that experience by any sort of figures?—I will endeavour to secure the figures for the Committee and post them on to you.

2261. *Chairman*: Have you got your answer ready, Mr. Pegg?—(Mr. Pegg): I thought the question had been answered.

2262. *Lord Weir*: My question is very simple indeed. I said: Take a cost of 10s. in 1914, and assume that everything is nominally double to-day and that that ought to be 20s.—I am only speaking of the wage cost: Is the wage cost 20s. or is it 30s., and of the 10s. difference do you attribute it to the Trade Board or to what do you attribute it?—It is just this. The wages pre-war were on a lower basis, and they are on a different basis to-day. I do not think you quite follow the point. You would not have two skirts alike in a workroom. It is not a factory.

2263. But it is quite conceivable that you have to repair the same kind of skirt now as in 1914?—No, we would not be doing repairs, we would be doing alterations. Alterations is a different thing. It is not like producing a thing by the gross in a factory.

2264. *Dame Adelaide Anderson*: You mean that the fashion for the individual article has changed and the work put into a skirt would be different?—Yes. You would not have two of the same kind of garment in stock probably.

Lord Weir: I think you must assume that you would have to do something the same in 1914 as now. Can you not think of any example?—?

2265. *Mrs. Lyttelton*: Would you take payment by time for something?—I will help the Committee all I can, only I am a staff manager and I have some thousands of staff, and the workroom is only a side issue; but I would be very pleased to answer anything to the best of my ability.

2266. *Chairman*: It only comes to this, I think: what percentage of the increased price do you put down to Trade Boards?—I should say roughly one-third.

2267. *Lord Weir*: Of the wage cost?—Yes. (Mr. Jackson): The figures which are given me are that work costing 21s. in 1914 would to-day cost 42s.—precisely the same work. That is 100 per cent. increase on wages, as compared with 1914, for the same actual work. The figures as to output we cannot give at the moment, but we will endeavour to give you figures as to output.

2268. *Sir Arthur Pease*: For the same time do you mean, or the same work?—For the same work.

2269. *Chairman*: We had better get back into the main stream of your evidence. You had something to tell us about the time occupied in altering the rates?—Yes. We simply referred to that as it is our experience in the case of the Grocery and Provision Trade Board that the time which is taken to get the rates operated or varied is too long. You have that case of the Board which I have just quoted, where the rates were practically determined in November of last year; they were not sent forward to the Minister for his confirmation until the spring of this year, when the cost of living had considerably fallen, and it was on that ground that the Minister referred them back to the Board for reconsideration. We do feel that the time in which rates can be varied is much too long. It applies both ways, to the employees and the employers of course; but when agreements are made between firms and their employees for a rise or a fall in wages, certainly the rise is

frequently made retrospective, but the reduction is never made retrospective. Under the Trade Board, of course, you have the situation of wages being fairly high at a time when the cost of living has fallen, and the cost of production in the particular trade still remains high, and enormously affects the trade.

2270. You have no special suggestion to make as to time?—We have no suggestion as to time. We feel that the whole Trade Board system requires not only reconsideration, but, possibly, replacement, and we are not prepared at the moment to put up any definite suggestion for the re-modelling of Trade Boards.

2271. Then what about expense?—As to the expense of working, we chiefly want to refer to the time which is occupied, particularly by employers, in Trade Board matters. We find that we are summoned to a large number of conferences, and the meetings very frequently stand adjourned—meetings which employees attend at the expense of the Government from all over the country, and there is usually much discussion as to the scope and definition of a Trade Board which might very well be done without such a meeting. We practically have to adjourn at this preliminary conference because the section of employers in the room feel either that they ought to have a separate Trade Board, or that there ought to be other sections brought in. Then again, when the Trade Board is actually formed, the employers' time occupied in sitting upon the board is also increasingly heavy, and if the Minister carries out his plan of applying the Trade Boards throughout the distributive trades, we shall be in the position of having to staff a large number of Boards with employers, and occupy their time in that way.

2272. *Mr. Pegg*: You will appreciate that whenever you have negotiating machinery it involves the employers' and workmen's representatives giving the necessary time to give effect to the machinery?—Quite.

2273. Do you suggest that in your Trade Board arrangements that is excessive, in comparison with what generally obtains in other industries?—Much more excessive. If you are negotiating conditions for your own particular group of firms, it can be done in a much quicker way than by fixing up rates by the machinery of a Trade Board, which is going to cover the whole country, or certainly a much larger section of the country.

2274. And that would probably be simplified by your suggestion of three Boards only for the distributive trades?—It would simplify it from our point of view, certainly, but we should prefer not three Boards, but one Board for the whole of the distributive trades.

2275. *Chairman*: How would you fix a national minimum wage by one Board?—It need not necessarily be national in the sense that it would be one rate applying to every district all over the country, but it would have to be graded possibly by districts according to the cost of living.

2276. Do you suggest that it should apply to all trades, or only the distributive trades?—Our alternative suggestion—would be a national minimum wage which should apply to the lowest grade of worker in each district, the districts to be determined by some such method as a Royal Commission.

2277. That would involve a further very careful inquiry?—A very careful inquiry.

2278. I think in Australia it took some years to make that inquiry, and the results have not yet been approved even?—Do you mean an unvariable minimum wage?

2279. You would have some machinery for varying it if goods got very much dearer, or the reverse?—A minimum wage which would rise and fall with the cost of living automatically—which would require no committee to supervise it, and require nothing but a bare announcement of the cost of living figure.

2280. The cost of living figure is not always undisputed, is it?—We would suggest that the method

16 November, 1921.]

Mr. T. ERNEST JACKSON and Mr. E. J. PEGG.

[Continued.]

whereby that figure is prepared should be investigated, and if possible a better figure secured, and it should be accepted by all parties.

2281. That would involve a further inquiry?—Of course the whole question of the fixing of wages by the State is so important that the most exhaustive and careful inquiries are necessary. You have under the Trade Board system a fixing of wages practically by the State for a particular section of the trade—I am speaking now of distribution. The result is if you fix for that particular trade too high a minimum rate, or even a standard rate, as Boards in other trades are said to have fixed, you may take it out of its economic relationship with other sections of the same trade. That is the whole difficulty. The moment you set a very high standard of minimum rate in the grocery and provision trade, you would automatically force throughout the distributive trades a very high minimum rate upon other sections of distribution. They are so inter-related and connected that the wage fixed in one trade forms the basis of negotiation for a higher rate in another section of what is, after all, the one trade, salesmanship.

2282. I do not doubt that; I was only wondering whether you had considered the tremendous task which you are suggesting when you ask for a national minimum wage. I suppose it would extend to all the trades, including such people as miners, and so on, who would put their minimum very high probably?—I think the output of energy required to secure a national minimum wage might be about 50 per cent. of that which is now exhausted on the very elaborate Trade Board system per annum. I think not only would you save 50 per cent. of the present output of energy of your members on Trade Boards, but you would save a considerable amount of Government expense and the time of Government staff.

2283. *Mr. Pugh*: But is there really so very much difference between the machinery of the Boards and the ordinary machinery of negotiation in other industries, excepting that the Trade Board decisions are made compulsory by the State, and in the other industries they are not? May I put it in this way: supposing you made decisions arrived at by other Wages Boards which exist in other industries compulsory, would not they be in very much the same position as your Trade Boards are?—Certainly. There is no objection to wage rates which are agreed being made legally compulsory, because it does protect the good employer against the unscrupulous employer, and we feel that there should be some method of protecting the employees against sweating; and it is for that reason we say that whilst the Trade Board system brings chaos into our business, and that to proceed on the lines indicated will bring still greater chaos, we put to you the suggestion of a full minimum wage as an alternative, in order to secure that standard of life which is necessary for the employee.

2284. My point is that I do not see why there should be very much greater difficulty in applying machinery of negotiation collectively in the distributive trades than there is in other industries, provided that the methods of applying the machinery were similar. The essential difference seems to me to be that in the one case your decisions are made compulsory and in the other case they are not compulsory?—There is that difference in fact, but in the distributive trades I am pointing out that you will have so many different minimum rates applying through one business house. Under the machinery to which you refer in other trades, you practically only have one rate. I take it, for one grade of labour throughout the whole of the trade.

2285. What I am trying to get at is this, whether the difficulties which you put before us are difficulties arising from the application of the machine, or from the machine itself?—They are certainly not difficulties which arise from the application of the machine, but from the machine itself, and that is

by reason of having too many machines for one trade. That is the whole of our difficulty.

2286. I have had a great deal of experience of Wages Boards, but I have not yet been able to understand why you should have greater difficulty in respect of your negotiating machinery in the trades which you represent than we have in other very important trades. I can conceive difficulty possibly arising from the compulsory factor, but it does appear to me from the evidence which has been submitted to the Committee up to the present that the difficulty is not in the Board itself, but in the mode of application, and possibly in some cases it is owing to the constitution of the Board, it having possibly too many or too few members. I put that forward because there seems to be an important distinction between an objection to the Boards as such and justifiable complaints as to the way in which they are utilised. You appreciate the importance of the difference, do you not?—Yes, I quite appreciate it, and the objection is, of course, to the way in which the Boards are used, and the large number of Boards we are threatened with. Possibly we are crying out before we are hurt, but we know what the plans are, and we are asking the Committee to consider what will be the position if those plans be carried out.

2287. *Chairman*: You mean apart from that you would have no objection to the Trade Boards?—Quite so.

2288. *Dame Adelaide Anderson*: Does it partly arise from not being used to wages consideration jointly with the workers?—I mean not being used to working out agreements? Perhaps these other trades of which Mr. Pugh was speaking have slowly evolved their own machinery. I am trying to find out what the difficulty is?—They are, of course, highly organised, and they are able through their higher organisation and long experience to have their agreements honoured and carried out throughout the trade.

2289. Does not that show all the more urgency for regulation of the character of the Trade Boards where there has been that slow growth of self-government?—We quite agree that there should be more regulating machinery; it is simply on the question of what that machinery is to be that we differ from the Trade Boards. They do not, in our opinion, meet the situation.

2290. *Chairman*: You wanted to say a word about suspending the operation of the Act, did you not?—Yes. We desire to urge that this Committee should seriously consider recommending that no further Trade Boards should be applied to the distributive trades. The Grocery and Provision Trade Board, as I pointed out before, is operating and functioning, and it is anticipated that those rates will shortly come into operation. We urge that until some complete revision of the Trade Board machinery, or, as we suggest, the statutory alternative of a national minimum wage, takes its place, no further Trade Boards should be formed. I have described in detail how it will affect the large stores, and the absolute chaos which will result if the application of the Trade Boards to the distributive trades should be carried out completely, and I want to urge upon the Committee that that shall not be proceeded with until, at least, the Report of your Committee is available, and, if possible, not even after that, until some alternative is found to the Trade Boards.

2291. *Lord Weir*: You are interested in the grocery trade, in which these things are pending now; will it constitute any grave difficulty in your large stores?—The existence of the Grocery Trade Board will not; it will simply mean that it will fix a rate which will immediately become operative, and which will be paid to all employees in the grocery and provision departments. It will obviously follow that certain grades of labour which come under that Board will then immediately affect the same grades of labour in other departments of the stores: that will be the immediate effect when it comes into operation; but that will not constitute a difficulty. The

16 November, 1921.]

Mr. T. ERNEST JACKSON and Mr. E. J. PEGG.

[Continued.]

difficulty will be if the three Boards already defined, meat distribution, fish, poultry, game and rabbits, fruit, flower and vegetable, are brought into operation, because you will then have four Trade Boards in what is commonly called the food department of the stores.

2292. *Mr. Bell:* You made rather a point of the question of the wages as fixed by the Trade Board affecting employment: are you of opinion that the wages in an industry covered by a Trade Board are higher than they are in an industry which is not covered by a Trade Board?—I would not submit to the Committee that the existence of Trade Boards had appreciably affected employment, but it does in some ways, and it will in this way: we will assume that a store of the type I have quoted, which is situated in the West End of London, has to attract to its employ a highly efficient and highly qualified type of labour: it has to pay a wage which will attract that type of employee to come in from the outlying parts of London and take employment in that store; and to do that it has to pay a higher rate than will be paid in the suburban districts of London. Under the Trade Board rates the moment those become applicable that store will have to pay higher than

the Trade Board rate in order to attract the right quality of labour.

2293. There are certain industries in the country which are not affected by the Trade Boards Act, while there are others that are; in which industry is the wage the highest, is it higher in those affected by the Trade Boards or in those not affected?—It is quite impossible to say off-hand what industries are affected by Trade Boards: you might find one which is not affected paying higher wages than one which is affected, and there are so many affected and so many unaffected that it will cut both ways.

2294. You would say, generally speaking, that those affected pay higher wages than those not affected, would you not?—I should suggest, on the contrary, that in certain kinds of trades, such as the making-up trades, the wages have been forced to an uneconomic height by Trade Boards, and have consequently resulted in a certain amount of unemployment, but I would not say that that unemployment in those trades has been due to that factor, because there has been the other factor of the reduction of the purchasing power of the public.

Chairman: We are much obliged to you for your evidence.

(The Witnesses withdrew.)

Mr. A. H. WOOLLEY and Mr. F. W. CHRISTALL, Miss SUSAN LAWRENCE and Mrs. ———, a Middlewoman, called and examined.

Mr. Woolley handed in the following statement on behalf of the employers' side of the Lace and Net Finishing Trade Board:—

We have been doing our best for about eleven years to put up with the serious defects of the Trade Board system because it has one great redeeming feature, i.e., it gives power to take legal proceedings to compel the would-be sweater among employers to pay the minimum rates fixed and so tends to eliminate the undesirable or incapable employer. For this reason we have been content to wait for amendments to the Act to rid us of the serious difficulties which it has imposed on us, owing to the fact that when it was drafted Labour demagogues and philanthropic cranks only were consulted and employers were ignored.

Now that amendments are in prospect we make it a condition of our continued co-operation that if any new legislation is enacted effective provision shall be made therein for dealing with the defects referred to, which come under the three following heads:—

- (1) Middlewomen and middlemen.
- (2) Foreign competition.
- (3) New provisions for prosecution of offenders.

Middlewomen and Middlemen.—The amendment required under this heading is made the subject of a separate document, enclosed herewith, from which it will be seen that the Lace Finishing Trade Board as a whole will not continue to function unless a Special Clause, which all sides of the Board deem necessary, is included in any new legislation.

Foreign Competition.—The foreign competition which is most prejudicial to the Lace Finishing Industry is that of an exactly similar industry in France, in which country the scale of wages paid for precisely similar work is, at the normal or pre-war rate of exchange, actually less than half the rates fixed by the Board, whilst at the present rate of exchange it is less than one-quarter of these rates. This competition has entirely prevented Nottingham for a long time from producing the best class of laces in competition with Calais, as these best goods contain the largest quantity of handwork, which handwork is done by the outworkers for whom the Board fixes the rates payable without having any regard to the rates paid in Calais. It is absolutely essential therefore that there shall be new legislation providing that the appointed members shall take into consideration the incidence of the lower rates paid in these similar industries abroad which are competitive in the

markets of the world and in the home market. Failing this, Counter-Vailing Duties must be imposed that will balance the difference between the rates paid abroad and the rates fixed by the Trade Board, so that if we cannot compete in foreign markets we may at least retain our home market.

Prosecution of Offenders.—When all sides of the Trades Board are agreed unanimously, power should be given to the Board to initiate and take charge of prosecutions for underpayment without having to depend upon the permanent officials in London to do this, with the delay or slackness which is usual under the present system. This is urgently necessary in view of the fact that on the ground of economy it is not desirable to increase the staff of inspectors although their numbers are undoubtedly quite inadequate.

Special Statement on the position of Middlewomen and Middlemen.

(1) The Board has no power to fix a rate of commission or other remuneration for middlewomen or middlemen.

(2) Both sides of the Board and the appointed members are unanimously of the opinion that it is urgently necessary in the interests of the workers and the good employers that such power should be given them by Statute.

(3) All the members of the Board have laid their views hereon before the Minister of Labour and the employers' representatives struck (i.e., declined to sit) until the deputation had been received and heard on the matter. This deputation, representative of all three sides of the Board, was received sympathetically, but they were told that nothing could be done without the sanction of Parliament.

(4) Whereupon the members of

The Nottingham Chamber of Commerce,
The Lace and Net Finishers' Association,
The Homeworkers' League

took the matter up and stated a case for a One-Clause Bill to amend the Trade Board Act, to be worded as follows:—

A Bill to Amend the Trade Boards Act, 1909.

To add the following Clause to Paragraph 3 (1) of the Trade Board Act of 1909.

"The Lace Finishing Trade Board may also fix for their trade the minimum rate of

16 November, 1921.]

Mr. A. H. WOOLLEY, Mr. F. W. CHRISTALL,
Miss SUSAN LAWRENCE and Mrs. —

[Continued.]

commission or other remuneration to be paid to middlemen and middlewomen."

Their case was stated in the form of a Petition to the Minister of Labour in which their reasons were very fully set out (see below).

In conclusion if the Clause as drawn is adopted and passed into law we would point out that nobody has any right to object because no trade other than the lace finishing trade will be affected thereby.

Annex to Document No. 4.

Copy of a letter sent to the Minister of Labour.

Sir,

The members of

The Nottingham Chamber of Commerce,
The Nottingham Lace and Net Finishers' Association, and

The Nottingham Homeworkers' League

desire to draw your attention to difficulties that have arisen in the lace finishing trade owing to the fact that no cognisance is taken of middlewomen in the "Trade Board Acts, 1909 and 1918." In consequence no remuneration for middlewomen can be fixed by the Lace Finishing Trade Board. This anomalous position of the middlewomen results in their being grossly underpaid by the bad employers, thus penalising the good employers, and inflicting hardship on the workers to whom the middlewomen distribute the work. To state the case fully, the position is as follows:—

A great part of the lace finishing is done by outworkers. In a majority of cases the work is given out to them not by the owners of warehouses, but by middlewomen, who receive work from warehouses and distribute it to the workers. In the eye of the law these middlewomen are employers, who are responsible for paying the correct Trade Board rates to the workers and also for their insurance under the National Health Insurance Act. The position of many of the women concerned is such as not to enable them to discharge adequately the duties of employers. The middlewoman is paid by a commission varying from 25 per cent. in the case of good employers to as little as 15 per cent., or even, in some instances, 10 per cent. The quantity of work given to these women is in many cases small, amounting to perhaps from £5 to £10 worth of work per week. It will thus be seen that a middlewoman who only receives 15 per cent. on such sums is herself in the position of a poorly paid worker. Consequently it is not surprising that cases occur and have been reported by inspectors, in which the middlewomen have not paid the Trade Board rates to the workers, and where the latter have not been properly insured, but there is reason to believe that the cases which are not discovered and reported are much more numerous.

We feel—and we understand that this opinion is shared by responsible officials—that the poverty of many of the middlewomen resulting from their underpayment makes it exceedingly difficult to enforce either the Trade Board Act or the National Health Insurance Act.

The Lace Finishing Trade Board has considered this question, and thinks that these evils would be to a great extent mitigated if they had the power to fix a proper commission for middlewomen.

We understand that both sides of the Lace Finishing Trade Board, and the appointed members thereon, are unanimous on this question, and have laid their views thereon before the Ministry of Labour, both by deputation and through their secretary.

We desire to associate ourselves with them as representing the opinion of both workers and employers, and to ask that special legislation should be introduced, giving the Lace Finishing Trade Board of Nottingham the power to fix the minimum commission to be paid to middlewomen.

We venture to appeal hereto a draft (see above in special statement on the position of middlemen and middlewomen) of a one-Clause Bill which would have the desired effect, and from which it will be seen that *no trade other than the lace finishing trade will be affected thereby*. This we respectfully urge should be passed by Parliament at the earliest possible moment in order to remove the anomaly, and the resulting hardships and abuses complained of.

Miss Susan Lawrence handed in the following statement on behalf of the workers' side of the Lace and Net Finishing Trade Board.

I am the secretary of the workers' side of the Lace Finishing Trade Board, and secretary of the Home Workers League, Nottingham branch.

The Home Workers League is not a trade union. Attempts were made at different times by the Lace Operatives Society, and by the National Federation of Women Workers to organise the outworkers. These attempts not having been successful, an attempt was made, with the knowledge and approval of the union concerned, to form a society with a subscription of one penny a week, in order to accustom the workers to corporate action and to assist the trade union representatives in maintaining and enforcing an adequate rate. Additional funds were furnished through the Anti-Sweating League. The experiment was successful, and immediately before the late depression in trade, the leading homeworkers concluded that it would be practicable to enrol the homeworkers on a self-supporting basis. The trade depression, however, and the consequent extreme poverty of the homeworkers, made it advisable to postpone this experiment.

The position of the middlewomen has already occupied the anxious attention of the Board. The recognised trade commission is 25 per cent. on the work given out. This agreement has been printed as a matter of information on the Trade Board notices, and is customarily observed in Nottingham.

Workers who fetch their own work are paid a 15 per cent. commission. This is legally enforceable, whereas the 25 per cent. for the middlewomen cannot be enforced. Instances have come to the notice of the workers and the Trade Boards where employers pay the middlewomen 15 per cent. only or even 10 per cent. There are a large number of persons who act as middlewomen in a very small way. The amount of lace given out varies greatly from week to week; when little lace is given out they act as outworkers, when more lace is given out they employ others. The work of the middlewomen is important and difficult. She has to measure the lace and furnish particulars to the outworkers. A glance at the piece price list fixed will show that the work is not altogether a simple matter. Further, she is responsible for the health insurance of the outworkers, and has to furnish the employer's contribution. It will be seen that a middlewoman with a small amount of work and a 15 per cent. commission is actually in a worse position than the workers she employs. She cannot well refuse to take the extra work offered her, and she would, in such a case, run the risk of being without work at all. An unscrupulous employer is therefore under a strong inducement to employ no outworkers.

If he has 30 outworkers and turns 10 of them into middlewomen, he will save 15 per cent. on the 20; he will save all expense and trouble under the Health Insurance Act, and will be rid of his duties as an employer under the Trade Board Act and the particular clauses of the Factory Acts.

From the point of view of the outworker it becomes almost impossible to enforce either the Trade Board Act or the Health Insurance; as it is idle to establish a claim for arrears against a woman who is herself in extreme poverty.

I desire to put in the following extract from the report on administration made by the officials of the Lace Finishing Board on December 31st, 1919,

16 November, 1921.]

Mr. A. H. WOOLLEY, Mr. F. W. CHRISTALL,
Miss SUSAN LAWRENCE and Mrs. —

[Continued.]

and to draw particular attention to the concluding paragraphs:—

"There is a very general absence of adequate records by the middlewomen, and although the Act of 1918 makes it an offence to fail to keep such records of wages as are necessary to show that the provisions of the Act are being complied with, it is felt that a prosecution on this ground only might be subject to the risk of dismissal on the ground of its being merely technical. The dismissal of one or two such cases would seriously diminish the value of the provision in the Act in its use by officers in securing the keeping of records.

"In the absence of records, the officers are dependent for their evidence as to underpayment upon the actual workers, and frequently the outworkers are very reluctant to give evidence against their middlewomen, where this might result in loss of work and also in appearing personally as a witness in proceedings against the middlewoman.

"Sources of Complaint."

"A certain amount of information as to underpayment comes from the middlewomen themselves, by way of complaint of the rates paid to them by the warehouse. Whether or not the prosecution of a middleworker on her own complaint would be invidious, any such action would certainly stop this increasingly valuable source of information as to underpayment.

"The investigators have found of late a marked increase of confidence shown towards them by the middlewomen, and it has been felt that it would be difficult to prosecute a middlewoman who has complained generally of underpayment by the warehouse and who has gratuitously given her own case away in detail.

"Efforts were made in 1918, in the case of *Rex v. Field*, to prosecute the warehouse direct for aiding and abetting without proceeding first against the middlewoman, who had given much valuable help and information. The Court, however, definitely disallowed this procedure in the absence of a decision from the High Court.

"It has further been felt that where underpayment by a warehouse has involved a number of middlewomen in the case, an injustice may be done by prosecuting only such of these as have kept adequate records to serve as evidence.

"On the other hand, if proceedings are contemplated against a middlewoman who has failed to keep records the total evidence of the workers has to be relied upon entirely. This has repeatedly been found to be useless as the worker is prepared to swear to a general underpayment, *e.g.*, on 1 or 2 thread work, but is unable to give specific evidence as to particular pieces of work, such as is definitely in the form of a summary. It therefore devolves upon the officer to visit both worker and middlewoman with sufficient frequency to be able to give general evidence as to specification of certain items of work and the prices paid for them—in other words, to be on the spot when the work is brought back to the middleworker and paid for.

"*Conclusion.*—In these circumstances, inspection has resolved itself very largely into securing arrears of wages to workers in cases where underpayment could be discovered, and at the same time in getting arrears paid to the middleworker by the warehouse, where the latter has been actually, though not legally, responsible for the underpayment of the outworkers. The cases in which middleworkers who are paid proper rates and commission by the warehouse deliberately underpay their outworkers are comparatively rare."

The section of the Board representing the employers and middlewomen were in full agreement with the workers' side on this question, and the Board as a whole made continued applications to the

Minister both by letter and by deputation. The following letters to and from the Minister set out the position of the Board and the Minister:—

Copy of Letter dated 25th October, 1920.

"From the Secretary Office of Trade Boards,
Office of Trade Boards,

7-11, Old Bailey, E.C.

"To the Secretary, Ministry of Labour,
Montagu House,
Whitehall, S.W.1.

"Sir,

"I am directed by the Lace Finishing Trade Board to refer to the Deputation which was received at the Ministry of Labour on the 9th February last on the subject of the amendment of the Trade Board Act so as to enable the Trade Board to regulate the rates payable to middleworkers in the lace finishing trade, and to point out that, so far as the Trade Board is aware, no action has at present been taken by the Minister of Labour in this connection.

"I am to state that the Trade Board consider the matter one of extreme urgency and that steps should be taken immediately to bring middleworkers within the scope of the Trade Board Acts. If it is not possible to effect this by general legislation, owing to the incidence of such general legislation upon other trades, the Board urge that special legislation affecting only the lace finishing trade should be promoted by the Minister. In this connection I am instructed to transmit for the consideration of the Minister, a form of words which would, in the opinion of the Board, give effect to their proposals and which the Board suggest should be incorporated in a Bill to amend the Trade Boards Act, 1909, and to urge that a Bill in this form should be introduced by the Minister in the present session.

"I am to add that in consequence of the present inability of the Trade Board to fix appropriate rates to be paid by the warehouse employers to middleworkers these middleworkers are being paid at rates considerably lower than those which should obtain. In some cases they are receiving only 15 per cent. and in some cases as little as 10 per cent. above the minimum rates payable to single outworkers under the determination of the Trade Board, and as a result the insurance contributions due in respect of workers employed by such middleworkers are, in many cases, not being paid.

"I am, Sir,

(Signed) H. M. MONTGOMERIE,
for Secretary."

Copy of Letter dated 8th April, 1921, from Ministry of Labour, Montagu House, Whitehall, S.W.1.

"To the Secretary, Lace Finishing Trade Board,
5 Chancery Lane, W.C.

"Sir,

"I am directed by the Minister of Labour to refer to your letter of 25th October, 1920, on the subject of the amendment of the Trade Board Acts with a view to enabling the Lace Finishing Trade Board to fix the rates payable to middleworkers in the lace finishing trade.

"In reply I am to state that this matter has been carefully considered by the Minister, but in view of the extreme difficulty at the present time of introducing special legislation to enable the Trade Board to fix rates for the workers in question, the Minister regrets that he is unable to hold out any hope of early action in the matter.

"I am however, to state that the representations made by the Trade Board are being borne in mind, and that opportunity is being taken when investigating trades for the purpose of applying the Trade Board Acts, to enquire into the position of middleworkers if employed in such trade, so that the Department will be in a position to deal with the question amending the Act in this respect in conjunction with any other

16 November, 1921.]

Mr. A. H. WOOLLEY, Mr. F. W. CHRISTALL,
Miss SUSAN LAWRENCE and Mrs. —

[Continued.]

amendments which a longer experience of the operation of the provisions of the Act of 1918 may indicate as being desirable.

"I am, Sir,

(Signed) F. W. LEGGETT."

The attitude of the Minister, as set out in other correspondence between the Minister and the Home-workers' League, is understood to be generally favourable to the proposal made by the Lace Board; the Minister considers, however, that other trades may be in the same position, and that it would be desirable, if anything is done, that he should take powers to deal with middlewomen and men generally.

In this correspondence certain Birmingham trades—pin, hook and eye, and buttons—were mentioned.

I venture to suggest that such a course would be unwise.

In Nottingham, employers, employed and middlewomen are in agreement, and the opinion of organised labour in the locality is favourable.

In support of this I desire to quote the attached letter from the Nottingham Trades and Labour Council. In other trades, however, this is not so. In certain trades even such permissive power would be strongly resented by organised labour, and such regulation might in itself be highly undesirable.

I do not, of course, speak for such trades, but it is a matter of common knowledge that a contrary policy is advocated by them, and has been supported by the Trade Union Congress.

I may, however, claim to speak for the pin, hook and eye, and the button outworkers, both as workers' representative on these Boards and as representing the Birmingham Branch of the Home-workers' League.

It is my opinion that it would be inopportune to deal with the Birmingham middlewomen at the moment, and that the proposal to take such powers would be opposed.

I suggest, therefore, that it would be best to deal with the trades only where public opinion is strong and united, and that to introduce a clause giving general powers to the Minister would be ill-advised.*

Mrs. A. handed in the following statement:—

Before 1919 I was paid a little above the amount I had to pay in wages to the women. It is difficult to estimate how much this came to, but I believe not more than 15 per cent.

In June, 1919, a change was made, and I had a fixed commission of 20 per cent. This continued until February, 1921. The women then received a rise of 1d. in the shilling, and this 1d. in the shilling was deducted from my commission, I receiving only 12½ per cent. Recently the wages of the women have been reduced, and I have been successful in re-obtaining a commission of 15 per cent.

My husband is dependent upon my earnings, and helps me to fetch and carry the work from the warehouse. I give out the lace to the women, the numbers of whom depend upon how much work I have. I have had as many as 30 women. I have now only two or three employed. I have to part the breadths for the women, and make out their books. I have to fetch it from them and take it back to the warehouse.

I have brought my employer's book showing commission.

2295. *Chairman (to Mr. Woolley):* I think you are a member of the Lace and Net Finishing Trade Board?—(Mr. Woolley): Mr. Christall and I represent the employers on the Lace Finishing Trade Board.

* Miss Lawrence also handed in the following copy of a letter from the Secretary of the Amalgamated Society of Operative Lace Makers, Nottingham, dated 13th November, 1921:—

DEAR MISS LAWRENCE,

I am certainly of the opinion that a minimum should be fixed for middlewomen for reasons far too numerous to state in this letter. The wonder is that this class of worker was not brought under the control of the Trade Board long ago; the better class of employers would welcome such a course, I am sure.

(Sgd.) C. WARBLE, Secretary.

2296. Are you yourself an employer?—Yes, I am President of the Lace Finishers' Association, a Chairman of the Board, and also a member of the Nottingham Chamber of Commerce. We put our case very fully before you in writing, and I understand it has been circulated, so in order to save your time I should like to know how far it has been read, marked, learned and inwardly digested. We agree with Trade Boards generally; we are not coming here to oppose them, but we have some very strong objections to their present defects, which we must have remedied. We have been very specific, and I should like to know how far you have considered the points which we have raised.

2297. We have carefully read your statement, and we are making it part of your evidence.—Then would it not be best for you to cross-examine us on our statement?

2298. That is more or less what I am proposing to do—not to cross-examine you, but just to put to you a few points on the statement. First, with regard to the middlemen and middlewomen: you are very strongly in favour of the Board having power to fix rates for middlemen and middlewomen?—Yes, and I put it much more strongly than that. This is the oldest Trade Board but one that there is, and all sides of the Board are united on this question. We have also the support of the Nottingham Chamber of Commerce in what we are asking for, as well as the association of employers. We regard this matter very seriously, and we say that, as we are running the industry, and not Parliament or a bureaucracy up here, when we are all unanimous as to what is in the interests of the trade as a whole, now that we have the opportunity which we have been waiting for of getting legislation which we think has been required the whole time, we must either have it or we do not function.

2299. I do not think you need put it in that way. You come here to put your points as a reasonable man, and we want to know what your views are, not what you are going to do. Will you kindly tell me about the middlemen? You desire to have power to fix the rates for middlemen and middlewomen?—Quite so.

2300. Is that because they are now underpaid, or for some other reason?—It is because some of them are underpaid. The merit of the Trade Board is that it brings the shady employer into line, and unless we have power to fix the remuneration of middlewomen we have no power to make the worst employers pay more than they do.

2301. Are the good employers paying more?—They are paying more all the time, and they are handicapped because they have no power to make the bad employers pay the remuneration which they ought.

2302. The object is to bring the bad employer into line with the better employer, and to see that he pays his middlewomen properly?—Exactly.

2303. Is it a question of raising the percentage, or what is it?—It would probably take that form.

2304. I think they are paid by percentage?—Yes, they are paid by percentage.

2305. Do you think the percentage ought to be higher?—We do not think the percentage ought to be higher than the good employers pay, but what we have indicated as a pious wish is that the middlewoman should be brought within the scope of the Act. Up to now she has been ignored because the employers in the trade were ignored when the Bill was first drafted. If we had been consulted instead of the demagogues and cranks, this would not have happened at all.

2306. *Lord Weir:* Is there any difference between the efficiency of middlemen and middlewomen?—There is not very much, because middlewomen for the most part do not do the work themselves, they only distribute it and collect it.

2307. Even distribution and collection can be well or badly done?—Any considerations of that kind

16 November, 1921.]

Mr. A. H. WOOLLEY, Mr. F. W. CHRISTALL,
Miss SUSAN LAWRENCE and Mrs. —

[Continued.]

would find their level by a middlewoman being employed or not being employed, without entering into the question of remuneration at all.

2308. Then they would not be remunerated according to their efficiency?—They would either get more or less work, according to their efficiency.

2309. It would find its level in remuneration in that way?—Yes.

2310. *Mr. Bell*: When you say that the middlewoman merely collects and distributes work and then collects it again, is she not then an employer?—Technically she is, and that has been the whole difficulty. That is why we specifically ask for this for the lace trade only, because it stands in a unique position. The middlewoman in the lace trade occupies a position which is not analogous, I think, to that of any other trade. We want a clause for ourselves only, and we specifically ask that because we know that if you begin to lump up our case with any other we shall not have what we want. We think we are big enough and ought to have what we want, without jeopardising our claim by bracketing it with that of any other trade.

2311. Would it meet your case if the middlewoman, or any other class of woman who employed any other person doing lace work, was considered an employer under the Act?—She is an employer under the Act, and she will continue to be an employer under the Act if it is amended as we suggest. If you have our case before you you will see what we have suggested to the Ministry of Labour. We have asked them to add the following clause to paragraph 3 (3) of the Trade Board Act of 1909: "The Lace Finishing Trade Board may also fix for their trade the minimum rate of commission or other remuneration to be paid to middlemen and middlewomen." That stands by itself, and affects no one else, but we are all unanimous that it is necessary, and we ask for it, and with all due deference to my Lord the Chairman, we demand it.

2312. *Chairman*: It is no good your demanding anything of me; it is Parliament that will settle this matter.—I am speaking through you to Parliament.

2313. You have come here to put your point to us, and it is for us to make recommendations.—I say this with all respect; I only want to show that we are in deadly earnest about it.

2314. I assume that, or you would not have taken the trouble to come?—(*Mr. Cristall*): We think it is a point in our favour that the appointed members are quite unanimous on this subject, as also are the employers and the employees.

2315. The whole of your Board takes this view?—Yes, the whole of our Board.

2316. *Dame Adelaide Anderson*: Has it been raised by any other trade?—(*Mr. Woolley*): I could not tell you that, but we do not want to be concerned with it if it has, because that would complicate the issue.

2317. *Mr. Pugh*: I suppose the middlemen and middlewomen are absolutely necessary to your trade?—Yes, and that is what the framers of the Act failed to appreciate.

2318. And the workers themselves actually come under the Board?—Yes.

2319. I do not think the middlemen and middlewomen come under the Board?—The Act does not permit of it; they do not exist for the purposes of the Act.

2320. Then, for all practical purposes, it is only the first employer and the home-worker that come under it, and the middle people you cannot touch?—Their existence was purposely ignored by the people who drafted the Bill, very stupidly.

2321. *Chairman*: You are not the only trade that makes this request?—If it is kept to the lace trade, that does not arise.

2322. *Dame Adelaide Anderson*: With power to extend to other industries, as in the first Act? In the Act of 1909 the Secretary of State has power to extend the Trade Boards?—Yes. The middlewomen were not taken cognisance of.

2323. I understand that, I was only saying that the Act gives power by agreement to extend?—Miss Lawrence wants to say something with respect to the middlewomen, so as to release a Witness whom she has here. (*Miss Lawrence*): The point is, that we are all in agreement with regard to the middlewomen. I understand we are not all in agreement with regard to foreign competition, so I thought perhaps you might exhaust the question of the middlewomen first.

2324. *Chairman*: Yes, by all means we shall be glad to hear what you have to say if you want to add anything?—I represent the Home Workers' League, Leeds and Nottingham Branch; it is not a trade union, but it is a society formed under the auspices and with the knowledge of the local trade union for the purpose of forming a sort of first education in corporate action. The Board has long considered the question of middlewomen. The recognised commission is 25 per cent., and that commission is printed on the Trade Board notices proposal, although it has never been put into effect. Workers who fetch their own work are paid a 15 per cent. commission, which is legally enforceable, whereas the 25 per cent. for the middlewomen is not so enforceable. Instances have come to our knowledge where employers pay the middlewomen 15 per cent. only, or even 10 per cent. The amount of lace given out varies greatly from week to week. When little lace is given out, the middlewomen act as outworkers doing the work themselves, and when the employer gives out more than they can do themselves they act as middlewomen and give it out to other people. If the piece prices on lace are before you (and I asked that they might be) you will see that it is not at all a simple matter to fix the prices to be paid, but with regard to the middlewoman she not only has to do that, but she is responsible for the health insurance of the outworker, she is responsible for the correct rate being paid, and she is in the eye of the law an employer. The middlewoman is a very poor woman, and with 15 per cent. commission on say £5 worth of work she is worse off than the worker she employs, although she is, in the eye of the law, an employer, and responsible for those complicated duties under the particulars clauses of the Factory Act, and under the Trade Board Act, and she is also responsible under the Health Insurance Act. A bad employer has therefore a direct incentive to create more middlewomen. If he has 30 outworkers, and turns 10 of them into middlemen, he gets out of the expense and trouble under the Health Insurance Act, he is not directly responsible under the Trade Board Act, and he gets out of the particulars clauses of the Factory Acts. From the outworkers' point of view you cannot enforce the law against these people: it is no use getting an arrears award under the Health Insurance Act, because if the woman is herself very poor she cannot pay it. It is no use getting arrears under the Trade Board Act, because the position is still the same. When you have one sweated worker employing another, you have a position which is absolutely intolerable. I put in with my evidence the statement made by the responsible officials of the Board in their report to the Ministry dated 31st December, 1919. I do not want to read it, but I want to ask that it may be entered on the minutes of the evidence of this Committee. I want also to draw attention to the concluding words of that paragraph, that "the cases in which middleworkers who are paid proper rates and commission by the warehouse deliberately underpay their outworkers are comparatively rare." Those cases are rare. The middlewoman is as honest as anybody else, and if they were not driven by poverty they would rarely do it. During the whole of 1920, and nearly the whole of 1921, we have been agitating that point with the Ministry of Labour. I do not want to take up your time, so I will not read the letters, but I want to ask that the letters sent to and from the Ministry of Labour shall be entered on the minutes of evidence.

16 November, 1921.]

Mr. A. H. WOOLLEY, Mr. F. W. CHRISTALL,
Miss SUSAN LAWRENCE and Mrs. —

[Continued.]

2325. They are on this statement, and we will enter the whole of your statement on the minutes?—Thank you. Then I want to say one word about the last point. The Minister intimated to us that he did not look unfavourably on this, but he had in his mind some general permissive clause giving him power to deal with middlewomen and middlemen generally in this and other trades; and I want to say from my experience of other trades that that would be fatal. In Nottingham we are all agreed. You have heard that the employers' organisation, the Home Workers' League, the Nottingham Trades Council, the Lace Operatives' Society, which has great experience in this business, are all for this change, and the four Members of Parliament for Nottingham are in favour of it; and if this matter goes forward as a Nottingham clause we think it cannot meet with any objection. I think there are certain trades in which outworkers and middlemen are employed where the opinion of organised labour is violently contrary to any such course being taken, and they have had their opinions confirmed by the Trade Union Congress, so there would be great opposition by organised labour to this being general. The Minister referred also to the similar condition in the pin, hook and eye and button trade in Birmingham. Now I represent that: to a certain extent I represent the workers' side on both those Trade Boards, and I am Secretary of the Home Workers' League there. The circumstances of Birmingham are very complicated, and extremely difficult, and, in fact, I may say it would be extremely dangerous to give these powers to the Minister enabling him to apply this to that trade. The result might well be a quarrel between the employers and workers in the pin, hook and eye and button trade. I know that we have not got the home workers into a sufficiently organised state to give us any effective support. We therefore do ask that this should be done for the trades for which we have asked it, and that the Minister should not be given powers to apply it to any trade which does not apply for it.

2326. *Sir Arthur Pease*: When both sides of a trade ask for it?—When there is practical unanimity and strong public support, then you have a case, but I do not want you to prejudice the Nottingham trades by giving the Minister power to drag in trades which do not want it, and where the application of it would only upset our case.

2327. *Chairman*: This clause would not prevent a middlewoman from being an employer, as she is now, technically: she would still be an employer for the purpose of the Insurance Act and the Factory Act?—Yes, but she would no longer be a sweated employer, and I think that would make all the difference.

2328. Supposing she has £5 worth of work, does the whole £5 go to the actual workers?—Probably a little of that would be done by the middlewoman, but we have a middlewoman here who can answer that question.

2329. It would only be done by her when she is the actual worker, I suppose. Does the middlewoman get anything above the agreed commission? If she has got £7 or £8 worth of work, it is all she can do to give it out, but if there is a slack week and she gets only £2 or £3 worth of work, she might perhaps do 15s. or 20s. worth herself. A worker

cannot very well do more than about 30s. worth a week herself.

2330. I wanted to know whether the whole agreed price, apart from the commission, goes to the actual worker, including, of course, the middlewoman if she works herself? Supposing she put out the whole of the work to other people, does she pay the actual workers the whole £5, or does some of it remain with her?—No, the amount given to the workers is fixed by the Trade Board, that is to say, they get the £5, and on top of that she gets her commission.

2331. So that the £5, or whatever sum it is, represents the actual Trade Board wages for the work?—Yes.

2332. And she only gets commission, unless she works herself?—Yes, and if she is at all slack she works herself.

2333. *Mrs. Lyttelton*: Does the middlewoman make more money in the year than the worker?—Supposing you are an outdoor worker, it might suit you to take 30s. worth of work, and do it yourself; but if your employer says: "You have to take £2 or £3 worth of work this week," you have to take it.

2334. *Mr. Bell*: Do the outworkers as a rule do this work as well as attend to their own house duties?—Yes.

2335. So you may have some outworkers who are well satisfied if they get 15s. a week, because that would represent as much time as they could devote to the work?—Yes.

2336. *Chairman*: Have you anything further to add?—We have here a middlewoman who can give evidence, which she can support by books, of really very great hardship in this connection. There is a precedent in Royal Commissions that the names of witnesses should not be published if it is likely that the giving of the evidence would cause harm to them, and it is her strong opinion that if this woman's name and the name of the employer were published in the evidence she would lose her work.

2337. We have not the least desire to ask your witness's name.—This is her summary of evidence. (*Document handed per above.*)

2338. *Mrs. Lyttelton*: I know it is very ignorant of me, but how is it possible to force more work on a person than she cares to do?—(*Mr. Woolley*): I think Miss Lawrence was under a wrong impression when she gave you that idea. It is entirely optional with the middlewoman how much she takes out. It is usually governed by the number of people who work for her, and how much there is reasonable prospect of her getting done.

2339. Then the inducement to be a middlewoman is that on the whole you make more money than if you are an ordinary outworker?—Yes. (*Miss Lawrence*): I say that is not so. The middlewoman who will give evidence will show you that she gets 12½ per cent. on the amount of work, and that she may not make 30s. a week.

2340. Then why is anybody a middlewoman?—Because you have to make your choice between taking the amount of work which it is convenient for the employer that you should take, or not getting any. (*Mr. Woolley*): With deference to Miss Lawrence, that question never arises.

Chairman: I should like to ask this lady her experience.

Mrs. A., called and examined.

2341. *Chairman*: You are a middlewoman?—Yes.

2342. And an employer gives you work to be done?—Yes.

2343. How is it given? What is the form of the order?—We get it in large numbers, perhaps 100 of 70, and we have to divide it up between so many women. The women sometimes come and fetch it, and sometimes we have to run after them, and if it is a special order we have to fetch it from them and take it to the warehouse again.

2344. What fixes the money which is paid to you for that? How do you know the price to be paid for it?—There are tickets with the price and the length on each piece that we get.

2345. What fixes the price which is on those tickets?—For scolloping the prices are from 2d. up to 8½d.

2346. Are those the Trade Board rates?—Yes.

2347. And you get simply a commission on that amount?—Yes, we pay the Trade Board rates and we get a commission on it.

16 November, 1921.]

Mrs. A.

[Continued.]

2348. You take the work to the women and fetch it back again?—Yes.

2349. Does it take all your time fetching and delivering the work?—Yes, with £8 or £10 worth of work it takes all your time distributing it amongst the women.

2350. Are you a married woman?—Yes.

2351. Have you your home work to do besides?—Yes. I start work at about 5 o'clock in the morning.

2352. Is your husband at work?—No, he has not worked for 10 years. He helps me with the work when there is a lot and I could not carry it myself. It would be impossible for me to carry it.

2353. In some cases are the middlewomen women whose husbands are at work?—Yes.

2354. So that in those cases it is an addition to what the husband earns?—Yes.

2355. How much a week do you get by your commission?—It varies from £2 to 50s. if there is £10 worth of work, or we should get 30s. at 15 per cent.

2356. Do you get as much as that as a rule?—We get 12½ per cent., or 1d. in the shilling. I used to get 20 per cent., but now I only get 12½ per cent.

2357. What is it now?—Since that 1d. has been taken off they have given me 15 per cent.; before that 1d. was put on I had 20 per cent.

2358. I want to get at how much a week it brings you in on the average?—It is very difficult to say, because things have been very bad, but about £2 a week. (*Miss Lawrence*): Mrs. A. formerly got 20 per cent., but the workers had a rise of 1d. in the shilling last January, and her commission was instantly reduced by 1d. in the shilling, so that she only got 12½ per cent. Then the workers suffered a reduction in wages, and that lady was successful in getting back the 15 per cent. commission. When the outworkers' money was raised it was taken directly out of her earnings, and here is the book. (*Same handed*). (*Mr. Woolley*): It is because we as employers want to have power to deal with that class of employer that we are so insistent upon what I have been saying.

2359. (*To Miss Lawrence*): That is what you wanted to explain, was it?—(*Miss Lawrence*): Yes.

2360. *Sir Arthur Pease*: It is only an exceptional firm that takes off the 1d., is it?—The good employers dislike this as much as anybody.

2361. It was not the general practice when that 1d. was taken off to take it off the middlewoman all through the trade, was it?—No.

2362. You are only drawing out the point that there being no Trade Board there was no body to enforce that another section of the workers was not prejudiced by the decision. That is what you want to draw out, is it not?—Yes. (*Mr. Woolley*): It is because we are so furious that these things are possible that we are here demanding this in the insistent way in which we are.

2363. *Lord Weir*: Is all the lace given out to the middlewomen?—Some of the workers come and fetch it themselves, but a great deal of it is distributed through the middlewomen.

2364. A big proportion of it?—Yes.

2365. Is that proportion going up or down? Is the middlewoman increasing, or tending to decrease?—I should say it fluctuates to a large extent with the great fluctuations in the lace trade. If the lace trade is good and work is plentiful there is more work for the middlewomen, but if work is scarce there is a tendency for the workers to come and fetch it themselves, because they stand more chance of getting it than if they are dependent on the middlewomen.

2366. *Mrs. Lyttelton*: Before Trade Boards there was a good deal of exploitation by middlewomen, was there not?—There was, according to the propaganda circulated by the Anti-Sweating League, and so on. Before the Trade Board was thought of they were spoken of by the name of "Duchesses."

2367. Certainly in the boot button trade there was great exploitation by the middlewomen: I do not know about the lace trade.—I daresay.

2368. *Dame Adelaide Anderson*: The quantity of the middlewomen's work varies according to the

number of outworkers she has to supply?—(*Mrs. A.*): Yes.

2369. Is it your aim to have outworkers who can give most time to it, that is to say, to distribute a good quantity amongst a few rather than amongst a number of outworkers?—I have about 30, and when things are slack I have not so many.

2370. You take on outworkers according to how you can get the work done?—Yes.

2371. Some can give only a little time, and some can give much time?—Yes.

2372. They take away what they can carry?—Yes. 2373. *Sir Arthur Pease*: How often is this distribution made?—Every day, and sometimes twice a day.

2374. To outworkers?—Yes.

2375. May I ask why that is necessary—why you cannot distribute a day's or two or three days' work at a time?—(*Mr. Woolley*): Lace, as you probably do not know, is made on machines of 150 to 180 inches wide, and with a strip of lace 1 inch wide the web will contain 180 breadths of that, and it is all laced together as you lace your boots together. These women take this out, and it is split up into the proper widths. These webs come in from the starchers or the dressers throughout the day, and the workers usually come first thing in the morning and take the first supply away, and then they come again in the afternoon and take the second delivery.

2376. *Dame Adelaide Anderson*: There are other processes, such as scolloping?—Yes, and clipping.

2377. And snicking?—Yes.

2378. It is all done at one and the same time?—If there is clipping and scolloping required.

2379. *Mrs. Lyttelton*: In every case that is done by home workers, is it not?—As a rule, but there are some firms who do some of the work indoors. The very large proportion of it is done outdoors. The sole reason for this, and the sole reason why Nottingham ever was referred to as a sweated industry, is because we are up against the competition of Calais in France, where this kind of work is done in the homes as a cottage industry at very low money. I am coming to that later on, when Miss Lawrence has finished. It is a cottage industry in France, and therefore it has to be a cottage industry in England.

2380. What has been the increase in wages since the Trade Boards of the home-workers in this trade?—The first rate fixed by the Board was on the basis of 2½d. an hour.

2381. What had it been?—That, or more, with the best firms, and less with the worst ones.

2382. *Chairman*: This is one of the original trades scheduled to the Act?—Yes, the second. This outdoor work is only a very small proportion of the work in the lace industry. When the lace industry was scheduled as a sweated industry I came up to see the present Lord Asquith on a deputation, and he admitted the contention we put forward that it was scheduled on the Board of Trade Returns as the highest-paid industry but one in the United Kingdom, was true. It is only in respect of this outdoor work, which is competitive with analogous outdoor work done in France, that it ever began to deserve to be called a sweated industry at all. The industry on the whole is the most highly-paid in the Kingdom, and it is still only this branch of it, in which we are competing with the outdoor work in France, which comes under the Trade Board. The Calais industry is an exactly similar one, and the machines which produce the work in Calais are still built in Nottingham, and by reason of the fact that the work is done under these conditions there, and paid for at less than half our rates at the present time, which at the exchange as it stands at present means a quarter, we are severely handicapped in Nottingham. However, because the Trade Board has the redeeming virtue of requiring bad employers to come into line with good employers on a minimum wage, we have been content to put up with these disparities and to lose a good deal of work to Calais, which we ought not to have lost because the Calais

16 November, 1921.]

Mrs. A.

[Continued.]

in fetching and carrying for the out-work at Calais than there is at Nottingham. I have been told that Calais, which was very badly off at one time, is unloading on London. (*Mr. Woolley*): Yes, but that is another story altogether.

2396. *Lord Weir*: The amount of labour in Calais must be distinctly limited if they do it in their spare time, because there are only a certain number of people who have spare time?—It is not only in Calais; it is distributed over a very wide area, probably over an area of 30 miles. There are middlemen and middlewomen who come in and fetch it in very large quantities, and distribute it in the agricultural districts to the wives and daughters of the agricultural workers. They take it out by train and cart.

2397. *Chairman*: Is it only in Calais that this work is done?—There is a different kind of work, but there is some which is competitive with Nottingham done in Courtrai, and in Lyons too.

2398. I have seen it all over France, but, of course, not every sort competes with Nottingham?—The work you will have seen will be largely hand-made lace.

2399. *Mrs. Lyttelton*: Pillow lace?—Yes.

2400. *Chairman*: Have you covered all your points?—I have covered the point as far as competition is concerned, and the only other point I wanted to mention was the question of prosecutions. I think that some machinery should be devised for making the prosecution of offenders more easy than it is at present, and we should like to suggest that power should be given to the Board, when the Board is unanimous and the appointed members are also agreed, enabling the Board to initiate prosecutions without having to depend upon the official heads in London. In that connection, I should like to say that we were very disappointed indeed when the Trade Boards were transferred from the Board of Trade to the Minister of Labour. No reason has ever been adduced why that change should have been made, and we think it is very deplorable that it should have been made.

2401. *Dame Adelaide Anderson*: In the old days, in the early days under the Act of 1909, you found the inspection adequate, did you not?—There were very few Boards then.

2402. But the ratio was then adequate?—I believe it was much more adequate than it is now, as far as our information goes.

2403. Whom do you suggest should bear the cost of prosecution?—That is a question which I have not gone into.

2404. It is rather an important one, in view of what you said. At the present moment I understand that the Ministry directs a prosecution because the Ministry bears the cost, but now you are asking that the power of directing prosecutions should be given to the Trade Board. Is it suggested that the Trade Board should bear the cost?—I happen to be President of our association, but I cannot speak without the mandate of my constituents. If it were thought necessary, in order to give these facilities to Trade Boards, I believe employers' organisations would most probably be willing to make themselves liable for the expense of prosecutions. (*Mr. Christall*): It has never come before us, but I think it is quite possible.

2405. What about the workers sitting on the Board? Would they wish that the whole expense should be borne by the employers?—The lace industry, at any rate so far as this work is concerned, is so slenderly organised that I do not think there is any organisation we could look to for the money. (*Miss*

Lawrence): I should not like to do away with Government prosecutions. (*Mr. Woolley*): I do not wish to do away with them, but merely to supplement them. We wish to have the initiative if we desire to take it.

2406. *Chairman*: There are two sides to the matter. (*Mr. Miss Lawrence*): You rather think the Government ought to be responsible?—(*Miss Lawrence*): We have not enough inspectors. There are a good many infractions which ought to be prevented, and it would be desirable to have a good deal more inspection and a good deal more prosecution.

2407. *Dame Adelaide Anderson*: Is it not open to any citizen to initiate proceedings in this as in any other quasi-criminal matters?—(*Mr. Woolley*): We have not any power to initiate prosecutions, have we, as it stands?

2408. *Chairman*: Anybody can prosecute in these cases, unless there are restrictions in the Act.—(*Mr. Christall*): I think there is something in the Act about it.

2409. Yes, there may be something in the Act to prevent it. I see the Act says that where it appears to the Board of Trade—that is now the Ministry of Labour—or to any officer of a Government Department which is assisting to carry the Act into effect that a sum is due by an employer to a worker, and it is not possible to recover the sum so due, and so on, that officer may prosecute; and the Trade Board may also take any such proceedings in the name of any officer appointed by the Board of Trade for the time being acting under the direction of the Trade Board in pursuance of this Act; so it could be done by their secretary or any of their officers authorised by them?—The authority has to come from London for that purpose, does it not?

2410. I have some doubt about that. The Act does not say so.—Would you not consider it in that sense?

2411. No, but I can quite understand that the Trade Board would want to be assured about the expenses of the prosecution, and they would apply to London before taking definite steps?—Quite so.

Dame Adelaide Anderson: They also have power to arrange with any other Government Department if there are suitable inspectors in another Department.

2412. *Mrs. Lyttelton*: Or if the employers choose to bear the expense they can do it without application to London?—Do you think that that would stand now?

2413. *Chairman*: It looks like it, but you might look into it.—(*Mr. Christall*): What we desired was that we should have a local inspector, but the principle of economy was so essential that we thought there was no possibility of getting one, and the suggestion which we make here is simply an alternative to that, in order to give us some chance of dealing with those employers who are infringing the law.

Chairman: I quite recognise the motive for it.

2414. *Lord Weir*: Apart from these matters, you are satisfied that the Trade Boards are good?—(*Mr. Woolley*): We think in Nottingham it has done good work, and we have no desire to abolish it. I hope, Sir, with regard to the middlewoman question, you will realise that that is absolutely essential to the proper working of our Board.

Chairman: I quite understand that. We are much obliged to you for your evidence.

(The Witness withdrew.)

(Adjourned to Wednesday next, 23rd November, at 11 a.m.)

23 November, 1921.]

Mr. IVEY ROGERS.

[Continued.]

SEVENTH DAY.

Wednesday, 23rd November, 1921

PRESENT:

THE RIGHT HON. THE VISCOUNT CAVE, G.C.M.G. (Chairman).

THE RIGHT HON. LORD WEIR OF EASTWOOD.

DAME ADELAIDE M. ANDERSON, D.B.E.

THE HON. MRS. ALFRED LYTTELTON, D.B.E.

MR. W. T. LAYTON, C.H., C.B.E.

MR. E. L. POULTON, O.B.E., J.P.

MR. A. MACCALLUM SCOTT, M.P.

MR. H. D. HANCOCK (Secretary)

Mr. IVEY ROGERS, called and examined.

2415. *Chairman*: You are Chairman of the Autocrat Light Car Company?—Yes.

2416. You have come here in connection with the National Union of Manufacturers?—Yes.

2417. You have not submitted to us a proof or summary of what you are going to tell us?—I think we have submitted a summary, if you will allow me to say so.

2418. I have not one.—There was a letter giving the points upon which the members of the delegation would speak, and we regarded that as a slight summary, which we thought would be sufficient for the purpose.

2419. It would have been more convenient if you had given us a summary, because a summary assists the Committee in testing the evidence afterwards. Also, I think, such a summary lends weight to the evidence as being the considered statement of the views of the Association. I therefore regret that you have not given us one, but we must do our best without it.—It is the intention to hand you a formal statement after the evidence has been submitted.

2420. Why not let me have it now, and then I could follow what you say?—I think possibly we might be able to do that. I find there is only one copy of the evidence of each member of the delegation, and I am afraid they will want to refer to it. Will it satisfy your Lordship if it is handed to you afterwards?

2421. Very well. You were going to tell us something about the constitution of the Union?—Yes. It is not my province to give evidence, neither is it my intention to make a speech, but in acknowledging the privilege you have accorded to us of giving evidence of the working and operating of Trade Boards, and in introducing the delegation, I should like to state our credentials. We form part of a committee appointed by the National Union of Manufacturers to deal with this matter; the National Union of Manufacturers, our organisation, is composed of nearly 3,000 manufacturers, employers of labour, ranging from organisations incorporating several firms employing many thousands of work-people and millions of capital to the humbler manufacturer with his 50 hands and his hundreds of capital. The correspondence we have received from those manufacturers leads us to think that Trade Boards are not an acceptable institution to manu-
facturers.

2422. Are many of your firms or members connected with Trade Board trades?—The Union's membership embraces practically every industry in the country in which Trade Boards are in operation, and it is as representatives of this institution, with its organisation such as I have outlined, that we are here to-day. In dealing with this question our Union has received a mass of correspondence, too bulky to be dealt with in the time at our disposal. The correspondence comes from all quarters and from almost

every trade in which Trade Boards are in operation, and it is because of the nature of the complaints which we have received that the Union has devoted its energy to the consideration of this question. The 1909 Trade Boards Act cannot be said to have caused great dissatisfaction, and it is probable that manufacturers would have agreed to a greater measure of security being given to the workers in those trades in which sweating was a disgrace and a scandal. During the four or five years in which Trade Boards were in operation prior to the war, less than twelve trades were scheduled as coming under the scope of the Act; but the 1918 Act was not long in operation before the anomalies and eccentricities of the Act were discovered. In the latter end of 1919 and the beginning of 1920, correspondence began to reach the offices of the Union pointing out the inequalities of the Act, and it soon became a very serious question, so much so that a sub-committee of the Union was formed to deal with the matter. In the early part of this year a deputation was received by the Minister of Labour which laid the grievances of our members before him, and we believe that the present Committee of Inquiry is a redemption of the Minister's promise at that time, and to some extent an acceptance of the statements which were then put before him. In order to be as brief as possible, the mass of evidence which I referred to previously has been sifted, collated, and very much curtailed, and the gentlemen forming this delegation who have been selected to put the evidence before you will deal not only with the data and the information arising from those letters, but they will also deal with their own experiences, and will give you particulars from their own experiences in connection with the operation of the Trade Boards Act in the very many trades with which they are connected. Much of the information which will be given to you has no doubt been given to you before, though we cannot say exactly, of course, what information has been given to you; but if this is so, it should strengthen the proposition which we shall submit, that Trade Boards are a blight upon the industrial effort and progress of this country. We ask for the repeal of the 1918 Act. You may say we are asking too much, but our chief concern is the interest of the nation, and it seems to me somewhat stupid that, at a time when we may say that millions are out of employment, legal machinery exists to prevent a man getting his living. In saying that I mean that the Board may decide that a man must have £3 5s. a week, and so he must walk about and be unemployed for any length of time receiving his dole instead of accepting a position to help the country at £3 a week. Time was when the old maxim that half a loaf was better than no bread carried us over many similar crises, but to-day we seem to have got beyond that, and in my opinion out of all sense and reason. I am quite sure that these Boards have contributed largely to unemployment:

23 November, 1921.]

Mr. IVEY ROGERS.

[Continued.]

I am equally sure that if Trade Boards were suspended even for a time, hundreds of thousands of the men who are out of work to-day and walking the streets would soon be fully employed. My union has no desire to curb the longing or yearning for better conditions amongst the working classes: the agitation against Trade Boards does not arise from a desire to curtail the wages or to cut the wages of the workpeople, but it arises from a desire to do the best in the interest of our country, and in the interest of industry, and when we are told that we are to expect almost a poverty-ridden country after the war, we look to other countries, such as even Germany, France, and Belgium, where the men are fully employed and there is far less, in fact there is negligible, unemployment. We feel that as victors in the great war we should be as fully employed as any of our Allies or our enemies, and we feel, too, that the 1918 Trade Boards Act at least has a good deal to do with the unemployment. There are in our Union some people—a few they may be—who think that the violent and extreme methods of certain extremists, coupled with the abuse of the employer on every occasion, should be met by retaliation; but the more mellow opinion of the large majority of our members is that that would probably bring about worse conditions than exist at the present time, and the spirit of conciliation and concession, and a desire to harmonise our interests with those of the workers, is ever present in the deliberations of our council. It is that spirit that actuates the delegation which appears before you to-day. With those few observations I should like to suggest, if it is agreeable to you, that the evidence to be submitted to you should be accepted

in the following order: first that Mr. Arthur E. Beck should open the proceedings, dealing generally with the subject of Trade Boards; then that Mr. Jackson should put before your Lordship and the Committee evidence of the anomalies and injustices of the operation of the Boards; then that Mr. Gordon Stammer should deal with the unemployment aspect of the case; and then that Mr. Ashley Ward should address the Committee in summing up the case. If that course meets with the approval of the Committee, perhaps you will call upon Mr. Beck.

2423. *Lord Weir*: Have you any personal experience of Trade Boards?—I might have said that personally I have no direct experience of Trade Boards. My own particular trade is under the beneficent chastisement of the trade unions, and not under a Trade Board.

Mr. Poulton: It is very difficult, of course, to follow the statements made by the Witness, and there were a lot of statements made which I should have liked to question him upon. As they may, however, arise on the evidence which is to be given, I refrain from doing so, but I must say that I wish the Witness had put his own statement into writing, because had there been a written statement I should have challenged some of the statements that he has made.

Chairman: It is unfortunate that there is not one, but what the Witness said was by way of a preliminary address.

Witness: I can only apologise for not handing in this statement.

Chairman: You have introduced the subject now, so we will get on to the other evidence.

Mr. ARTHUR E. BECK, called and examined.

2424. *Chairman*: You are a member of the National Union of Manufacturers?—Yes. I am afraid that what I have to say to you is rather in the nature of general than particular evidence; but it is in view of the fact that the general argument that I am going to submit to you will be supported by the evidence which will follow that this order has been selected.

2424a. Will you follow your own course, remembering that the subject is not a new one to us; we know a good deal about it already, and general observations do not help us very much. I think you will find that my remarks follow a specific line. I want to divide what I have to say into certain headings: I want to tell you first a little more about who we are, then what we want; and then I want to tell you the reasons why we want it. Then I shall leave to my fellow members of the Council of the National Union of Manufacturers the work of supporting the reasons which we bring forward as a body by specific evidence.

2425. What is your own position?—I am Vice-Chairman of the Midland Council of the National Union of Manufacturers; I am a Director of the Metallo Seamless Tube Company, and I am engaged in the steel tube industry.

2426. Is that at Birmingham?—Yes.

2427. *Mr. MacCallum Scott*: You are not under a Trade Board yourself, are you?—No, we are not.

2428. *Mr. Poulton*: I should like to be quite clear upon that last point. I understood you, in answer to my colleague, to say that you have no actual experience of Trade Boards?—I am not working under a Trade Board, and it is because of that that perhaps my evidence will be of value to you personally.

2429. I only wanted to be clear on the point.—Mr. Rogers has told you what our association is, that we are comprised of manufacturers, and that the association consists of a number of trades, from the manufacturer employing only 40 or 50 hands to manufacturers employing almost as many thousands; and in the lightest to the heaviest trades, from the silk and lace industry to the heavy iron and steel industry. We have also organised means of discussion in different parts of the country, and the result

of those organised means of discussion is that the opinions of all the members on this particular point, members engaged in every trade and having direct personal experience of the working of Trade Boards, has been brought together and organised in the way in which it will be put before you. We appear before you as manufacturers, but I should like to say a word or two with regard to the particular position of being manufacturers. Usually consideration of a matter of this kind is divided, as though industry were composed of two groups, into labour and capital; and I should like to submit to you that labour and capital may co-exist side by side without either of them being employed. Capital may be in the works and the banks or in the pockets of investors, and labour may be walking about in the street, but they require the presence of the manufacturer, who partakes of the nature of both, being neither *per se*, in order to employ both. Therefore in coming before you and submitting our evidence to-day we really ask you to take the view that we are occupying a midway position between labour and capital, because we as a body are associated with both. In that way perhaps our evidence may be received as being less *ex parte* than it would be if we were labour only or capital only.

2430. *Chairman*: You are all employers, I take it?—Yes, we are all employers, and being employers we have first of all to be tradesmen, and being tradesmen we employ both labour first and capital afterwards. It is because we have that particular work of seeing whether a trade can be profitable or not, and as to whether the world conditions justify our employing both labour and capital in industry, that we have had the question of Trade Boards under review. It is an important matter to us whether or not a trade can be pursued, and all the conditions, the legislative conditions, which affect an industry have to be taken into consideration by us in embarking upon an industry and in its continuance. I should like also to ask you to take our evidence as not only coming from two or three thousand firms, but as coming from a much wider area, because our meetings are attended by non-members, and our correspondence on this question has been from a larger

23 November, 1921.]

Mr. ARTHUR E. BUCK.

[Continued.]

body of manufacturers altogether than those embraced in our own Association. I should like to tell you what we want. We ask that the Trade Boards Act of 1918 be repealed. Many discussions have taken place as to whether amendments to that Act would be acceptable by us, and as to whether we regarded that Act as possible to be amended in order that it might be useful to us in carrying on our business, but by an almost unanimous majority in every case, that majority being composed both of members who are in what I may refer to as free trades as well as those working in Trade Boards, it has been resolved that its repeal is necessary.

2431. Can you tell us what feature of the 1918 Act it is which leads you to ask for its repeal?—We are asking that the *status quo ante* be resumed.

2432. Can you tell me exactly why?—May I come to those reasons later? We ask that the position existing before the Act was passed be resumed. We admit the value of the 1909 Act, and we admit it because there were certain industrial diseases existing at that time, which we are hoping will some time cease to exist, which needed legislative interference. That is the sweated industries. We admit that the 1909 Act was useful as an industrial medicine, but the continuance of that medicine and the application of it to other trades as a food is something to which we object. We say that even the 1909 Act, was a temporary expedient in order to meet certain conditions of industry which we hope will not remain. We do not suggest the repeal of the 1909 Act, but that its application should only be in cases where the condition of an industry is below the normal.

2433. Do you mean its application should be confined to sweated industries?—Yes.

2434. Mr. Poulton: What would you define as a sweated industry?—A trade where the payment for labour is considerably below the normal payment for labour of a similar class in other trades. The 1909 Act contemplated that its application would be or might be only temporary, because in Section 1, Clause (3), you will find that in the event of normality being resumed—I am using my own words now—a Provisional Order may be made by which the application of that Act to that particular industry would cease. I may therefore sum up what we require as being the repeal of the 1918 and the reinstatement of the 1909 Act. The reasons why we ask for that are that first of all the 1918 Act is, in our view, unnecessary, that it is unworkable, that it is inelastic, that it forces the semi-efficient into unemployment, that it leads to confusion and disputes amongst work-people, and that it is a bar to the growth of mutual agreement. We say that it is unnecessary, because since 1909 the growth of trade unions and trade union membership has been very great indeed. In 1909 the number of trade union members was three millions. To-day it is 2½ times that number. In 1909 the number of employers' associations was small; to-day the number of employers' associations, as supplied to our Association by the Board of Trade, is 2,400. That is according to the list supplied to us by the Board of Trade; and we say that with this enormous machinery in existence there is no need for State interference, because this enormous machinery is set up for the express purpose of regulating wages.

2435. Chairman: Have you made an analysis showing how many of those unions and associations deal with the Trade Board trades?—No; the employers' associations may be taken as in all trades, and a certain proportion of them would be—

2436. You have not got it out?—No, we have not. Now there is not only an enormous growth in trade union membership, but there is a growth in the trades affected and organised; and this must not be taken as limited to the number of new trade unions, because there has been a disposition during the last few years for general unions to apply their energies to the organisation of certain trades which would otherwise be unorganised.

2437. Like the Shop Assistants' Union?—No, I was referring rather to the Workers' Union. The Workers' Union organized many trades. My own

trade, the Steel Tube Trade, is organised by the Workers' Union; and the Dockers' and General Labourers' Union has organized the Clay Trade, and other trades as well; so that the growth of organization in industry itself must not be limited in your minds to the number of Trade Unions, because there has been a tendency during the last few years for General Unions to organize specific industries, and therefore the number of trades unorganized to-day is very much less than it was in 1909. We feel that increasing the Trade Boards could only be justified if the reverse were the fact; that is, if there were, a smaller number of trade unionists and a smaller number of employers' organizations, then the 1918 Act would be justified because it would be a State supply of that which industry was not setting up for itself. Our case is, in regard to the 1918 Act, that industry has set up its own machinery and that it works better than with State interference, and that if the application of the Trade Boards Act is limited to those industries where there has been a failure of this machinery, or where there may be a failure of this machinery in the future, that would represent all the State interference which could be justified.

2438. You know, of course, that the Act is limited to cases of unorganized trades?—Well, in fact, Sir, I think you will find that the evidence which will be submitted to you will show that in effect it is not so.

2439. I am speaking of the Act, of course.—Yes; but I am speaking of the effect, and we rather have to work with the effects than with the Act. In the effect it is not. If it were limited only to sweated industries our objection practically ceases.

2440. I do not say sweated industries, but unorganized industries.—Quite.

2441. Lord Weir: In saying that the Act is unnecessary do you really mean that the Minister has been unjustified in applying the Act to certain trades where there is already sufficient organization, and that he should not have applied the Act to those trades?—I am taking it rather earlier than that. I am saying that the passing of the Act was unnecessary at the time when the Act was passed, and especially since then; the growth of the position of industry dealing with its own internal and domestic concerns has so grown that the application of this Act—if it is exceeded and if the position is that the Minister goes further than the Act—then the damage is more. But we say that even the application of the Act as it now stands is harmful.

2442. Chairman: I think you are not quite answering Lord Weir's question. May I just say how it strikes me? You told us just now that the Act does apply to trades which are not unorganized trades, in your opinion?—Yes.

2443. Well, I think Lord Weir wanted to know from you whether you mean that the Minister has applied the Act in cases where it should not have been applied, or whether you mean that some trades have become organized since the Act was passed?—I think both have occurred.

2444. And you will give your instances later?—I will give my instances later.

2445. Mr. Poulton: That is to say, you think that although you disapprove of the Act, the Minister has exceeded his powers under the Act?—Yes; we shall give you instances of that. We take the view that the Act is unnecessary to-day whatever it may have been at the time it was passed, because of the growth of the administration of the affairs of industry by industry itself, and the only possible answer to our view would be that compulsion was better than mutual agreement. I would submit to you that where there is mutual agreement there is no dissatisfaction, or very little after-dissatisfaction; but where there is compulsion there is always one side dissatisfied; and mutual agreements are in practice more easily enforceable. As a manufacturer I am obliged to say—and I am quite content to say—that the last word is with labour. When an agreement is entered into—and I have been a party to many agreements be-

23 November, 1921.]

MR. ARTHUR E. BROOK.

[Continued.]

tween Labour and Capital in the particular trade which has been my calling—these agreements have always been voluntarily entered into, but with the knowledge that if they were voided labour could withdraw itself. It was sufficiently well organized to withdraw itself and to enforce the agreement upon any manufacturer who voided it. And I should like to point out that if there is a manufacturer in any particular trade who attempts to pay a rate below the ordinary standard, and so get any advantage over his fellow-manufacturers as well as to create a disadvantage to his workpeople, in an ordinary trade, an organized trade, where the employers and the workpeople have means of meeting, he receives no support from his fellow-manufacturers, and he certainly receives no support from the Trade Union. You may take it that there is an effective means in every organized trade of keeping wages up to a standard of reasonable living to workmen, and also—and this is the particular point which perhaps makes a difference between the voluntary and the compulsory system—within the limits of the possibility of the trade.

2446. *Chairman*: I follow what you say, but it applies to organized trades?—To organized trades, yes.

2447. *Mr. Poulton*: I am sorry to interrupt the Witness, Mr. Chairman, but I should like to ask, through you, whether he is aware that in the Act of 1909 and the Act of 1918 there is a great deal of difference in the authority by which the Minister of Labour acts?—Oh! yes, that is so.

2448. It says: "The Minister of Labour may make a Special Order applying the principal Act to any specified trade to which it does not at the time apply if he is of opinion that no adequate machinery exists for the effective regulation of wages throughout the trade, and that accordingly, having regard to the rates of wages prevailing in the trade, or any part of the trade, it is expedient that the principal Act should apply to that trade." That is very different wording from the 1909 Act?—Quite so, and it lies within the view of one particular official.

2449. Of course, it must necessarily be so; you must have authority somewhere?—Oh! quite; but we submit that it should not lie within the province of one particular official and that he should ask for positive evidence, and there can always be positive evidence forthcoming of a trade being abnormally low in its return to the worker, and upon that alone he should act.

2450. But, as a matter of fact, is not that so? Is there not advertisement inviting all trades to produce evidence where it is proposed to apply the Act?—As to that, I do not know. I should like you to ask the gentleman who follows me, who will give you specific information on that point.

Mr. Poulton: I should like to know, Sir, first of all, whether that is not so.

2451. *Chairman*: Probably you know this, that under the Act of 1909 the Minister had to be satisfied that the wages paid in the trade were less than the ordinary wages?—Yes.

2452. But your point is that under the Act of 1918 all he has to satisfy himself of is that the trade is not properly organized. That is your point?—That is so.

Chairman: I think that answers Mr. Poulton's question.

Mr. Poulton: I hardly think it does, Sir. I have in mind one trade where there were three thousand objections sent in.

2453. *Chairman*: Can you throw any further light on that, Mr. Beck?—I cannot. I see two totally different standards adopted in the Acts; one is where the Minister has to satisfy himself that it is an industry in which the return to the worker is too low; and the other is in the Act of 1918, which is not a question of low or high; it is a question as to whether it is organized or not.

Mr. Poulton: It is both.

2454. *Chairman*: He must have regard to the wages paid?—Yes, general regard; but specifically it is a question of organization in the 1918 Act.

2455. It is both in a sense, as Mr. Poulton says. He must have regard to the state of organization and to the wages paid; but you do not get, I think, under the 1918 Act the words in the Act of 1909 about the wages being—what are the words?

Mr. Poulton: The words in the 1909 Act are "exceptionally low," and in the 1918 Act, in the second Clause, it says "having regard to the rates of wages prevailing in the trade."

Chairman: Yes, that is the difference.

2456. *Mr. Poulton*: So that he must have regard to the wage prevailing?—In the trade, but that is only in the one particular trade.

2457. That is the trade he is enquiring into at that moment?—But in 1909 it is by comparison with other trades, so that there is a difference there. With regard to the workability of the Act, I may say that evidence will be put before you as to its unworkability, and there is a principle which is new in the payment of work which we find, and which all the members who are in Trade Boards find extremely unworkable, and it is this: that the amount paid is not always fixed by the work done; it is paid in connection with, or it is affected by, the after-use of the article upon which work is done, and therefore the same class of work in a works may, by the after-use of the article operated upon, be paid at either one rate or another, although the knowledge is not within the mind of the worker as to what application would be made of his particular work.

2458. *Chairman*: Would you just say what you mean by that?—I mean this. There are many instances where the same act may be paid according to various rates because there are operating in the same works two or three Trade Boards; and that applies particularly to Birmingham. The act which the worker is performing may be the elementary stage of either the one trade or the other, but a difference exists in the mode of payment.

2459. I think I follow. Can you give us an instance?—With your permission I would rather not trespass upon the evidence which will be submitted to you. Instances will be forthcoming of that. Then in my own trade, the steel tube trade, we found an extreme difficulty in fixing either a uniform day work rate of uniform piecework rate, and we found that difficulty for this reason. My own firm manufactures a very high class tube, and out of the same material a lower class tube may be produced under quicker conditions, but being sold for a totally different purpose. Now when we have met the tube makers and the trade union officials round the table we have tried to obtain a basis which would apply uniformly, either piecework or day work, to our trade. We have found that that was impossible without damage, and we have come to individual arrangements between the trade unions and the employers, with the agreement of all other employers, which has been satisfactory to the trade and satisfactory to the workmen, but which would have been impossible had we had a Trade Board in our trade. The trade union leaders have said that to fix a piecework rate which would apply to one particular works would mean that they should be very well paid indeed, but the workmen in our firm would not earn a living at all because of the slower production obtaining in our works for the purpose of producing higher quality tubes. At the same time, if our workmen were to be paid in the Metallic Seamless Tube Company at a certain rate per hour, that rate of wages per hour applied to the tube manufacturers at the other end of the trade, who are making the commoner and the cheaper tube, would leave him without the possibility of competing as he was doing with foreign articles, and also in the neutral markets of the world it would not permit him to export. Therefore an elastic arrangement has been made between the trade union officials and the employers which has permitted us to make the high grade tube

25 November, 1921.]

MR. ARTHUR E. BEOK.

[Continued.]

and has protected the manufacturer who made under quicker systems and sold for a cheaper purpose. It has enabled him to continue his trade, and both the two firms and the two sets of employees in those firms to be mutually satisfied. Within my own experience, after an attempt with the trade union officials to apply a fixed basic rate, either a piecework or day work rate, we have realised that an arbitrary and very harsh and inflexible rate would be harmful to both the workpeople and the firms who are at the two different extremes of the trade in our case.

2460. *Lord Weir*: You mean that a Trade Board would be very unsuitable for the steel tube industry?—That is so. Then we suggest that a Trade Board is unsuitable to a falling market; that it is too slow in operation, and that it must necessarily be slow. No State interference can be so quick as the operation existing between a trade union and an employers' association. 25 years ago in my own industry I joined several other manufacturers to find the money to establish a trade union in our trade, and that was in order that there might be a ready means of fixing wages by combined barter rather than by individual barter, and we perhaps took what is an unusual step for manufacturers, and that is we found the money to start a trade union in that particular trade. But it was a line which was fully justified by its operation, because we could make and keep bargains, and we had a bargaining force—we had someone with whom to make arrangements, who could enforce those arrangements being kept on their side, and a definite arrangement could be come to.

2461. *Chairman*: You only helped it to start, I suppose?—We helped it at the start; that is all; then we disappeared. I respectfully submit that it was because we felt that the arrangements which were possible—the domestic arrangements between us as employers and labour combined and organized—would not be any hindrance to us, that we made those arrangements.

2462. Of course, that is as to your natural interest in your own trade; but we are dealing here with trades where collective bargaining of that sort is assumed to be impossible.—Then, my Lord, it is a question of degree; and what I am suggesting is that industry has increased her facilities for making her own arrangements, and therefore State interference and State regulation is less necessary than it was at the time of the passing of this Act.

2463. Does it come to this, that in trades where the improved organization is sufficient to enable the workers and the employers to bargain together, there the Trade Board may be dispensed with?—That is so. I would like to give you a little evidence which did arise in connection with my own trade, and which may be helpful to you in considering the difference between mutual arrangements and what may be called, and what I call, State regulation.

2464. We are conscious of that difference; but you see, your trade does not bear very closely on Trade Boards.—No, but it is a trade in which there is no Trade Board, and in which there is the highest degree of satisfaction; and if there be the highest degree of satisfaction in our trade, it may be possible that it exists in others, and I take it that it is a type of the organized trades.

2465. Give your evidence, if you like; but please remember that we are not dealing with organized trades on this Committee. If you think it material, by all means give it; but I want to save time.—I would like to give it, if I may, for this reason, that it might show you a difference which may be helpful in considering the question of delay. It is this: that on one occasion we fixed a rate of wages originally up to the limit of foreign competition. We realised that the home industry was underpaying at the time when we started to welcome a Trade Union and to assist in its creation, and the wages were raised up to the limit at which we could hold the market of Britain as against foreign competition. But there came a time when one particular

article was undercut very much from America, and we immediately sent to the Trade Union officials, and within 24 hours we had an arrangement with regard to that particular article, and we quoted on that, and we destroyed the competition from America. Such a procedure was no hindrance to business; the mutual arrangements made were so quick in operation that we had all the protection we wanted, and the workman had all the protection which he wanted, which I venture to suggest would be impossible had we had a Trade Board in existence.

Then I would like to submit that the effect of the Trade Board in its recent applications forces the semi-efficient into unemployment. It was purely the intention of the 1909 Act to fix a low and minimum rate of wage; but evidence will be submitted to you that the rate of wages fixed by Trade Boards recently is a standard rate of wages and not a minimum; and the effect of fixing a standard wage as against a minimum is this, that if a minimum rate of wage be fixed there are certain semi-efficient people who can live, and if it is fixed to cover the cost of living it includes those and gives them a living; but a workman who is efficient will always ask for more because of his extra efficiency, and he may have it, and he does have it, and you have to pay it. Every manufacturer has to pay it to him in order to retain him, and it permits the grades of efficiency to be all employed in a trade. But the recent operations and the recent fixtures in Trade Boards have been of a standard rather than a minimum character, and under the Act of 1918, whether it was so originally intended or not, at any rate as it is being applied, a standard rate has been fixed and very great damage has been done because the semi-efficient have been forced out of that industry and into the ranks either of the unemployed or of unskilled labour.

2466. The slow workers, as they are called?—The slow workers. There are many such, and human beings are not all alike. While there is provision in the Act for those who are physically impaired to be specially treated, there is nothing in the Act which deals with the slow worker; and it is because of that that we find in the various trades which are under the operation of the Trade Boards Act a decrease in the employable, because the number employable at the Trade Board rate must be less if the rate be fixed higher than if a minimum rate alone were fixed. The evidence which will be submitted to you by the next witness will show—I will not refer to it except briefly—the causes of confusion and delay in a factory by the application of the various rates to either the same act or the same person. In giving way to the next witness I would like to say that the tendency of the recent attitude of the Government to industry has been to release industry from State interference, and if, when you consider the question, you will consider the trend of the public view on this matter, it will be considerably helpful. We as the National Union of Manufacturers feel that there ought to be evidence submitted for the discontinuance of the 1918 Act rather than for its continuance.

2467. We expect to hear evidence of that character on both sides.—Yes, but the attitude of the State to Labour and to industry—and industry is very grateful for it—is to decrease the State interference and to decrease State control, and if, in the consideration of the question of the Trade Boards Acts, that general tendency can be taken into view, we feel that the report you make must necessarily be favoured by the appreciation of that fact, and that industry in being released from State control recovers some of the vitality which is natural to it and becomes healthier because of that.

2468. *Dame Adelaide Anderson*: I should like to know how the witness would deal with the sub-normal worker. The sub-normal worker does need protection.—Oh! quite.

2469. Does need a sufficiency of food and lodging, and so on?—Oh! yes, quite.

23 November, 1921.]

Mr. ARTHUR E. BECK.

[Continued.]

2470. Supposing there were no regulation as to the minimum rate, the position would be serious for the sub-normal worker in an unorganised industry?—Quite so, and therefore the Trade Boards Act of 1909 we regard as fixing, and correctly fixing, the rate of wage at a rate higher than the necessary cost of living to the slow worker, if I may adopt your phrase.

2471. But where organization is weak, if no Trade Board were applied, what would be the position of the sub-normal worker?—It would not be good, and the Trade Boards Act of 1909 is a very valuable Act, because it protects not only the rate of a general worker, but it fixes a minimum, and will fix a minimum at which the slow worker will have enough to live upon, and a minimum wage will mean a living to those who are slow in their work and an added income to those who are efficient because of their efficiency.

2472. But the Act of 1909 is applied to the ordinary rates of wages?—Quite. Then if anyone is unable to give the amount of service which will enable a manufacturer to employ him at the minimum, then he would have to leave that industry.

2473. And possibly pass into industry where there is no adequate machinery for organization?—Or general work. There are people who are quite able to do general work but who are slow in one specific trade. The man would find he had mistaken his calling in the event of his not being able to do service which justified his receiving the minimum wage.

2474. Did your Association gather any evidence as to industries in which the adequate machinery is supposed to exist, where a Trade Board has been applied under the Act of 1918?—I hardly follow your question.

2475. This Act of 1918 applies to industries in which there is no adequate machinery for organisation?—Yes.

2476. I understood that your answer was that the Act had been applied to organised trades?—Yes, that is so.

2477. Can you indicate any particular industries?—With your kind permission I am asking the next witness to reply specifically to that, because he has that information. But there are industries which are organised to which the Trade Board Act has been applied.

2478. Mr. Poulton: You started out, I think, by saying that you wanted the Act as an Act repealed; that is to say, you did not want to save anything in it?—That is so; we were satisfied with the Act of 1909.

2479. Yes; and you finished up by repeating that, but in entirely different words; because you said you wanted to be released from State control?—Yes.

2480. Now the trades that I should think have had more State control are the trades that have not been under the Trade Boards, are not they, such as the engineering and boilermaking, and the kindred trades? I thought they were the trades which were controlled in the interests of the nation during the war?—I think you misunderstood me if you thought I referred to the cancellation of State control *in toto*. What we ask for is the State to make good where the trade itself is unable to do so; but where the trade is able to make its own domestic arrangements, we suggest that State interference then is unnecessary, is irksome, and is damaging.

2481. I cannot pursue that personally any further, Mr. Chairman, because the witness has stated to Dame Adelaide Anderson that the next witness will deal with that point. (*To the Witness*): But you follow that by saying that the Act is unnecessary, unworkable, and inelastic; they were the three phrases you used?—Yes.

2482. Now will you tell me how the Act is unworkable?—The objections which I have to the workability of the Act are these. First of all, it sets up a form of payment for wage which is unworkable in a factory, because in many works, especially in Birmingham, there are several Trade Boards operating because several trades are being pursued of an almost

kindred character, and the next witness will give you instances of where a works is working under four distinct Trade Boards.

2483. You mean under the same roof?—In the same works and rooms, and in which the different rates of pay for the same Act are applicable, because of the different Trade Boards which control the rate of pay, and the worker at the time he or she is doing the work does not know the ultimate purpose to which that work is to be applied, and does not know the specific Trade Board under which the wages which he or she may be receiving are regulated. There is a very considerable difficulty set up in the payment of workpeople, and a great deal of suspicion engendered, because the workman will always think that it is the higher rate which he ought to receive, and not the lower. (*Mr. Rogers*): May I interpolate a question here?

Chairman: Please do not. We will deal with Mr. Beck's evidence first.

2484. Mr. Poulton: I rather gather, Mr. Beck, that your idea of the unworkability is not with regard to the Act as an Act, but because there may be in a particular kind of works different industries carried on, and from the interpretation of the Act itself there may be varying rates enforced?—Yes, and that must necessarily be so.

2485. Of course we are handicapped to the extent that you have not the specific cases; but I should like to call your attention to the fact that there are 63 Boards now in existence, and which are working. —Yes. I might say this: that we have from the manufacturers who are in the trades where Trade Boards are set up almost unanimous opinions in favour of a repeal of the 1918 Act.

2486. Have you any direct evidence yourself, because I should judge by your wide terms here and the embracing character of your organisation, that you must have a considerable number of your colleagues whose business itself, as a business, is under a Trade Board, and I presume, therefore, that they themselves may be serving on some Boards?—That is so.

2487. Can you give me any specific instances which have been brought to your notice as to the harshness and the unworkability, and the confusion, because all those terms are terms you used as arising in connection with the administration of the Act?—May I say that both the gentlemen who follow me are members of Trade Boards, and therefore their evidence in that direction would be more helpful to you than mine, which is only a report of what others say. I am able to report that those who are members of our Association, who are also members of Trade Boards, are all of opinion that the Trade Boards Act is very much inferior to the mutual agreements which are commonly made in industry, and also that they constitute a bar to the increase of mutual agreements. The atmosphere of a Trade Board is that of plaintiff and defendant; there is a contentious attitude taken from the start; while mutual agreements are usually arrived at in a very much more satisfactory manner, by a Round Table conference, and the attitude of plaintiff and defendant does not come in. Those members who are members of a Trade Board and members of our Association consider that the existence of the Trade Boards Act of 1918 is a bar to the increase of mutual agreement, which is very much preferable to working under a Trade Board.

2488. It is no use pursuing this with you, because you say your colleagues will deal with it; but may I take it that you think the Act, as an Act, is altogether bad? That it is not owing to one particular clause which might be altered, or with regard to wages, or with regard to the method laid down or to its administration, or to the book-keeping which it demands from the employer, but you think that because of the general inadaptability of the Act to a trade it ought to be repealed?—We say that. We say that in except in sweated industries it is unnecessary. Our attitude is that it is unnecessary, that it is unworkable, and that it is inelastic.

23 November, 1921.]

Mr. ARTHUR E. BECK.

[Continued.]

2489. Despite the fact that there are 63 Trade Boards in existence?—Yes.

2490. Let me come now to that semi-efficient worker for a moment. You say that the Boards, owing to their rigidity, have been in effect throwing out a very considerable number of workers who otherwise would have been in employment?—Yes.

2491. Does that mean, following it up to its logical conclusion, that those trades are therefore short of workers? Are they requiring hands at the present time and unable to get them?—I think you might carry it further than that, and say that the fixing of a rate higher than the trade can pay decreases the volume of trade in that trade, and that there are therefore two things operating at the same time, a decrease in the volume of trade and a decrease in the number of people employed.

2492. You would not go so far as to say that there is actually a shortage of efficient workers?—No, I have not suggested that.

2493. The last point you raise is a very difficult one, having regard to the fact that the highest skilled trades in the country have the highest number of men out of employment at the present time. Those trades have never been under a Trade Board, so obviously, looked at economically, that cannot apply?—I can barely see the force of that argument for this reason, that in the event of Trade Boards affecting one particular trade, a reactionary effect upon other trades must necessarily exist, and if you have 63 trades, and a diminution of trade because of an inelastic operation of some regulating force, that must have its effect upon other industries.

2494. You have amongst your trades the boot and shoe repairing trade, have you not?—We have.

2495. And you may take it that the statements which you have made on behalf of the organisation are entirely at variance with the position arrived at by the Boot and Shoe Repairing Board.—I have read the evidence of my colleague who is following me, and the boot and shoe industry will be specifically referred to by him. That question will be fully replied to in his evidence.

2496. You would prefer to leave the question unanswered?—Yes.

2497. *Mr. Layton:* You make the metallic seamless tubes in the Birmingham area, do you not?—Yes.

2498. And your trade has its wages fixed by agreement?—Yes.

2499. In that area there is a number of Trade Boards?—There is.

2500. One of them being the Stamped or Pressed Metal Wares Trade Board. Can you tell us what is the relation of the wages fixed by those Boards in the various branches of the metal trades to the wages that are being fixed by your association?—A comparison of the rates of wages fixed by the Trade Boards and our own?

2501. Yes. You told us that the wages fixed are standard rates and not minima. In other words, what I want to know is, what are the current rates paid in those other trades?—Yes; you wish to know whether the wages fixed by agreement are higher or lower?

2502. Yes, whether there is any substantial difference?—I do not think there is any substantial difference. I have looked at the list of the Stamped or Pressed Metal Wares Board, and I find that in certain ages the rates differ from our own, but if you take the rate of an adult the wages we pay in the tube trade will be somewhat similar, and vary very slightly from those fixed in the stamped metal trade.

2503. You have also said that Trade Boards machinery was inadaptable in time of slump—that it was not elastic?—That is so.

2504. Is it the fact that the wages paid under agreements in your own industry, where negotiation takes place, have varied more and have adapted themselves to the falling market more readily than the wages paid in the stamped metal industry in the locality?—Very much. We have a monthly meeting, and we can call a meeting at three days' notice, though generally it is seven. In one week we can

make an adaptation of wages which applies to the whole trade.

2505. Is it the fact that at the present moment unskilled labour in your trade has dropped below the unskilled rate in the branches of the metal industry in Birmingham, which are covered by the Trade Boards?—I can tell you what the unskilled rate of wages is in the tube trade; it is 53s.

2506. In both?—In the tube trade; so that if you have the other you can make a comparison.

2507. I want to try to get at this point. You said that the Trade Board method was inelastic, and what I was trying to get at was whether you had any evidence showing that there was greater elasticity in your own industry than in a Trade Board trade?—The inelasticity of the Trade Board is shown in the construction of the Act.

2508. Yes, but I want to get at the figures. I will put the question from another angle: Have you had substantial reductions in wages in the last six months?—Yes, we have.

2509. Have you ever had the Trade Board wages quoted against you by trade unions?—Yes, in the negotiations and discussions there have been references to kindred trades, and the wages paid in the district, including those where the Trade Boards are operating.

2510. You would not claim that the inelasticity of the Trade Board had prejudiced you in adapting your own wages, would you?—I rather think that I should, because we have frequently used the argument that the wages quoted against us in discussion from a trade regulated under a Trade Board have been maintained at a higher rate than was current, and that that particular industry was being held up, and we did not want to be held up in the tube trade. In many cases we have been able to cite instances where a trade had been affected disadvantageously by a higher rate being fixed by a Trade Board than the market would allow, and therefore we, in the tube trade, wanted more elasticity, because we did not want to be held up; and it was considered by the labour representatives that the employment of the people in the continuation of the trade did justify some adjustment of wage, which, had we been under a Trade Board, we could not have affected so readily. The quotation in argument of the rates paid by a Trade Board was always qualified by the fact that they were inelastic, and were causing loss of trade because of their inelasticity, while we wanted to preserve our trade and continue the employment of our people.

2511. *Chairman:* I see the lowest Trade Board rate for metal workers works out at 58s., while yours is 53s.—Yes, by local adjustment.

2512. *Mr. Poulton:* How recently is that?—A month ago.

2513. *Mr. Layton:* I was not wanting to put an argument into your mouth: I was only wanting to see whether, in your view, the inelasticity of the Trade Board system had any reaction on the trades using some other method?—It must necessarily have, but it has less reaction than it would have if it were successful in continuing that trade. When a trade under the operation of a Trade Board standard rate, called a minimum rate, has a decrease in employment and a decrease in the volume of trade in that particular industry, then we can cite against the argument that a higher rate of wage is paid in that trade than in ours the fact of its not being so successful in its operation, and in that way the argument, initially being to our detriment, has nevertheless been discounted by the fact of the high standard of trade. The very fact that we have obtained a 53s. rate as against a 58s. rate in works adjacent, shows that the representatives of the work-people themselves consider that the 58s. is higher than is justified.

2514. In fact you are able to use it as an object lesson in favour of a rapid adjustment of wages?—That is so.

2515. *Chairman:* I ought to say that the 58s. was fixed only from 14th October 1921; until then the rate was 8s. higher.—Is it in operation now?

23 November, 1921.]

MR. ARTHUR E. BECK.

[Continued.]

2516. Yes, I am told so?—Then it must have been fixed some time ago.

2517. It was fixed to come into operation from the 14th October?—Must it not have been fixed four months ago?

2518. It was proposed some time before.—There is the whole answer to the question. The fixture four months ago in our own works was higher than 53s. very considerably, but to fix a rate of wages on a changing market, a rate which comes into operation in four months' time, is, in my view, and I submit that the view is correct from our standpoint, unworkable. The position is very difficult. If you have fixed a rising wage to come into operation in four months' time, the workman immediately says: "If I am worth £3 a week in four months' time, why am I not worth that now?" and the natural effect upon his mind and upon his work must be very considerable and detrimental. On the other hand, if there is going to be a fall of wages in four months' time, is a manufacturer going to put work into stock? He is going to decrease the quantity of work on stock until the operation of that new rate of wages. That is what is going to happen with a slow operation; therefore the fixing to-day of any rate which comes into operation only in four months' time, or in any considerable period, must have a deleterious effect either upon the workman, or upon the manufacturer, which reacts upon the workman, while a ready adjustment is free from that disadvantage. When you mentioned that this came into operation on 14th October, that shows that it must have been fixed four months previously.

2519. Not necessarily four months, but some time previously?—Yes, and that should supply an object lesson in my favour.

2520. I did not put it against you.—No, but I submit that that is an argument in my favour that our rate of wage at the time when that was fixed would be something like 53s.

2521. Mr. Poulton: But you do not suggest, do you, that by mutual agreement organisations of employers and employed are not constantly adopting these methods—that is to say they adopt agreements which will come into operation four months'

hence?—I have not experienced that: I have found this, that where there are any material differences they are almost immediate. I have submitted it to labour representatives where we have a contract fixed at such and such a price for a certain term, and I have always had consideration at the hands of the labour representatives so that there should not be any material loss upon that particular contract; but it has only been one particular contract, and evidence has had to be given that that contract is in existence, and that it is not a general postponement of a settlement. I have never met that.

2522. You have the advantage of strong labour organisation in your business, because you can make an agreement which will be carried out?—I respectfully submit that the trend of an industrial body is towards the strengthening of the labour organisation, and towards the respecting of the agreements which are made. The voiding of agreements I have found to be almost negligible.

2523. Dame Adelaide Anderson: Is it just possible that the increase of organisation in these industries under Trade Boards which you spoke of earlier in your evidence, may be in part due to the work of the Trade Boards?—I am afraid not. I should not be able to admit that. I should think that it is retarded by the existence of a Trade Board, because if a Trade Board exists it is the means, and the only practical means, by which the rate of wage can be fixed. It is unworkable and unthinkable that there should be a secondary voluntary agreement if their voluntary agreement would be ineffective, because of the existence of a Trade Board.

2524. Mr. Poulton: I take it, then, that you yourself favour a strong organisation on both sides?—I do.

2525. So that you do not quite subscribe, or at any rate not fully, to the statement of your colleague—"under the beneficent chastisement of a Trade Union"?—If it is beneficent I agree with it, and if it is chastisement, I sometimes agree with it. I have known the time when I have myself suggested chastisement to a Trade Union.

Chairman: We are very much obliged to you for your evidence.

(The Witness withdrew.)

MR. H. D. JACKSON, called and examined.

2526. Chairman: You are a member of the Stamped or Pressed Metal Wares Trade Board?—Yes.

2527. What is your own business?—My business is a general business, comprising some Trade Board articles and some not. I come under the Trade Boards for the manufacture of brace and suspender fittings, and also buckles under certain sections: the remainder of my output does not come under Trade Boards at all, but my wages are regulated by an agreement between the Employers' Federation and a Trade Union, which comprises 90 per cent. of those employed in that trade, to which I am federated on both sides.

2528. What do you call yourself generally?—A buckle manufacturer. In the first place I should like to draw attention to the definition in the 1909 Act, which says: "If the Board of Trade was satisfied that the rate of wages prevailing in any branch of the trade is exceptionally low, as compared with that in other employments, and that the other circumstances of the trade are such as to render the application of this Act to the trade expedient" and so on. That was instituted at a time when there was a great outcry against sweating in certain trades, and it was with the object of fixing a wage that would prevent sweating. During the time that that Act was in operation, there were nine trades out of the number of trades in the country selected, which were found to be paid a rate which was below the wages of surrounding trades, and that seems to me an infinitely small number compared with the numerous trades in the country, when you can only find nine which com-

plied with that specification. It therefore seems to me evident that sweating was not very prevalent.

2529. There were four scheduled to the Act, and there were 13 Boards relating, as you say, to the nine trades?—Yes. When that Act was put into operation it naturally tended to make employers set up a standard of efficiency if a standard wage was going to be asked for, and it really meant that the worker who claimed to be sweated in many cases did not get employment, because he did not reach that standard of efficiency. That, of course, will always be controlled by the economic law of supply and demand. At times when there is a demand for labour, and labour is not sufficient, labour will always claim a high wage, while, on the other hand, when the reverse operates, there will always be labour available at a low rate of wages. But there was that tendency to set up in all these trades a standard of efficiency in the employer's mind which he expected his operatives to comply with. In the 1918 Act the definition is entirely different. It has already been referred to, but perhaps I might read it: "If the Minister of Labour is of opinion that no adequate machinery exists for the effective regulation of wages throughout the trade, and that accordingly, having regard to the rates of wages prevailing in the trade or any part of the trade, it is expedient that the principal Act should apply to that trade," and so on. The procedure for this is also an important point. I do not know that it is necessary to read the parts of the Act, but at any rate it was a Provisional Order under the 1909 Act, which had to come before Parliament for confirmation, while to-

23 November, 1921.]

Mr. H. D. JACKSON.

[Continued.]

day it is a Special Order, which has effect without the confirmation of Parliament, which really means that it is left in the hands of the Minister of Labour to decide the degree of organisation in a trade that is necessary. That degree of organisation can be anything that the Minister himself may decide. I know there is a chance of a statutory objection, but you must remember that it is trying to deal with unorganised trades, and do you think it is possible in a trade which is unorganised to raise sufficient money and get a sufficient number of people to agree to put up a statutory objection, which is a lengthy and expensive process? Trade Boards at the present time, in my experience, are not acting in accordance with the original intention of the 1909 Act, which was to fix a minimum rate. They are now fixing wages for all classes of workers, and the rates, as you will see, are many and various. It therefore seems to me that the Boards are becoming, instead of a body for fixing a minimum wage, practically an arbitration board of a compulsory nature. I should like at this point just to illustrate this by the fact that the unorganised trades which were mentioned are very often influenced, and their wages are practically regulated, by other trades which are organised in the district, and which employ a similar class of labour. We have in our own district many trades which are very small, and they are affected and regulated practically by the agreements come to in larger trades.

2530. I do not understand that. Do you mean apart from the Trade Boards?—I mean generally what are called the unorganised trades, which are very often small, are affected by the larger trades in the district fixing wages for the same class of labour and for the same operations.

2531. Apart from their being under a Trade Board?—Yes. It is only natural that they should be affected by the larger trades which use the same labour, and very often the same process. It seems to me that if you are going to set up a degree of organisation, it is a difficult matter for you to find sufficient members on the employers' side, who can approach the thing nationally and fix a wage that does not apply only to their local area which they know, but which will apply to the whole of the country. You are asking them to form an organisation out of an unorganised trade with people who have not sufficient experience to judge of its effect, or the effect of their decisions all over the country, and it seems to me that a Trade Board should only be set up, if it is to be set up at all, in a trade which is organised, where you have sufficient people who have been used to discussing wage negotiations for the whole of the country, and who are able to judge their effect upon a different part of the country from that in which they are situated.

2532. In those trades you do not require it?—I am going to claim later that it is unnecessary, but that is one of the arguments to show that it is bad in its effect: it sets up a Board which has not sufficient knowledge to cover the whole area that it is supposed to cover. Again, I claim that it is inapplicable, for the simple reason that it has probably to fix a wage by the manufacture of a particular article, rather than by the occupation exercised by the worker. This has a very serious effect upon trade from that point of view. It means to say that as the Minister of Labour has interpreted the word "trade," the effect is that the workers in a particular trade are regulated by the people who are acquainted with that trade only, although those workers are capable of moving about to various trades, and are equally employed in different trades, as he calls them. We disagree with him when he says that they are different trades. If you take the metal industry at Birmingham, for instance, it is so closely allied in its various sections that I claim that you cannot divide it up into five trades, as the Minister of Labour has done; and that applies to most other trades.

2533. Which are your five trades?—I made a mistake in saying five, it should be four. You have

your stamped and pressed metal wares, buttons, pins, hooks and eyes, and coffin furniture.

2534. Do perambulators come into that?—They might be included in the metal trades, but that trade is hardly so closely allied as those other four trades that I have mentioned.

2535. That is probably the fifth that you had in your head, but those other four you say are the most important?—Those four trades are almost indivisible, and in many places they are carried on in the same establishments by the same workpeople on the same machines at different times in the same day. When you get to that state of affairs, you can realise that it is almost impossible to work if you are going to have four Boards controlling the wages of those operatives, and I consider that the method which has been adopted since the old days of the Guild of paying the labourer by his work, and not by the article that he produces, would be much more suitable to the trade than trying to fix it by the articles that he makes. I should like to give you an illustration of this by the samples that I have brought from the works in Birmingham. We have here four different sizes of cupped blank made from brass by means of a power press, and drawn up to that shape. You have four different sizes there, and in a large works where these are made they are made and stocked before it is settled what their final form will be. In this case when it is in this form, made into an umbrella ferrule, it comes under the Stamped or Pressed Metal Wares Trade Boards while on the other hand, if it is made in this form into an umbrella cap, it does not come under the Trade Board. Now the position arises that you cannot tell what the wages of that operative are to be when that article is being made, because you cannot say to-day whether it is going to be made into a ferrule or an umbrella cap.

2536. By "cap" do you mean the top of an umbrella?—Yes. Now the same thing applies to this article. You have part of an incandescent burner which comes under the Pressed Metalwares Trade Board, while you have a toe-cap which does not. The same position applies, and you can imagine that these articles go through in thousands of cases, and you cannot fix the wages of the worker, and no inspector and nobody else can come along and say whether these come under the Trade Board or not at that operation. Here again you have the same position. You have articles here which come under the Trade Board. Here is a dentifrice perfume case which does not come under the Trade Board, and here is an oil bottle, and here is part of an incandescent burner. There are three articles into which that blank can be made, and at the stage of this blank you cannot tell which it is going to be made into. This is a little case for holding a battery, which comes under the Trade Board, and this is a shaving-stick soap box which does not come under the Trade Board.

2537. How do you manage in practice?—Of course what happens is that we as manufacturers realise that if we get more than one Trade Board applying to our works we have no option but to pay the higher rate for the same class of work, and the consequence is, as I will illustrate later on, that that has a severe effect as regards competition. I just wanted to illustrate the point that I have made, that by the setting up of Trade Boards for the manufacture of articles you create a confusion which would not occur if you went by the work performed. Suppose you were to say that Trade Boards were necessary, although we say they are not, if you were to say that the press worker who makes a blank should get such and such a wage, you would not cause such a deleterious effect on the operative's mind as you do by saying that the wage is to be fixed according to the operations performed on it. That is one of the chief grounds on which I claim that Trade Boards as a whole are not applicable to industry in their present form.

2538. To follow that out, I see the lowest general rate of wages in the stamped or pressed metalware

23 November, 1921.]

Mr. H. D. JACKSON.

[Continued.]

trade is 1s. 2½d. an hour; is that right?—I think it is right, but the point of illustration I was dealing with was to show that the method of defining what comes under the operation of a Trade Board is quite wrong, and that it should be by process.

2539. I just want to get down to your point. You say if it is for one purpose you pay one rate of wages, and if for another you pay another?—No, the position is that articles are made from that that do not come under a Trade Board.

2540. That is another point?—Therefore they could if they chose pay any rate they liked for it, because neither an inspector nor anybody else could say what that work was for. You have to decide what the article is for before you can settle what the rate of wages is, and as an illustration of that, in the stamped metalwares trade I may say that there has been a decision given in the past that a man carrying work from one department of the works to another, assuming that the work in question comes under the Trade Board, such as the making of suspender fittings, for instance, gets the Trade Board rate, but in the case of another man carrying work about which did not come under the Trade Board he would not come under the Trade Board rate.

2541. *Lord Weir*: What do you call that piece of metal before it is one thing or another?—It is what they call a cupped blank. It is made in the form of a cup. Then we come to the question of the rates in these trades, and, as I will show, they are actually identical trades. For instance, these cups and stamped parts are made from either sheet steel or sheet brass, and the manufacture of a button is done by exactly the same process as the manufacture of the stamped part of a safety-pin; the manufacture of what comes under stamped and pressed metalwares is by exactly the same process. It may be by hand press or by a power press—it is immaterial which it is—it is exactly the same process. At this point I may say incidentally that none of us in the trade know exactly what the stamped or pressed metalwares trade is. If it is to be called a trade, the new definition which is proposed comprises 38 sections, and I should say if it were to be put on its proper basis it would comprise a matter of 30 trades.

2542. It is a good long definition.—As the Minister defines a trade and manufacture of a particular article, such as he does with buttons, you could divide it into at least 20 trades, but if you are going to claim to regulate wages the whole lot are only one industry. It is an industry which manufactures articles from sheet metal by a process called stamping and piercing, and all those articles, buttons and everything else, are manufactured in the same way; yet we have four Boards. Those Boards all started to operate in 1920, and at various dates in the early part of 1920 they fixed various rates. First, I should like to read you the rates with regard to coffin furniture, which were fixed on the 26th May, 1920. They fixed the rates of male workers of 21 years of age and over with less than one year's experience at 47s. for a 47-hour week, with more than one and less than five years' experience 45s., and with more than five years' experience 60s. The Pin, Hook and Eye Board on the 31st July, 1920, which is almost at the same time, fixed a rate of wages at 21 years of age and over, with no experience at all, at 1s. 3½d., while the Button Board fixed a rate of 1s. 3½d. on the 26th March, 1920, and the Stamped or Pressed Metalwares Board on the 15th April, 1920, fixed 1s. 4½d. There you get a very great divergence of rates; you get the question of years of experience, and you are dealing with the lowest class of labour, not skilled labour, but the lowest minimum rate, and if there is a question of degree of skill it shows a very great difference of opinion when one Board fixes three rates on account of degree of skill, while the other says, "No, we will fix one rate." I will take the highest rate of the Coffin Furniture Board, which is 60s. That works out at about 1s. 3d., while the other two are 1s. 3½d., and the stamped or pressed metalwares rate is

1s. 4½d. Just to give an illustration of this, a labourer may be carrying steel in a works where these four Boards apply (and I know one where they do), and he does not know what is going to be made from it except by inquiring. You could not tell by inspection of the material what it is going to be made into, because very often the same size of metal and the same gauge are used for different purposes, yet that man's rate depends on the article that the metal is going to be made into, and not on the actual work that is done. These rates go on for workers of 20 years and less than 21, with less than one year's experience, under the Coffin Furniture Board 40s. a week, with more than one year's experience 47s., so that 1s. an hour is the highest. The other three Boards all fixed 1s. 2d. an hour for workers of 20 years and less than 21 with less than one year's experience. For workers of 19 and less than 20 with less than one year's experience, the Coffin Furniture Board fixed 34s. a week, and with more than one year's experience 40s. The Pin Hook and Eye Board fixed 11½d. an hour, the Button Board fixed 1s. 1d. an hour, and the Stamped and Pressed Metalwares Board fixed 11½d. an hour, so you have there a variation of over 1½d. an hour, which is over 10 per cent.; and the Coffin Furniture Board is still lower, the difference being the difference between 40s. and 50s., the minimum and the maximum. Taking workers of 18 years of age and less than 19 years, the Coffin Furniture Board fixed 34s. a week, the Pin, Hook and Eye Board 9d. an hour, the Button Board 1s. an hour, and the Stamped or Pressed Metalwares Board 9d. an hour. For workers of 17 years of age and less than 18, the Coffin Furniture Board fixed 33s., the Pin, Hook and Eye Board 8d., the Button 8½d., and the Stamped and Pressed Metalwares 8d. There they come very much nearer each other, but the confusion of rates is very great, and it causes you to say that in your works you will only have one rate, so naturally you have to pay the highest in existence. Between the ages of 15 and 16 years the Coffin Furniture Board fixed 23s. 6d., which is 6d. an hour, the Pin, Hook and Eye Board fixed 6d. an hour, the Button Board is now lowest at 5d., and the Stamped or Pressed Metalwares fixed 6d. Under 15 years of age the Coffin Furniture Board fixed 16s. 6d., the Pin, Hook and Eye Board fixed 4½d., the Button Board fixed 4d., and the Stamped or Pressed Metalwares Board fixed 4½d. Then when we come to the female rates, I see that the Pin, Hook and Eye, the Button, and the Stamped or Pressed Metalwares Boards consider the adult age as being 18, while the Coffin Furniture Board consider the adult age as being 21, so there is a great difference of opinion there. Workers of 21 years of age and over, with less than two years' experience, under the Coffin Furniture Board got 27s. 6d., with more than two and less than three years' experience 30s., and with more than three years' experience 32s. 6d. The same difference of opinion occurs as to the question of the degree of skill between that Board and the other three Boards. Workers of 19 years of age and less than 21 years, with less than two years' experience, were rated at 25s. 6d., with more than two years' and less than three years' experience they were rated at 28s., and with more than three years' experience they were rated at 31s. Workers of 18 and less than 19 with less than two years' experience were rated at 23s. 6d., with more than two years' experience and less than three years' experience at 26s., and with more than three years' experience at 27s. 6d. The one rate fixed for the age of 18 years and over for the hook and eye trade was 9d., for the button trade 8½d., and for the stamped or pressed metalwares trade 9d.

2543. *Chairman*: You are speaking of an earlier rate, are you?—These are the rates fixed in 1920, the first rates that were fixed. What I have said shows that the rates compare as follows: 27s. 6d. for coffin furniture, 35s. 3d. for pins, hooks and eyes, 33s. 3d.

23 November, 1921.]

Mr. H. D. JACKSON.

[Continued.]

for buttons, and 35s. 3d. for stamped or pressed metalwares, showing that one rate was 7s. or 8s. below the others, although fixed at the same time, the same type of labour being employed on the same processes.

2544. *Lord Weir*: What is the extreme variation?—Between 27s. 6d. and 35s. 3d. It is about 20 per cent. or 25 per cent. on the top rate, and it is higher on the lower rate. It is practically 30 per cent. on the lower rate. Workers of 17 years of age and less than 18 were rated at 21s. in the coffin furniture trade, and 7½d. in the other three trades; workers of 16 years and less than 17 in the coffin furniture trade were rated at 18s., in the pins, hooks and eyes trade at 6½d., by the Button Board at 6d., and by the Stamped or Pressed Metalwares Board at 6½d. Between the next ages there is a divergence of opinion again. The Pin, Hook and Eye Board are of opinion that the wages should be altered every six months, while the others are of the opinion that they should only be altered every twelve months, so that between 15½ and 16 years of age the Pin, Hook and Eye Board fixed a rate of 5½d., while no other Board fixes a rate between those two ages. Then between the ages of 15 and 16 the Coffin Furniture Trade fixes a rate of 16s. 6d., the Pin, Hook and Eye Board fixes a rate of 5d. between 15 and 15½, the Button Board fixes 5d. between 15 and 16 years of age, and the Stamped or Pressed Metalwares Trade fixes a rate of 5½d. between 15 and 16.

2545. *Chairman*: Have you a table comparing those rates?—Yes, I have it here.

2546. Perhaps you will hand that in presently; it will be easier to follow than these extracts you are reading from it.—Certainly.* I do not know that I need quote the other rates between the ages of 14 and 15. The same thing applies, and you will see this afterwards. This, as I illustrated, shows that people performing exactly the same work are being paid different rates of pay according to the article which is going to be produced from the material that they are handling. The result is that if you have a manual labourer of between 17 and 18 years of age under the Coffin Furniture Board, he will get 8½d. an hour, while in the pin, hook and eye trade he will get 8d., in the button trade he will get 8½d., and in the stamped or pressed metalwares trade he will get 8d. That only shows a variation of ½d. an hour between two of the Boards and the other two. Between the ages of 18 and 19 he will get 8½d. in the coffin furniture trade, 9d. in the pin, hook and eye trade, 1s. in the button trade, and 9d. in the stamped or pressed metalwares trade. If you will just compare those figures, that shows between those two ages there is a difference between the rate paid in the coffin furniture trade and the button trade of 3½d. an hour, which has naturally created a much more serious discrepancy than there is in the previous age. Then between the ages of 19 and 20 you have a rate of 40s. in coffin furniture as the highest rate, while in the pin, hook and eye trade you have 11½d. an hour, in the button trade you have 1s. 1d. an hour, and in the stamped or pressed metalwares trade you have 11½d. an hour. When we get to 21 years of age and over with one year's experience the rate in the coffin furniture trade is 47s. a week, which is 1s. an hour, the pin, hook and eye rate is 1s. 3½d., the button rate is 1s. 3½d., and the stamped or pressed metalwares rate is 1s. 4½d. Then again in the coffin furniture trade the question of experience entered into it. There is not such a serious divergence of rates there as there is in the previous age, but that shows the amount of confusion that arises in trying to apply the Trade Boards Acts to the manufacture of particular articles instead of to the allied trades which employ the same class of labour on practically the same operations. That is a trade which I know, but you have a similar thing arising under the Rope, Net and Twine Board. On the 1st April, 1920, they

fixed varying rates for females at varying ages, and in the Flax and Hemp Board they fixed them on the 30th July, 1920, approximately the same period. These were the rates fixed: for the workers under 15 years of age in the rope, net and twine trade, 4d. an hour; in the flax and hemp trade, 4½d.; and in the jute trade they did not consider it necessary, I take it, to fix a wage for that age at all. For workers of 15 years of age and under 16 in the rope, twine and net trade they fixed 4½d.; in the flax and hemp trade they fixed 5½d.; and in the jute trade 5½d. For workers of 16 and under 16½ in the rope, twine and net trade they fixed 5d. an hour; in the flax and hemp trade they fixed the rates between 16 and 17 at 6d., and in the jute trade they considered it was only necessary to fix the rates between the ages of 16 and 18, and they fixed them at 7d. So there you get a great divergence of opinion in those kindred, allied trades. They are using the same material, and very often making rope out of jute, hemp and flax at varying times on the same machine. From 16½ to 17 years of age the rate in the rope, twine and net trade is 5½, and then when we get to 18 and upwards—they all fix the adult rates at 18—they get 8½d. in the rope, twine and net trade, 8d. in the flax and hemp trade, and 8d. in the jute trade; so they were more agreed there.

2547. I do not think you need go through all these details if you are going to hand in those tables.—This shows the great divergence of opinion, and the serious difference which there is, because 25 per cent. is a serious difference in a man's wage.

2548. We quite follow your point.—Then the rates for males vary in the same way. There are rates for the same work of 8½d., 9½d., and 11½d. practically at the same time, which is a difference of 2½d. or 11d., or 25 per cent.; in other words, 33½d. per cent. increase on the lower rate, or 25 per cent. less than the highest rate. As I say, it is no uncommon thing for operatives to be working on flax, hemp, jute or cotton (which does not come under a Trade Board at all) on the same machine by the same process, and yet the rate of pay would vary in each case. Take, for instance, the last scale. Operatives supplying a weaving loom with raw material, if between 16 and 17 years of age, get different rates according to whether they are carrying flax and hemp or jute. If carrying flax or hemp, the rate would be 6d., and if carrying jute the rate would be 7d. If you take a male between 18 and 19 years of age, the rate would be 9½d. in the first case and 11½d. in the second. Again, take a girl wrapping up goods coming under the three Boards. Her wages would be as follows: if between 16 and 16½ years of age in the rope, twine and net trade 5d., in the flax and hemp trade 6d., in the jute trade 7d.; if between 17 and 17½ years of age in the rope, twine and net trade her wage would be 6½d., in the flax and hemp trade 7d., and in the jute trade 7d.; if over 18 years of age, in the rope, twine and net trade her wages would be 8½d. an hour, in the flax and hemp trade 8d., and in the jute trade 8d.

2549. For wrapping up?—Yes. It is practically the same article made in the same works, whether it is wrapping up jute or hemp. They would not know the difference unless they had some experience. They could tell cotton, but not the others. I have a great quantity of evidence here, but I do not think it is necessary to go right through it, because I have illustrated my point. I should, however, just like to take the case of handkerchief making. Under the Linen and Cotton Handkerchief and Linen Piece Goods Trade Board, for cotton hemming the rate is 29s. a week, while under the Shirt-making Trade Board, for sewing shirts, aprons, etc., she would get 11s. a week. Now the same girl might well be hemming towels and dusters in the forenoon, and in the afternoon sewing aprons and shirts; so what wage ought she to receive? That illustrates the point that I wanted to make, that if a girl is using a sewing machine for one operation or another it surely makes very little difference whether she is sewing one article or another if it is plain, straightforward sewing; while

* Tables and letters subsequently handed in—not printed.

23 November, 1921.]

Mr. H. D. JACKSON.

[Continued.]

for hemming, as I pointed out, they get two different rates for hemming two different articles. You will realise, I think, that it would be impossible in a factory to work under these conditions, because a girl might be doing a certain number of these articles which would occupy her for two hours, and then change on to some other article of a similar character, and she will have to remember, and you will have to have some recording machinery for recording that her wages have altered every two hours, which I think is a practical impossibility.

2550. It is right that responsibility should be put on the right shoulders, and no doubt you know that when these Metal Boards were formed they all clamoured for separate Boards—pin, hook and eye, button, and coffin furniture; they all wanted to have separate Boards. You probably also know that an attempt was made not long ago to get those Boards to amalgamate, but opposition came from some of the Boards, though not, I think from yours?—Ours was in favour, but the others opposed, and in some cases the labour representatives also opposed amalgamation.

2551. If there is blame you would not put it on the shoulders of the Minister of Labour?—I am not doing so, I am putting it on the Act itself, because it can only be applied to a trade, and the Minister has interpreted that in the distributive trades as meaning that you cannot treat the distributive trade as a trade, but it must be divided up into grocery and other distributive trades, so that you have the other point that he has himself said that you cannot apply it to a collective trade.

2552. That is also true, is it not, with regard to the Rope, Flax and Jute Trade Boards: there is also a joint committee?—I agree there is a Joint Industrial Council in some cases sitting at the same time as the Trade Boards, and there is in the hollow-ware trade. I am trying to illustrate the fact that getting a co-ordinating committee does not solve the problem.

2553. I daresay not, but it is as well that the Committee should know those facts?—There is no co-ordinating committee in the stamped or pressed metalwares trade. There you have the position operating, and there is one works, as I know, in which four Boards operate. They do not pay the different rates because they cannot.

2554. Are they paying the highest rate?—Yes. Other Trade Board rates become inoperative, and it puts that manufacturer in a serious difficulty when he is competing with other people who do not come under the four Trade Boards. I do not think I need go on with these illustrations any further, because I think I have fully put before you the difficulties. The other objection we have now is that they are not in all cases representative. There are some cases, at any rate, where representation has been applied for and refused. The Boards in many cases are not representative of the workmen for whom they are supposed to adjudicate. As an instance of that I can quote the Brush and Broom Trade Board, in which the Walsall manufacturers of saddlery brushes, who make 75 per cent., or claim to make 75 per cent., of the total output of the country are not represented on the Board, and though they have applied for representation, it has been refused. I should like to read a letter on that point. This is an objection raised by a firm of manufacturers which I happen to know personally. They are large manufacturers of brushes of various descriptions, and very large manufacturers of these particular saddlery brushes. "Our first objection, in common with other manufacturers, was that 75 per cent. of the saddlery brushes in this country are made in the Walsall district, and not a single Walsall manufacturer was asked to sit on the Board, and when we applied for permission to be heard it was ignored." That is the statement of the firm themselves.

2555. *Mr. Layton*: What proportion of those brushes are made in the whole brush trade?—I cannot tell you, because it is a very complicated trade, and, as you know, there are a number of brushes of various brands. I am only saying that there is a special section of the trade which cannot get representation, although they applied for it.

2556. *Chairman*: Are they affiliated to the British Brush Manufacturers' Association?—I cannot tell you.

2557. *Mr. Poulton*: To whom is that letter addressed?—It is addressed to our Secretary.

2558. I suppose you have not any letter addressed to the Ministry of Labour protesting against their exclusion?—No, I have not.

2559. *Chairman*: I think they say that they wrote to the Ministry of Labour?—The words they use are that they applied for permission to be heard, and it was ignored.

2560. I see that most of the employers were suggested or nominated by the British Brush Manufacturers' Association, and it may be that the firm you mention are members of that Association?—That may be so.

2561. That Association is connected with your Union, is it not?—The Association used to be affiliated.

2562. Are they members of the Union?—(*Mr. Cheesman*: Individually they are, but the Association is no longer affiliated. *Mr. Jackson*: Again, in the case of the wire rope manufacturers their wages are regulated by the Rope, Twine and Net Board, although there is not a single representative of the wire rope trade on the Board. I have here a letter which I received from one of the wire rope manufacturers who also manufactures cotton rope. "In this connection I should like to say that although we are really wire rope manufacturers our wages are regulated by the Rope, Twine and Net Trade Board, which does not include a single wire rope manufacturer. We can only say that we know of wire rope manufacturers who when the Trade Board rates came into operation carefully scrutinised their wage sheets and dispensed with numerous people whose earning capacity was not sufficient to show a reasonable profit." That point I can illustrate later on.

2563. *Chairman*: Just to get it clear, I have got the definition here, which excludes the making of wire rope unless made in the same factory or workshop as hemp or similar rope or cord?—There you have the same instance.

2564. It is just as well to have the facts clear.—The effect is that in a factory where you make cotton rope, because you are making another article in the same factory, you have your wire rope-making wages regulated by that.

2565. The statement there is made quite generally that all wire rope manufacturers are under the Board, and that is not so?—I simply read the letter as it was written to me; I thought that was the right thing to do.

2566. It is not a correct statement?—No, but it simply means that the wire rope manufacturers' wages where another trade is existing in the same factory are regulated, and where there is no other trade existing in the same factory they are not regulated. It is an illustration of the fact that they are regulated, not by the work done, but by the article made.

2567. *Mr. Poulton*: Do you seriously suggest that the Trade Board rate is the rate which obtains in the factory, whether it be higher or lower?—I do.

2568. It does not obtain in my trade, I assure you?—I am talking about this trade, and there is the statement that it does apply, and in the statement of the Pressed Metalwares Trade it does apply, too.

2569. *Chairman*: Are you going on to another subject?—Yes.

23 November, 1921.]

Mr. H. D. JACKSON.

[Continued.]

Chairman: Then I think we had better adjourn at this point until 2.30, when we shall have to interpose another witness who has been waiting for some time, so we shall not want you again until a quarter past three.

Mr. Rogers: As I have been requested to attend at the Liquidation and Disposals Commission this afternoon, I shall be glad if you will excuse me from further attendance.

Chairman: Certainly.

(Adjourned for a short time.)

Mr. WILLIAM COOLING LAWRENCE and Mr. C. CORELLI, on behalf of the Association of London Master Tailors, called and examined.

The Witnesses handed in the following statement:—

1. The Association of London Master Tailors would have had no objection to the Trade Board if it had confined itself to fixing equitable minimum rates and fair conditions under which the wage could be earned in areas where the cost of living is normal with a minus rate for villages and rural districts. Whereas the workers demanded, and were successful in obtaining higher rates on the plea that their bespoke tailoring trade was a skilled and seasonal trade.

The alleged difficulty of differentiating for villages and rural areas can be surmounted as it was by the Food Controller during the war by collecting prices of staple articles of food.

2. The methods of the wholesale Board on which the spokesmen of the workers had served were applied to the retail bespoke tailoring trade. These methods are too cumbersome for a trade which numbers over 50,000 employers. They necessitate an interminable amount of correspondence and detail and an enormous cost to the country without accomplishing adequate results.

3. The Board has not prevented strikes from occurring all over the country. This year there was a disastrous strike in London which ruined the London Season at a critical time of trade depression.

4. The Trade Board by its constitution and atmosphere is useless as an Arbitration Court in the settlement of disputes.

After two years it has not yet been able to fix piece-rates, the system on which the journeyman tailor has been paid wages from time immemorial.

5. The Conciliation Board on which the employers and workers were represented has been in existence for thirty years and has operated satisfactorily at no cost to the country. Its atmosphere is one of goodwill and mutual respect. Its members have intimate knowledge of all the conditions of the trade, its awards have never been questioned, and they have automatically been accepted in the United Kingdom.

As however Conciliation Boards have no compulsory powers, the employers and workers made a joint application to the Minister of Labour to make the awards binding on the whole trade. He referred the matter to the Trade Board, which has been powerless to arrive at a decision.

The Conciliation Board provides for payment for different degrees of skilled work, whereas the Trade Board has absurdly based its rates on the age of the workers and the number of years he has been at work.

6. In conclusion, we are of opinion that the work of the Trade Boards could be done more easily, more promptly and infinitely more economically by:

A National Minimum Wage;

Conciliation Boards; and

A Tribunal to give legal sanction to the awards of the Conciliation Boards in the interests of the community of consumers.

2570. *Chairman:* Mr. Lawrence, you are the President of the Association of London Master Tailors?—(Mr. Lawrence): Yes.

2571. What have you to say to us about Trade Boards?—I want to put before you the length of time that has been devoted to trying to arrive at a decision of what we should pay in London, and I thought, in order to impress you with that, it would be necessary to bring you the papers and put them in front of you. We have now been at work for two

years, and as the London Master Tailors work by a log, we have not come to any agreement at what rate this log should be paid. We have only fixed a minimum time-rate by the clock hour. I think it is my duty to call your attention to the fact that in fixing this minimum rate, which is to be a universal one, the workers have gauged the minimum rate by the wages that were paid in London at the time these negotiations commenced.

2572. Of which Board are you speaking?—The Retail Bespoke Tailoring Trade. I will just draw your attention to the first minute. (*Printed document handed to the Chairman.*) These are the minutes of the first meeting held, and those are the rates that were suggested by the workers.

2573. Yes; that is: male workers in the first-class firms, 2s. an hour; those employed by second-class firms, 1s. 10d.; and those employed by third-class firms, 1s. 9d.; and the number of hours to be 48?—Yes. What I wanted to draw your attention to was that those were the rates prevailing at the time in London, and they were arrived at in this way—

2574. Are not you going into rather ancient history? Those were not adopted, were they?—Oh, yes, they were the prevailing rates.

2575. But they were not adopted by the Board?—They were not adopted by the Board, *no*. We shall lead up to something else which I think will give you the reason of this correspondence which was received objecting to the rates which were ultimately arrived at. The minimum rate for the Provinces, in the rural areas, as you will see, was decided somewhat on the standard prevailing in London, and the consequence was that we were sent all these letters of objection. (*Indicating large bundle.*) There are some, but very few, from the trade unions, all of a stereotyped nature. I do not know whether you intend to investigate these letters, but there they are at your disposal.

2576. I think not. Your Board made a proposal for rates, and those are the objections to the proposal?—Yes.

2577. Then was the proposal ultimately adopted or set aside?—The proposals were adopted by the vote of the Appointed Members. I am sorry to say that at that time it was touch and go whether the masters would attend these meetings any further, but we were prevailed upon to continue, and we did under protest; so practically and morally the masters are not responsible for these minimum rates which now prevail, and they have tried to enforce them in the Provinces, with this result. The masters are not in any way responsible.

2578. *Lord Weir:* Are those letters received by the Trade Board or by your association?—I am a member of the Trade Board, both as a member of the Trade Board, as a member of the Administrative Committee, and of the Log Committee, so I have pretty extensive knowledge of its operation. These were received by me as a member of the Trade Board.

2579. *Chairman:* That big bundle about 9 inches thick?—Yes, and weighing about 9 or 10 lbs.

2580. *Mr. Poulton:* What do they refer to?—That if the rates were put in operation which have been decided by the Trade Boards, it would be attended with disastrous results to the masters concerned, that they would have to close down or discharge their workmen who are working on the piece-rate, and sell ready-made garments—deal in factory-made garments. But there are some also from the trade unions, which I should mention; I think there are 70 or 80 letters from trade union organisations, all

23 November, 1921.]

Mr. WILLIAM COOLING LAWRENCE and Mr. C. CORELLI.

[Continued.]

of a stereotyped character, all written pretty well in the same strain, and they are comprised in that bundle.

2581. You say they are stereotyped. If the others object and say it will bring disaster, are not they also stereotyped?—No, they are not. They are all written in different composition entirely.

2582. They may be in different composition, but if the result is that it will bring disaster?—Do you know exactly what I am alluding to? I mean if I instruct a man to write a letter, that is stereotyped, but if I write a letter which emanates from my own brain I call that my letter. To show you what I mean by the word "stereotyped" I give you that example.

2583. *Chairman*: You mean they show signs of a common origin; is that it?—Yes, my Lord, a common origin. Then as far as the London Master Tailors are concerned, I must mention to you that when it was suggested that we should be included in this new Act of 1918, a deputation of our association consisting of Mr. Cundey the principal of Poole's, Mr. Moore of Soudons, Mr. Johnstone of J. B. Johnstone of Sackville Street, myself, and Mr. White, of Hawkes and Co. of Savile Row, attended at Montagu House and begged that we should be exempted from the Wholesale Board but there is no doubt that in the archives of this House there is a record of what took place at that meeting. It is now so remote that I have forgotten the details, but there was one remark that was very much impressed upon my memory, and that was that as our Association numerically was so small, politically we were of no importance. I mean to say that is the idea that was conveyed to me from the interview, that our numbers were too insignificant to be of any importance or to be of any weight in the scale. Why I state that is this, that we are not inconsistent in our attitude. From the very beginning we have felt that there was no necessity for us to be included in this, and when the 1909 Bill was in Parliament we were told that we should not be. Also, to give an example of our independence of this Act, in 1920 the workers made a demand—we were then paying 1s. per log hour—of 1s. 6d. an hour on account of the increased cost of living. On the fact that all other industries had made an increase we compromised by granting them 1s. 3d. per log hour. We pay by the log; we do not pay by the clock hour. But at the commencement of this year the falling off in the trade was so appalling that economic necessities compelled us to suggest to our men that the cost of production must be reduced in order to entice custom. We suggested that the ordinary garments in daily wear should be reduced from 1s. 3d. to 1s. 1d. per log hour, and that the dress garments, the dress garments mentioned in the minutes of the Trade Board which you have there, should remain as they were; that is to say, we acted according to the principle that had been laid down by the workers themselves at the Trade Board. But we were told that it was contrary to the interests and opinion of trade unionism to differentiate, and they would not allow us to pay the workers making the garments as specified by the Trade Board at 1s. 3d., but they compromised through the intercession of Miss Sloan, a member of Montagu House, at 1s. 1½d. for all garments by the log hour. As a member of the Trade Board the workers vote for one principle at the Trade Board, but do not act up to that principle in practice. With regard to overtime, we have suggested that in our section it is inapplicable.

2584. I dare say you understand that this Committee is not going into details of rates fixed by the Trade Board. We only want to hear you upon the working of the Trade Board system in connection with your trade. We cannot go into the rates which have been fixed or not fixed.—With regard to the working of this, our men in their last strike, in March of this year, were not influenced by the edicts of the Trade Board. I should like to impress that upon you.

2585. What do you mean by that?—I mean to say this, that the Trade Board have differentiated in garments, and the workmen will not differentiate; all garments must be paid for at the same rate per log hour, although it is specified by the Trade Board that by the clock hour they are to pay 1s. 8½d. for ordinary garments and 1s. 10½d. for dress garments.

2586. I dare say you know that the Trade Board only fixes the lowest rates, which must be paid for certain kinds of work. It does not prevent the employers paying more, or the workmen from asking for more?—No, but if we suggest different rates on garments we are turned down by the union.

2587. That is a complaint against the union, not against the Trade Board?—I only mean to say this, that I assume that the workers' side at the Trade Board represents the opinions of the union. If they do not, well, what is the object of the Trade Board? If the unions will not obey the behests of the Trade Board, it shows they are not in sympathy. This point struck me—I do not want to bore you—but as a member of the Trade Board it seems to me, if we vote for certain things there, and they are not carried out by those who wish them (and, of course, we do not wish them), the whole thing is useless. I should like you to go into the origins of these Trade Boards, and who got us included. It was not the masters who wished to be put there, and I personally do not see the necessity why we should be, because we are not in any way affected by the Trade Board.

2588. *Lord Weir*: I should like to get one thing a little more clearly. You say on the Trade Board you have fixed two different rates for two classes of garment?—Yes.

2589. And in practice in your workshop you are unable to adopt these rates?—Yes.

2590. Why?—The workmen will not have them; they will not have differentiation.

2591. *Chairman*: They want the high rate for both, I suppose?—Yes.

2592. *Lord Weir*: And did you have a strike over that?—Yes, we had a strike lasting two months this year.

2593. What was the result of it?—The result was we got 10 per cent. reduction.

2594. How do you mean, 10 per cent. reduction? You wanted to impose the Trade Board rates—the differential rates?—No, not the Trade Board rates. We wanted to impose a differential rate, but not the Trade Board rate. We pay a higher rate. We came to an agreement with the trade union to pay a higher rate. All the members of our association pay a higher rate. We are not influenced by the Trade Board; we have always paid a higher rate.

2595. So that the London Master Tailors are outside the Trade Board—you make your agreements apart altogether from the Trade Board?—Yes, quite outside.

Chairman: I suggest to you that this has nothing to do with the inquiry we are conducting.

Lord Weir: How can it?

Mr. Poulton: I cannot follow it at all.

2596. *Chairman*: I mean you can always pay more than the Trade Board ratio?—(Mr. Corelli): I think Mr. Lawrence means to say that in consequence of the differentiation allowed by the Trade Board we thought we should meet the men's wishes by making certain proposals, and when they were put to their meeting they were howled down, because of the differentiation; and once they go on strike it is very difficult to get them back again.

2597. Still, they are rates higher than the Trade Board rates?—Yes; ours have always been. (Mr. Lawrence): Now, with regard to the apprenticeship scheme. Of course we had our apprenticeship scheme in operation long before the Trade Board, and I am sorry to tell you that as far as apprentices are concerned if that end of the channel is closed, namely rural areas whence are obtained our sartorial recruits, it will create great difficulty. How it happens in London as regards the apprenticeship scheme is this, that if anyone wishes to apprentice

23 November, 1921.]

MR. WILLIAM COOLING LAWRENCE and Mr. C. CORELLI.

[Continued.]

a boy to the craft, and a guardian or parent comes to me for that purpose, I introduce the workman to that parent, and the premium and remuneration is an arrangement between the two. I do not in any way interfere with that. All I do in order to encourage the apprenticeship is to give the space in my premises, and the worker, if there is any profit in the matter, he takes it, and if there is any loss he bears it. He makes his own arrangement. I have been asked since this scheme has been in operation whether I could take an apprentice. I went to one of my workmen, and his reply was, "The rates are too high for us," and you see how the channels at both ends of our trade are stopped. We cannot get them from the rural areas because they cannot cope with these rates, and the workmen at our end, with whom we do not interfere at all—we allow them to get all the advantages accruing from the apprenticeship scheme—say the rates are too high.

2598. You mean the rates fixed for learners?—I am speaking of apprentices. You may call them learners; it is really one and the same thing, but we call them apprentices.

2599. Do not the rates fixed for learners apply to apprentices?—Yes, about the same. There is a slight difference, but not much.

2600. Mr. Poulton: Do you mean that the workman in your establishment says that the amount of wage that he has to pay the apprentice is too much?—Yes.

2601. Therefore he will not take him?—Yes.

2602. Has that been communicated to the proper authority in connection with the men's union?—No, I have not discussed it with the men's union.

2603. You have not attempted to try and meet the situation?—No. It never struck me that after having consulted my workman on my own premises, which was a private matter between myself and himself, it would be correct to bring that matter before the trade union.

2604. Mr. MacCollum Scott: Is it the other workman who pays the learner?—Yes, it is the workman. He would take the premium and pay the learner. We do not interfere at all; we let them make the arrangement themselves. If there is any advantage accruing from the deal the workman gets it. He gets his premium. We of course are at a loss, because we supply the implements, and we supply the space to the boy.

2605. Lord Weir: Is that general all over the country, or is it confined to London?—No, it applies more particularly to London, the high-class houses.

2606. Dame Adelaide Anderson: The rates for learners are not the same as the other rates you have been speaking of; they are higher proportionately?—I do not think there is very much difference.

2607. From what you said a little while ago the rates you were paying were higher than the minimum?—From memory, the rates were about the same; the apprentices and learners are about the same.

2608. Chairman: They begin at 10s. in each case. I think they are about the same?—Yes.

Chairman: They advance rather more quickly with learners than they do with apprentices.

2609. Dame Adelaide Anderson: I was not comparing apprentices with learners. I was on the point that you were paying higher rates generally than the minima prescribed by the Trade Board. Is not that so as regards the learners?—No; we do not employ learners; it is not the custom. In fact we do not employ assistants. If a tailor employs an assistant tailoress he pays the prescribed rate as agreed by the Trade Board or the trade union, and if he makes a profit by the arrangement he gets the profit. Then in the event of that assistant taking work direct and taking the full responsibility for that work, she receives the same payment as the men. For instance, the women waistcoat makers in our employ are paid on the same standard as the men, so they are exactly in the same position. The woman who takes a garment and makes it completely is put in exactly the same position in our trade as

the men; but as long as she works as an assistant and does not take full responsibility, she makes her terms with the workman, and of course he is governed by the trade union agreements or the Trade Board rates. In London they pay higher than the Trade Board rates; I think that is the understood thing.

2610. For adults you pay higher?—Adults and the women too—for the assistant tailoresses, yes. They are paid higher, and the tailoresses, those who make garments on their own responsibility, are paid at the same rate as the men.

2611. Lord Weir: So far as your particular branch of tailoring is concerned, if there were no Trade Board in existence it would not make the slightest difference?—It would not make the slightest difference. (Mr. Corelli): We have a Conciliation Board, and have had for 30 years. (Mr. Lawrence): We discussed that. I have been operating with the Amalgamated Tailors since 1891, when there was a strike.

2612. Lord Weir: You claim that you were perfectly adequately organised for regulating your own wages?—Quite so, and we would save the country an enormous expense.

2613. But not as regards learners and apprentices?—Well, it is not the custom of the members of our Association to employ learners and assistants. It would be quite the exception that proves the rule.

2614. Chairman: Your men do?—Our men may do so.

2615. You say they find a difficulty because of the rates fixed for apprentices and learners; is that so?—Oh no; the men make no complaint about the learners or the assistant tailoresses. The only thing they make complaint about is the question of apprenticeship. The apprenticeship rates are too high, and therefore they will not take them. Consequently English boys will not get the opportunity of learning our craft, and we shall employ foreigners instead.

2616. Is that the only point where the Trade Board affects your trade in London?—Yes, I should think that would be so.

2617. Mr. Poulton: Have you any idea of the difference between the Trade Board rate and the rate of your employees—I mean they become in turn employers in the case of these apprentices?—Yes. Some of my partners were in my employ 30 or 40 years ago as workmen.

2618. Can you tell us what is the difference in the rate that they have been in the habit of paying these apprentices and the rates which are now prescribed for you to pay?—I should have to inquire as to that; I have never interfered. But as a citizen I am anxious to encourage apprenticeship, and I may tell you now it is most disastrous. What is going to happen a generation hence I do not know.

2619. Dame Adelaide Anderson: Are these workers who are employing apprentices represented on the Trade Board, or have they made any appeal for representation on the Trade Board?—I cannot answer that question at all.

2620. Chairman: What is your next point?—I want that to be well thought of—the rural areas. I believe that Mr. Nicholson, who is of course one of the members of Montagu House and also of the Labour Ministry, attended our last meeting, and told us that the results of the application of these minimum rates to the rural areas has been disastrous. I think that comprises all I have to say. The only thing I should like to finish with is that, of course, as a commercial man—it may be a digression and uncalled for—I have chafed very much for the last two years at the Trade Board meetings at the enormous expenditure incurred there, with the little result obtained. As far as we are concerned the only point that we are really interested in—that is, the minimum log rate—has not been decided. That is all I have to say.

2621. Have you anything to add, Mr. Corelli?—(Mr. Corelli): If I may, I should like to add a few words.

2622. What is your position?—I am the secretary of the Association of London Master Tailors. What

23 November, 1921.]

Mr. WILLIAM COOLING LAWRENCE and Mr. C. CORELLI.

[Continued.]

I should like to say is that if these trade boards are to stay there should be some reconstruction of the work. First of all, piece-rates, by which 95 per cent. of the men are paid, should have been considered in the very beginning. We have been at work for two years, and that has never been decided yet. If we had a general piece-rate I am certain that all these troubles which we have had about overtime and out-workers and a great many other things that have cropped up, on which we have had discussions day after day, would never have been needed. For instance, the question of differentiation in villages: if you have a piece rate it is quite easy to have an agreement with a trade union that in such-and-such a district a piece-rate at the rate of 11d. instead of 1s., or 10d. instead of 11d., should obtain, and that would settle the whole difficulty of differentiation. Mr. Lawrence has laid great emphasis on the rural districts, because these trades are valuable; they are an asset to the country. The employer teaches his son; sometimes the trade descends from father to son for three or four generations, and it is from there that we get all our recruits, and a good many boys who have learned their trade in a village are now partners in great firms in London—some of the very greatest. Then there is also the facility with which higher rates could be fixed by conciliation boards if once you had a normal rate for what I should call normal districts—that is, second- or third-class towns. That would not include Manchester or Liverpool, or even fashionable places like Bath; and then London would become the top. It would be quite easy to do that when once you had a fixed minimum piece-rate. Our troubles would be gone as far as our association is concerned. Then I should like also to say, although it is a very small matter and probably other people know much more about it than I do, that the administration of the board is very cumbersome. There is a tremendous lot of correspondence, as Mr. Lawrence has said.

2623. Are you on the Board?—I am on the Board, yes, and all these notices have been sent out. I should think between a quarter and half a million notices have been sent out, and yet we know many firms have not received them. I think it would be quite as easy to advertise them at the Post Office, or in some other way which would be easier, and so that everybody could have a chance of knowing what they were going to be asked to pay.

2624. What way would you suggest? There is an objection, I am told, to the post offices being used, because they do not want to have more notices, as they have only a limited space.—During the war, of course, we used the post offices for all sorts of things.

2625. That is true.—Would not there be some other way of doing it?

2626. Would an advertisement in the ordinary daily papers be useful, or in the trade papers?—It might be said it is cheaper to send these notices out; if the postage costs nothing, it may be cheaper.

2627. It takes time?—But, of course, the post costs the same thing to the country.

2628. It takes time, of course, to reach all the employers?—Yes, and some of them are never reached. Even when they get these notices, there are many firms—I called on a firm quite recently where there was not a spot where you could put one of these notices. All the partitions, all the walls, were either shelves with cloth upon them or partitions with glass, so as to bring the light into the trying-on rooms. You could not have put up the notices anywhere. I suggested that they should put them in the passage and paste one on the top of the other loose, so that anyone could lift them up and look at the ones underneath. But there are very few tailors' establishments where there is any wall space on which they can put these notices. Of course, it is a very small matter, but we are kept at the Trade Board for two days sometimes, and nothing is done. Speeches are made; you hear a trade union official come and make a speech which he has already made

at a meeting in Scotland—he speaks in broad Scotch in a room where you cannot hear anything else for the noise going on in the streets, and this very same speech has been made already to the employers. He has been shown that he was wrong, and yet, in order to play to the gallery or to influence the appointed members, he goes on repeating the same thing, and speaks for a quarter of an hour, and then afterwards, when we have something important to say, the Chairman says, "Well, would you mind leaving it as it is; time is pressing," and so on. There is too much talking about it altogether, as I think Mr. Lawrence will agree.

2629. That is incidental to a great many assemblies. We cannot very well go into that?—Perhaps I am a sinner now, my Lord. If you will allow me, I should like to make a suggestion—I daresay you have had a lot of suggestions—about a remedy for all this. I say that a national minimum rate, as has often been suggested here, a national minimum rate for the United Kingdom, could easily be fixed for normal districts. There are great facilities with the rural district councils, with the food committees that were established during the war, for finding out the average price of staple articles in villages, and I think that a lower scale, what I call a minus scale, for villages could easily be fixed once you have got a minimum rate for what I should call normal towns—second- or third-class towns. We have a Conciliation Board, and I should like to hand you the rules of that Conciliation Board. (Copy handed.) It was not called originally a Conciliation Board; it was called the Reference Committee; but some time before the Conciliation Act was passed we called it a Conciliation Board. The rules were submitted to Sir George Askwith, as he then was, and it has been in perfect working order the whole time. We settle everything without any trouble. We meet in a room with mutual respect, and listen to one another as people who know one another's business, whereas at a trade board the atmosphere is something—well, I do not like to qualify the atmosphere there is there. It is one of hatred and accusation and name-calling, and it is something dreadful.

2630. What proportion of the employers belong to the associations?—The Association of London Master Tailors and the Amalgamated Society of Tailors were the first. Then the Minister of Labour induced us in 1912, in order to give the Board a more national aspect, to admit the National Federation of Merchant Tailors, of which Mr. Adams was the representative here last week.

2631. That was not the question I was putting to you. What proportion of employers and workers belong to unions or federations? I want to know how well organised your trade is?—It is not sufficiently organised for us to claim exemption from the Trade Boards; that I admit. But when Mr. Wilson took the chair at a conference at the Ministry to induce us to extend our Conciliation Board, we had hopes that we should become strong enough to ask the Minister to exercise the power which he had during the war of making our decisions binding on the whole trade.

2632. When you say "our decisions," you mean those of the Conciliation Board?—Yes, of the Conciliation Board.

2633. Mr. Layton: I understand that you are dealing with London only?—With the London association and branches of the National Federation. Our decisions are always followed everywhere. If we go up 1d. or come down 1d., even in Ireland the rate goes up or down with ours, so that the Conciliation Board has been really doing all the work which the Trade Board is doing now.

2634. When you said just now the trade was not sufficiently organised to claim exemption from the Act, would that be true of London as well as of other parts of the country?—The Conciliation Board or the Trade Board?

2635. You said that the trade was not sufficiently organised to claim exemption from the Trade Board?—No, it is not sufficiently organised.

23 November, 1921.]

MR. WILLIAM COOLING LAWRENCE and Mr. C. CORELLI.

[Continued.]

2636. Does that apply to London as well as to the rest of the Kingdom?—Yes.

2637. It is not even sufficiently well organised in London?—No, not anywhere. There are 50,000 tailors, and it would be quite impossible for a voluntary body to organise, say, 40,000 or 45,000 employers; it would be quite impossible. But at the same time, we think that by a stroke of the pen the Minister could inquire into our decisions, and if they met the approval of the Department, I think you could get power to make those conditions acceptable locally, whether in Manchester, Liverpool, or London. It would save all this trouble.

2638. Mr. Poulton: So that your objection is not to a Trade Board as such, but only to the way in which, for the moment, it is administered. You get along too slowly?—Yes, and the spirit is not quite right.

2639. The spirit there is not the same as at your own Conciliation Board?—That is so. At our Conciliation Board we meet as friends, and it always ends up with a cordial vote of thanks, either to Mr. Cuney or to Mr. Lawrence.

2640. Chairman: What is the moral you draw from that?—I draw from that that everything in trade that is interfered with by Governments—well, I will not say any more.

2641. Mr. MacCallum Scott: It was stated that in the London trade, or, at least, certain sections of it, wages were agreed on which were considerably in excess of the Trade Board figures?—(Mr. Lawrence): Were in excess.

2642. Appreciably in excess?—In excess; I should not use any qualification.

2643. Very well. Does that apply to the whole trade?—(Mr. Corelli): No.

2644. To what section does it apply?—(Mr. Lawrence): The Association of London Master Tailors, the members of our association. There may be others outside.

2645. Do they cover a large proportion of the London trade?—No. (Mr. Corelli): We limit the membership to those who bind themselves to pay certain rates. (Mr. Lawrence): The problem we have to consider is this. In the event of a strike, whom have we to protect; those who pay high rates or those who pay low rates? Therefore, we subscribe to a certain code, and those who subscribe to that code we naturally band together to protect. (Mr. Corelli): May I add that right through we have had—I do not say to educate, but to initiate a lot of Departments into the mysteries of our trade, and there has been a good deal of overlapping. It took us a long time to get, say, the Board of Trade to understand our trade. At last, I think, Sir George Askwith understood it almost as well as I did. Then we had also the Home Office to deal with, the inspectors under the Factory Act. The Chief Inspector came to several conferences at our Conciliation Board with his assessors, and he made certain agreements, because he admitted that the Factory and Workshops Act was impossible to administer in our trade, exactly the same as these decisions of the Trade Board Act are—very few of them can be administered. Now, the Chief Inspector admitted that, and he made, for instance, the arrangement that instead of having to give the full particulars to the workman—it shows we were getting on quite well without the Trade Boards interfering with our trade at all.

2646. Mr. Layton: You propose that there should be a Conciliation Board with a provision to make its decision binding?—Yes.

2647. If you were to give legal sanction to the agreements which you make between the employers and employed, would not the resulting rates be open to the same objections as the rates now fixed by

the Trade Board, namely, lack of flexibility?—No, the Conciliation Board have three rates for London. There is a rate for the firms who choose to classify themselves as first-class, and accept first-class labour. There is the lower class—we do not call them third-class, but they choose to classify themselves to pay the lower rate; and then there is the middle rate. There are, at this moment, only two rates, because it was not convenient to alter all three, but that leaves enough elasticity in London to meet the requirement of the whole trade.

2648. You are speaking now of the rates fixed by the Conciliation Board?—Yes.

2649. They fixed three grades?—Yes.

2650. Three grades for the workpeople?—No, for the employers.

2651. Who grades the employers?—(Mr. Lawrence): A mutual agreement between the two trade unions involved—the masters and workers' associations.

2652. That grading is not possible under the Trade Board—a similar grading. Is that what you are saying, that grading of that kind is not possible under the Trade Board?—That is what the appointed members said. The line of demarcation is impossible to draw. That is why they turned down the rural areas and would not have differential rates. They said the line of demarcation was impossible to fix.

2653. Your point, then, is that the Conciliation Board machinery permits of more variable arrangements than the Trade Board?—Yes, and a more local arrangement too.

2654. But supposing you were to ask the State to intervene, and make that arrangement legal, would not the same difficulty of demarcation then arise? You arrange that firm A should be in such and such a group, and firm B in another group, by a bargain between the two sides? Could you make that a legally binding arrangement without at once introducing the element of inflexibility?—Well, Sir, could not it be met as it was by the old Trade Boards Act of 1909, which says: "The Trade Board may establish district trade committees consisting partly of members of the Trade Board and partly of persons not being members of the Trade Board, but representing employers or workers engaged in the trade and constituted in accordance with regulations made for the purpose by the Board of Trade, and acting for such area as the Trade Board may determine." At present London acts for the whole of the United Kingdom.

2655. Yes, but that is not exactly the point I am putting. You suggest conciliation machinery and then that the State should step in and make the decisions arrived at by that conciliation machinery legally binding?—Yes.

2656. I am asking you whether you do not consider that the intervention of the State after such an arrangement is arrived at, making it legally binding, would not introduce many of the elements of difficulty that you now see in the Trade Board system?—Of course it is a very difficult thing to say, but the trade unions have always shown great aptitude in regulating affairs of that description, and it would be principally at their dictation that certain individuals should come under a particular grade, and if it were approved of, probably the individual referred to would have an opportunity of appeal on this Committee, to show why he was not paying the rates of others in the district. It could be gone into locally, and according to the views of the Committee after that interview he would have to submit or put up with the consequences. (Mr. Corelli): What we say is that 50 men meeting from all parts of the country are not a fit and proper tribunal to judge what the London employers and workpeople agree to pay. It is not a proper tribunal for the purpose.

(The Witnesses withdrew.)

Mr. H. D. JACKSON, recalled and further examined.

2657. Chairman: You were dealing, I think, with the question of variable rates for similar work?—Yes. The next point I should like to deal with is

the question of Government interference in trade. It has not proved very successful during the war, and practically the whole control of trade has been

23 November, 1921.]

Mr. H. D. JACKSON.

[Continued.]

released by the Government in nearly every industry that it affected during the war. More particularly I should like to call your attention to the fact that the attempt to regulate agricultural wages has been abandoned, and it seems to me some evidence is afforded of that by the fact that the Government realise that in attempting to control the industry, they have taken on a subject which requires the most intimate knowledge of the industry itself, before it can be dealt with satisfactorily. It seems to me that this is only another method of trying to put on to industry something that it is not capable of bearing, by persons who have not sufficient knowledge to be able to form an opinion that they are trying to enforce. The old method of allowing manufacturers to deal direct with their employees, and to deal with them also collectively in a collective bargain, seems to me to be much preferable to a Government endeavour to introduce members outside the trade who do not know anything about it, to adjudicate on matters of this description.

2658. Would you extend that to cases where there is often what is called sweating—an undue exploitation of labour?—Well, I hardly think there is a condition of sweating to-day, and even if it were sweating, I should prefer for the Government to say: "You must alter this, but settle it yourselves and we will see that it is carried out."

2659. There would need to be some machinery for that purpose?—Yes, there would need to be some machinery.

2660. Have you any criticism on the machinery set up by the Act of 1909 for that purpose?—I have no particular criticism of the Act of 1909, because that simply dealt with that problem of sweating, which is a thing that should be dealt with, and I think compulsorily. Unless free scope is given to manufacturers of negotiating directly with their employees, enterprise is killed and, consequently, industry does not flourish, and nobody can regulate wages in any industry who is not very intimate with the conditions prevailing in that industry, and therefore the presence of appointed members not only leads, through want of knowledge, to rates being fixed that the industry cannot bear, but is a bar to mutual agreement, as each side is aware that in case of disagreement the casting votes rest with the appointed members, and therefore trust to the fact that they are more capable of presenting their case before such members. In one case an appointed member was invited to a factory to see an operation about which there was a dispute, but he had to admit that he knew nothing about the trade. Now it seems to me that that is a point which it is very difficult for a manufacturer to concede, and that is that he shall allow an outsider to come into a trade and to fix a rate of wages, when he has not knowledge about the economic conditions of that trade, the conditions of working, the work to be performed, and various other things of that description which have a great value in fixing the remuneration for that work. It really comes to this, that you have an equal side of workers and employers, and you have three or more representatives appointed by the Minister of Labour who have really no knowledge of the trade for which they are adjudicating. There are here extracts from two letters which I think illustrate the subject, and I should like to read them if I may. This is just an expression of opinion, as I quite realise, but I am going to deal with the matter more fully later. "With 20 years of business experience I strongly resent a person who has no knowledge of a business concern, and very little, if any, sympathies with the difficulties which present themselves to those in the management of a factory, being sent from an office in London to tell me how my affairs must be managed." That is one letter, and these are just representative of the ideas that run through the various letters which I have here; but the main point, I consider, is this, that it is a new departure to bring somebody into a business to settle a vital factor in that business, who has not sufficient knowledge to be able to tell what the result of that settlement will be

on the business itself. I think nobody can settle wages of this description but those who are fully acquainted with the trade.

2661. Of course you would distinguish a case where where an arbitrator is appointed by agreement between both sides?—Yes, but that does not very often arise—at any rate, not on wages questions.

2662. Not so very often as it did, I think, at one time?—No, because they have not found, even in the past, in those voluntary arbitrations that they have derived the satisfaction which they expected. One side always goes away dissatisfied, and there is always dissatisfaction, it does not matter on which side, and that dissatisfaction continues as long as that rate is in existence; whereas if you come to mutual agreement you both go away satisfied with the fact that you have come to a mutual agreement, and that it has not been decided for you by a third party. "The chief grievances against the existing system are the length of time necessary to carry out a proposed alteration in rates and the fact that the appointed members in arbitrating between the two sides have been reluctant to face the facts of the present industrial crisis, and act in accordance with the general and inevitable trend towards reduction of labour costs."

2663. That is a quotation?—Yes. I did not want to burden you with a lot of letters, but I have many more containing other evidence which I want to use. The Acts place the appointed members in the position by their votes of settling wages for hundreds of thousands of workers, and yet it is impossible for them to know sufficient of the details of the trade to be able to form a fair and proper opinion. In Australia, where Trade Boards have been in operation for a considerable time, it has been found from experience that this is the greatest source of unrest, as the arbitrators fix such divergent prices for exactly the same labour that it is only natural that those coming under the lower rates feel that an injustice is being done to them, and this has been a prolific source of strikes. It seems obviously futile to place in the hands of persons who have so little knowledge of the trade the right to determine such a fundamental factor as this in case of disagreement between the two sides, and this is the only occasion when their services are required, and the only reason for their appointment, because if the two sides agree the appointed members have no necessity to vote, and in fact do not vote. That means that the only that they come into operation is when there is disagreement, and when there is disagreement it must be on fundamental facts, and it is, as a rule. Therefore it seems to me that you have to have a knowledge of the trade before you can decide the fundamental facts of the case. The presence of appointed members on the boards actually tends to disagreement between the two sides, as each one knows that in case of disagreement it is a question of persuading the appointed members to their point of view, and each relies on putting forward their case better than the other, and in practice, especially in the unorganised trades, the workers' representatives are better able to present their case owing to the trade union representatives' experience in this direction. That often happens in an unorganised trade, very largely because the employers have had no experience of wage negotiations on a combined basis, and their negotiations have generally taken place in their own works, whereas the trade union representatives on the other side are generally those representatives who have handled these negotiations before, and are probably in a better position to put forward their evidence than the other side. That is why I say, and I said earlier, that in my opinion, if it is to be applied at all, it should be applied to an organised rather than an unorganised trade. It is a common thing for the workers' side to put forward proposals which any members with experience of the trade would at once reject. Such proposals are put forward relying upon the ignorance and sympathy of the Appointed Members. For instance, at one of the Boards recently there was proposed an increase in the wages

23 November, 1921.]

Mr. H. D. JACKSON.

[Continued.]

of female pan hands from 9d. to 1s. 1½d., but I feel sure that would never have been brought before a Board acquainted with the trade, and it is probably because it is commonly stated that workers have come to recognise that the appointed members nearly always split the difference, and therefore if an extravagant demand is put forward they will obtain at least one-third or one-half of their demands. One would have thought that the presence of appointed members, seeing that they are the same persons on other Boards, would have led to co-ordination in the rates fixed for similar labour, but this is far from the case, as the instances I have given earlier in my evidence will show. Many of those Boards that I mentioned before have the same appointed members, and yet you get no co-ordination in rates for the same work. I must say at this point that it may happen largely from the fact that they have not had to exercise their vote, and therefore they have not had control over the rates which were fixed, but still they were there in an advisory capacity, and one would have thought that the rates would have been made uniform.

2664. You mean they have been agreed rates?—I cannot tell that; they may have been agreed rates.

2665. You are only on one Board yourself?—I am only on one Board myself.

2666. *Lord Weir*: Does that experience you have described to us reflect your own personal experience?—Yes. I was going to give the personal experience on the Stamped or Pressed Metalwares Trade Board. The first rate that we endeavoured to fix was the female adult rate, and the first point that was agreed was the age, and that was 18. Now I call attention to the fact that the Coffin Furniture Board had then passed their rates. They were in a practically identical trade, and they considered the adult age was 21. This point was all brought out, but we still considered that we were right in the fact that the adult age was 18, because it had been the common practice in our trade to make that age 18. Then came the question of rates, and we were at very great variance. We first of all started with a 7d. rate on the employers' side and 1½d. on the workers' side. I do not know that I need give you the details of the history of the negotiations, because they took place and we had various interviews with the appointed members, and finally, after all the points had been put forward, after three days' discussion, the position was put to us by the appointed members in this way: "The Coffin Furniture Board and the other Boards, three months ago or two months ago"—I forget which—"fixed 8½d. as the minimum rate. The cost of living has gone up, and therefore I shall not vote for you unless you come to 9d." Now, surely that is not the way to fix wages in a trade. It does not take into account the fact of whether the trade can stand it. In that particular case it happened to be an allied trade; but the very fact of using that argument of fixing wages in one trade by comparing them with another trade is a fallacy altogether, because there may be a different degree of skill required; there may be all sorts of things comprised. Surely you could not for one moment suggest the idea that a trade, say the sugar and confectionery trade, did not require more skill than a girl sorting rings. I mean there is that basis of the fact, that you have got a different class of operative, and it seems futile to me, at any rate as a business man, to try and fix wages on a scale because somebody else did it. You have to know the conditions of the trade.

2667. *Chairman*: I think you told us that to some extent the work done in the two trades was alike?—In those two particular instances, yes. But I mean the very argument is unsound. I referred to the coffin furniture trade because I happened to think of it, but other Boards were mentioned. It was said that two months ago a Board fixed a rate at 8½d. There were four mentioned, but I forget their names. They fixed 8½d., and the cost of living has gone up, therefore it was considered that we ought to make it 9d., and it was decided on the votes of the appointed

members. That is the actual conclusion; it was not decided on the facts of the case; it was decided on the votes of the appointed members.

2668. *Lord Weir*: I should like to ask one question about that. You have told us about these inconsistencies in the different trades. Before the Trade Boards Acts, did those inconsistencies not also exist?—As far as those trades that had any organisation were concerned, no; because these negotiations usually took place with trade unions whose membership covered the whole of those trades, and does to-day, and the consequence was, if you made an agreement with a trade union it applied to every trade.

2669. So that these are new inconsistencies?—These are new inconsistencies.

2670. *Chairman*: I am not sure whether you would say that, because these are unorganised trades; they were always unorganised trades?—I do not agree that they are unorganised. They may be as regards making particular articles, but that is a different question to an unorganised trade. There may be a body of employers from composite trades who may negotiate with a trade union where there is an organisation, but that organisation cannot be said to consist of the trade as defined by the Trade Boards Acts or as interpreted by the Minister of Labour.

2671. *Mrs. Lyttelton*: But their decisions are copied, you mean? You said before that the rate that obtained in one portion of a trade was very nearly always taken by another portion?—Yes, that is so.

2672. That is your argument, is it not, that the organised part of the trade sets the pace for the unorganised part?—Yes, in the stamped or pressed metal wares trades, as I told you, the part for the making of our work—that is the brace and suspender fittings—the bulk are covered under another union—the Harness Workers' Union—but we represent 90 per cent. of the workers and employers, and it is a section of a trade. It is an actual trade, as a matter of fact, under the definition of the Minister.

2673. *Chairman*: What I wanted to get at, and I think Lord Weir also was asking, had regard to the traditional differences in the different trades. You mentioned just now that 18 was the age for the adult in one trade and 21 in another?—No, that was the opinion of those members who were on Trade Boards.

2674. Was it right or wrong? I thought you said it was right that 18 was the proper age?—Yes, because the practice since the war and before the war has been to regard 18 as the adult age. If I may say so, it has been an advance. In the old days it was 21, but I consider that in the semi-skilled trades, such as ours is, a girl is quite adult as far as work is concerned at 18.

2675. You were saying how one trade differs from another.—Peculiarly enough, I believe that one representative on the Coffin Furniture Board who agreed to fix 21 two months earlier, is also on the Stamped or Pressed Metal Wares Trade Board. When our arguments were put before him that 18 was the age he agreed; so that you see his opinion had changed.

2676. *Lord Weir*: Conceivably in the coffin furniture trade this age had been recognised as 21, and in this other branch as 18?—It had not been recognised, because most of the coffin furniture people were on war work, and they had to recognise 18 as the age.

2677. *Chairman*: Then you mean there are really none of these traditional differences between one trade and another?—There are certainly traditional differences between trades.

2678. That is the whole point that is being put to you.—I beg your pardon; I thought you meant in these particular four trades. There are traditional differences between trades, certainly.

2679. *Lord Weir*: You have called these things anomalies and inconsistencies; you have pointed out the fixing of rates for people who do the same work varying by 25 per cent.?—Yes.

2680. Is it not the case that, to a certain extent, that existed long before Trade Boards?—Not in the particular industry that I know.

23 November, 1921.]

Mr. H. D. JACKSON.

[Continued.]

2681. You have spoken of several industries, you know?—I mean to say I did not reckon to prepare evidence on the practice years ago.

2682. You have given us figures; you have quoted definite rates varying by 25 per cent. You say that has been caused by the Trade Boards. Did that not exist before the Trade Boards?—I say, in the trade that I know, no. I have answered that question to the best of my knowledge. I say, no.

2683. Mr. MacCallum Scott: Did you include the coffin furniture?—I do. I can include those four Boards.

2684. Lord Weir: So the action of the Trade Boards has produced inconsistent remuneration for practically the same work up to the extent of 25 per cent.—inconsistencies which did not exist before?—Yes, I dealt before with the question of the pressure that it brings to bear on employers to level up wages in their works, regardless of what their competitors have to pay. I mentioned before, of course, the existence of more Trade Boards than one. It also has the effect where no Trade Board exists, where one Trade Board exists and the other part of the trade is not covered by a Trade Board of a similar character—the fixing of wages by the present method very often means that the fixing of rates for the particular article in question forces the employers to pay the same rates to other workers engaged on similar operations, although his competitors do not pay the higher rate. For instance, in one firm, of whose products 10 per cent. come under the Sugar Confectionery Board, they had to apply Trade Board rates to all their employees, as they found it impracticable to pay different rates to workers engaged on the same work. In another case, workers engaged on the same bench are brazing stamped chain and wire chain, and the fact that the rate for brazing stamped chain is fixed by the Stamped or Pressed Metalwares Trade Board necessitates the payment of the same rates for the wire chain, although the output of stamped chain is only 10 per cent. to 15 per cent. of the total output, whereas the firm's competitors make the same class of articles and do not have to pay this rate. That means to say this, that you have workers on the same bench and they are brazing chains. There is no difference between brazing a stamped chain made from pressed metals and a wire chain, and you cannot, naturally, pay those two workers a different rate. The price for brazing stamped chain comes under the Trade Board; the price for brazing wire chain does not. The consequence is that the manufacturer who is controlled in any proportion of his output by a Trade Board has, in order to keep peace and quietness and in justice to his employees, to pay that rate to those making wire chain, whereas his competitors can pay anything they like.

2685. Chairman: His competitor who is making only wire chain alone?—Who is making only wire chain alone; he can pay anything he likes.

2686. Mr. Layton: Do you mean that the whole of the wages in your factory are in fact covered by the Trade Board?—In my own factory, yes.

2687. Is it so?—I cannot avoid that possibility. It stands to reason. I have a shop with 20 or 30 power presses in, all running side by side.

2688. What percentage of your workpeople are under the Trade Board?—I could not say exactly what there are. In my case there would probably be if it were gone into in detail—it is difficult to say for the reason that the definition of our Trade Board is very difficult; we hardly know what comes under it and what does not—I can only say there is something between 50 and 60 per cent. who come under the Trade Board, and the rest do not.

2689. Mrs. Lyttelton: Do you complain because the rate is too high that it is fixed in the same way, or simply of the possibility of someone competing who is not under a Trade Board?—I am dealing with both, but at present I am complaining of the fact that I have at present to pay more than my competitors in certain classes of my goods because I have a

Trade Board telling me what rate I must pay, and my competitors have an agreement made between representative employers and employed, representing 90 per cent. of the trade.

2690. Lord Weir: I suppose you could conceive of a Trade Board fixing a rate which helped you as against your competitors?—I could conceive of it, yes.

2691. Dame Adelaide Anderson: And does to a certain extent help you when its influence takes effect, that the rate has to go up in another factory?—It does not have to go up.

2692. I understood you to say that by example and by demand of the worker he is obliged to pay it?—No, because I am controlled by the Trade Board, but in my competitor's house it does not apply.

2693. But you speak of employers paying anything they like?—Yes.

2694. Is that in another unorganised trade?—I used that expression perhaps inadvisedly. I mean they do not have to pay the fixed rate; there is no legal liability on them to pay any particular rate. I did not perhaps put it in the right form.

2695. Mrs. Lyttelton: And do they in fact pay a great deal less?—Yes, I can give you the figures.

2696. Mr. Layton: Are the people in your factory not under the Trade Board covered by a trade union? Are there unions whose agreements cover the balance of 40 per cent. of workpeople in your factory who are not under the Trade Board?—Not all of them.

2697. But there are collective agreements?—Oh, yes.

2698. And you are in fact paying more than the collective agreement rate for particular classes of workmen?—Yes.

2699. Mr. Poulton: That is to say you are paying more than the minimum which the Trade Board lays down, because you know that you follow that up by a statement that no employer is prevented from paying higher rates of wages. That is a minimum; we must not forget that.—I do not quite understand your question in relation to this.

2700. I understood you to say that you were paying more in some instances than under the Trade Boards—

Mr. Layton: No, it was the other way round.

2701. Mr. Poulton: I mean under Trade Board rates than employers under private rates?—Yes.

2702. I say there is nothing in the Trade Board rates, even though they are higher, to prevent you paying more; it only says you must pay up to at least those rates.—Yes. We are paying to some of our operatives a higher rate than the Trade Board rates; but if the operative was specially skilled there is no reason why we should not pay more. My complaint is that I am bound to pay more for the minimum labour than I am bound to pay under the agreement with the trade unions. That is my point. We all know that there are operatives in a factory who always get better paid because they have higher skill, and that would always follow. The man in business who does not recognise that is not very successful as a rule.

2703. Mr. Layton: Will you tell us, either now or later, what has happened during recent months in connection with the trade depression? Have the trade union rates fallen more rapidly—has the margin widened?—I will give you that later on in the stamped or pressed metalwares trade. Then I deal with the question that arose before lunch, and that is the question of the Trade Board being confined to a trade. The Trade Board is confined to a trade as defined in the making of an article. It would have been far better for the regulation of wages, in my mind, if it had not been confined to a trade but had been confined to what I might call an industry or an allied trade. But the Minister has distinctly laid down—I only want to bring this system in evidence—that in the distributive trades he could not make a Board covering all the distributive trades, and we must admit there that there cannot be any difference between a salesman or a carter

23 November, 1921.]

Mr. H. D. JACKSON.

[Continued.]

in the distributive trade, whether they are delivering one class of goods or whether another.

2704. That was a decision founded on the Act itself?—Yes. That was one of the defects in the Act to which I want to call your particular attention. I consider it is one of the worst features in it, and one that creates the most trouble and confusion in industry. We claim also that this Act does not altogether prevent sweating. It means that you cannot pay lower than a certain wage, but what becomes of those people who are not economically profitable in a factory at the wages that you are paying? They go out of the trade, and logically in the long run I claim that if you were to establish a Trade Board in every trade in the country you would leave a certain number of people who were unemployable, not unemployed, because they were not economically profitable. After all is said and done, business is done for a profit; if a worker shows a loss on the work that he does, in the long run he is bound to get out of employment, and eventually, if you are forced to pay a certain rate, he becomes unemployable, or else the manufacturer goes out of business. The essential object of the 1909 Act, to prevent sweating, cannot be shown to have been achieved. The actual result has been that employers have chosen their employees more carefully, and the old cry of the survival of the fittest has operated, and the workers who claim to have been sweated have been thrown out of employment. The Secretary for Labour in Australia, in a book he has written on Trade Boards, confirms this in a statement he makes, and in his opinion a minimum leads employers to set up a standard of efficiency, and those below that standard are unemployed.

2705. *Chairman:* That was Mr. Murphy. I think?—Yes; the Australians have had much wider experience than we have of Trade Boards. I will now deal with the question that I have been asked several times, and that is the fixing of the wage itself, which is altogether distinct from the other portions of the Acts.

2706. I think Mr. Murphy is Secretary to the Department of Labour for Victoria, is he not?—I am not quite sure; I think he is.

2707. I have his book here. He calls himself "Secretary, Department of Labour at Melbourne." I rather doubt whether he is Secretary for the whole of Australia?—I am not quite certain about that. It is Mr. Murphy that I mean.

2708. I will verify that.—Then comes the question which has been raised several times, and has been raised outside very prominently. That is the question of the minimum rate. There is no definition of the word "minimum," but as I understand it it is a rate that can be paid in the least well-appointed factory and in the least well-placed area, because if you are going to take a rate and say that it is going to be based on the best-organised factory in the country you are going to prevent the young man from starting business. He cannot drop into a well-equipped factory; he cannot at once put in an organisation; and the consequence is you must allow a certain amount of latitude in your minimum, and allow for the fact that he must be able to start business, because a large proportion of our success is founded on the fact of young men going into business with enterprise and brains and developing it to the benefit of themselves and the benefit of the country as a whole. If you do prevent them, it is going to be very detrimental to the country, and therefore I claim that a minimum wage cannot be based upon the best-equipped factory. It is the wage that can be paid in the least well-appointed factory in the least well-placed area. You would have thought that on a Trade Board if it could be shown that any portion of that trade paid a rate that was agreed upon by 90 per cent. of the employers and employed in that particular section of the trade it would at any rate have formed a basis, if nothing else, of the minimum wage. But that is not the case. On the Stamped or Pressed Metalwares Trade Board, by a casting vote of the appointed members, a

rate varying as much as 25 per cent. above the rate agreed by employers and employed was fixed, and I will give you the particulars. That is a printed list of the rates to which I am going to refer. (*List handed to the Chairman.*) On the 15th April, 1920, the Stamped or Pressed Metalwares Trade Board passed the following minimum rates—which of course came into operation later under the arrangements under the Act: Female workers of 18 years of age and over, 9d. per hour; 17 years and under 18 years, 7½d. per hour; 16 years and under 17 years, 6½d. per hour; 15 years and under 16 years, 5½d. per hour; those under 15 years of age, 4d. per hour. At this time there was an agreement between the Harness Furniture Employers' Association and the Harness and Saddlery Trades Union, which comprised 90 per cent. of the employers and employees in the Walsall trade, which employed the same employees as those who would come under the Trade Boards, and many of whom did subsequently come under it, because it was applied to certain sections of the trades which were operated by those firms. In fact, all the operatives in Walsall making brace and suspender fittings were controlled by this agreement. This agreement provided for the following rates of wages. There are various classifications:—(1) Forewomen, order clerks and despatch clerks, responsible for the production of orders only. Naturally you would not employ anybody on that work of a very young age, and therefore the first age was fixed at 17, 4½d. per hour, and at 18 years of age, 5½d. per hour. The second was warehouse hands, storekeepers, huckle tonguers, rollerers and plating shop assistants, 2½d. per hour at 15 years of age, 3½d. at 16, 3½d. at 17, and 4½d. at 18 years and over. No. 3 is sorters, wires-up and shacklers, who got 2d. per hour at 15 years of age, 2½d. at 16, and 3½d. at 17. Here I would like to call your attention to the absence of a rate at 18, because in the negotiations that took place both sides agreed that this was so unskilled that it ought not to keep those people of an ordinary, average efficiency in it after the age of 17, and the employers contended that it was not profitable to pay more than that rate. The trade union representatives agreed that it was, as I say, a section of the trade which ought not to have people in it over 17 years of age, because if they were of average efficiency they ought to get into one of the other sections. That was an important point, because it set up a principle there; so they agreed, at any rate, those that had knowledge of the trade agreed, that the inefficient worker, the slow worker, might remain in that section at the rate of wages that was payable at 17, and they did remain, in practice, in that section long after that age, and got what was a reasonable wage. Then we get filers, chippers, edgers and braziers, 3d. an hour at 15 years of age, 3½d. at 16, 4d. at 17, and 5d. at 18 years of age and over. Then there are hobbors, moppers, grinders, japanners, blackers and stampers, 3d. at 15 years of age, 4d. at 16, 4½d. at 17, and 5d. at 18 years of age and over. Press workers—that is, the bulk of the trade—capstan lathe operators, drillers and screwers get 3d. at 15 years of age, 3½d. at 16, 4½d. at 17, and 5d. an hour at 18 years and over. Acetylene welders, who do not come under the Board, electric welders, who do not come under the Board, come next, and then braziers, brazed chainmakers and chain burnisher makers get 3d. an hour at 15 years of age, 3½d. at 16, 4d. at 17, and 5d. at 18 years of age and over. These rates were then subject to 45 per cent. advance, which was increased on the 8th May, 1920, very shortly afterwards, to 50 per cent., and on the 9th July to 55 per cent.

2709. Which year?—1920. Below is a comparison of these rates, and the Trade Board rates, applicable at various ages. I would point out here that the trade, who understand their business, have separated these people that come under minimum rates, or all those people that come under minimum rates, into separate sections, because they maintained that the work is different and the rate of pay should be different. The two chief ones are sorters and press workers; they both come under the minimum rate at

23 November, 1921.]

Mr. H. D. JACKSON.

[Continued.]

the present time under the Trade Board, and also the warehouse hands. With regard to the warehouse hands and storekeepers, if you take the agreement rate first and the Trade Board rate afterwards, you will see the comparison. I am taking the highest rate in July, 1920, under this agreement, that is the 55 per cent. advance. The warehouse hand was 3½d.—that is as near as I can get it in fractions—and the Trade Board rate was 5½d. That is between the ages of 15 and 16. Between the ages of 16 and 17 the rates are 6d. and 6½d. per hour respectively, between 17 and 18, 5½d. and 7½d., and 18 years of age and over, 7d. and 9d. This is where the employers' request for a 7d. rate was obtained from, and these particulars were put before the appointed members.

When we come to the sorters, the rates are slightly lower in the case of the mutual agreement. Sorters between 15 and 16 years of age get 3½d., and by the Trade Board rate they get 5½d.; between 16 and 17 years of age they get 4½d., and under the Trade Board, 6½d.; at 17 years of age and over they get 5½d., against 7½d. under the Trade Board, and at 18 years of age they get 9d.; so that, as a matter of actual fact, a girl of 18 will receive under the Trade Board 9d., as against the 5½d. which she would receive under the agreement.

2710. *Lord Weir*: At the moment?—You get 75 per cent. advance in wages in that particular case. Those were operating at the time. They were in the agreement, and they are contained in a printed list signed by both parties. Taking press workers, the rate between 15 and 16 years of age was 4½d., while the Trade Board rate was 5½d., so you will see the discrepancy is not so great there because the Board was acquainted with the trade and thought that the press worker was entitled to more wages than the other people. Between 16 and 17 years of age the agreement rate was 5½d., and the Trade Board rate 6½d.; between 17 and 18 years of age the agreement rate was 6½d., and the Trade Board rate, 7½d.; while for 18 years of age and over the rates were respectively 7½d. and 9d. an hour. I am dealing now with the minimum rates. It has always been thought that the Trade Boards would fix a minimum rate based on the lowest rate in the trade fixed by responsible associations of employers and recognised trade unions, whereas the above facts prove that this is not the case, and, in fact, a rate of as much as 30 per cent. above an agreed rate was in some cases fixed, and in the case of the female rates, this rate was only fixed by the vote of the appointed members.

2711. *Mr. Layton*: You refer to these rates as being the minimum rates both under the Trade Board fixing and also under the trade union agreement. When you speak of them as minimum rates under the trade union agreement, 'are we to understand that they were not by any means in fact the actual wages paid?—They were the actual rate paid.

2712. Those rates that you call the minimum rates were in fact the current standard rates where a Trade Board did not apply?—There is a misunderstanding on this question of whether these are the rates paid, because it stands to reason that if you have a minimum rate fixed, that is the rate you pay to any worker who goes into your factory and applies for work, but then, when she has gone on for a little bit, if the worker shows special ability, you will pay her a higher rate. But the fact is that she has to show special ability in order to get more, and therefore I maintain that it is the standard rate.

2713. I gather that the whole of this class of labour is paid time-rates?—No, I did not say that.

2714. You are giving the minimum time-rates?—It is rather difficult to compare piecework rates, because they are based on so many technicalities in the operations. That makes it almost impossible to compare them.

2715. I am only trying to get clear whether these rates quoted to us represent in fact the actual wages paid to the majority of the workers?—Those are the

actual wages paid to the majority of my workpeople.

On the alteration of the female rates in June last, again by the vote of the appointed members, the new rates were fixed, well above the rates ruling between the two bodies mentioned, and they then compared as follows. That is the rate that Lord Cave referred to this morning when he said it came into operation on 14th October, 1921. That is pretty recent. Sorters of 17 years of age and over, by the agreement with the trade union, were to get 4½d., and by the Trade Board rate, from 17 to 18 years of age they would get 7d., and for 18 and over they would get 8d. Here, again, you are paying 3½d. more, at the age of 18, than other people who are competitors, but are outside the Trade Board. As regards press-workers, capstan lathe operators, drillers and screwers, from 15 to 16 the present rate is 4½d., the Trade Board rate has come down to 4½d.; from 16 to 17 the present rate is 5½d. and the Trade Board rate is 5½d.; from 17 to 18 the present rate is 6½d. and the Trade Board rate is 7d.; and for 18 years of age and over the rates are 7½d. and 8d. respectively. Here, again, a rate supposed to be a minimum rate has been fixed 10 per cent. or more above an agreed rate in some cases. On the question of the mutual rates you may ask me why I do not call it a mutual rate although by agreement; I will deal with that later. They do not cater for unskilled male labour in that union; the male labourers' rates are governed, more or less, by the agreement which was entered into years ago after the great Midland strike, in which the labourers' rates for the Midlands, by what was then the Midland Employers' Federation, were fixed at 22s. and rose later to 23s. That agreement has, more or less, governed the ordinary average labourer in the district. I do not say it has absolutely governed his rate to the extent that is meant by the word "governed," but it has regulated the wages for the district of the average labourer if he is in a works.

2716. *Chairman*: That has risen, I suppose, with the cost of living?—This was pre-war. I am just saying that that had regulated the wages.

2717. *Mr. Layton*: That is the reason why they are out of the union agreement?—Yes. I merely state that they only dealt with the skilled workers, the same as the Brassworkers' Union in Birmingham do. Under the agreement arrived at after the great Midland strike some years ago the labourers' rate for the district immediately prior to the war was 23s. per week, and the average for the country was 20s. 6d., and yet although the hours of work have been shortened the rates fixed by boards operating in the Midland area vary from 60s. to 64s. 7½d., or an increase of from 160 per cent. to 180 per cent., thus increasing the cost of production out of all proportion. You have not only the factor that you have increased the rate by from 160 to 180 per cent., but you have also the factor to take into consideration in costing that the hours that they work have been reduced. In the same way female wages in that area have been increased out of all proportion—I am now talking about outside this particular section that I mentioned—as by an agreement between the Birmingham Engineering Employers' Association and the Workers' Union of October 17th, 1913, the following rates were fixed:—I call attention to the fact that these are not for trades but for women workers, the ordinary woman worker who takes up unskilled work: 18 to 19 years of age, 9s. per week; 19 to 20 years of age, 10s. per week; 20 to 21 years of age, 11s. per week; and 21 years of age and over, 12s. per week; and by an agreement between the same parties of November 23rd, 1915—that is, a year after the war was started—the rates were: from 18 to 19 years of age, 13s. per week; from 19 to 21 years of age, 15s. per week; for 21 years of age and over, 16s. per week. In this latter agreement there is a clause which provides as follows: "The terms of this agreement shall be put into operation forthwith and shall remain in force unaltered during the period

23 November, 1921.]

Mr. H. D. JACKSON

[Continued.]

what tallies with the figures which I gave to your Lordship on the question of the stamped or pressed metal work. There was a big advance.

2724. In that particular case of males under 21 on piecework, was there a piecework basis time-rate in operation before the war?—They never had such a thing as a piecework basis time-rate.

2725. Then what is the comparison with?—I cannot tell you, because I do not know what was in operation in those works at the time. I can only tell you what it meant to the manufacturer.

2726. Is that a percentage increase in earnings, or what is it?—It is a percentage in earnings.

2727. Lord Weir: You just said that there was nothing to compare it with?—I said I did not know. I did not say there was nothing, but I would not profess to attempt to carry all the piecework rates in my head.

2728. Chairman: Then the 126 per cent. you cannot verify: it is the 32 per cent. that you stick to?—It is 32 per cent. over the whole. I take the manufacturers' figures which are given to me.

2729. Mr. Poulton: It is a very important point whether it is a difference in earnings or in rates?—If it is in day work can it be anything else but rates?

2730. It makes a great difference if a man is a pieceworker whether his piecework is regulated by a day work method?—I gave you the day rates, and there is an increase of so much, and it can be nothing else but the earnings. If you give a day rate it can only be the earnings per hour.

2731. I do not agree, because the iron trade works differently. I cannot agree to something which I know my own trade does not do.—If you can explain to me how you can have a rate of so much per hour and yet claim that it is not the earnings of the person per hour, I shall better understand your point.

2732. What I want to know is whether they are earnings or whether it is in a fixed rate?—I am afraid I do not understand that.

2733. A pieceworker might earn a rate?—We are talking about day workers at the moment. I say that the rates have been made up in that way for day workers, and they are made up for pieceworkers also on actual earnings. A man does not go and take the whole list of rates and make them up with a differentiation between different people.

2734. Chairman: Can we rely on the 126 per cent.?—That is only in that one particular case in that particular section, but it is 32 per cent. over the whole lot. I can give an illustration in my own case: The piecework basis time rate was fixed 10 per cent., or practically 10 per cent.—i.e. an hour—above the day work rate. Of course, we are all endeavouring to work on piecework, and strangely enough in my own case, although I was affected by the day work rates, I was not affected by the piecework basis time-rate. My pieceworkers were earning as much money under the old conditions as they were under the Trade Board. But that did not apply to every manufacturer, although perhaps their piecework rates were the same as mine, because their methods of operation were not as good as mine, and although they paid the same rates as I did, the operatives got more for their labour with me, because I had better facilities for them to produce their work.

2735. Mrs. Lyttelton: You were better organised?—Yes, I had better tools, and other things which conduce to a larger output at the same price. There is the answer, I think, to Mr. Poulton's question. It does not follow that in one particular works a pieceworker will earn the same as in another works at the same price.

2736. Mr. Poulton: Of course, it does not.—Therefore I can only give you the relative percentage of increase in that particular works on piecework.

2737. Mrs. Lyttelton: I do not quite understand what point is being made.—The point is this, that the Trade Board has fixed a rate which is above the agreed rate in the district.

2738. Dame Adelaide Anderson: If you have an agreed rate it is all to the good that efficiency of organisation should produce better results?—No, it

is not. It does actually produce better results, I admit.

2739. Is not that an incentive to have better methods?—Yes, undoubtedly the better methods you can produce on and the greater output from the area of the factory, the higher your chance is of selling your goods at a better rate of profit or at a lower price than your competitors, and thus getting the trade.

2740. Chairman: I think you have illustrated that point, that in some cases Trade Board rates are higher than the agreed rate.—Yes, and very often in fixing piecework rates, as some Trade Boards have endeavoured to do. In the Brush and Broom Trade Board they have a very numerous list. Here I will refer to one matter which I referred to before, and that is dandy brushes. The pre-war price was 10s. per 1,000 knots, and at the time the Trade Board was instituted it was 1s. 6d. per 1,000 knots, at which rate the manufacturers say the minimum-rate could be earned. The Trade Board, however, fixed a rate of 2s. 11d., which has made it hopeless to compete with foreign manufacturers. That is an important instance of where a want of knowledge comes in, because that saddlery section which is making that brush is not satisfactorily represented on the Trade Board, and therefore I maintain the Trade Board was not in a position to alter that piecework price and say that it should be 2s. 11d. There should have been on the Trade Board some representative of that section who understood the manufacture of dandy brushes. That is where it is desirable that there should be somebody who knows the trade on the Trade Board rather than that these rates should be fixed by somebody outside the trade. Here is an extract from a letter. "The minimum time rates compare hopelessly with the piece rates fixed. In fact, in most instances, we were paying considerably more than the time rate when the Trade Boards came into force; but the piece rates are fixed altogether out of proportion to the time rates, and in some instances workpeople, both women and men, could earn three to four times as much on the piece rates as on the time rates. Take, for instance, the price for drawing dandy brushes; the pre-war price for drawing dandy brushes was 10s. per 1,000 knots, and when the Trade Board came into force we were paying 1s. 6d., at which price they could earn the minimum time rate wage."

2741. Mr. Layton: Does he quote the time rate there?—No.

2742. Lord Weir: It says price, not rates.—I am telling you that the Brush and Broom Trade Board have fixed a whole list of piecework prices.

2743. You used the word "rate," but you meant "prices," no doubt?—I beg your pardon. They say, "Our present Trade Board piece-rate for this class of work is 2s. 11d. per 1,000, at which price it would have been absolutely hopeless to compete with foreign manufacturers."

2744. Mr. Poulton: When was it settled?—I cannot tell you.

2745. I am speaking of those rates you are now quoting?—I cannot tell you the date.

2746. Has there been any reduction since then?—Probably they have reduced the prices since then. There has probably been some reduction in prices since that time, but at the time when the 1s. 6d. rate ruled they raised it to 2s. 11d.

2747. Mr. Layton: Would that be what you call a general minimum piece-rate?—No, it is a definite piecework price for a definite operation.

2748. Under what heading of the Act would it come?—Under the Trade Boards Acts there is an obligation to fix a minimum time rate and a minimum piecework basis time rate. After that you may fix other rates, but it is not obligatory. Many Boards have adopted the principle of only fixing one rate, a general minimum time rate, while others have gone to the extent of fixing skilled day work rates. Some Boards have gone even beyond that and have fixed piecework rates for the actual operations; and in this case it is a piecework rate for an actual operation.

25 November, 1921.]

Mr. H. D. JACKSON.

[Continued.]

Mr. Poulton: As Mr. Jackson cannot tell me the date of that, can your secretary tell me, because it is important? I do not know whether it was fixed when the cost of living was at its apex.

Witness: I am not complaining about the rate for the work, but I am complaining that the Trade Boards increased the price to nearly double the piecework price which was in existence.

Chairman: The notice setting out particulars of the rate is not here, but the date shall be found out.

2749. *Lord Weir:* In fixing these piecework prices do they lay down the method or process? Surely if a manufacturer can change his methods and processes he is allowed to reduce the piecework prices.—What you usually do is to approach the Trade Union and say: "I have a new method," and so on, and then you generally get some satisfaction from them and an immediate alteration of the rate. That is if you want a reduction; but as a rule manufacturers are satisfied—personally I am satisfied with the fact that although I pay a higher actual wage to my operatives, or did at that time, I was getting more work for it, therefore my productive capacity was higher and my expenses contingent upon that were reduced in proportion, the consequence being that I was in a better position. I was therefore satisfied with that without asking for any reduction in the workers' wages.

2750. *Chairman:* Do not let us get too much into detail.—No. The fixing of these high minimum rates inevitably tends to the dismissal of workers who cannot come up to the average, and those who, owing to age, are not so active, as well as deterring manufacturers from putting on adult women or men to learn the trade. It also creates discontent among the older and more experienced workers, who object to receiving the same rate as inexperienced workers. With regard to this matter I should like to read some of the letters dealing with different sections of the trade after I have made a few more remarks on the subject. If you do not fix a rate which will cover the slow and inefficient worker as a minimum rate which you must pay on an article, it means that if they cannot come up to the standard of efficiency they have to go. As a matter of fact, that has happened, and in the stress of times that have occurred during the last 12 months, I, unfortunately, have had to resort to the same process myself, because I cannot possibly employ labour which is not economically profitable. Therefore, if I find from my experience that a worker is not earning sufficient, at any rate, to pay her way, I must dispense with her services and get someone who can. I can only take the average worker, and I do not take the best. Even last week there was a difference in production between two pieceworkers operating on the same article of as much as 15 per cent.

2751. I suppose if time rates are fixed at all they must be fixed for the ordinary worker: you can hardly fix time rates for slow workers?—I think that is what operates. For instance, I will take as one illustration the engineering trade and the rate for a toolmaker. In fixing the rate for a toolmaker it has to be the less-skilled toolmaker who gets, I forget what rate, but it is about 1s. 7½d. Now if you get a really good toolmaker you cannot give him 1s. 7½d., so what is the position? That is the minimum rate for the less-skilled man.

2752. But not for the slow worker, as we call him, that is the man who is under the normal?—When we come to a question of production it is the slow worker who is in the same position as the less-skilled worker. If you have a pieceworker, for instance, who is slower than another, he gets less wages, and if you fix a minimum sufficient for that slow worker, who has to live, the other worker, who can earn the average, will earn a great deal more, and you cannot afford to be forced to pay that wage.

2753. I was using the word "slow worker" as meaning a man who is abnormally slow. You mean a less-skilled worker?—I do not mean an absolutely abnormal worker, but there are a good many workers

who are 10 per cent. slower than the others, and if you fix a rate you fix it on the average worker, and the average is between the best and the worst. The tendency, of course, is to employ all the best and cut out those below the average, and so get an average works. That is a hardship on the worker who is somewhat slower than the others, and therefore your minimum rates should be such minimum rates that they will cover that slow worker profitably. Here is a letter from a man in the cotton waste trade, who says: "In every town or district after the mills and workshops 'whose labour comes under some trade union' have had the pick of the labour market, there is a residue of labour neither as good physically or mentally as that already employed. This labour we could at one time make use of, and we bought goods to sort and to employ this class of labour; no skill is required, and we now employ children new from school who ought to be learning a better trade, and the older women are out of work. The work in question is picking rubbish out of waste which comes from cotton mills. The stocks of the lowest price waste are very heavy and can be bought for less than pre-war price. No one can afford to pay Trade Board rates to deal with it. A lot of women we used to employ were married, and had husbands working, and simply came for a few days a week, and are quite satisfied with wages as they were before fixed rates came into operation." That is an instance of what is happening in many cases. They were not physically incapacitated, or anything of that sort, but they were not capable of doing as much work as others, and they got into this trade where they could earn a certain amount, very often sufficient for them to live upon when they could not earn the fixed rate. Now you cannot employ them unless you pay them the fixed rate. Then in the Sugar and Confectionery Trade, I have a letter here in which the writer says: "Having regard to the Trade Board wages which we have to pay, we naturally have to select as far as possible employees skilled and experienced in our own particular trade, the effect being that employees who do not possess a knowledge of our trade are apt to become unemployed." Putting that in other words, if they do not reach a certain degree of efficiency they are eliminated from the trade. I have a good many other letters of that sort, but I do not think it is necessary to read them all. The other point is, of course, more a question of administration. There is such an inordinate delay in the fixing of these rates that it is almost a universal objection, in fact I think you may say it is a universal objection to all Trade Boards that there is great delay in the settlement of rates. It is a very serious objection, because the minimum time that can elapse is four months before rates become operative, and in the experience of those who have had to do with them it is nearer six to nine months before any notice of alteration becomes operative; and whichever way the alteration is made, up or down, it is not satisfactory. That application made for an alteration in wage which came into operation on October 14 in the Stamped or Pressed Metalwares Trade was made somewhere about March, so that was six or seven months. Whether it is made up or down it is not satisfactory, as if the wage is up the worker says, "If I am worth this rate in four months' time, I am worth it now"; and, according to human nature, not being satisfied, does not give the best results. On the other hand, if the change is down, the employers will make nothing for stock, knowing that costs will fall in four months. Beside this, by the time the wage becomes operative, conditions have in most instances changed so that it is not the correct wage at that time. That is a very serious objection, that in four months' time the conditions have altogether changed; and there are Boards who have not fixed rates for eighteen months, because every time they come up for confirmation of the rates there has been such a change in conditions that they are not confirmed. The Grocery and Provisions Board have not fixed rates up to now, though they have

23 November, 1921.]

Mr. H. D. JACKSON.

[Continued.]

been at it for a long time. That delay is so serious that it very often causes a great deal of dissatisfaction in the trade, in which men are working side by side on practically the same work at different rates. Take the Stamped or Pressed Metal-ware Trades and the allied trades which we cater for. In the skilled section of the polishers there was an application to the Brass and Metal Mechanics' Union for a reduction in the skilled rate early in 1921 by the Brass Employers' Federation. They were working on an article which, if finished in one way, would be paid for at the rate of 1s. 6d. an hour, and if finished in another way, would be paid for at 1s. 8½d. an hour, simply by reason of the operation of the Trade Boards Act. There was no objection to the reduction on the part of the workers' representatives, but it took such a long time to get through that meanwhile here was a reduction of 2½d. It took four months to get it through. I will now leave that question of delay, because I think you have had plenty of evidence about that. The next question is a very important one, too, and that is, not the obligatory powers of Trade Boards, but the fact that they can, if they choose, fix skilled rates. It takes a very great deal of knowledge of a trade to fix skilled rates, and it is not possible to have trade unions present, as they do now, and fix skilled rates very easily, because you have to have a knowledge of the trade itself. If you were to go into a particular section and say that a polisher was to get a rate of so much, I agree that could be done, and has been done, and that rate is one that should be controlled outside the Trade Board and by people who know their own business. I will give you an instance. In our trade, we, as employers, opposed the fixing of skilled rates altogether, and we opposed it on the ground that the trades under the Stamped or Pressed Metal-ware Boards were so numerous that it was impossible for any Trade Board to have sufficient knowledge of all those trades to enable them to fix rates which would be suitable. That argument did not hold water with the appointed members, and we were beaten on the vote of the appointed members, so we set about making up rates with a committee of four from each side. The position arose that there were so many trades in it, and so many different parts in the trade that were very similar but not exactly alike, that when we had made our own definition with our own knowledge, we found that other trades of which we had no knowledge were seriously affected by the unskilled section of their trade being brought into a skilled section. A definition which we intended to be right did not cover it exactly, because our knowledge did not extend to the whole of the trade. The one instance I can give you at the moment is of a hand brush lacquerer. When we had the question before us we had in our minds the girl who does particularly nice work in colours, and so on, and when the definition went out we found that it included all the people who did just the common lacquering, that is to say, just brushing it right over without any skill being required at all. We had failed in a matter that the Trade Boards and the appointed members are asked to do, that is to say, to fix skilled rates in that particular case, and we were not able even to do our own job, because of our own want of knowledge of a trade with such wide ramifications. It is not just one trade which composes the stamped or pressed metal-ware trade, but we claim it is no trade at all. The only other point I have to deal with is the question of strikes. It has been stated many times that no strikes have taken place since Trade Boards were instituted. In the first place, I should like to point out that most Trade Boards have been operating until recently on a rising cost of living, and it is not often that strikes take place in that case provided that the workpeople get advances, and in nearly all cases advances have been granted. Nevertheless, there has been one strike of 14 weeks' duration in the Liverpool rope trade because a trade union advised its members not to accept the Trade Board rates. The only other one I know of is where

a Board has not yet fixed its rates because they have been referred back to the Minister several times. That happened in the Made-up Textile Trade Board; I believe the trade union threatened to bring out its members on strike if the proposed rates were put into force. The Boards which were instituted under the 1909 Act fixed what I think was much nearer a minimum wage than the others, because, in the first place, the Chain Board, for instance, in their first rate that they fixed, fixed 5d. an hour for adult males and 2½d. an hour for adult females. I think, if you will compare that with the wages surrounding, that was lower than the wage which was actually being paid in several trades surrounding them at the time, but they fixed it with the idea that it should be a minimum and apply to all workers, whether they were absolutely the most efficient or the least efficient. In Australia, however, the experience of Trade Boards is longer, and peculiarly enough we find that Australia holds the world's record for strikes. Therefore if it is an industrial panacea for strikes, why is it that Australia, with the longest experience of Trade Boards, holds the record for strikes?

2754. *Lord Weir*: Do you suggest that the 1918 Act should be repealed; is that your view?—It is.

2755. And that the 1909 Act worked satisfactorily, and should be retained?—With amendments of some of its provisions. It would require some amendment. The principal amendment I claim is this, that if you are going to operate Trade Boards at all they must apply to the work done, and not to the article made. That is an amendment of the 1909 Act that I should claim. The definition of a trade in its present form is absolutely arbitrary, and is of very little use. Then there is the question of inelasticity, and I should like to read at this stage some letters, because the question has been raised whether I had the official letter of the people who made the statement. Here I have a case which is probably known to you; it is the case of Richards, Limited, of Aberdeen. They sent a petition to Dr. Macnamara, another was sent by the whole of the trade of Scotland to Dr. Macnamara, a petition was sent by their employees to Dr. Macnamara, and a petition was sent by their employees to the Prime Minister. I do not know that I need read these to you, but it is the fact that there are these four documents in connection with a firm which employs a large number of workpeople. The facts of the case are that trade became slack, and they wanted to make a reduction in wages; they got their own workpeople together, and at that time they were employing 760, and they agreed mutually that a reduction should be made of 10 per cent. in the wages of the males and 20 per cent. in the wages of the females. That would have enabled them to keep their works running, and in order to try to get that agreed to they wrote to the Minister of Labour asking him to allow these rates to be put into operation. I think I should like to read that letter: "I am taking this opportunity, Sir, of saying a few words to you about the Trade Boards Act as it affects the industry I happen to be deeply interested in, namely, that of flax spinning and linen manufacturing. I do not mean to occupy much of your time for the reason that I am in the midst of preparing, with the co-operation of the other flax spinners and linen manufacturers of Scotland (and England, if I think, will join) a manifesto which will be presented to you at no distant date, praying that the industry may be freed entirely from the dominance of the Flax and Hemp Trade Board which was foisted upon us almost without our knowledge and certainly without any sort of consultation. With this in view it would, I think, be inconsiderate of me to occupy much of your time now. Our industry has, unhappily, fallen on evil days, and the collapse is more complete and disastrous than in the most experienced amongst us ever looked for. In the most experienced amongst us have never seen anything all my long experience I have never seen anything to approach it. There is absolutely no business doing. Quite a number of mills in the country are already silent, and more are likely to follow, and the others

23 November, 1921.]

Mr. H. D. JACKSON.

[Continued.]

are running very short time, mostly three days a week, and more than half of the machinery silent. Thousands, mostly females, I am pained to say, are reduced to the verge of starvation in mid-winter. To-day I am not going to dwell upon the causes of the crash, although this is a point on which I could say a good deal, and I certainly would not forget to give Government interference its fair share. No, I will confine myself to giving my views in a very few words as to what, in my humble opinion, should be done to save our industry from ruin. The first and indispensable necessity is that we, the flax spinners and linen manufacturers of Scotland, get our freedom. Would that our Government would leave the business of the country to those who are actively engaged and have their capital in commerce! No other plan can ever succeed. It cannot be too often repeated that individuality must have free scope, and given free scope it will in time succeed. Freedom is essential to enterprise, and without enterprise no industry can flourish. No manufacturer has any heart to launch out, indeed, he cannot launch out, if he is in any way overshadowed or subject to bureaucratic control or interference. To be brutally frank, if our trade is ever to be resuscitated it must, in the first place, be freed from the dominance of a Trade Board. These Trade Boards are, in my opinion, the most perfect instruments that possibly could have been invented for driving trade away from our country. Given our freedom, you will naturally ask me what will be our next move. The next move, Sir, must, I think, be obvious to you. If we are going to compete successfully with Japan, with Germany, with Austria, and with our Allies the French and the Belgians, the cost of our production must come down, and this can only be accomplished by lowering wages and putting our mills on to full time as soon as practicable, and my managers at Bradford Mills inform me that our employees as a whole are quite alive to this fact, and they also inform me that our people have never thought well of Trade Boards, and I may say I am not without hope that the employees of the trade will take action themselves in this matter and join the employers in desiring to be freed from the outside interference referred to." There is a great deal more of that letter, but I do not think it is necessary to read it all. It simply means that the firm wrote. Here also is a copy of the appeal by the Flax Spinners and Linen Manufacturers of Scotland to Dr. Macnamara, on the 10th February, 1921, that the flax and hemp trades be withdrawn from the operation of the Trade Board Acts. It follows along the same lines as the other.

2756. *Chairman*: They are coming to see us.—Then there is a letter from the employees themselves to Dr. Macnamara, to which they got a reply that nothing could be done; and they followed that up by sending a letter to Mr. Lloyd George, but the rate was not altered and Richards closed down.

2757. Do you know what became of the employees?—I could not tell you that, but they were unemployed. If you mean what became of them so far as the works were concerned, they were simply dismissed.

2758. I wondered whether you had heard what became of them?—No, I could not tell you that.

2759. *Mr. Poulton*: You started out by saying that it was difficult to settle a rate nationally?—No, I did not say that; I said it was difficult in an unorganised trade to select people who had a sufficient acquaintance with wage negotiations to settle a wage nationally.

2760. Do you say that a national rate would not be a good thing?—I do not know about that at all; I do not think we are concerned quite with that.

2761. I put it down immediately so that I should not depend upon my memory; but if you say you did not say it of course I accept your statement. You said, at any rate, that a rate by the Board had been set too high very often?—Yes.

2762. I take it that as an employer you also know the opposite side, that we hear constantly that if

we pulled the other people up who were paying too little, employers would not object to the rate?—Yes.

2763. Therefore, to that extent, a Trade Board might be advantageous?—I do not agree there, because I do not agree that a Trade Board would assist. There is a difference between instituting a Trade Board as you have them at present and enforcing the decision of a voluntary board. Those are two different things.

2764. Surely the obligation of an agreement, whether enforceable by law or not, is morally just as strong on me or you to see that fair rates are paid?—Yes, so far as it is possible to do so. Only last week I was asked by the chairman of my association to speak to a firm, and I wrote to them on the subject, because the trade union approached me, saying that they had approached their employees with a view to reducing the rate on certain work. I wrote to them, and they said, No, they had said to their employees that they would have to close down because they could not pay the rate—they could not, economically.

2765. You said there was a difference in the rates in the same factories under the Trade Board regulations, but as a matter of fact was not that obtaining many, many years before Trade Boards came into existence?—Not in that way. We know there are different rates in the same factory, I agree, but not for exactly the same operations.

2766. Was there not, and is there not now, known to the manufacturer such a thing as the difficult subject of demarcation, as to which trade an operation belongs to?—I gave you instances.

2767. You were giving us instances more particularly from the standpoint of your own argument about the Trade Boards doing that, and I was asking you whether that was not in existence before Trade Boards were?—I can give you another instance: that is, the question of whether a handle being made is being made for a coffin or for a large cabinet.

2768. That does not alter the fact that it is a question of demarcation. The question of demarcation of work in a factory was just as difficult in many places before Trade Boards were in existence, was it not?—I do not agree.

2769. I must accept your answer. At any rate, there were difficulties known, were there not, in determining to what particular trade a particular operation belonged or what particular rate of wage was applicable?—That is not a question of demarcation.

2770. I am not going to stand upon a narrow point like that so long as you agree upon the principle of the thing.—Oh that I want to say that I maintain that the different rates are for the same operation, and are brought about by the actual final use of the article.

2771. If you put it in that way I might just as well put it the other way; it would then depend what particular union you had to send that work to?—I can give you the instance of the handle. If it is used on a coffin it is one rate under the Coffin Furniture Board, and if it is used on a cabinet it is another rate, because it comes under the Pressed Metalwares Board, though it is the same handle put into stock until it is used.

2772. The same thing would happen if it belonged to one particular union as against another. I have heard employers complain that they had half a dozen rates in their own factories?—You do not get two unions controlling the manufacture of the same article.

2773. It is no use for you and me to bandy words about that; that is my experience.—It is not mine.

2774. You went on to say that if the wages were regulated by one Board instead of four Boards—is not that due to the fact, possibly, I do not say altogether, because I know it is not, but is it not due to the fact that both sides want a different number of Boards?—I cannot say that both sides want a different number of Boards.

2775. I do not say that exact number of Boards, but the Boards themselves are new, are they not,

23 November, 1921.]

Mr. H. D. JACKSON.

[Continued.]

largely?—They all began to operate at about the same time.

2776. They are comparatively new, therefore I suppose they are subject to these mistakes, which even your voluntary organisations sometimes suffer from, and they will get out of those anomalies, which you put very honestly and very clearly. Do you not think with a little experience these Boards will be able to surmount those difficulties by good will being shown on both sides?—I think that would be an expression of opinion which it would be rather difficult to give at present, but I think it would be possible for a better voluntary organisation to be formed by those who know a trade than an organisation such as these, with members on them who are not acquainted with the trade.

2777. Now I come to the point about the saddlery brushes; I was very interested in your statement about that. I am not on a Trade Board, but I understand that each side was consulted as to this; that is to say, the employers were consulted, though I do not mean every individual?—I do not say some employers are not consulted; some would be, I quite agree.

2778. And their organisations are consulted?—Yes.

2779. Did it not come about for this reason, that they themselves largely selected their men?—The point is this: I gave an instance of their asking for representation and being refused.

2780. Did they ask for representation after the numbers were filled up?—Excuse me, but I do not think a Board is ever filled up; I think it is always possible to increase it by another member on each side.

2781. You mean it could be enlarged?—Yes.

2782. I suppose that depends upon what they agree upon, but I am now talking about the inception?—If it was at the inception, they found that they were left out and applied for representation, and could not get it. They do not say at what stage; they simply say they applied for representation and could not get it.

2783. There is another point you made against the appointed members, and that was their lack of practical knowledge and about their not knowing the intricacies of the trade, but being invited to a factory to see an operation. I should have thought that was a point in their favour, that before they decided things they should go and visit a factory and see the operation performed, ascertaining the length of time that it took to do that particular operation?—It would not help anybody to go into a factory to ascertain the period of time that it took to do an operation unless they came in with the knowledge. If you put somebody special on to take the time of an operation—for instance, if you put somebody on to watch the work—I do not think the work would be done satisfactorily. I could not do it if I had anybody looking over my shoulder to see how fast I was working. It is not a reasonable way of fixing a rate.

2784. Very likely not, but it is a thing which is very often done?—I did not complain of the appointed member going there, but I said he admitted that he knew nothing about the trade; that was my point.

2785. You made a point of his having to go to a factory to see the operation because he did not know anything about the trade?—No, I have it typewritten here, if you would like me to read it again. I do not think it had that meaning at all, but I think you have given it a meaning that I never intended it to bear.

2786. *Chairman*: At any rate, what you say now is that you do not complain of his going there?—Not at all; I think he is a wise man. I have had our appointed members round our own factories.

2787. The point, I gather, is that when he was there he admitted that he knew nothing about the place?—That is my point.

2788. *Mr. Poulton*: You complained also about the length of time taken in settling or re-arranging matters. Was there any complaint of this made when there was a rising market?—As far as I am

concerned, I am in the stamped or pressed metal-ware trade, and we have complained from the first. When you come to consider that a Government Department appoints what is supposed to be a representative body to speak for a trade, and then says in effect that that representative body is not capable of deciding for the trade, therefore there shall be a period given for everybody to send in objections, it does not seem to me to be quite a businesslike plan. It is like saying, "We are negotiating with a trade union now, and we will give two months for all your members and ours to send in all sorts of objections to this proposal before we put it into force."

2789. Do you object, then, to the period of time allowed to either side to send in their statement of objection?—If you want it in detail, I object in this way: first of all I object to the fact that there is no time fixed in which a matter shall be considered. When it is brought up there may be all sorts of delays offered of one sort or another. If you have a voluntary agreement with a trade union that comes to you with a request for a rise in wages, or when you have gone to them for a reduction, they would not expect you to wait for six weeks and to say, "No, we shall not start to discuss it for six weeks, or it may be two months or more." That is one objection I have. In my opinion, if anything of this sort is necessary I say there should be an obligatory period in which it should be compulsory for that Board to consider the question.

2790. It is not a question of principle, but of re-arranging details. I should think it is largely a question of administration?—I admitted that when I started.

2791. It is not a question of principle at all, but of details. Now let us get to these uneconomic, unemployable people. You said it did not prevent sweating: is there not any arrangement by which those particular people can be dealt with without throwing them absolutely out in the street?—Not unless they are physically disabled. If they have a physical infirmity, yes.

2792. If the rates were elastic enough, your objection would disappear?—If we framed a new Act I might alter my view.

2793. Both sides are here to try to do their best, after all, for the country.—If we are going to frame a new Act, that is a different thing, but I am objecting to the present Act.

2794. That does allow you, under certain conditions, to pay these people less?—Only if they are infirm.

2795. That is a fairly wide term?—No, we were talking about it with regard to slow workers. Infirm people can be dealt with specially, but I am talking about a slow worker who is not slow on account of being lazy, but, for instance, is naturally slow, a worker whose mental capacity does not allow him to work as actively as other workers.

2796. If on a time-rate you could not bring that person into the infirmity clause, you would have to put him on piecework if there is piecework in the trade?—Yes, and if there is piecework that person's infirmity will show itself in her earning less than the other people.

2797. With regard to the appointed members, I rather gathered from your statement, several times repeated, that you thought the appointed members had a temperamental influence, in this way, that neither side seemed to want to settle the matter in the same way as they would if a voluntary agreement was being made without a third party coming in. Is there not just another side to that question, that both sides rather shrink from doing what personally I think they ought to do, that is to say I consider they ought always to waive certain objections, and settle matters if possible without sending the case to a third party? I have found by experience that when there is a third party there people rather run to him. Is not that rather one of the reasons—that both sides shrink from settling—I am accepting the position of the other side members too—and they say: "If we accept that, there will be a

23 November, 1921.]

Mr. H. D. JACKSON.

[Continued.]

row; let us fall back on the appointed members"?—I can only say that immediately we have found difficulty in the full Board itself, these matters have generally been settled by a committee of four of each side, who have met alone on most occasions.

2798. The only point I want to emphasise is that I do not think it is so much the appointed members as both sides feeling that if a third party is there to fall back upon, rather as an umpire, they use him as an umpire?—That is practically the same thing, is it not?

2799. Is not that what they are rather inclined to do? I do not think it is any reflection on the appointed members?—I am not making any reflection upon the appointed members, because I have great esteem for the appointed members on our Board, whom I have got to know personally since I have been on the Board; but it is the principle of the appointed member being there that I am objecting to, not to the man himself.

2800. *Chairman*: Are there four members of the Trade Board on each side?—Yes.

2801. And they settle matters before the Board meets?—Yes. Very often it is a formal matter, and it gets through in a short time when it gets to the Board. Of course, both sides naturally during these negotiations consult their own side by themselves, and come back and settle the matter.

2802. *Mr. Poulton*: Those wages that you read out seemed to be rather high: were they agreed wages between the unions and the employers?—I gave you the name of the union.

2803. The rates that the union fixed were so much lower than the rates fixed by the Trade Board that the Trade Board rates came out at 126 per cent. higher?—No, not those particular rates that I gave you. I have a maximum rate there which is about 75 per cent. higher than the existing rate.

2804. You think there is no hope of carrying on under the Trade Boards?—I do not think there is any hope of carrying on under the Trade Boards. We are representing a large body of people, and, as you know, if you were to ask them all to agree upon a right method they would have some difficulty in doing so; therefore I cannot get any alternative put forward to you that would at all be acceptable to the bulk; each one would probably have some different suggestion to make. We cannot therefore give you an alternative; we can only say that the alternative must be worked out, if there is to be an alternative, in consultation with the people who will be affected.

2805. *Dame Adelaide Anderson*: It was suggested, was it not, that one of the great difficulties arose from defining by articles produced rather than by processes; would not the difficulties be very much greater if you tried to deal with that from the other side?—May I answer that question in this way? We have had this question over with the Ministry of Labour, and sat three days on the question of scope, and a whole day was spent in arguing that question of definition of process. We claimed that the difficulty would not be insuperable of applying our suggestion, but the Ministry claimed that they would be insuperable, so there is just that difference between the Ministry and ourselves.

2806. *Mr. Poulton*: Some of the organisations in your federation are in favour of continuing the Boards, are they not?—Not to my knowledge. A number of brush people resigned for that reason.

2807. A boot and shoe firm?—No, they are not federated to us.

2808. It is in your list that you read out this morning?—No.

2809. *Dame Adelaide Anderson*: Did I understand you rightly to say that a minimum wage must be based on the ability of the least well-placed factory to pay such a rate?—Yes.

2810. Would not that operate against competitive capacity in organising an industry?—I do not think so. It is this way. Suppose you have a factory in a district where the railway facilities are not as good as they are in other districts, or you are using an

export article and you have got a long railway journey to make. As a rule the factor of wages is taken into consideration, and you take one of the biggest unions in the country and the biggest manufacturers' federation—that is the Engineering Federation. They have had for years and years district rates. Why? They have their own knowledge of their own trade, and they must be satisfied with those district rates. There has been a necessity for a different rate in a different district, or they would not have instituted it.

2811. But you would need to have added to that, of course, something like a subsistence level. You could not make wages depend solely on the capacity of the industry to carry on, because you might get parasitic industries propped up?—Well, to come to the essential point, is this Act to fix a minimum wage based on a subsistence level or is it not? That is the difficult point that we have to decide. It appears to my own judgment that the original Act was for that purpose. The Amending Act brought the scope very much wider, and I should like to point out that that second Act was brought into force at a time when no employer in this country had any time to attend to anything of that sort. 1918 was the rush year of the whole war, and we were asked to consider and think about an Act of this description at a time when nobody had any time to do so.

2812. *Mr. Layton*: I asked you some little while back whether wages moved more freely in that section of your trade which is governed by collective bargaining than in the Trade Board section? I do not think you gave us any information on that point. You showed that the wages in some cases were 75 per cent. higher under the Trade Board than the wages fixed under voluntary agreements?—Yes.

2813. But during the six months period have you any evidence showing that the wages under the collective bargaining moved more freely?—I will tell you this as perhaps a good illustration, that in the two organisations that I mentioned, voluntary organisations, an application for a reduction in wages was made at the same time as it was made to the Trade Board, and we got it settled in less than two months and in operation. I say in less than two months because I have not the particulars to enable me to say five weeks or four weeks, or whatever it was; and it took us six months to do on the Trade Board. That operation was one and was made in this way, that we had sufficient knowledge in the trade to show that we thought that, at existing levels of prices, those rates that were in existence at that time that we arranged to come in immediately would be satisfactory. If there was a fall in the cost of living it probably would tend to reduce prices, and therefore we did propose, somewhat against many of our opinions—but it had become such a common practice to fix falls or rises on the cost of living—we had a cost of living clause and have had it ever since then. I may say at the same time in our notice we tried to introduce that into the Trade Board and the Minister turned round and said, "It cannot be done." We had to abandon the idea because it was not within the power of the Act. Afterwards, I admit, he said it was within the scope of the Act. Of course it was done then.

2814. There is one other general question. You said, I think, that you want to abolish the Act of 1918 and fall back on the Act of 1909?—With amendment.

2815. Yes, the amendment being that you should define your Board by occupation or process, rather than by trade. I take that not to be a general principle. You are only now talking of the definition of a special trade. You would not, for example, say that you would have a Trade Board for all machinists throughout the country; you are merely talking of the definition of a trade?—No, I mean to say not to cut up what you might consider an industry. The word "trade" is a very narrow word; it is a very difficult word to define.

2816. It is a difficult point, but the trades should be defined by process rather than product?—Yes.

23 November, 1921.]

Mr. H. D. JACKSON.

[Continued.]

2817. Assuming that either by amendment or in some other way the function of the Trade Board was limited to fixing what you call a minimum, that it did not go in for fixing the wages of more highly skilled people and so on, and in other respects met your views, would you then object to the extension of the 1909 Act so interpreted to the large field which is at present contemplated by the 1918 Act; that is to say, covering all industries where there is insufficient organisation?—Not under the procedure of the 1909 Act or the 1918 Act, because I object to the presence in these negotiations of any outsiders who do not understand the trade.

2818. Assuming that the Department interprets correctly the words regarding insufficient organisation, do you still think that there should be no Trade Board?—I do not think there should be a Trade Board as at present constituted.

2819. No, but assuming that the Trade Board was altered to the 1909 position. Do you, as a body, object to Trade Boards covering the whole field of unorganised labour?—If you will appoint representatives from the trades, who will settle their own matters without any interference by outsiders, then I say yes. It is practically what was suggested, and that is, the Industrial Council.

2820. But you would impose some machinery of negotiation or organisation from outside, because the assumption is in the Act that there is insufficient organisation that there is lack of organisation?—We do not agree there. I do not think you will find that there is a great want of organisation in this country.

2821. But that is a matter of interpretation. Assuming that the Act was defined as being applicable to those trades where there was inadequate organisation, then what should be done? Should they be covered by Trade Boards, or should they be encouraged to organise?—May I give an illustration? It is rather difficult for me to answer that question. I should like to give an illustration to show what I mean. The brace and suspender fitting trade, of which I suppose I am the largest member at any rate, is a small trade confined to a few people. It would not be worth the expense of an organisation to run that trade. What happens? We join with another trade that operates in the town. Another trade has sufficient members and is of a sufficient size to have an employers' organisation. We both employ the same labour and in some cases we do exactly the same work and produce the same product; but in the suspender fitting trade which is our chief trade and not the other people's chief trade there is not sufficient, as I say, to work up an organisation. Therefore we join with them, and although you cannot say there is any organisation in the brace and suspender trade, it is still in an organised condition because it joins with other trades. There is the position. A lot of these small trades are not organised as trades, but they are in other organisations. Perhaps one member is in this organisation, another in the National Employers' Federation, and another in another association. If you took them individually you would find they are under an organisation, but, as a trade, they are not under an organisation. ●

2822. We have many cases before us of trades when there is perhaps 20 or 30 per cent. or 33 per cent. organised?—But I say the Ministry do not get the degree of organisation by the means by which they go for it.

2823. Mr. Poulton: The method is not the right one?—These firms are not organised as trades. They

are too small to organise amongst themselves and the individual members join large bodies of other employers such as the National Employers' Federation and other sections. Now in the stamped or pressed metal-ware trade I suppose there is at least 30 per cent. of the employers in the trade that are not in a trade organisation, but belong to the National Employers' Federation. When the National Employers' Federation negotiate wages in that district their members are naturally controlled by that agreement, and although you cannot go and say they are an organised trade, they still come under a wage agreement.

2824. I accept your view that organisation is much more widespread than is accepted by the Ministry or otherwise, but you have not really got my point. Assuming that we can ascertain the degree of organisation, do you object to organisation being made the test of the field to be covered by Trade Boards?—I do, because I do not agree with Trade Boards at all at present. You see, you are tying me down to a Trade Board.

2825. Yes; I was assuming the Trade Boards were altered on the lines of the 1909 Act, the scope of such an Act being defined by the degree of organisation.—I should object to the whole Trade Board Act as long as there was the presence of the appointed members, for one thing.

2826. Mr. MacCallum Scott: Even in trades which were not organised at all?—Yes, I claim that there is no unorganised trade. Here is another case. There is a manufacturer of umbrellas. I do not suppose there are three firms in the country, and they are spread about, and the consequence is they could not have an organisation all that distance apart. One of the biggest is in Sheffield, and the other is in Birmingham; there are not many of them. Now the Birmingham firm join the National Employers' Federation. Their wages are controlled by a voluntary arrangement. The other firm join an organisation in Sheffield, where there is an organisation in existence, and their wages are controlled by voluntary arrangement and agreement; but the Ministry say they are not organised people.

2827. Mr. Poulton: They may get control by that method, not as umbrella manufacturers, but by belonging to an organisation, and they fall in with the arrangements which they make themselves?—Yes, that is it.

2828. Lord Weir: I judge from your answers to Mr. Layton that you believe that the only thing that wants protecting against, in a legislative sense, is exceptionally low wages?—Yes, and if you ask my personal opinion, I should say that any decision of a voluntary organisation should be binding on all employers in the trade.

2829. Mr. Poulton: Mr. Chairman, there is one quotation I should like to make, as apparently I was assumed to have made a terrible blunder. "The most important groups of members apart from the above are engaged in the following trades: boot and shoe making." That is why I put the question?—You said boot and shoe repairing.

2830. Excuse me, in the Trade Board it is the same. You know that they include the boot and shoe making?—But you said the boot and shoe making trade, and I do not think a boot and shoe repairer is a boot and shoe maker. They do not do the same thing. Most of the boot and shoe repairers are small men.

Chairman: I am obliged, Mr. Jackson, for the pains you have taken with your evidence.

24 November, 1921.]

Mr. GORDON T. H. STAMPER

[Continued.]

EIGHTH DAY.

Thursday, 24th November, 1921.

PRESENT:

The RIGHT HON. THE VISCOUNT CAVE, G.C.M.G. (*Chairman*).

DAME ADELAIDE M. ANDERSON, D.B.E.

Mr. E. L. POULTON, O.B.E., J.P.

The Hon. Mrs. ALFRED LYTTELTON, D.B.E.

Mr. A. MACCALLUM SCOTT, M.P.

Mr. W. T. LAYTON, C.H., C.B.E.

Mr. H. D. HANCOCK (*Secretary*).

Mr. GORDON T. H. STAMPER, called and examined.

2831. *Chairman*: I think you are a manager of the firm of J. Lyons and Co.?—Yes, but I want it to be distinctly understood that in the evidence that I give I am not representing necessarily the views of Lyons; I am speaking on behalf of the National Union of Manufacturers.

2832. But you are a member also of the Grocery and Provisions Trade Board?—That is so.

2833. You have something to tell us about Trade Boards and unemployment?—Yes. I might say that I have been asked by my colleagues to deal with the operation of the Acts in so far as they affect unemployment, and I thought perhaps it would be as well if at the commencement of my evidence I dealt with one or two preliminary matters which have their influence on the main part of my evidence. So far as the National Union of Manufacturers are concerned we have no grave objections to the operation of the 1909 Act—that is quite definite as far as we are concerned—and I think, my Lord, that any evidence that you have received from the employers' side in favour of the Trade Boards can be traced as emanating from gentlemen whose trades are covered by Orders made by the 1909 Act. Generally it is common ground that the 1909 Act was introduced to deal with industries where it was agreed that sweating was taking place, and in that connection I should like to say now—because I have not seen that it has been brought to your notice before—that that sweating was not invariably, shall I say, caused by the type of people who are alluded to sometimes as capitalists, but more particularly by a form of outworker or person who controlled an outworker. I allude more particularly, say, to the tailoring industry, where you have certain people whom we will call wholesalers who had work to put out. Then it was customary in those days—it is not so now, because the Trade Boards Acts have eliminated that—for a group of people to come and say: "We will take that work off your hands." They would farm the work out to certain people who would do it in their own homes, and it was those men who were guilty undoubtedly of getting the labour of the people that way, working in their own homes for a remuneration that was undoubtedly not sufficient.

2834. You would probably agree that there was also sweating taking place in small workshops?—In the industries that were scheduled under that Act.

2835. Or referred to in the Reports?—Yes. I thought I would just call attention to that particular form of work. The provisions of this Act provide that proper enquiry should be made before a Board could be set up in any particular trade, and of course there were a certain number scheduled, and five more I think were added by special provision. The 1918 Act transferred powers that had previously been in the hands of Parliament to the Minister of Labour, and in our opinion, my Lord, in a great many cases on very slender evidence, he began to apply this Act—I do not mean to say Dr. Macnamara personally, but the occupier of the office—to all sorts and conditions of trades. At the moment there is in operation something like 60 Trade Boards, two of

which are distributive trades. Upon making careful enquiry amongst our members—of course we had considerable correspondence with the majority of our members on this subject; in fact I think our secretary has received something like a thousand letters on the different subjects connected with the evidence that has been placed before you—we find that the principal grounds for complaint in connection with the setting up of these Boards are these: That very often the employers have never been consulted as a body as to the advisability of such a course being taken, although I understand it has been their practice to consult the workers. I think, my Lord, I could give you one instance in particular—that of the Grocery Board. The employers on the Grocery Board were never consulted as to the advisability of setting up a Trade Board.

2836. You mean that some employers were not consulted. Of course a good many were—at least I understand so?—Not the recognised organisations of employers. I do not think there is any evidence of that.

2837. You may be mistaken about that?—I think the only thing the Ministry have ever said in that connection is this, that the Grocers' Federation offered no objection. You can hardly call that consultation.

2838. That conveys to me that they were consulted and did not object?—Well, may I say that I do not consider that the employers were consulted in a way that would have enabled them to have given a considered opinion on the subject—I will put it in that way.

2839. We will take it that in your view there was not sufficient consultation?—Yes, that is my view, and I think from the evidence you received from my colleagues that there was evidence of that yesterday.

2840. *Mr. Poulton*: Do you mean that a sufficient number of organisations which were representative were not taken into consultation?—Quite. With regard to the National Union of Manufacturers, I do not believe that on any possible occasion have they ever received any communication asking them to get into touch with a group of their members who were concerned with the formation of a particular Board, and as they are the recognised authority for representing employers, manufacturing employers, it seems rather curious. I am merely putting the point.

2841. *Chairman*: We need not discuss it, but I do not think we can take it that the National Union of Manufacturers is the only channel through which manufacturers can be consulted.—I think it is the principal channel.

2842. I do not know that we can even take that.—I am putting it from my point of view. I can only tell you this, that I am in constant touch, and have been for nearly two years, with the principal associations of the grocery trade, and I have had it impressed upon me over and over again that the information that is given to you is not quite in accordance with the information that was given to me. At any rate, we can leave that. We are unanimously of opinion that the provision of the

24 November, 1921.]

Mr. GORDON T. H. STAMPER.

[Continued.]

1918 Act, which allows the Minister to set up a Board if he thinks that either the employer or employees are not sufficiently organised—that is a phrase that he uses; I know that the Act explains it in perhaps a little different way—is a provision that is so loose, that it should never have found its way into an Act of Parliament. That is our considered opinion—and we would like to know in this connection, if it is possible, although I do not know whether it would cover the scope of the report which we shall no doubt get from your colleagues and yourself, what degree of organisation of employers and employees the Ministry have thought it necessary to lay down as being essential. This idea of organisation is such a wide term; it is not definite in any particular. We are not told, for instance, what particular benefits trades with this degree of organisation have found. It must be something very wonderful, because, if they possess it they escape the provisions of this Act. We would like, if it were possible to know, why it is considered necessary, and, as I have said, any remarkable benefits that have been noticed that trades with this particular degree of organisation have received as compared with those who are not so fortunate in their organisation.

2843. *Mr. Poulton*: You mean in the sense that they are not ultimately brought under a Trade Board?—Yes; in that particular case they are more fortunate than their friends. We understand that in connection with the enquiries upon which the Ministry base their opinion of this lack of organisation, they are assisted from time to time by reports from their inspectors who visit places with the object of persuading in some cases employers to set up Boards. I am sorry Mr. Jackson is not here to-day, because he told me of instances where these gentlemen had been going round Birmingham, I understand, with the object of setting up Boards from time to time and making what they considered to be the necessary enquiries. We take it, or I take it rather, that the Ministry formulate their opinion upon the reports of these inspectors, and we think it would be a considerable advantage if, when employers are consulted as to the setting up of a Board, these reports could be forthcoming. We think there is everything to be gained by putting all the cards on the table in such matters as these, and at the present moment I think it must be generally conceded that employers have a serious ground for complaint when they are told quite suddenly one day that a gentleman who occupies the position of Minister for Labour does not consider they are sufficiently organised, and for their sins in that connection they are to have Trade Boards inflicted upon them for the rest of their business life.

2844. *Chairman*: Now you are coming to your own subject, which is unemployment, I understand?—Just one moment, Sir; I shall not be very long. I must lead up to this, because it is a concrete part of what I have to say afterwards. I will not keep you any longer than I can help; I have it as concisely as I possibly can. Having dealt with that particular part of my evidence, I should like to say this, that so far as I am aware in no single instance in the opinion of those whom I represent has the wage of any Trade Board under the 1918 Act been a minimum wage, an irreducible minimum, and that undoubtedly is the principal cause of the trouble. I am of opinion that it is quite impossible for the Boards to fix a minimum wage as they are at present constituted. It will be found that the employers are usually in the position of having to make a bargain which they know will operate unfairly to the trade, because the appointed members indicate to them that they will cast their votes for the workers' proposals unless the employers accept something that they suggest, which is perhaps a little lower than the workers' demands, but which is something very much higher than the employer, who, by virtue of his knowledge of the business, knows what the sale price of his production will allow him to pay. This see-saw business goes on on every Board, and is the curse of the

whole system. The appointed members, as has been said previously in the evidence, are invariably people without experience, who know little or nothing about industry; some of them, professors, who in all probability have never seen the inside of a factory. That point was, I think, amplified yesterday to the extent that one gentleman had been and seen a factory. I am not complaining about that at all, but all I do say is this, that it is quite impossible for people of that particular calibre to be in possession of such a frame of mind as will enable them to adjudicate upon any of the cases that are put before them in such a way as will allow of a wage being fixed which is an irreducible minimum. Half the trouble that we are suffering from to-day in connection with the Trade Boards is this, that a wage is invariably fixed that, so far from minimum, is practically speaking a maximum. What is the result of that? The result is undoubtedly this. A manufacturer is notified that a certain wage is fixed as regards his trade. He sends for his works manager and says: "How does this compare with what you are paying?" If we take the Grocery Board rates which have been fixed—they have not yet been confirmed—and if we take the female porters' rates, they have fixed a rate for London of something approaching 37s. a week whereas the average rate in London to-day undoubtedly is something about 35s. or 34s. That is for ordinary factory work. The Grocery Trade Order embraced not only people who were serving in shops, but people who were doing work which came under the scope of the Order inside factories. That is a very curious combination, and it is difficult to see how any business man could have made such a combination. But the Ministry have done it; they have fixed something like 37s. a week, as I think you will find by reference to the Order, for London. The average rate to-day for the type of work which these girls have to do is between 33s. and 34s. I think that is generally conceded. It may go as far as 35s. That, you will see, is quite a considerable increase—somewhere about 7 or 8 per cent. What is the result? The Works Manager will probably be told that his production cost will be increased by 8 per cent. How is he going to save it? He has to save it somehow. He has to eliminate the slow worker. He must have nothing but super-efficient; and that slow worker is naturally thrown out to the market of the unemployed. What I am going to suggest, my Lord, is this, that at the present moment and in the present state of the country that is precisely the thing that the Ministry of Labour does not want the average manufacturer to do; the Minister of Labour does not want the manufacturer to go down his list of staff and have a stock-taking as to which worker is slow and which fast. The best thing is to let business recover from the shock of the war period, let his business increase, and then undoubtedly the staff will benefit accordingly. I think in this connection that probably the mistakes that have been made in the past—and there have been many—or, at any rate, a great many of them, have arisen from this very simple fact. I do not think there is a single person at the Trade Boards Office or at the Ministry of Labour either who has had any real actual industry experience, and by that I mean a man who has been used to factory work, starting from the bottom of the ladder, and who has earned his living in an executive capacity at the top of the ladder. I mean if a person of this kind, or probably they might need several, were connected with any of the Boards, some of these mistakes I submit might never have occurred. In all probability it is impossible to work it into the Trade Board system; in that case that will only substantiate the view that I am coming to later.

2845. Now have you finished your preface? I mean, I am very anxious to hear about unemployment which is the subject which you have been specially asked to deal with.—I have got just one further piece of evidence on the workers' side.

2846. Please assume that this Committee has heard a great deal about the general considerations, but

24 November, 1921.]

Mr. GORDON T. H. STAMPER.

[Continued.]

we are very glad to hear from you something practical if you can tell us it, which other witnesses have not told us.—If you will allow me to look through my notes for half a second—

2847. Certainly.—The first serious case I will call to your attention is undoubtedly that of Cornwall. Here in the dressmaking trade the direct effect of the Trade Board on the dressmaking and millinery trades in Cornwall is shown by the following figures:—Employed in 1918: assistants, 532, improvers 35, apprentices 131, making a total of 698. Employed in 1920—this was before the trade depression had set in—assistants 198, improvers 7, apprentices 15, total 220, a decrease of 478, or 70 per cent., in that particular trade.

2848. At what date in 1920—what month?—I am afraid my informant has not given me the actual month. The information was actually sent to me a matter of three days ago.

2849. *Dame Adelaide Anderson*: What was the percentage?—70 per cent.

2850. *Chairman*: But of course it is very important to know to what month the figures apply.—I can ascertain from the gentleman with whom I am in communication, Mr. Trowson, of Redruth, the date at which these figures were compiled. He has given the year, but I quite see your point that you would like the actual month.

2851. *Mr. MacCallum Scott*: In both cases, because you appreciate that this is a seasonal trade and there are great variations in that trade even in normal times?—I have refrained from giving you the whole story in connection with this particular trade because the Chairman has expressed his anxiety as to time.

2852. *Mr. Poulton*: But if one set of figures were taken from actual experience—?—My dear Sir, if only anyone has gone into the case of Cornwall I think he will see that half the people in the county are out of work, and I know that the average rates being paid, even in the grocery trade in that district, are something like 40s. a week, whereas the Order, if it is confirmed by the Ministry, which Order was fixed the other day, will make it necessary to pay them 48s. a week, and the traders of that county have told the Ministry themselves and have told us who sit on the Board that it means absolute ruination for everybody in the trade. The Ministry have sent down a Mr. Goodchild, who is absolutely *au fait* with conditions in the county.

2853. *Chairman*: At any rate you will get us the date?—Yes.

2854. *Mr. Layton*: Will you tell us what these figures purport to be? Is this a reply to a circular covering a large area of Cornwall? Does it purport to be for the whole County or what?—This is a circular that has been issued in response to an enquiry, or has been sent to me in response to my enquiry, but it is a circular that has been drawn up by the Combined Traders of Cornwall.

2855. And it purports to represent the whole dressmaking trade of the county?—Yes, it is signed by Mr. Wesley Hosken, the hon. Secretary to the Combined Traders of Cornwall.

2856. I was only trying to ascertain what it represents.—I have evidence as to the dressmaking trade, the tailoring trade, and the grocery trade, and the shoe repairing trade.

2857. *Chairman*: Perhaps you could tell us this: When was the circular sent out?—I received the circular about three days ago.

2858. Have you got the circular? What did it ask?—It is evidently of quite recent date, because I see that in connection with the shoe repairing trade the remarks are dated October 24, 1921.

2859. What did the circular ask for?—The circular does not ask for anything. It is an account by the Council of the Combined Traders of Cornwall as to the state of the various trades in that county covered by the Trade Boards Acts.

2860. I thought it might tell you how the Combined Traders got those figures. Did not they make some enquiry of their own?—By enquiry amongst the members of the trades in the county?

2861. Yes, but I want to know what that enquiry asked for. Did it ask for the figures in a particular month or in a particular year, or what? Perhaps you cannot tell us?—I cannot tell you that, no; I am not sufficiently conversant with the details of the County of Cornwall to give you that information. All I do say is this, that in connection with every trade it gives the same doleful account as to the working of the Trade Boards Act in those trades.

2862. I am sure you will understand what I want. I want to see the value of these figures. If these figures were taken, say, in April, 1920, of course they are quite worthless, because they were taken before the Trade Board rates were fixed.—Perhaps I can give you the information now: "The members of the Cornish branch of the National Federation of Merchant Tailors have just been circularised, and the questions they were asked to answer all related to the working of the 'Retail Bespoke Tailoring Trade Board.'" "The replies were required by the Headquarters Staff of this Federation for use before the Special Committee considering the future of Trade Boards, therefore I have struck an average note, and they are as follows:—

"Have present rates affected your business?—Most seriously."

"If so, to what extent?—Employing only half pre-war staff, and those on 32 hours per week instead of 57."

"Have you endeavoured to meet conditions by reducing prices?—Yes."

"If so, to what extent?—The award of October, 1920, to females of 15s. per week increase has not been charged on to customer. Clothes, therefore, being sold at cost price, or slightly over, and no provision being made for establishment charges."

"Have your customers refused to order on account of high prices?—Yes."

"Have you had to reduce your staff owing to present rates and short hours?—Yes."

"If so, to what extent?—About one half, and those from 57 to 32 hours."

"The conditions prevailing in my own business in this city are typical of those existing in all businesses in every town and village in Cornwall."

"Pre-war I employed"—this is the man who is sending out the information on behalf of the tailors—"22 people in the workshops, at 57 hours per week."

"Total hours worked per week ... 1,254"

"I now employ 12 people, at 32 hours per week."

"Total hours now worked per week ... 384"

"A total loss of production in this one shop of 870 hours in one week, thus creating dearer clothes and much unemployment. The award of October, 1920, to females, 15s., worked out through shortening of working hours, which was national (no business being able financially to meet it), that both females and males took home at the week-end less money than they had previously earned, so that, employers through shorter hours and employees earning less, no one was satisfied."

"Before October, 1920—

"Women worked 48 hours for 34s. per week."

"Men worked 48 hours for 76s. per week."

"Within a few weeks they were only earning, through the increase to women:—

Per week.

"Women (32 hours at 1s. 0½d.) ... 32s. 8d."

"Men (32 hours at 1s. 7½d.) ... 50s. 8d."

"The men dropped back through trade union rule, 'that one out, all out,' and lack of trade." That is dated October 17, 1921, and it is signed by Richard Hawke, the hon. secretary.

2863. It does not answer my question; but you will no doubt get the answer for me?—Yes. I have here a letter from a firm that are under the Pin. Hook and Eye Trade Board, situated in Birmingham (*extract from letter read*). I do not think there is any other matter in this particular letter that would interest this Committee.

+ The Committee was subsequently informed that the figures related to December, 1920. See also: Written Statements of Evidence, No. 4, page 964.

21 November, 1921.]

Mr. GORDON T. H. STAMPER.

[Continued.]

2864. Would you like to do this which was done by the Drapers' Chamber of Trade, to send us a bundle containing copies of these letters, because then we get the information at first hand?—Yes. In some cases the manufacturers who have written to us have objected to their names being published; in others they have not; the great majority of them do not object.

2865. You are quite at liberty to leave out the names.—Yes. Well, these people also call attention to the same thing (*extracts read down to the words, "curse the Trade Board to eternity"*). Of course, that is a way of putting it, but I think that gives you a typical instance, and there are many more. I should think I have something like 30 odd letters here which I have selected from the bulk, as representing fairly the views of the bulk.

2866. Perhaps you would let us have a bundle containing those letters. It would have much more effect upon me, at any rate, than when the letters are read in a rapid way.*—There are just one or two here. You see it is pretty generally complained amongst our members that there is no provision for the old or the slow worker. The idea that you can apply for a permit, of course, is quite ridiculous; in fact the employers told the Board quite frankly that they would not be a party to asking for permits for their workers. It is the sort of thing that the employers do not wish to do.

2867. They are not given for slow workers?—No, only to people with physical defects; that is so. But the employers did tell the members of the Board that they did not feel inclined to apply for permits for work at lower rates of wages. If employees themselves like to apply, that would be another matter, but we felt it was really a matter for the employee rather than the employer, and that they had better go to the Board and let the Board assess what they thought their labour was worth. But so far as the slow or the old worker is concerned there is no provision at all in these Acts for allowing them to earn their bread and butter at such a rate as any ordinary manufacturer can afford to employ them at. Now, my Lord, having given you the one or two letters I have read—I will undertake to say that a bundle of them shall be sent to you some time to-morrow—may I say now, dealing generally with this, that I think I have proved conclusively that undoubtedly unemployment has been caused through the operation of the orders made under this particular Act, that workers have been dismissed, and they have been dismissed for this reason, that the cost of production has been sent up owing to the fact that the Boards have fixed wages which are above a minimum wage. In this connection it is not realised very often that the products of the various manufacturers of the country have, in a great many cases, to compete with foreign markets. It may be said that that has nothing to do with a Board which is fixing a rate of wages. Well, if the business is not forthcoming, then the employment is not forthcoming, and I do urge that this system of appointed members, plus the workers' side, which largely consists of Trade Union officials rather than workers in the trade concerned, is responsible largely for the trouble that has arisen, and that I absolutely concur with my colleagues in the view that they have expressed to you that the only way to set this position right is for the Government to consent to the repeal of this Act. It is no good making a patchwork quilt of it; it is quite bad enough already. I cannot see how you can get over having some sort of appointed members, and with that particular provision the whole of the difficulty is bound to arise. All the manufacturers with whom we have been in touch over this matter, whether large or small, are anxious to increase their business; they want to enlarge their works; they want to employ more workpeople; but they are in such a terrible position that they never know from day to day when the Board is going to meet and fix a higher

rate of wages, or in some way alter the conditions of their labour. It was stated to you, I think, that four months was the quickest time that any alteration could take place, but it must be within the knowledge of this Committee, at any rate, that six months is very much nearer the fact. That is a very serious position. It was pointed out clearly by Mr. Jackson yesterday that where manufacturers were able to deal with their workers direct, an alteration could be made inside a week, proving therefore that the man who can so deal with his workers is five months better off, as far as his costs are concerned, than the man who is governed by a Trade Board. Then, of course, one very grave objection, and another point that makes for unemployment, or shall I say lack of employment, is the very high rates that have been fixed in a great many cases for juniors in the trade. It used to be customary before the war for a young girl in an average factory of about 14 or 15 to start at about 6s. or 7s. a week. I am not going to say that that in itself was sufficient but still it was a starting point, and increases after that naturally followed the ability of the worker. At the present time you will find that the majority of rates start at about 15s. to 17s. if you strike an average for the majority of Boards. That is a great deal too high. It does not give the employer an opportunity. It must be recognised that whenever you take a junior into the trade—and I am sure those who have experience of industry sitting round this table will agree here; we must admit it, those of us who have been juniors ourselves—that tendency of a great many juniors is that they spoil a considerable amount of stuff. They are bound to do it; it is one of those things that human nature in its younger stages is obliged to do in gaining experience; but the employer, of course, has to pay for them. That sort of thing has not been taken sufficiently into consideration in our general view. I think that concludes all I have to say on the subject of unemployment, and I will undertake that the letters for which you have asked shall be sent to you, and also the month in 1920 when those figures from my Cornish friends were compiled.

2868. Not when they were compiled, but to which month they refer.—The month in 1920 when they were actually taken.

2869. That is the month in which they were the actual figures?—Yes, I understand.

2870. Mr. Poulton: And 1918?—Yes, I will get that month also.

2871. Mr. Layton: You said twice in your evidence that Trade Boards created unemployment by fixing the rate higher than it ought to be fixed. The only actual figure you quoted was that of the rate for female porters in the grocery trade, I think, was it not, at 37s. as against the actual rate of 33s.? Is 33s. the rate to-day?—I said that the average rate for a female porter to-day would be, in an ordinary average factory carrying out the operations that are covered by that Order, from 33s. to 34s., and the top rate would be 35s.

2872. What was the rate when the Trade Board fixed 37s.?—Well, it would not have varied.

2873. It was then 33s.—Yes, that is so.

2874. What I wanted to get at was this, that the Trade Board actually fixed a rate higher than the current rate?—Yes.

2875. It was not that the rate fell and that the Trade Board rate remained high?—No, they fixed a rate which was higher than the current rate.

2876. You referred to the Appointed Members being a difficulty, and then you proceeded to refer to foreign competition as though the two things were connected—as indicating that there were outside forces which governed your wages which were not taken into account by the Appointed Members?—The Appointed Members do not take that or any other cogent factor connected with the production, or the sale of the product into account. All they take into account is that there are two sides, and one says No and one says Yes, and it is largely the man's oratorical ability that counts with them. That is how the majority of my friends think.

* Extracts from 34 letters subsequently sent to the Committee—not printed.

24 November, 1921.]

Mr. GORDON T. H. STAMPER.

[Continued.]

2877. But if the employers put before the Board the fact that foreign competition was making it impossible for the wages to be beyond a certain point?—The foreign competition argument is an argument that applies almost exclusively to the brass making trades, of which you had evidence yesterday. It does not apply to the grocery trade because we do not export grocery.

2878. Quite obviously, it is a factor which must govern wages in a great many trades to-day—the majority, I should say?—To a very great extent I should think so, yes.

2879. Is it not a fact that can be explained by the manufacturers to the Appointed Members?—Can be explained?

2880. Yes?—It is explained, but I do not think it could be seriously suggested that a manufacturer would not explain to an Appointed Member something which might afterwards operate in his favour.

2881. What I wanted to get was this. Is it not the business of the employers' representatives on the Trade Board to put the economic facts of the trade forward, and if the Appointed Members are the reasonable and proper persons to consider the matter, then they would be given proper weight?—They do not give them proper weight, and I am informed by my friend who is sitting beside me that he has only to-day put that argument before the Appointed Members, and they have given so much consideration to him that they have voted against him. They will not consider these things. I do not know whether you understand the position that actually operates on a Board. The Appointed Members send for the employers and say: "Look here, the workers want so much per week: what are you going to do about it?" We have already told them, we will say: "55s. is the most we can pay"—this is not an actual figure—and then they say: "You must come up to 60s.; if not the workers will get it." But that is not the proper way to arrive at an economic rate that will not injure the trade. Is it a businesslike proposal to say: "Jones wants 65s.; you say you can only pay 50s. by virtue of the fact that you have to earn your living by running your business at a profit, but because Jones has said 65s. we think 60s. is the proper rate; consequently you can either pay 60s. or we shall vote for the workers' proposal, which will make it necessary for you by law to pay 65s. or be fined £2 a day for ever?"

2882. Your point is that, although the economic side of the industry is put before them, they do not take those facts into consideration?—Exactly; they use their own judgment as to what they consider is a fair wage. As I pointed out, by reason of their early training they are not competent to come to a judgment. That is due to their appointment.

2883. Mr. MacCallum Scott: Would you say that employers did not try to eliminate the slow worker before Trade Boards came into being?—I would say so, yes. I am the manager of a very large factory myself, and when I give you the position I know exactly what would operate. You have got people in your factory, supposing you have got a factory where you have a whole lot of high speed machinery, and in that factory you have a number of odd jobs which can be performed by people who are not necessarily quick at manipulation—girls or men who are good enough for waiting jobs. They are not machine operators; they are not doing a definite job attending to a machine or turning the stuff out actually; they may be waiting on a group. The slow worker can do that work quite well and quite properly. Directly the Trade Board comes in you have got to pay that person exactly the same rate as the machine operator. Now, you may say: Why have you got to do that? The answer is, because the rate fixed for the whole of the factory is so high that you can only afford to pay it to an efficient worker. Now you are going to say to me: "How are you going to get the work done by this slow worker?"

2884. What difference does it make if you get a more efficient worker, since the slow worker can do

the work just as well?—Because you will in a good many cases re-organise your machinery to a certain extent. You may have the stuff which that worker was carrying to certain machines carried to those machines by a travelling band. The extra price of that labour in all probability will make the travelling band an economic proposition, whereas it is not to-day. I am giving you a general instance of exactly what operates in the average employer's mind, and it is made to operate by reason of the fact of these rates being fixed.

2885. The extra price of the labour would make the use of the machinery more effective?—Yes.

2886. I think you said that in Cornwall and throughout the trade there was a decrease in employment of about 50 per cent., or something like that, on pre-war days?—70 per cent. in the dressmaking trade, but as a general statement half the people in the county are out of work.

2887. In a good many instances which are not under Trade Boards the amount of unemployment is far greater?—In the statement I was reading, when no doubt, owing to the pressure of time, his Lordship cut me a little short, I had a statement emanating from someone with a knowledge of the operation of Trade Boards, that unemployment in trades not covered by Trade Boards was greater than in those covered by Trade Boards.

2888. Chairman: By all means deal with that.—That was a statement that was made, but the gentleman in question would have had included that great body of labour known as the casual labour. I suggest that if he eliminates casual labour he will find that unemployment in Trade Board trades is, I should say, at any rate, higher. Take the casual labour out of it and let us have a statement of actual trades as against trades. The casual labourer is a gentleman in an occupation where the percentage of unemployment is very much above the average always, and that must be so. If you put that on either one side or the other you will get whichever result you want.

2889. Mr. MacCallum Scott: Take the district I come from, the Clyde, where it is largely engineering and shipbuilding, where unemployment is wholesale and universal?—Unemployment in the shipbuilding industry, yes.

2890. And in engineering generally and in many other trades which are not affected by Trade Boards. Do not you think that these trades which are affected by Trade Boards would be subject to the same general influences to which these other trades are subject?—Trades which are affected by Trade Boards must, of course, be affected by the same general influences, but they are affected also by the additional influences from which other trades which are not governed by Trade Boards are immune.

2891. Can it be shown that the unemployment is very much larger in those trades which come under Trade Boards?—If you say very much larger, I do not say that that is so, but I suggest that you could show a percentage which, on the whole, would add considerably to the volume of unemployment in the country.

2892. But you have no comparative figures as to that?—I do not think it would be possible to arrive at comparative figures. You can only judge by the individual reports which you get from the individual factories.

2893. With reference to a trade like dressmaking and tailoring, unemployment for the last eighteen months or so has been very rampant throughout industry all over the country?—Yes.

2894. The consuming public have been hard up and unable to spend money, and so have not been able to get new clothes and dresses. Would you not say that that would account for a very large diminution in that trade?—My answer to that would be this—that if they had been able to pay a reasonable economic wage the price of their commodity would have been decreased to the consumer. The consumer's purchasing power would then have been a little more use to the trade, and consequently the unemployment would not have been so serious as it has been.

24 November, 1921.]

Mr. GORDON T. H. STAMPER.

[Continued.]

2895. *Mrs. Lyttelton*: I only wanted to ask whether you wished us to take your vivid and dramatic description of what goes on at Trade Board meetings as accurately describing what does go on—that the appointed members do not consider the economics of the rate at all, but merely say: “Well, the worker has asked so much, and therefore you must give so much.” Do you mean to say that there is never any discussion as to the rights or wrongs of the case?—That is what the discussion boils itself down to, and I think that in that connection every gentleman I have ever consulted—and I know many that are on Trade Boards; there are several sitting round me here now—would say that the sum total of what happens at a Trade Board meeting which I have given you is a reasonable expression of fact.

2896. *Mr. Poulton*: And I take it from your statement that you feel that it is hopeless to make improvements at any rate in the 1918 Act?—I do, absolutely.

2897. That it is so bad from the standpoint of those whom you represent that the only thing to do with it is to wipe it off the Statute Book?—I look upon it as a tragedy.

2898. It is a little difficult when one takes up that particular attitude. If one could suggest improvements it would be different; but you do not look at it in that way at all. You think it is past improving?—I do, absolutely.

2899. Then just to follow up the question put by *Mrs. Lyttelton* about the appointed members. I was rather struck by your statement, having regard to the fact that I know sometimes they sit for four or five days before they come to a decision, and sometimes sit from 10 in the morning till 7 or 8 o'clock at night.—They do, worse luck.

2900. Do you really suggest that in that long period of time all they do is to bandy this kind of statement, rather than go into the question of the pros and cons of the matter, and try to ascertain what is really the economic situation of the trade?—They go into it, but that is the sum total of what they come to. That is what they tell you at the end of the story, and it does not matter whether they tell you at the beginning or the end. That is the effect of their decision. You are in a cleft stick; you can neither move one way nor the other.

2901. This is rather a serious statement. You said that the appointed members intimated that they would cast their votes for the workers unless certain things were done?—Yes.

2902. You know, do not you, as a matter of fact, that many of the workers on these Boards are making just the same kind of complaint in a modified way, namely, that the appointed members voted against them?—I have never heard of any such complaint.

2903. I have heard of a great many; but you do not know of that?—I do not know of that, no.

2904. It is no use going into the figures for Cornwall because we want the dates, and we know that Cornwall as a county has got an unemployed problem more accentuated than in most other cases. The dressmaking and millinery worker is not as badly off as the miner, and if the miner has no money, obviously he cannot spend it on dresses and millinery, can he?—Well, this is not helping it, is it?

2905. But you put up those figures as if the Trade Boards had brought this about, when it is well known that there has been an appeal to Parliament to deal with Cornwall as a county, because it is in such a terrible economic condition?—But there is ample evidence that if the people could pay rates as now prevailing they are quite content to go on employing the people. The gentleman who wrote me this letter, *Mr. Trounson*, is engaged in business in Cornwall, and he told me only last week that his employees went to him and told him that the workers themselves were convinced that he could not afford to pay the rates he was paying them, and that they would be glad if he would agree to reduce those rates. He has offered to give the figures to anybody: he has full particulars. But he said, No; he would

go on paying them as long as he could because he had formed a little reserve fund during the war for the purpose of getting over the hard period. The Trade Board has fixed a rate which is higher than he is paying to-day. What is he going to do then?

2906. That does not affect the point I was putting to you, because if the population itself as a population has no income, obviously it cannot do any trading, and you are here to try and prove unemployment when we know as a matter of fact that, deplorable as are some parts of the country, Cornwall is in a still worse state?—Mining is not the only thing in Cornwall.

2907. It is the big thing.—Dressmaking is not confined to the mining districts. You will find that a lot of it goes on in the seaport towns.

2908. Following a point of *Mr. MacCallum Scott's*, do you not think it follows that when you get the great trades of the country suffering to the extent that some of them have suffered, when 60 per cent. of the workers in them are out of employment, and 70 per cent. of those in employment are on half time, that necessarily it must have its effect upon the other trades?—I am not saying and I have never suggested that such a state of affairs has not had its effect on other trades; but what I do say is that the effect on trades that are governed by Trade Board rates is more considerable than on trades that are not so governed, because they are forced to pay something which is not economic so far as their production is concerned.

2909. I thought you said the effect on the employer was to get rid of the uneconomic worker?—That is exactly where the unemployment comes in. I thought I had explained that. If they were still in employment then one could not allege that the Trade Boards had caused unemployment.

2910. That is elimination caused by a new rate?—I say it is unemployment distinctly caused by the operation of the Trade Boards Acts.

2911. Not necessarily at all.—If a man is thrown out of work he is not employed.

2912. Yes, that particular man; but it does not follow that another man is not employed.—Do you suggest that an employer would get rid of an old servant because a certain rate operated, and would take on somebody else in his place?

2913. Yes I do, because I have had experience of it many times.—My view is that an employer always will prefer those people who have been associated with him a length of time. He prefers his old servants; he does not wish to get rid of old servants.

2914. Now with regard to the high rate for the young people, is not that rate practically only in keeping with the rate at which the cost of living has gone up from pre-war; that is to say, supposing it is 16s. now does not that represent 8s. pre-war?—No. Perhaps I should explain a little more carefully what I mean there. Previous to Trade Boards it has been the custom, I think it will be generally admitted, that in most trades the difference between the junior in trades not governed by Trade Boards, or shall we say pre-war, was always very much greater than the Trade Board standard has laid down. I am not going to say before the war whether the difference was not even too great. I think that to-day a junior starting at 14 or 15 years of age should receive something like 10s. or 12s. a week. I think you will find that in the majority of Trade Boards they fix something like 17s. I am not suggesting to you that it is too high, and on all sides I have had complaints from the evidence I have gone through, and particularly with regard to the Grocery Board, as to the junior rates in the trade being too high. But after all, we want the juniors to come into the trade; the sooner you get a junior in the sooner he can earn money.

2915. You put that forward as a serious point about the appointed members do you, that the oratory in putting the case rather than the actual facts of the situation of the trade is the thing that in-

24 November, 1921.]

Mr. GORDON T. H. STAMPER.

[Continued.]

fluences the appointed members to give their decision?—Undoubtedly I do.

2916. That is to say, although they were selected because of their supposed judgment in matters and their judicial capacity to understand the position economically?—Yes. I think so, for this reason, that I should think any person would agree that a man with a bad case, if he went before the Courts, would get on much better if he had a good counsel than if he had a bad one.

2917. As to the Department itself, you said that the Department made a great many mistakes. I daresay it has; most Government Departments have. I have no doubt, but you went on to say—?—Might I just say here, in case of any misapprehension, that in anything I have had to do personally with the Minister of Labour or with any of his subordinate officials, I have always received the greatest possible courtesy. I am only talking about the operation of their work. I can say that, with regard to Dr. Macnamara, he is a most charming gentleman, and has always shown me the greatest possible consideration.

2918. Quite so, I did not understand you in that other way at all. But you said if they got men or women there from any trade who knew something about the business, they would not make these mistakes?—I think it would assist greatly. I do not think there is anybody at the Trade Boards Office—

2919. You think there is no one there who knows anything about the practical side of the trade?—What is the Appointed Member to do even if it were possible to work the Act? I do not agree that it is—but what is the Appointed Member to do? He knows nothing about the trade; he has to listen to both sides and one man says yes and the other no.

2920. You are talking about the Department as a Department?—Yes. The Department should provide that information.

2921. You do not think they do?—No, they certainly do not.

2922. *Dame Adelaide Anderson*: On the point of the Appointed Members, I think you said that the Boards as at present constituted cannot fix a minimum rate?—I do not think so.

2923. Do you think it is hopeless to appeal to the Appointed Members?—I do.

2924. You mean they simply compromise between two extremes?—I think so. That is my considered opinion.

2925. You have no insuperable objection to the 1909 Act?—No. You see if you trace the operation of that Act you will find that in no case did they fix anything extraordinary in the way of a wage. Take the operation of the Sugar and Confectionery Board to-day. Well, the rate for porters in that trade is something like 54s. a week, but the rate for women ends at 18 years of age and does not go beyond 32s. Well, that gives the manufacturer a chance of working in the various types of labour. I have come into touch with the workers a great deal and I regret very much the operation of these things. I know they want work. Even in the last three months in connection with a factory we have opened I have received as many as 3,000 applications for employment. Some of the letters are powerful human documents. I think it is a great pity if there is anything on the Statute Book which operates in any way to prevent those people getting employment.

2926. It has been suggested that there are other causes of unemployment?—I know, but this is a contributory cause; I will put it like that.

2927. Going back to the 1909 Act, they have the Appointed Members' system there too?—In the 1909 Act?

2928. Yes.—Exactly.

2929. The Appointed Members there are more reasonable?—What I would say is this, that before the Boards were set up under the 1909 Act there was a general overhaul of the trade concerned in the shape of an enquiry. It was not altogether like a body of people coming in without knowing anything about the facts of the case. They came in with, at

any rate, something to go on, and here, of course, you merely see an Order in the paper—

2930. Would you pursue that by suggesting some development that would improve the 1918 Act in that direction?—I think it is impossible to do it. I think the whole job would be too colossal. The Act was originally introduced to stop sweating. It was never accepted by anybody that it was for any other purpose, and I do not agree that it is necessary to regulate wages in any trade by Act of Parliament, unless it can be proved that sweating has taken place. I think it is fundamentally wrong in principle.

2931. You would not agree with some manufacturers who have expressed the view to me that certainty as to wages was the important thing upon which to build up business?—I do not think that is necessary. The only thing that is necessary in business is this: first of all organise your place, see that you have the finest organisation. If you have the finest organisation, you will pay the wages all right; you will get the best people; and what the other man does does not matter very much. Your production will sell your stuff, and you need not worry about the man who goes about in a niggardly fashion and does not pay the rates. If he goes below a certain irreducible minimum then prosecute him, but do not fix that minimum so that it shuts everyone out of employment.

2932. But there is the human element also?—That would cover the human element, I think.

2933. You will not get the best labour, the best work, and the best output, unless you pay something more than the minimum?—When I say the minimum, if you fix the minimum so that it is an irreducible minimum and nothing else, the better worker always will get more than that minimum. No employer wishes to run his factory by paying a minimum; he likes to be able to pay more than the minimum. A good many people may think that that is an exaggeration, but I know that it is not.

2934. Given a certain rate, a knowledge of the rate, it is easier to organise your work?—I would not even say that, because the great bulk of the work in the majority of trades to-day is run by piecework—payment by results.

2935. In the industries with which you are familiar, has there been any attempt on the part of the employers to get into conference with their workers in the factories as to rates—as to how to make the work go on these rates that you think are too high? I mean you can save in one direction or another?—You would not consult the workers as to that?

2936. That is done in some works with works committees?—Yes, I know, but I have never read of it being anything like a great success. I have studied the whole question. There are certain factories in Yorkshire and so on. I attended a whole course of lectures on the subject.

2937. *Mrs. Lyttelton*: I wanted to get the point about the Appointed Members quite clear. What struck me was your statement that the Appointed Members really use—well blackmail is a strong word, but still a kind of bargain is driven. They take the figure and say "If you do not give this figure we shall vote for the other side." That seems to be a very serious accusation to make?—The Appointed Members are always obsessed by the fact that they have to get something settled.

2938. Do you seriously assert that that is always their method?—Always.

2939. *Chairman*: Have you seen that done yourself?—I certainly have, Sir.

Mrs. Lyttelton: It is very improper.

2940. *Chairman*: On the Grocery Board?—On the Grocery Board. On the last occasion that actual procedure did happen. I could give actual details of it where finally the employers were obliged to concede a small increase in the rates.

2941. *Mrs. Lyttelton*: It is the threat that I am on?—Well, if you do not come to terms it is obvious they are going to vote for the other side.

24 November, 1921.]

Mr. GORDON T. H. STAMPER.

[Continued.]

2942. But do they say so?—Yes, they tell you so definitely. They have only one proposition before them. You have no alternative.

2943. *Mr. Poulton*: You say there is no alternative, but there are; there are several alternatives. That is a very strong statement to make against Appointed Members, and I should like to know whether it does not happen rather in this way, that the Appointed Members being there to try to hold the balance even between the two sides, and as far as possible to weigh the evidence that is adduced by both sides, they therefore having weighed it up and the two sides not being able to agree, try to induce them to agree? If they fail in that, does not it rather come the other way about? They say with all the evidence which has been adduced they feel that if there cannot be an agreement they will feel bound to vote for someone else. That is rather different, is not it?—I think it is exactly the same. The effect is absolutely identical.

Chairman: No doubt we shall see the Chairman of the Grocery Board before we finish.

(The Witness withdrew.)

Mr. ASHLEY WARD, called and examined.

Witness: I quite realise that you do not wish to hear the same thing repeated many times over, but although my position can be very shortly stated, it is a little difficult. I will try to be very short, and I merely want to emphasise, with your permission, the issues which have been raised by the evidence, and possibly to confirm what some of the other gentlemen have told you. In the first place, we have to thank you, my Lord, for the very patient way in which you have listened to this long and detailed and somewhat tedious evidence. We have nothing to complain of on that score, I am sure. Another point with which I think you will agree is this. I think you will be convinced that the appearance of the National Federation before you is not in any spirit of general obstruction to Government legislation, which one very often finds.

2948. *Chairman*: You mean the National Union?—The National Union of Manufacturers. Their presence here is due to the incalculable amount of harm which we think will be occasioned to industry, and is being caused, by the Trade Boards Acts. It is common knowledge, I think, that manufacturers and traders generally are fighting and scheming for their very existence to-day, not only for what people term the markets of the world, but for their own markets against the exchange-supported foreigner to-day, which is a very, very vital point, and we do feel that on the top of these very onerous conditions it is absolutely intolerable that we should have the conditions imposed by these Acts which you have here in evidence before you, with their menace of un-economic wages. You have heard what the Act of 1909 was brought in for—namely, exceptional cases of sweating. I do suggest to you, my Lord, that the Act of 1918, which I might call an extension Act, was imposed by persons in connection with Government control and Government concerns, who firmly believe, in my opinion in error, that there is a theoretical panacea for every ill that industry and employment suffer from. That I believe to be at the bottom of the whole question of the administration of the 1918 Act. Of course, I will concede that these persons have an idea that they are going to do some good to trade, but in our opinion it only shows how very often the well-meaning act of Government interference acts in the opposite way to what is intended. The Extension Act of 1918 could not have been brought into force at a period which could have been more inopportune. For a short period after it had come into actual effect this country apparently prospered; the conditions as to cost of production and freights, and that kind of thing, made it of very little consequence indeed, because everything was passed on to the consumer during a period like that. Then suddenly we were confronted with the most appalling slump, as I think you will agree, that the world has

2944. *Mr. Layton*: Have one or more of the Appointed Members ever moved formally on the Board in your knowledge an alternative figure to that proposed by either side?—They moved a set of figures on one occasion.

2945. They have put forward their own figures?—Yes, on one occasion. They have been referred back several times. What I am telling is not peculiar to the grocery trade, it goes on on every Board. I do not want to make a special complaint against our appointed members, because personally they are quite nice people. They all do the same thing; it is common to the system.

2946. *Chairman*: Still you only know of your own Board?—I can only speak for my own Board, but what I tell you is quite common.

2947. *Mrs. Lyttelton*: Only it does not happen in the trades that are under the Act of 1909?—I cannot tell you that. I have not sufficient experience of the 1909 Act to tell you that.

ever seen. What did we find? Costs of production, instead of being quite by-words, immediately began to come into importance. In a few short months they were of paramount importance, until to-day you hear nothing else. It is the chief concern of every manufacturer to-day to look after his costs, because otherwise he is always in the position, as regards foreign trade, of trying somehow to come within measurable distance of the rates which are quoted by foreigners, who are to-day supported by the exchanges. This Act of 1918, I suggest to you, was passed during this period, and suddenly, when traders came up against these conditions, they suddenly found themselves confronted with this Act, which thwarts them at every turn with its hide-bound regulations and its particular development. It is an Act, I suggest, which was framed in the apparent security of prosperity, and with a total disregard of the fact that we were likely, as we seem likely now, to get back to pre-war conditions. The purpose of this Act was to prevent sweating and in trades likely to fix a minimum wage. I think you will find from reference to the Act, that the development of this Act, whatever may be the Act itself, has been entirely different. From the very first every effort, we say, has been made, and perhaps not unnaturally, by the labour side, and we think supported by the appointed members, to transform these single purpose minimum wages boards into permanent ruling wages boards. That is my own experience of Trade Board work, and you will have heard it is the same experience with others.

2949. I think you are on the Waste Materials Reclamation Board?—Yes. The rate has been fixed, not for the lowest-paid worker on the subsistence level, but for every grade of worker. We say that was never intended by the 1918 Act, and for which the machinery of the Act is totally unsuitable. Well, the results of that kind of thing you see in the conflicting rates and conditions which have been put before you, in unemployment to some extent, and in the suspension of industries, and the refusal of man and master to accept the rates; and, as you know, in some cases in the refusal of magistrates to convict where these Acts is known to be enormously costly. They have an enormous number of inspectors now, quite disproportionate to the benefits accruing; but if there is to be a continuance of the development of this Act, I suggest to you that we are going to have an army of inspectors in this country, because nothing else could make the Act efficient or workable. I do suggest to you, my Lord, that any attempt to carry on this sort of thing is doomed to failure whether you go on with the Act or not. Trade, in our opinion, is

24 November, 1921.]

Mr. ASHLEY WARD.

[Continued.]

controlled by inexorable laws, and if you are going to force impossible wages by Trade Boards or anything else upon industry, you are really interfering with the common rights of the people, and you can never enforce it. In the case of the Waste Materials Reclamation Board, of which I have a good deal of experience, I suggest to you that nothing could have been more futile than the refusal of the Chairman and the Minister to consider twelve months ago the postponement of the operations of this Board from six to twelve months to allow conditions to stabilize. The Chairman's attitude was this: "I have been appointed by the Minister to fix minimum rates for this trade, and fix rates I will—some sort of rates." He made that statement in my hearing. What was the result? This body has met for twelve months at enormous expense to the taxpayer; for myself I have put something like 24 to 27 whole days, and, as Mr. Pontou says, sometimes up to 7 or 8 or 9 o'clock at night, in the endeavour to come to a settlement. The Board has entirely failed to keep pace with the falling wages and conditions. The deliberations of one month, at an adjourned meeting the next month, have appeared perfectly absurd to both sides, and the final effort, with the addition of the appointed members against us, as I am informed just now, has been to recommend to the Minister to fix a rate from 5s. to 10s. higher in the iron and metal section of the Waste Materials Reclamation Board than the highly-organised trade of steel manufacture, to which this trade is a contributory. And according to the terms of the Act, over which the Minister has no power—you would not say under the Act that the Minister had power to-day to come to the steel smelters and say: "I consider you have not a sufficient degree of organisation in your trade, and I propose to appoint a Trade Board." It would not be tolerated for one moment on either side, probably.

2950. *Mr. MacCallum Scott*: Could you give a specific figure with regard to it—one wage?—The rate fixed, and recommended to the Minister to fix, for the Iron and Metal Section for adult workers by the Waste Trade Board is 53s. for 48 hours.

2951. And in the steel trade?—I will give you the figure I have just had handed to me here—the actual rate for the steel works labourer. We are talking about the lowest paid men in both cases. The actual wage to-day for the steel works labourer, as required by the Steel Smelters' Union and the South Wales steel manufacturers, is £2 4s. 10d. In the tinsplate mills, which roll the bars that are made by the steel works, the figure is 42s. 7d. Both these labourers are always considered to be a slightly better class of labour than in iron and steel yards.

2952. *Chairman*: Did you say this was being carried against the Appointed Members?—With the help of the Appointed Members the rate has again been sent to the Minister for confirmation, against the employers. In the tin plate trade, which of course is allied, the rate is only actually £2 2s. 7d. to-day, and what is the result to-day in South Wales? In South Wales they have actually got up this last week to 86 per cent. of their production of steel, totally due to the fact that the wages have put it within the possibility of the manufacturers to meet foreign competition, and it is the only bright spot in the iron and steel industry to-day, is the South Wales steel trade.

2953. *Mr. MacCallum Scott*: Do they apply approximately to the same areas?—There is a difference in the Sheffield district, which is another steel area. The actual rate to-day there is £2 6s. 7d., which is slightly higher, but again is much lower than the other rate. I mentioned my figures as from 5s. to 10s. higher. The present constitution of Trade Boards whilst possibly suitable for the fixation of a minimum wage to prevent sweating—

2954. *Chairman*: Could you tell us what the employers proposed in this case?—If I remember aright, 48s. a week. Even that, of course, is very much higher than what the rate is that is being paid to-day.

2955. These proposals were made some time ago?—In August, and they were forwarded to the Minister for confirmation; and they brought forth, in view of falling wages, a storm of protest from the country, and the Ministry have sent them back to-day, in consequence of that protest, for re-consideration by the Board. They have had a meeting to-day, and the result has been that, with the vote of the appointed members, the Minister has been requested to confirm those rates. The present constitution of Trade Boards, whilst possibly suitable for the fixation of a minimum wage to prevent sweating, is quite unsuited for carrying out satisfactorily the work which most of these Boards have set out to do—that of fixing fair and reasonable wages for all classes and all grades of workers or trades affected. No wonder there is strife and trouble, because to do the work properly Boards would have to sit continuously, and in every district of the country. It is impossible that these Boards should go and fix wages, such as shown in the schedules to the quarterly report of the effect of the Acts, and sit in London and attempt to fix wages for all the delicate operations of trade which are covered by the hundreds of occupations. The general procedure, in my experience, is that of practically the whole of the Trade Boards. The whole of the employers' representatives speak: sometimes we wish they would not; it is probably in the interests of truth and justice that they should do so; but it is a bit trying sometimes. On the workers' side, in my experience and the experience of two other men who were on Trade Boards, there is this—that no practical workman, if he is on the Board, ever speaks. The case is always presented, in other words, in political oratory by union people in connection with the labour leaders, and instead of the Trade Board being a reasonable group of practical men out to solve a difficulty, the whole procedure of the Board is sacrificed to tactics, as you will have realised from what Mr. Stamper has said. You will see that procedure such as that does place the whole situation in the hands of the Appointed Members, and induces the situation mentioned by Mr. Stamper. The Appointed Members during the Waste Materials Reclamation Trade Board meetings almost become white-haired in so far as, in consequence of the falling condition of the trade, the rates were so widely apart that they could not do anything, and they did go in my hearing to the length which Mr. Stamper has mentioned, and say, "You have mentioned such-and-such figure; the labour members such-and-such a figure: we cannot vote for your figure. If you will come to this mean figure, we will vote for it. If you will not, we will vote for the original resolution on the higher figures." That is my experience on the Waste Trade Board; I did not know Mr. Stamper had had the same experience on his Board, because I had not met him until the last few days. But that is my experience on the Waste Trade Board, and I submit it is absolutely wrong, and against the intention of the Act. There is a little light as regards future trade, as I have already told you, but we are not through with serious anxiety by any means, and employers have their hands full of very serious problems to-day. Imagine employers in these times of most acute adjustment, both for the workers and for the employers, with new circumstances and new industry; fancy us having an Act of Parliament in our industry which says "You shall proceed to fix wages" when it is inadvisable to do so; which says that once you have fixed those wages you shall not alter them for six or nine months. Just fancy an Act to-day saying, "The Trade Board are going to fix to-day a rate of 53s. in the adult section of the Iron and Metal Trades." It says in effect, "You shall not alter that rate for six months," and then you have two or three months' notice to give to alter it again. It makes it somewhere about eight or nine months altogether. Fancy them attempting to fix a figure of 53s. when, in the organised trade of steel manufacture, you have already got a rate operating 10s. a week less!

24 November, 1921.]

MR. ASHLEY WARD.

[Continued.]

2956. *Mr. Layton*: Is that a first fixing of the rate, or a variation?—No, it is the first fixing. It has taken twelve months to do that, and 27 days of argument. It is an Act which months ago—I know they have altered the procedure slightly recently—said: "You shall not fix the wages on the cost of living scale, because it is not within the power of the Act." We naturally asked in November last, and in December, why not fix a scale in accordance with the cost of living? Everybody was agreed to that, but we were informed by the legal section of the Ministry of Labour that it was not possible under the Acts. Well, now, imagine us being faced with all those conditions, and fixing rates higher than the ruling, accepted rates, not in isolated shops, but in organised works. It simply leaves the employers fighting to make the best of a bad job, and I am sure you will agree that that is not the sort of atmosphere we want to-day. Both workers and employers are up against very serious difficulties, and we can only solve them by pulling together, and not by such procedure as I have detailed to you. The conditions would be a serious hamper in stabilised trade, but in trade as it is to-day they are nothing short of a catastrophe.

2957. *Chairman*: I think the rate was proposed in January, was it not, and that was sent back by the Minister, and then this new rate was proposed, and it has been referred back again?—That is so.

2958. This seems to occupy about six pages (indicating printed document)?—Yes. If you want a real example of anything like the travesty of the 1918 Act, I suggest to you to look at the last quarterly report on Trade Boards, with its multitudinous conditions and rates, and ask yourselves whether the 1918 Act was ever intended to do such a thing.

2959. I have seen that.—It is the most impossible document anyone ever saw for a national assembly like the Trade Boards to fix rates in those trades. You know those great differences of opinion which have occurred between miners and engineers, and those branches of industry which we have had before us in the last six months. Supposing you went to the negotiators and said, "You shall only make peace in accordance with 40 or 50 clauses of a Government Bill which we have prepared," I venture to say the result would have been more disastrous than it has been to our trade to-day. It is a good thing to get together to settle these things, but what is wanted is frank talk between the employers and the men who know the intricacies of the business, with liberty to explore every type of settlement, whether for short periods or long periods, and whether it is on scale or not on scale. A great many people in this country still, and a great many on the labour side, are looking for a fresh flight of prices to lift us out of our difficulties. The employers are not; they are all seeking business to-day at price levels which are lower than they are to-day, and I think they are right; and the only thing is that this Act is putting every hindrance possible in their way. If these Boards are to function at all in their present state, it must be for minimum wages applicable to the lowest class of worker, without upward classification or sub-division, and having regard to the state of industry, based solely on the lowest figure consistent with a reasonable standard of frugal comfort. That is what we consider a minimum wage should be. It is obvious that workers of greater skill will automatically command higher rates. We put before you in the national interests that the expense of the administration of these Trade Boards can no longer be borne, and that economy can only be effected by terminating what is really—an expression very often used, but I think after seeing that quarterly report of the operation of the Trade Boards Act you will agree that "bureaucratic structure" is about the only thing you can call it. We do ask for the abolition of this thing, and a drastic reduction of the permanent staffs, and the elimination of all these theorists and advocates of general and political labour principles,

which, we say, act against the interests of the worker and of the employer. Another disturbing feature of the application of these Boards is that they are actually applying to a very large number of people who are already organised under the Acts. Take the experience of myself. We have something like 2,000 employees; we are the largest employers in this particular class of trade in the iron and steel section. I saw this notice as to the Waste Trade Board; I could not imagine that it applied to my industry, because every man I have is a trade unionist, and, of course, their wages are very accurately and closely governed. So that I took the matter up with the Minister of Labour, and said: "You have got wording in the Special Order which is either very, very loose and dangerous, or else you are out to rope in a very, very big trade." I got no reply to that. I saw them several times about it, and they said they were not quite sure what occurred, or what it did refer to; but before doing anything in regard to the Trade Board they would call me in and consult me. They did nothing of the kind; they never consulted me at all, and I was so concerned about this question of the application of the Trade Board to my industry that I pestered them with letters and with calls to try and get the information. Unfortunately, owing to the demobilisation of one person and another, every time I went up I saw a different person; sometimes a lady, sometimes a gentleman; and I got no satisfaction at all, and this Board was actually constituted without any further reference to me whatever. Then, of course, the people in a large way in my trade raised a protest to the Minister that this Board should be constituted without any reference at all to the large firms in the trade. I do not think I am breaking any confidence when I tell you that the Ministry actually sent a representative down to see me, and told me that it was never their intention that my trade should come under the Act; that it referred to somebody entirely different. "Well," I said, "if you will give me a letter to say that the operations that cover my trade do not come within the meaning of the Act, I will gracefully withdraw at once."

2960. *Chairman*: I suppose the words that cover you are: "The collecting, sorting, or grading of . . . scrap iron or other scrap metal"?—Quite. When it came to asking the Minister for a letter which contracted me out of the Act, that, as you can quite understand, from a Government official was a totally different thing altogether, and we are in the Act. Consequently, you are seeking to apply a Trade Board to my workers who are already governed by the General Unions—the National Union of Workers, the Dockers' Union, the Smelters' Union—whatever district the men happen to be in they are in the different unions—and the last drafting of the Special Orders has caused a great deal of disturbance in London. The substitution in the 1918 Act of a Special Order for the Provisional Order of the 1909 Act has led to a great deal of abuse in that direction, although it has not been the intention of the Ministry to do it. It is because you have clerical academic people dealing with this thing instead of practical people. The advisability of the fixation of a minimum wage, I think, is agreed pretty well by everybody; we do not grumble at it; but we do suggest to you that the Trade Boards as they are constituted to-day are so wasteful and so cumbersome and so unsatisfactory a means of attaining that end that both employers and employed and trade generally call for nothing short of the abolition of the 1918 Act.

2961. Just tell me this: You have thought this matter over a great deal; are you suggesting that there should be a general minimum wage for all trades?—Well, that is a very, very wide question, and I do not think I would care to answer that here without going into a long argument; but if it is the intention of the Government to retain any portion of this Act, or to retain the 1909 Act, to prevent sweated wages in particular industries, such as we know were sweated industries, with that no one has any quarrel at all. What I say is this—

24 November, 1921.]

Mr. ASHLEY WARD.

[Continued.]

that this Act of 1918 has been seized upon by academical people, whether it is for the extension or glorification of their job in departments or not I do not know, and it has been converted into something which it was never intended to be. That is very largely why these complaints arise under the Act. I think it would be good for every member of your Committee, with all respect, to have a look at that last Quarterly Report of the Trade Boards Acts, and to ask yourselves if it was ever intended that a national assembly in London should fix wages in all the mass of detail for workers in hundreds of different districts.

2962. You are referring to the Trade Boards Gazette?—Yes.

2963. I have had the privilege of looking at that already.—I think that is all I have to say. I could say a good deal more, my Lord.

2964. You have put it very concisely and carefully.—I recognise that I might easily be going over a lot of evidence which I am sure has already been presented to you very faithfully.

2965. Mr. Poulton: Do I gather clearly that you wish for the entire withdrawal of the Act, or do you think it can be so amended or so improved as to make it a workable Act from your standpoint?—I do not think it can be amended for this reason. If you are going to constitute an Act which has got to regulate wages of all classes in sub-divisions, you can only do it in districts, and it is going to be such a huge structure that it will absolutely fail because it is so huge. If you are going to keep hold of the 1909 Act for the prevention of sweating and paying people something less than what is recognised as a subsistence wage, then we have no quarrel with that, whatever the Government may decide upon.

2966. Do you feel that that point about there being too long a period between the alteration of rates is a very serious one?—Very serious.

2967. Particularly for your trade, of course?—It is so serious to my trade that it would mean an immediate increase in many of our works to-day, when we have no orders; we are simply working into stock. We have higher stocks than we have ever had in the history of our firm, and it is not mere rhetoric to say that the men have been kept in employment because we considered they had a duty towards them, because we considered they had helped us when times have been good, and therefore we had to help them in times when they were bad; and it is no good them working short time at very high wages. What is the good of that? You work short time at very high wages and produce an article which costs more than you can sell it at. You had better work full time at economic wages and produce something which you ultimately can sell.

2968. Did I understand you aright that you felt that at any rate there was a class of labour that might need the protection of the State, and therefore if there were a Board to function at all it should be for the lowest class of labour, so as to set up an irreducible minimum?—Quite.

2969. That you would not object to?—I do not think I should have any quarrel with that as an abstract thing. It would very largely depend on how you brought it into effect.

2970. With regard to the inspectors, you used the term "army"; you said that nothing but an army could get it carried out. Do you think that that is because there is a deliberate intention not to carry it out, or because there are so many clauses, and so many regulations, and so much procedure that it necessarily must have an army of inspectors to assist employers?—Of course, you will always get a certain class of people who will endeavour to take advantage and not play the game. If there were a very large Act I think it would be necessary under the Act, otherwise you would have these unscrupulous people undercutting the man who was prepared to play the game all the time. A large Act would demand an army of inspectors.

2971. You said there was no practical worker who ever spoke upon the Boards. What do you mean by

that—that simply because a man happens to be a permanent official therefore he is never a practical worker?—The speakers who speak on my Board are not practical workers. They are people who have always made a speciality of trade union politics, and as such they speak every time. At any rate, to my knowledge they have not been in practical work—I am speaking now of manual labour, although I daresay they work as hard as anyone in their own way—for the last ten years.

2972. But are they therefore less able to put up a case from the practical side?—I quite believe they are. You get persons on the Waste Reclamation Trade Board who are all powerful speakers. Nobody else ever speaks; nobody else ever gives an argument. We never even get a practical workman in the Committee.

2973. But does not that apply also to the employers? You might just as well say that they have never worked at a bench.—My point is that the workers' representatives never belong to the actual unions concerned with the particular trade.

2974. That is not a special case which you are talking about?—There are a good many cases like that. You can take it as a general fact that the case for the workers is conducted by the recognised labour leaders. It is never conducted by, or spoken on by, any workman, and if any workman attempts to speak he is very quickly shut up. On the employers' side I do say that practically every employer speaks. I have already told you that we would be very glad sometimes if they did not, but they will insist on speaking; and generally speaking, I daresay it is quite right that they should. But you cannot get them to stop speaking; they will say before the Chairman and before the Board what their idea of the trade is. I venture to say that if you got the same expression of opinion from the workmen you would soon arrive at a solution of the difficulty.

2975. Mr. Lyttelton: Do you think you would get the same expression of opinion if the others were not there?—Yes.

2976. That is one of the difficulties, is it not?—We have sometimes disputes in our own works, where we have two hundred or three hundred or four hundred working, and men come up into the directors' room, or into a room in the works, and meet the directors. Well, the men are always able and willing to speak on those occasions. On the Trade Board it seems that the men are afraid of their Trade Union officials, or are in a state of awe for the recognised leaders, who are in some cases distinguished men. They seem afraid to make any remark or contribute anything to the considerations before the Board.

Chairman: I thought the complaint was rather more the other way.

Mr. Poulton: It is quite refreshing to think that a leader has some little bit of a soul left.

2977. Mr. Layton: Do you wish to give the Committee the impression that it was not the original intention of the Ministry of Labour to include iron scrap?—I can only give you what this official said. I could give you his name in private afterwards, if you wanted it. I can only give you what he said. He said it was never the intention in the establishment of this Trade Board to include large producing scrap iron and steel works in the scope of a Trade Board, as it was well known that they operated in iron and steel districts, and in organised labour districts; and as a matter of fact, if you apply the Trade Board rate to our employment you will apply it to people, every one of whom is a trade union member.

2978. What Trade Union is that?—I do not suppose you would find two in the whole two thousand of our employees who are not trade union members. They are either in the National Union of General Workers, the Transport Workers, the Dockers and General Workers' Union, the Amalgamated Society of Engineers, or some other Union.

2979. Chairman: Is there not some mistake? I understand you are interested chiefly in ship-break-

24 November, 1921.]

MR. ASHLEY WARD.

[Continued.]

ing?—No. That is not my chief interest; we are interested very largely in ship-breaking; but that is not our principal business.

2980. But is it not true that the actual production of scrap material does not come within the scope of the Trade Boards; perhaps that is what you mean? When you but it from outside and then sell it, then you bring yourself within the Trade Board?—Yes, and that is a most wonderfully delicate difference. You would have to keep an inspector on at our work the whole day to decide how many hours of time a man should have under the Trade Board and how many he should not.

Chairman: That may explain what you have been told by these officials.

2981. *Mr. Layton:* It is the fact that all persons employed in sorting scrap are under the Trade Board provided they are not in an iron and steel works?—That is quite true, and you have this position to-day, that in some of the cases the producing iron works, by virtue of the fact that they are paying to-day less wages than the scrap iron and steel producers, are setting up their own production yard for scrap and dealing with the unwieldy material themselves.

Chairman: That is in order to keep outside the Board?

2982. *Mr. Layton:* They are outside the Board provided the material is sorted in the steel works, but if it is done by an independent merchant in his yard it comes under the Board?—Quite.

2983. Would it be true to say that when that proposal was made, in August, of 53s. that was about, or even less than, the unskilled rate, but that it had since fallen?—No, it was already above. I attended the August Board Meeting myself, and I can tell you that the workers' rate proposed in August, when we started that meeting, was £3 5s. a week; and I brought the facts to the attention of the Board that in Sheffield and South Wales at the beginning the steel works' labourer was getting £2 11s. 5d. a week, and I made a special request to the Chairman that this figure should be either agreed or disputed before I proceeded. The Chairman thought it was rather a good idea to get it one way or the other, and it was finally agreed that that was the figure, and in face of that information they passed against our vote a recommendation to the Minister to fix, for a contributory trade, which includes not only people like ours, who are highly organised, but the ordinary rag and bone and iron merchant in the country—he is the man, after all, whom you have got to protect as well as people like ourselves—when you come to reckon up that they actually passed a resolution on that Board asking the Minister to fix a rate of 53s. a week for the iron and metal trade and 48s. a week payable by the rag, bone and paperstock dealer, which is about 6s. 6d. higher than the ruling rate in steel works; you see the futility of this thing.

2984. Could you tell us whether the percentage of labour engaged in sorting and handling scrap is a large proportion of the cost of the scrap?—It very largely depends upon the material, but it is quite as much as in any manufactured article.

2985. This 10s. might make a big difference in the price at which you could sell scrap?—A great difference.

2986. What sort of difference?—To-day if you got 2s. 6d. a ton profit on scrap you would be doing very well indeed. That is the position, and the operation of the Waste Trade Board is this to-day. Wages are very high, and everybody fears these Trade Board rates, and they will not buy, and they are

waiting for the thing to be settled. Wages to-day are higher than the material can be collected for, and the result is that all the lower grades of iron and steel are not being collected at all to-day. If you take up any merchant's list to-day you will find about half-a-dozen grade of material, all of which commanded £4, or £5, or £6 a ton during the war, which are now of no value; they are not even worth the cost of carriage. It is the same in the rag and paper trade, which is also affected by the Board. Corporations and public bodies who produced these things, from which they got a revenue, have to pay for them to be taken away to-day.

2987. What I was trying to get at was this: would the effect of this decision be that it would cost 5s. or thereabouts more to scrap by a firm which handles the material in its own yard than by a steel works?—Yes, I should think somewhere about that.

2988. And about 80 per cent. of the material used in making steel in South Wales is scrap?—In the Siemens acid process.

2989. Making tiuplate bars?—In the acid process for making tin bars it runs as high as 85 per cent.

2990. And those bars are being made even in the steel works at a cost which is appreciably above the price at which they can be bought from the Continent?—That is so to-day; but the fact of the reduction in the South Wales and Sheffield steel rates has had the direct effect of opening up these works, and the result is that tiuplate orders have been secured in British Columbia and other places, and they have been able to restart the industry there for that very reason.

2991. But the effect of this decision would be either to eliminate the independent merchant haulding and sorting scrap, or else to add that amount to the loss at which steel is at present being produced?—Yes.

2992. You would regard that as an incidental and unintentional result of this definition of the Trade Board?—Yes; I agree that it was never the intention of the Trade Board to effect that. The actual result, of course, to-day is in most merchants' yards that they have material which they are unable to sell because they cannot get the right price for it. They will have to meet it some day, and will have to cut their loss.

2993. Have your wages previously been governed in the main by the varying rate for unskilled labour in the iron and steel trade?—Yes.

2994. And now there is this difference between the two systems?—Yes.

2995. Is that a decision of the Board which covers the whole country?—Yes.

2996. And do you try and fix an equal rate for the whole country?—You mean in regard to our own employees?

2997. Not for your personal employees, but for the iron section of the trade?—No, it is effected in sections and districts, chiefly. There is the Birmingham and Midlands and the Liverpool district; the Yorkshire district, the London district, the Bristol district, and the Cornish district.

2998. And are those all different rates?—They are different chiefly, yes.

2999. Following the variation of the iron and steel wages?—Yes, and the districts, too. For instance, the Cornish rates are always lower than any other rates, and the industry, of course, there is comparatively small. In the steel-producing areas the industry is a very large one.

(The Witness withdrew.)

(Adjourned until Wednesday next, November 30th.)

30 November, 1921.] Mr. CHARLES AVELING, J.P., Mr. JAMES WALKER CLARK, J.P., [Continued.
and Mr. PATRICK HOWLING, F.I.S.A.

NINTH DAY.

Wednesday, 30th November, 1921.

PRESENT:

THE RIGHT HON. THE VISCOUNT CAVE, G.C.M.G. (*Chairman*).

THE RIGHT HON. LORD WEIR OF EASTWOOD.

DAME ADELAIDE M. ANDERSON, D.B.E.

THE HON. MRS. ALFRED LYTTLETON, D.B.E.

Mr. W. T. LAYTON, C.H., C.B.E.

SIR ARTHUR F. PEASE, BART.

Mr. E. L. POULTON, O.B.E., J.P.

Mr. H. D. HANCOCK (*Secretary*).

Mr. CHARLES AVELING, J.P., Mr. JAMES WALKER CLARK, J.P., and Mr. PATRICK HOWLING, F.I.S.A., called and examined.

The Witnesses handed in the following statement as their evidence-in-chief.

Constitution and Membership of the Chamber.

The National Chamber of Trade, established about 25 years ago, is a federation of nearly 300 Chambers and Associations throughout the country.

The aggregate membership is upwards of 100,000 traders, principally retailers engaged in respective classes of distributive trading, very many of them in mixed businesses.

Origin of the Idea for Extension of Trade Boards.

It was in the Second Report of the Whitley Committee, dated October, 1917, that the recommendations were made from which it appears the extension of Trade Boards has sprung. For those trades in which there is a lack or incompleteness of organisation, either of employers or employed or both, the Report proposed Trade Boards, and suggested they should be empowered to deal not only with minimum rates of wages, but with hours of labour and related questions, and that their functions should be further extended. Those constituting the Whitley Committee represented engineering, shipbuilding, railways, mining, political economy, and trade unionism, but there was no appropriate representation of distributive trading, as such, on the employers' side. Nor are we aware of any endeavour being made along definite lines to obtain information from organisations of employers as to the conditions prevailing in those trades. These criticisms may be also advanced in regard to the recommendations made by the Provisional Joint Committee of the Industrial Conference in 1919, which urged that Trade Boards should be established forthwith in the various less organised trades where they do not already exist. Distributive trading has so many peculiar features and problems dissimilar to those of craft industries that, before deciding that Trade Boards would furnish suitable machinery for the purposes intended, there should have been much more thorough and exhaustive inquiry, especially from the representative organisations of employers, than was instituted previous to the findings of the Whitley Committees or the decisions of the Industrial Conference Committee, and certainly before power was given for the extension of Trade Boards by the Act of 1918.

The uncontrolled powers for extension exercised too rapidly and too widely.

When the legislation culminating in the Act of 1918 was introduced the Chamber did not oppose it in principle, because it never for one moment anticipated that the powers proposed to be given would be so widely used, particularly in regard to the distributive trades, without the fullest possible

inquiry, nor until it had been demonstrated that the need for the new machinery existed, and that it would work effectively. Moreover, attention was diverted from legislation by the exigencies of the war. We did, however, object to the powers of extension being vested solely in the Minister. Since the extending Act came into operation, namely, on the first day of October, 1918, no less than fifty new Trade Boards have been set up within a period of about two years. Under the original Act of 1909 only three Boards were set up in the first year, one in the next, six in 1914, and one in 1916. Thus, in a period covering nearly six years only eleven Boards were established. The development of the Boards subsequent to 1918 within so short a space of time is, in our judgment, an example of unjustifiable departmental activity resulting from the possession of powers which ought not to be conferred without definite limitations.

Public Inquiry.

We do not overlook the fact that before the Acts are applied to any trade a notice of the Minister's intention must be published, and that any person affected within 40 days after the publication thereof may object to the Minister, and that if the objection is not met a Public Inquiry shall be held. In this connection attention should be drawn to the conditions under which Public Inquiry can be held. The first schedule of the Act of 1918, paragraph 5, virtually empowers the Minister to refuse a public hearing, while paragraphs 6 and 9 invest him with absolute control of any Inquiry that is held. If it be urged that there was little if any demand for Public Inquiries, then undoubtedly the absence of such demand was due to the fact that, for some time subsequent to the operation of the Act of 1918, trade and industry had not yet entered upon depressed conditions, and employers generally did not foresee the precipitate and grave depression which was shortly to become so manifest. This notwithstanding, the Minister and his Department, as trustees of the interests of industry, should have exercised every endeavour in the direction of full inquiry (again we say, especially from representative organisations of employers), but it would appear that, yielding to pressure and because of their own inclination, they proceeded with a rapidity, now shown to be unjustified, to institute the large number of Boards now in existence. In the Act of 1909 there was embodied what appears to us to have been a useful safeguarding provision, namely, the right of objectors to oppose the application of the Act to trades other than those schedules by means of a petition to Parliament. Therefore, under the original Act, a Parliamentary Select Committee had the final word. Under the extending Act the Minister of Labour or,

30 November, 1921.] Mr. CHARLES AVELING, J.P., Mr. JAMES WALKER CLARK, J.P., [Continued.
and Mr. PATRICK HOWLING, F.I.S.A.]

in other words, his Department, is the sole judge of what is an imperfectly organised trade.

A competent consultative tribunal should be established.

If the Act of 1918 is to stand, then we submit it should be modified, in so far as the Minister's powers are concerned, by the qualification that a competent tribunal shall be established altogether apart from the Departmental officials, and that the Minister shall be compelled to consult that tribunal and to lay before it all information, particulars and objections with respect to any trade before a decision is taken to establish a Trade Board.

Decision to set up Trade Boards in distributive trades.

In the early part of 1919 we first became aware that the Minister had decided to apply the Acts to the distributive trades. While by no means enamoured of the machinery, the Chamber determined to do everything it could to assist the Department to so work out its scheme as to make it as applicable as possible to the peculiar conditions obtaining in the distributive trades. It, therefore, laboured hard to secure the adoption of a comprehensive plan, and in view of the great difficulties in drawing lines of demarcation, and to avoid the overlapping inevitable under numerous sectional Boards, it was urged strongly that there should be one Board for the distributive trades, wholesale and retail, with sub-committees for respective trades where necessary, and that the central Board should co-ordinate the recommendations of the various sub-committees.

The peculiar difficulties in distributive trading.

From the evidence given by Mr. Humbert Wolfe, Principal Assistant Secretary to the Ministry, it would appear that only now, very late in the day, the Trade Boards Department have become cognisant of the immense difficulties which must be experienced in the attempt to establish over the whole field of distributive trading a host of sectional Boards.

Joint memorandum advocating a comprehensive plan.

We regret that Mr. Wolfe did not bring to the notice of the Inquiry the fact that, as long ago as January, 1919, the National Chamber as representing employers and the National Amalgamated Union of Shop Assistants as representing workers, prepared and submitted to the Ministry a joint memorandum showing, in the event of the application of the Trade Boards Acts to the distributive trades why such trades should be treated as a whole. The text of the memorandum was as follows:—

Representative character of the two Organisations.

The two organisations jointly submitting this memorandum are probably the most representative of employers and employed in the distributive trades, both having members in every section thereof. The Chamber as a Federation represents upwards of one hundred thousand traders employing (upon a low average calculation) not less than half a million assistants. The Union has a total membership of eighty-five thousand.

General distributive trading.

While there is some degree of specialisation, yet, in the aggregate, a very large proportion of the distributive trade of the country is done in shops and stores of a more or less general character. The large stores of the Metropolis and provincial towns possess departments dealing with, and supplying every commodity required by the community. In like manner in smaller towns and villages there are stores trading in drapery, clothing, furniture, boots, china, glass, hardware, grocery, provisions, etc. In many cases the assistants "serve through" and attend to customers in the various departments.

Different grouping in different localities.

The distributive trades (even where there is some degree of specialisation) do not take the same form in every part of the country. For example, in Lancashire the grocery trade is frequently coupled with baking and confectionery, while in London and the South the grocery and provision trades and frequently butchery and pork butchery and even poultry and fishmongers go very much together.

The modern tendency.

The modern tendency of present day distributive trading is in the direction of the "store" system, and medium and small shops carry stocks-in-trade of as comprehensive a character as possible.

Different methods of remuneration.

There are different methods of remuneration in the various business houses and even in the separate departments. These could be instanced as follows:—

- (a) Wage.
- (b) Wage, plus commission.
- (c) Wage, plus commission, plus premiums.
- (d) Commission only.
- (e) Wage, plus commission and board and lodging.
- (f) Wage, plus part board and lodging.

Views of the Distributive Trades National Advisory Committee.—Similarity of work.

The Committee appointed by the Ministry of Labour, in their Report upon "Openings in Industry suitable for Disabled Sailors and Soldiers" M.S./XXI, give expression to two very significant opinions which go to support the plea of this Memorandum. These are:—

- (a) There is a certain similarity in the work of the retail shop assistant and warehouseman justifying the grouping of them together as one industry for the purpose of training and employment of disabled men.

Number of scheduled trades and diversity of districts.

- (b) In view of the number of different trades scheduled and the diversity that exists between one district and another, the Committee cannot do more than state in general terms that the minimum wage which a trained man might expect to earn in the distributive trades is from 40s. to 45s. per week in the Provinces, and from 45s. to 50s. per week in London.

One Board for the whole of the distributive trades with sectional Sub-Committees where necessary.

If the distributive trades are dealt with upon a sectional instead of a comprehensive basis as one unit, then according to the Directory Classification no less than 37 general divisions or sections would have to be taken into account.

In view, therefore, of the great difficulties that would arise in drawing lines of demarcation, and the overlapping in administration that would inevitably ensue under a system of sectional Boards, the two organisations urge that there should be one Trade Board for the whole of the distributive trades, wholesale and retail, with Sub-Committees for respective sections where necessary, but that the Central Board should co-ordinate the recommendations of the various Sub-Committees in much the same way as was done by the Committee which dealt with the question of Disabled Sailors and Soldiers desiring training to enter the distributive trades.

30 November, 1921.] Mr. CHARLES AVELING, J.P., Mr. JAMES WALKER CLARK, J.P., [Continued.
and Mr. PATRICK HOWLING, F.I.S.A.

Joint Deputation to the Ministry.

On the 14th of January, 1919, the chamber and the union appeared in joint deputation before Mr. G. J. Wardle, M.P., the then Parliamentary Secretary to the Ministry for the purpose of conferring upon the submissions made in the memorandum. We would respectfully suggest that the Committee should requisition a copy of the minutes of proceedings of that conference and consider them in connection with the present inquiry. If this is done it will be seen that, as a result of the joint representations then made, the Ministry appeared at that time disposed to approach the problem from the comprehensive standpoint. In summing up the proceedings of a committee meeting of the distributive trades held on Thursday, March 27th, 1919, Mr. Leggett (Chairman) said (*inter alia*) :—

"If separate Boards are to be set up, evidence on the possibility of separation and definitions of the sections concerned would be necessary. It was in this connection that the real difficulties were to be found. The Department believes it is possible to have one co-ordinating Board in which the interests of the various sections could be protected, and to some extent the Ministry could assist to this end by framing suitable regulations. It seemed clear, however, that all on the Trade Board would find it in their interests to vote for a method of procedure which would give the maximum amount of autonomy to each section. In protecting their own sections members would protect other sections."

Rejection of the co-ordinating scheme.

For a time there were signs that a comprehensive plan, either for one co-ordinating Board or for the grouping of various sections under two or three Boards would be adopted. In the ultimate result and, no doubt, largely through pressure brought to bear upon the Department by some sections of distributive business, it was finally decided to dismiss the comprehensive idea and to institute sectional Boards. We do not forget that as time went on the Department gave as one of its principal reasons for sectional treatment that as advised the Minister had no power to treat various sections as one trade for the purposes of a Trade Board. Even so, we are unable to get away from the idea that not only on account of the pressure brought to bear, but also because of its preference for a sectional policy the Department leaned in that direction. We desire to lay emphasis on the fact that no employers' organisation in the distributive trades asked for a Trade Board prior to the decision of the Minister to extend the Acts to the distributive trades, which decision was solely and arbitrarily that of the Minister and his Department.

Boards already established or proposed for sections of distributive trades.

So far the Boards set up for the distributive trades or ancillary thereto are the following :—

Hat, Cap and Millinery.
Dressmaking and Light Clothing.
Retail Bespoke Tailoring.
Milk Distributive.
Grocery and Provisions.

The Minister has given notice of his intention to form Boards for :—

Boot and Shoe (Distributive) Trade.
Fish, Game and Poultry.
Fruit, Flower and Vegetable.
Meat (Distributive) Trade.

According to a statement made by Mr. Humbert Wolfe on the 20th October last, no less than 200 Boards are foreshadowed, and as most of the 61 Boards already set up cover manufacture it is reasonable to assume that the new Boards are contemplated for various sections of distribution. If they are established the result will be chaotic in large Departmental stores and smaller general businesses of a

mixed character. The difficulties of definition and demarcation would be tremendous, and the position of employers coming under a number of separate Boards and all their obligatory schedules and rates can be better imagined than described.

Official Recognition of the difficulties consequent upon a host of Boards.

It was under the Ministry of Sir Robert Horns that the sectional policy was adopted. He, while recognising the relationship existing between various sections, yet deemed it expedient to set up many separate Boards, but his consciousness of the difficulty of deciding lines of demarcation was exhibited in the proposal to appoint the same Chairman and "Appointed" members to various groups of related trades. His reason for this step is really our argument against many Boards, viz. :—

"The purpose of obviating any inconvenience or anomalies which might result from different treatment of similar problems, for example, with regard to the conditions of workers in establishments in which two or more businesses are combined."

Those who have urged a "sectional" as against a co-ordinated and comprehensive plan for shopkeeping trades have not had proper regard to the common interests of distribution nor to the fact that salesmanship is not a specific craft, but much more a vocation in which so many principles and considerations have similar and almost identical application. In reconciling divergent views the Minister might well have decided to set up two or three separate Boards to represent upon broad lines the distribution of food, clothing and furniture. But the policy adopted and now in course of prosecution means, not two or three, but a host of Boards which will impose upon shopkeepers a bewildering mass of orders as to rates of wages and prescribed conditions.

The sound principle.

The National Chamber has consistently supported the principle of employers and employed conferring together and arriving at mutual agreement for the settlement of wage and other problems. It recognises that the Trade Boards established under the original Act, not only by legislation, but also by the authority of public sanction, have served a most useful and necessary purpose. It also recognises that in essence Trade Boards embody the sound principle of employers and employed in a given trade or industry arriving at mutual agreement upon certain vital matters associated with its development and prosperity. Unfortunately, however, some Trade Boards have been administered and operated in such a manner that the welfare of the trade has been subverted to exaggerated demands and the imposition of minimum wage rates which in many cases have proved disastrous. It is inconceivable that Parliament in the extending legislation of 1918 ever contemplated that an instrument designed for reconciliation and agreement would be used for widespread and ill-considered interference. Actual experience of the working of Boards established under the Act of 1918 has been in marked contrast to the obvious intention behind the measure. We are unable to ignore the fact that representatives of labour have apparently misconceived the real design of the extending Act and have endeavoured in many instances successfully to effect through its administration the fixation of prohibitive wages rates.

The Minister's reasons for proceeding with caution.

That the extending Act was conceived and framed under the obsession of prosperity and that the institution of further Boards during depression is calculated to produce adverse effects is indicated in the replies given by the Minister of Labour to a

30 November, 1921.] Mr. CHARLES AVELING, J.P., Mr. JAMES WALKER CLARK, J.P., [Continued.
and Mr. PATRICK HOWLING, F.I.S.A.]

series of questions in the House of Commons on 16th March, 1921. He said:—

"In recent months of industrial depression representations in growing volume have been received against pressing forward unduly with the establishment of new Trade Boards, on the ground that unemployment, bad enough as it is, would be thereby made worse. It has been my duty to consider these representations very seriously and proceed with caution."

The Minister also stated that orders had already been made to apply the Acts to several trades which he mentioned. Pressed as to the reason for delay he said:—

"In these times of great depression if we make too much haste when the people we desire to serve are standing in the street unemployed, we are not serving them."

We believe that none of the Boards referred to in these questions and answers have been set up; the fair inference is that informed trade opinion and the prevailing circumstances have convinced the Minister that Trade Boards as constituted and administered would make matters worse. In this connection it must surely be a question whether those Boards respecting whose administration so much complaint has arisen should not at least be temporarily suspended and provision made for unreasonably high rates of wages to be reduced much more rapidly than at present is possible.

Resolutions adopted by the Chamber.

The fact that the Chamber has representatives upon five Trade Boards is evidence of desire and effort to implement the machinery in a beneficial manner. Throughout the whole period under review the Chamber has pursued a constructive policy, refraining from participation in the demand for abolition which has been expressed from other quarters. None the less representations of a very strong nature have been received from many of our affiliated bodies and individual members. So strong have those been that it has not always been easy to secure the adoption of constructively critical resolutions rather than requests for abolition. At the Annual Conference held at Bournemouth, May, 1920, the following resolution was adopted:—

"That this Chamber regrets that the original idea of the Ministry of Labour (strongly supported by this Chamber) to establish one comprehensive Trade Board for the distributive trades with appropriate co-ordinated sections has been relinquished and that a sectional policy for a multiplicity of Boards has been adopted, which in working must result in confusion and annoyance to traders, and calls upon the Ministry even now to modify its policy in the direction of limiting the Boards to the fewest possible number so that economy, simplification and uniformity may be realised. The Chamber is of opinion that Trade Boards as at present constituted do not adequately meet the purposes for which they were created, and it is therefore suggested that as it is proposed to form so many additional Boards it would be advisable to reconsider the question of their constitution."

At the Conference in May, 1921, held at Cheltenham (where a special letter from the Minister surveying the whole position was read and considered), the Chamber gave clear and definite expression of its demand for inquiry. We believe it was the first trade organisation to concentrate upon thorough investigation as an urgent necessity. Since the date when the resolution was adopted, repeated representations have been made asking the Minister to concede the Inquiry, and we were, therefore, gratified at the appointment of the Committee which eventuated none too soon. The terms of the resolution were:—

"That this chamber welcomes the decision of the Minister of Labour 'to consider very seriously the representations made against

pressing forward unduly the establishment of further Trade Boards and that he will proceed with caution,' and urges strongly that thorough inquiry by a competent and representative tribunal should be instituted into the general effect of existing Boards upon trade and industry, their cost to the State and their composition and working, particularly with regard to:—

- (a) Methods of formation and whether adequate steps are taken to make the Boards thoroughly representative.
- (b) The undesirability of persons being members of many Boards.
- (c) The powers and functions of the Appointed Members and their remuneration.
- (d) The imperative necessity for an adequate scheme of co-ordination.
- (e) Adoption of an apprenticeship system.
- (f) Why employers and employed in the distributive trades should not be allowed on existing facts and circumstances to mutually determine wages and conditions without the institution of Trade Boards."

Opposition not fostered by desire to exploit labour.

We think it should be made quite clear that, generally speaking, opposition to Trade Boards is not the outcome of any desire to exploit labour and to pay rates of wages unreasonably low. Some of the very best employers, even those who pay unusually high rates and conduct their businesses on the highest principles and who cultivate the best relations with their staffs, are opposed strongly to the statutory fixation of wages upon a basis which almost invariably excludes the essential principle of individual merit.

The Dressmaking and Women's Light Clothing Board.

As regards the distributive trades, it is well known that the objections have sprung in a very large measure from experience of the operation of the Dressmaking and Women's Light Clothing Board, established January, 1920. During negotiations respecting the composition of this Board the Chamber by communication to the Ministry and in Conference with other organisations endeavoured to secure a much larger representation on the Boards for that part of the trade carried on in workrooms connected with distributive business. For provincial workrooms of this particular nature there are only seven members from the provinces who are included in the list of those forming the retail section on the employers' side. It seems to us to be a fair criticism that the preponderating representation of standardised factory production has had the effect of obscuring to a large extent the issues and problems peculiar to more "individual" and handcraft production in which quite a different class of worker is employed and where different conditions obtain. It is equally fair to say that this Board was formed at the abnormal period when wages rates for almost every class of manual labour, skilled and unskilled, were extremely high and artificial prosperity was widespread. Numerous complaints have been made of the disastrous effect of the prescribed minimum rates upon provincial workrooms and smaller dressmakers. Recruitment of learners has been very seriously retarded and details are forthcoming of increased unemployment and even of workrooms being closed. These conditions are so serious that it is unnecessary to overweight them by contending that the depression in dressmaking workroom trade has resulted entirely from the prescribed rates. Some allowance must be made for changed conditions in garment production and the development of standardised manufacture on a large scale. This and other factors notwithstanding it is, however, clearly demonstrated that in many districts it has been found impossible to carry on

30 November, 1921.] Mr. CHARLES AVELING, J.P., Mr. JAMES WALKER CLARK, J.P., [Continued.
and Mr. PATRICK HOWLING, F.I.S.A.]

the workrooms on a proper economic basis and at the same time to pay the high rates.

Suspension proposed.

We have come to the conclusion that the best interests both of employers and employed will be served by suspension for a period of (say) three years of the Boards established in, or ancillary to the distributive trades. In the debate in the City Corporation on retailers and food prices on November 17th, one of the deputies said in reference to the Milk (Distributive) Trade Board:—

"In my county, in accordance with the terms of the Conciliation Board, I pay an ordinary farm labourer 37s. 6d. for a 50 hours' week, but that man's son, a single young fellow just over 21 years of age, who is employed in the dairy is receiving 62s. 6d. for a 48 hours' week by order of the Trade Board. You will never get what you want until the Government is told that the sooner the Wages Boards and other kindred authorities are abolished the better. They are hampering trade and giving thousands of persons week by week salaries that they do not earn. This explains why retail prices are so much higher than wholesale."

The rates proposed by the Grocery and Provisions Board, and agreed upon some time since previous to further decline in the cost of living, have now been sent forward to the Minister for confirmation despite protests from the employers' side. Our chamber has requested the Minister not to confirm these particular rates but to defer their consideration until the Committee has reported. The Minister has replied that he cannot interrupt the ordinary working of the Acts while the Committee is sitting and is bound to give consideration, in accordance with his statutory obligations, to any rates submitted to him by the Grocery and Provisions Trade Board for confirmation.

We appreciate this is so, but none the less the Minister has power to refuse to confirm and we trust he will exercise that power. Of the Dressmaking Board we have already spoken, and evidence of a strong character both in regard to that Board, the Hat, Cap and Millinery Board, and the Retail Bespoke Tailoring Board has been submitted to the Committee. All the Boards mentioned in this paragraph are connected directly or indirectly with distribution, and we suggest that, because of altered conditions and having regard to the undoubted prejudicial effect upon the trades concerned of the Boards already established and the apprehensions respecting the Grocery Board rates if confirmed, it would be wise to suspend the operation of these Boards. A further reason for this suggestion is that we realise there must be difficulty in postponing the establishment of other Boards for distribution so long as these continue. To set up additional Boards in distribution at any rate under the present system would be a profound mistake. The anxiety of the Chamber at all times to assist the Ministry in its various phases of administration entitles us, we trust, to give a note of warning that if the policy of uncontrolled establishment of a multiplicity of Boards is pursued the operation of the Acts in this respect will break down. The Committee will, we feel sure, recognise that successful administration of the Acts depends in great measure upon the co-operation, confidence and goodwill of employers, but they are just now in no mood to accept the imposition of unwarranted and unnecessary bureaucratic control and interference which will add to the heavy burdens and difficulties of business. This they would strenuously oppose and in our considered judgment they would be right. In the light of the appointment of the Committee and of its terms of reference, we entertain the reasonable hope that a halt will be recommended and that before any further extension of the Acts to distribution, thorough examination into the whole problem will be made not by casual and inexperienced inquiry in isolated cases but from representative organisations qualified to give information as to the

reasonable rates of pay generally prevailing and possible and the complexities peculiar to the successful conduct of the various sections of distributive business, many of which overlap and re-act one upon the other especially in relation to employment of staffs of various grades.

Separation of "Bespoke" and "Individual" sections from factory production.

Should suspension not be entertained then we urge that Bespoke Dressmaking, Millinery and Women's Tailoring as distinct from standardised factory production should be entirely removed from the scope of the existing Boards. We are aware that the Dressmaking Board has considered this and passed a resolution that the establishment of separate Boards for the wholesale and retail branches of the Light Clothing Trade is not practicable as no clear lines of demarcation could be found. Despite this resolution we believe firmly that, as the conditions in the respective sections are so different and the respective types of workers so diverse, the proposal for separation should be further considered. The trade in bespoke garments is decreasing and passing more and more to centralised factory ready-made production. The difficulties consequent upon loss of trade in this respect are aggravated by the imposition of rates and conditions which, however applicable they may be to mass production, have a restrictive effect on the maintenance of individual production in workrooms associated with distributive business. Handcraft work cannot be satisfactorily taught under regulations governing factory work. The class of learners that come into the bespoke side of the trade are quite different to those who enter factories. Parentage, training, education are all of a different character. In frequent instances girls are not sent into the bespoke trades until they are 17, 18 or even 19 years of age. Many of them have no intention whatever of staying in the trade always, but are desirous of acquiring a knowledge of handcraft work to help them in private life now and in the future. Before the war 30s. a week in bespoke workrooms was accepted as a fair wage for first hands; assistants receiving 22s. 6d. to 25s., and workers from 12s. 6d. to about 17s. 6d. Under the present rates the youngest and most inexperienced in the category of "workers" receives 81d. per hour, equal to 34s. per week, and proceeds by defined stages to 104d., or 43s. per week. Overwhelming evidence is before us of instances where, owing to high rates, the entry of learners into the bespoke trades has been seriously affected and trade has decreased owing to customers being unable and unwilling to pay the prices which employers are compelled to charge in order to cover the high costs of labour.

If Trade Boards are continued many changes are necessary.

If Trade Boards are to be continued then several changes are necessary in their constitution, machinery and working. Among these the following are submitted as being essential, in the light of experience and in order to render the Boards effective instruments for the purpose for which they were intended without imposing upon trade and industry uncalled for conditions prejudicial to the interests of those engaged therein, both employers and workers.

Duplication of Membership.

The fundamental idea is joint and mutual fixation of minimum wage rates by accredited representatives of each side. It appears, however, that in some respects the workers' side is utilising the machinery for the cultivation of professional trade unionism. This factor may be all right in its place, but the Trade Board is not the place for it. It is a reasonable presumption that a representative sits on the Board because of his knowledge of the trade and the conditions. Labour representatives and trade unionists are no doubt very

30 November, 1921.] Mr. CHARLES AVELING, J.P., Mr. JAMES WALKER CLARK, J.P., [Continued.
and Mr. PATRICK HOWLING, F.I.S.A.

competent people of strong mental capacity, but after all, like the rest of us, they have their limitations. If during the course of his working life a man can master the technicalities of two or three trades he has done exceptionally well. For the same men to sit on four, five, six, eight, ten or more Boards is nothing more nor less than sheer professionalism. They may possess an elaborate knowledge of economic principles and theories, but these gifts require to be reinforced with practical knowledge of working conditions obtained through and by continuous and immediate participation in the trade itself. To say this is not to ignore the valuable services which some leading Labour representatives have contributed as members of the Boards, but their work in this respect would not suffer in quality if confined to the operations and activities of fewer Boards.

The "Appointed" Members.

The position of the "appointed" members is one of great importance. It is usual to arrange for equal voting power on the two sections of representative members, therefore, the responsibility of decision may at any time be placed upon "appointed" members and if they are not in agreement then upon the Chairman. This situation may be and no doubt is avoided on occasion by negotiation between the "appointed" members and the respective groups. In such circumstances the "appointed" members may think it appropriate to exercise conciliatory functions. Mr. Willis lays stress on these considerations in his practical guide to the operation of the Acts and goes on to say that, in either of the cases referred to, it will be seen that it behoves the "appointed" members to follow closely the facts and conditions put forward, and for this purpose to acquaint themselves with the characteristics and technicalities of the trade. The constitution of the Boards, including the selection of the "appointed" members, is entrusted to the Minister who is empowered to make regulations accordingly. Most of the "appointed" members have been selected from the legal profession, professors from the Universities, economists and civil servants. There is, however, the same objectionable feature, as regards their duplication, as to some of the workers' representatives. That there must be impartial members sitting in the capacity of arbitrators is fairly clear, but surely it should be possible to select eminent men and women from commerce and industry who will have at least some practical knowledge of the difficulties belonging to respective trades. There is a suggestion that one from each side of the Board could be selected to sit with the Chairman in much the same method as obtains in a Court of Referees. There can be no doubt that the "appointed" members are a very important part of the machinery of the Boards, and charged as they are with great responsibility every endeavour should be made to select persons who possess some technical and commercial knowledge and who are prepared to decide not merely on abstract lines but also with reference to practical conditions.

Rates for Learners and Apprentices.

The minimum rates for learners and apprentices should be fixed no higher than is consonant with their worth, and such rates should certainly be calculated with due regard to the value of the knowledge imparted to the learner by or on behalf of the employer. As before stated, many Boards have fixed learners' rates at too high a standard, with the result that employers are compelled through sheer necessity to engage only the minimum number, and employment is therefore restricted.

Apprenticeship.

We feel strongly that apprenticeship coincident and in correlation with a scheme of technical education should be a statutory part of a Trade Board Order. Apprenticeship will mean greater trade efficiency, because it will prevent a young person changing from trade to trade for some fancied grievance, and thus

becoming a "Jack-of-all-trades, and master of none." Under an efficient educational system a young person would find an entirely new interest in his trade, and in addition to a necessary training in book-keeping and commercial arithmetic, would obtain an expert knowledge of the various commodities handled, processes of manufacture, sources of supply, trade law, etc., etc., and thus, instead of becoming a mere machine, would become an intelligent and active force in the development of the business with which he is associated.

Beyond fixing rates for learners and apprentices, the Boards should go no further than to fix minimum rates for persons up to 21 years of age. Here again the minimum should be at such a figure as to induce initiative and progress on the worker's part. By fixing automatically increasing rates on an arbitrary age basis for persons beyond 21 years, the Boards have ignored the ability and worth of the individual worker, and have penalised youthful efficiency and intelligence. The minimum fixed for the worker of 21 should be the minimum irrespective of age, and all wages rates beyond the minimum for persons older than 21 should be the subject of negotiation and adjustment between the employer and the worker, and depend upon merit and skill. We would suggest that there should be a limit of age—say, 50 years—beyond which no minimum whatever should apply. It is conceivable that many workers past the meridian of life who are reduced in their earning capacity will desire, for their own sake, to be at liberty to treat with their employers as to the retention of their posts on wages and conditions to be mutually agreed upon between them.

Principles of a fair Minimum Wage.

So far as we are aware, no definite principles have been laid down as to what should constitute a fair minimum wage, except that it must be a living wage sufficient to provide a girl of 18 with independent maintenance and to give a man of 21 the opportunity of contemplating and preparing for marriage.

Reference has been made to considering the wage-paying capacities of even the smallest shops, but from the decisions reached we hardly think that this consideration has had much weight. No serious endeavour appears to have been made to establish some relationship between the value of the work done and the fixed minimum rates. We believe that the Industrial Court has laid down the principle that the wages of various classes of workpeople should in ordinary circumstances depend upon the value of the work done, and this depends upon the condition of the markets and the demand for the products or services of the workpeople.

Limitation of scope.

It is also necessary that there should be some definite statutory limitation as to the classes and grades of workers coming within the scope of prescribed rates fixed by the Boards. There are certain employees in superintending and representative capacities to whom it surely was never contemplated that the Acts would apply. In Workmen's Compensation, Health and Unemployment Insurance the legislature has recognised the principle of limitation and has drawn a definite line between those included and excluded; therefore the precedent is established for distinguishing between those grades of employees of a higher character and those who should fall within the categories for whom prescribed minimum rates are fixed.

Procedure for fixing and varying rates.

The procedure for fixing and varying rates is much too protracted and cumbersome. It should be practicable to devise greater elasticity so as to reflect altering conditions of industry and trade from time to time. Complaints have been received of inconvenience and loss resulting from the delay in notifying employers of changed rates. We have had examples of the receipt of new schedules some days after the rates have been in force.

30 November, 1921.] Mr. CHARLES AVELING, J.P., Mr. JAMES WALKER CLARK, J.P., [Continued.
and Mr. PATRICK HOWLING, F.I.S.A.]

Work should bear some relation to Wages.

Rates and conditions set out in the Orders are binding upon the employer under severe penalties, but there is nothing whatever binding upon the worker. Whilst rates which are minima cannot, of course, be binding upon a worker, yet there should be some responsibility upon him to give reasonable service in return for his wage. Although the declared intention behind the extending Act was reconciliation and agreement, yet instances have occurred where disputes and strikes have been engineered by workers insisting upon higher rates than those adjudged to be adequate by the Trade Board.

The inefficient worker.

The position of the comparatively inefficient as distinct from the certificated sub-normal worker requires to be reviewed. In a trade where rates and conditions are fixed by a Trade Board employers are not at liberty to determine the rates which shall be paid to those workers who fail to reach the standard of efficiency. This must result in certain workers losing their occupations owing to old age or other causes which prevent them rendering that quality and amount of service given by a worker who is fully efficient. Employers would be prepared to retain the services of such workers providing they are given the liberty to arrange special rates of remuneration.

Difficulties of definition—An example.

Definitions of scope are unwieldy and complicated. An example is before us in an Inquiry put to the Ministry as to seamstresses employed in hemming bed linen, making curtains, altering underwear and altering and making aprons, etc. The reply given in January last was that the minimum rates fixed by the Dressmaking Board would apply to workers engaged in altering underwear and altering and making aprons, and the rates fixed by the Handkerchief Board to workers employed in hemming bed linen. With regard to curtains, if these were made from linen or cotton or mixed linen and cotton fabrics or from other textile fabrics, and if work was carried on in establishments mainly engaged in making handkerchiefs and household goods from such fabrics, the Minister was of opinion that the rates fixed by the Handkerchief and Household Goods Trade Board would be applicable. A study of this reply will show how difficult it would be to give effect to it in a business house where the same seamstresses were engaged on the various classes of work almost continually. Another reply was received six months after making confusion worse confounded. The Minister asked that the following information should be substituted for that previously given:—(a) Workers hemming bed linen are entitled to the rates fixed by the Handkerchief and Household Goods Trade Board; (b) Workers making curtains cannot claim to be paid at the minimum rates; (c) Workers altering underwear and making aprons are entitled to the rates fixed by the Dressmaking Board. If the Minister himself experiences such difficulty in determining the questions asked, what is likely to be the result if a multiplicity of Trade Boards are set up in distribution? In this connection we recall Mr. Wolfe's evidence that three pages of foolscap were necessary to define the scope of the Grocery Board.

Hours of labour and hours of business.

The statutory wage should be fixed for the customary working week without any reference to overtime. A 48 hours' week as proposed by the Grocery Board will lead to considerable difficulty in some districts, particularly in seaside resorts, and will mean the payment of a considerable amount of overtime. While standing for the principle of compulsory limitation of hours, yet we have to realise that in many businesses there are very slack periods during the day. The 48 hours' week for assistants without amendment of the Shops Act to provide for a 48 hours' week for the shop will lead to much complication and probably to the adoption of the "shift" system.

Area and district representation.

In order to ensure that special and peculiar conditions obtaining in various districts are much more thoroughly considered, we suggest that in the constitution of the Boards there should be area and district representation upon a properly designed zone system. We also suggest the establishment of area and district committees entrusted with the responsibility of making recommendations to the Central Board. It seems to us to be physically impossible to constitute a Central Board fully representative of all districts, and the area and district Boards would assist in surmounting this difficulty, as regards fixation of rates, notification, hearing of objections and final notification upon the rates being fixed.

Representation of Co-operative Societies.

The question of the position on the Boards of the representatives of Co-operative Societies should be considered as to whether they should sit as employers' representatives or as workpeople. If the former they should at least be Directors and not full-time paid employees.

Voting.

The procedure with regard to voting and the system under which decisions are arrived at require to be examined and amended.

Objections.

We fear that adequate arrangements do not exist for considering the multitude of objections which are received by some Boards. As objections are statutorily provided for, ample provision should be made for their full consideration. By massing objections together there is great danger of important submission made by individuals being altogether overlooked or ignored.

Cost.

We are unable to obtain precise information as to the expense entailed in the maintenance of the Trade Board Department and the working of the 60 Boards already established. It has, we believe, been officially stated that the headquarters cost of the officials amounts to £45,000, exclusive of the additional cost of part-time services of officials in other Departments who do certain Trade Board work. Assuming that on the average each Board meeting costs £100 and allowing for the low average of 5 meetings per annum for each Board, this involves a further sum of £30,000 per annum. These estimates in all probability underrate the actual expenditure, but we make no doubt the full facts will be produced to the Committee. The expenditure represents a new additional burden upon industry, the State, and the user and consumer of commodities. In administering the system an increasing expenditure of public money is entailed and we regret that no corresponding advantage accrues to trade and industry so heavily hampered by the burden of excessive Imperial and local taxation.

We do not claim that this memorandum is in any respect complete as embodying vital criticism of the policy leading to the extension of Trade Boards, their composition and administration and the effect of their working. None the less we hope that, amplified by our oral evidence, it will assist the Committee in their inquiry and recommendations.

On behalf of the chamber we gladly record appreciation of the services rendered by those members of the Boards who, despite the inherent defects and difficulties to which we have referred and the severely changed conditions, have laboured earnestly, although unsuccessfully, in the endeavour to secure functioning of the Boards without detriment to the trades concerned.

PATRICK HOWLING,
General Secretary.

The National Chamber of Trade,
16th November, 1921.

30 November, 1921.] Mr. CHARLES AVELING, J.P., Mr. JAMES WALKER CLARK, J.P., [Continued.
and Mr. PATRICK HOWLING, F.I.S.A.

3000. *Chairman (to Mr. Aveling):* You are the Governing Director of Robinson's Belfast Linen Warehouse Limited, of Manchester, Preston, and Southport?—(Mr. Aveling): Yes.

3001. You are past President of the National Chamber of Trade?—Yes.

3002. You are a member of the Corporation of Southport, and a Justice of the Peace for the Borough?—Yes.

3003. (To Mr. Clark): You are a past President of National Chamber of Trade?—(Mr. Clark): Yes.

3004. You are Chairman of the Parliamentary and Executive Committee?—Yes.

3005. And you are Justice of the Peace for Halifax?—Yes.

3006. When was the National Chamber of Trade established?—(Mr. Aveling): About 23 years ago.

3007. What does it comprise?—It comprises, roughly speaking, 300 Chambers of Trade and Associations throughout the Kingdom, together with individual members. The 300 Chambers of Trade, of course, represent many thousands of traders.

3008. About how many thousands?—At the very least 100,000.

3009. Are they retail traders?—Yes, principally.

3010. I see in your *précis* you give a statement as to the origin of the idea for the expansion of Trade Boards?—Yes. I suppose it is not necessary for me to read the statement?

3011. You will probably like this to be taken as part of your evidence?—Yes, it might be as well. I want to save the time of the Committee as much as possible.

3012. The statement is very carefully put together, and we will include it as part of your evidence.—Yes. It is very important to go back to the origin of the Trade Boards, and very important to go back to the origin of the last Act, how it arose, and what really it was supposed to do.

3013. You say, very truly, that the origin of the Act of 1918 is really to be found in the second Report of the Whitley Committee?—Yes.

3014. The first Report dealt with organised trades, and the second recommended with regard to trades not fully organised that they should be dealt with by Trade Boards?—That is so.

3015. Were the small traders in distributive trades represented on that Committee to the best of your knowledge?—Do you mean on the Whitley Committee?

3016. Yes?—No, they were not. That is our objection both to that and to the Industrial Conference which was held. There was no representative so far as the employers were concerned at the Industrial Conference from the distributive side.

3017. You are speaking of the Industrial Conference of 1919, are you not?—Yes.

3018. Do you think it would have been desirable that the distributive trades should have been specially considered and represented on that Committee?—I think when the distributive trade was being dealt with that trade had a perfect right to be heard before any recommendations were made.

3019. As a matter of fact, the Act of 1918 was passed, and it has, as you say, been very widely used.—Yes.

3020. You know that the number of Trade Boards has grown to 61?—Yes, with the prospect of many more.

3021. How many were set up under the Act of 1909?—Only three in the first year, one in the next year, six in 1914, and one in 1916.

3022. That would make eleven in the six years?—Yes.

3023. Since then there have been no less than 50 set up?—Yes, and when one considers that it took a number of years to see the commencement of the work, and so on, and then how they have spread since, it is very alarming.

3024. You are, of course, aware that an inquiry is held by the Minister before setting up a Trade Board in a trade?—I am not aware of any inquiry

being held, except private consultations that I have heard of; I have heard of nothing in the way of a public inquiry, and I am not aware of any public inquiry being held at all.

3025. A notice of intention or proposal, at any rate, is issued, and persons are invited to object?—I quite agree, but the decision, practically speaking, has been taken by the Minister before then.

3026. There is provision in the Act, is there not, for holding a public inquiry if objections are received?—The provision is there, but it has never been used.

3027. May that not be because the demand for an inquiry has not been pressed?—I do not think so personally, because I think the objections have been made. I do not myself see how the whole of them could be termed frivolous objections.

3028. I do not suppose they were termed frivolous objections, but I think in many cases the objections have been seen and interviewed, and have in the end withdrawn their objections?—I have no evidence as to that.

3029. You do not know of any case where an objector has pressed a request for an inquiry, and it has been refused, do you?—We only know from the atmosphere at the meetings of our conference. I do not know that I can give you a definite answer to your question.

3030. However, you said quite truly that the power to object does not dispense the Minister from the duty of using every endeavour in the direction of a full inquiry?—That is so.

3031. There is the difference, as you point out, between the two Acts, that under the Act of 1909 there had to be a Provisional Order which might be objected to in Parliament?—That is so.

3032. Owing to the fact that it had to be confirmed by Parliament?—Yes, but now the power rests with the Minister.

3033. Subject to the power of objection which has not been exercised?—Yes.

3034. Then you make a suggestion that if the Act of 1918 is to stand there should be a consultative tribunal?—That is so.

3035. Do you mean an advisory committee of some kind?—Yes, an advisory committee.

3036. And that the Minister should consult that committee before setting up any Trade Board?—Yes.

3037. How would you propose that the committee should be constituted? Of what persons would you suggest that it should consist?—I would suggest representative individuals selected from their chambers, so as to give some lead to the Minister, shall we say, from the opposite side as apart from the official side.

3038. The committee, I suppose, would consist of both employers and workers?—Yes. It is very difficult for officials, as you know, and for inspectors travelling about the country, one here and another there, to get the right atmosphere, but I think they would get the proper atmosphere if they attended some of the annual conferences of some of the Chambers of Trade.

3039. I think you became aware in 1919 of the proposal to set up a Board for the distributive trades?—There was a proposal.

3040. Did your Chamber consider that?—We did.

3041. I think you did your best to assist the Department in carrying that out?—We did. We had many interviews. We foresaw difficulty in setting up the Board, and we were most anxious to be of assistance, and have been the whole time. We have not taken up a dog-in-the-manger attitude over this, but we have tried to be of assistance. I think, in fact I am certain, that we were the first National Chamber to suggest that it should be one comprehensive Board for distribution, because owing to the ramifications of the distributive trade we saw great difficulties in setting up a multitude of Boards, and up to a point we thought that one Distributive Board should be set up. Then suddenly there was a change from the Department, and it was decided that they should be set up in sections.

30 November, 1921.] Mr. CHARLES AVELING, J.P., Mr. JAMES WALKER CLARK, J.P., [Continued.
and Mr. PATRICK HOWLING, F.I.S.A.

3042. Were you contemplating a Board representing the whole of the distributive trades?—Yes, with sections.

3043. I was going to ask about that.—Yes, with sections, and the sections could each consider their various points from a sub-committee to a main committee. You would then get one scheme. As it is, you have workers sitting or working close to one another with different rates of pay, and there is nothing but confusion, and cannot be, as far as I can see.

3044. I suppose a worker may go from one class of employment to another?—I can give you the illustration of myself. I am a draper, and when I was an assistant in a general store I served in every department, including the grocery, tailoring and ready-mades; I have gone through the whole lot. I have been called from one department to another as a volunteer: when things were quiet in one department I would be transferred to another. It is usually said that a draper can put his hand to anything.

3045. Like a sailor?—Yes, something like that. I think you will see that by what goes on in a large store.

3046. This will be a very large Board covering a very wide area; have you any suggestion to make as to district committees?—Yes, the suggestion appears later on in the précis, on page 15; would you like me to deal with it at the present time? It is really dealing with the setting up of a Trade Board. Firstly, so far as the distributive trade is concerned, I cannot see that we can get amicable working between employers and employees, which is what we are out for in these Whitley Councils, Consultative Councils, and Trade Boards, unless we have district committees and area committees. Take, for instance, Corporations: there are a number of Committees and Whitley Councils and so on, set up with central committees, but they have found out the necessity (not only from the administrative, but also from the working side, the non-trading as well as the trading) for area committees. In North-West Lancashire and Cheshire, for instance, they could not agree with the central committee, with the result that they have set up local committees. Originally they were set up, nominated, directly from the central council, but strong objections were taken, and they now are coming round to the view that the proper way is to nominate them from the areas to the central council. You then get the feeling of the whole country. Take the distributive trade as a very good example, and take the workers in country districts, rural areas, and urban areas: it is very difficult to decide anything properly unless you get the feeling, because it varies so much from district to district, agricultural or manufacturing. That applies in my particular county, Lancashire. The conditions vary to such an extent that we feel that unless there are area committees set up there will be great injustice done, particularly to some of the smaller traders. When all is said and done, it is most important to this country that the country districts should be helped in every way possible.

3047. What size would you suggest for the areas?—I think that is more a matter for some little investigation by the consultative committee which I suggest should be set up in the first place.

3048. You would not suggest a committee for each county, I suppose, but you would suggest having larger areas than that, I take it?—Possibly, but we see great difficulty in the delimitation of boundaries. Even in Ireland and in foreign countries one sees that difficulty of the delimitation of boundaries, and commissions are set up to find out where the boundary should be. It might be necessary to set up a committee to find out where the boundary line should be in this case, because a county area is not necessarily the right one.

3049. To have one for every county would be prohibitive, because it would mean having so many, would it not?—I think, on investigation, it would be found unnecessary, because several counties, I think, would be found to be very much alike. (Mr. Clark);

There is a great difference between a trader and a Corporation. A Municipality has a fixed area for its work within which it must work, that area being assigned to it by Parliament. I am a Yorkshireman, and we have the difficulty in our neighbourhood of many distributive houses having centres at a great distance from their shops, and one of the difficulties of the local Trade Board is the fact that those factories are in other areas in which other rates apply. The necessity for our suggestion is much emphasised, I think, by that difficulty which is arising at the present time. The co-ordination between one area and another is a difficulty. Had there been one controlling body, all these difficulties would not have arisen, or could have been dealt with if they had.

3050. I take it that although area committees are recommended, they would still be subject to the control of the central body?—They would be committees of the central body: for instance, they could not deal finally with any question.

3051. As they are now?—Yes. (Mr. Aveling): Unless there is co-ordination we get tremendous trouble. May I give you an illustration? You have a different rate of wages for the men who put in sewers, lay electric mains, lay water mains, or lay gas mains; there are four men doing similar work, all getting different rates of wages. Is it any wonder there is dissatisfaction amongst that class of men when they are working side by side getting different rates? Unless there is co-ordination between the various committees I am convinced we shall have nothing else but friction the whole way through.

3052. Sir Arthur Pease: Where there is a Whitley Council for each grade of men according to the grade in which they are working?—Local authorities would, of course, have a works committee, which in many cases has not been set up yet.

3053. Where there is a Whitley Council, that fixes the rates of wages for gas and water undertakings, and in doing so it takes into account and gives differential rates according to whether a man is living in a big town, a small town, or a country district, does it not?—Yes, it differentiates; each committee differentiates; but yet there is not co-ordination between the four. We are only dealing there with four items, but when you are dealing with distribution you are dealing with far more than that. Even with those four you get different rates, so how many different rates would there be if you had 60 Boards set up for the distributive trades? The result would be simply chaos. We pointed that out to the Department, and we put it very emphatically to Mr. Wardle when he was Under-Secretary; but I must say candidly I do not think the Department, and I do not think many of the other traders, saw the difficulty which would arise. We have been on that point the whole way through. Unless you can have co-ordination, you are going to have more unrest than there has been in the past, and so far as the distributive trade is concerned that has been one of the most peaceful in the country. I should like also to say, in justice to the employees, the Shop Assistants' Union, that they were with us from the commencement on this comprehensive Board.

3054. Chairman: They were parties to your recommendation, were they not?—Yes, we had consultations with them; they were parties to a memorandum; and we had a joint deputation to the Minister on the question of the one comprehensive Board.

3055. Lord Weir: Will you deal with one point and make it a little clearer, please? You started to describe the new machinery which you would like, and you said first one Board and then sections of that Board, presumably for each trade or each division of the trade?—For each division of the trade.

3056. Then area committees after that?—We would have the area and the central committees really on the lines of the Whitley Councils, so long as they are comprehensive. The sections could still agree, because the sections, so far as the grocery, drapery and various other things are concerned, agree now.

30 November, 1921.] Mr. CHARLES AVELING, J.P., Mr. JAMES WALKER CLARK, J.P., [Continued.
and Mr. PATRICK HOWLING, F.I.S.A.]

3057. You would have a grocery section?—We will term it a food section, if you like.

3058. Very well, a food section; then you would have a food area committee?—Yes, which would be a sub-committee, just in the same way as there are now sub-committees of local authorities.

3059. *Mrs. Lyttelton*: Do you mean an area committee of every trade? That is what I do not understand?—There could be an area committee, and if they liked they could still appoint sub-committees to bring forward their recommendations; but the area committee would send up a definite recommendation.

3060. *Lord Weir*: Starting at the top, you have your Distributive Trade Board, which is divided into blank sections?—Agreed.

3061. Each representing a branch of the distributive trade?—Agreed.

3062. Let us say there are six sections: for each of those sections would there be what might be called a sectional area committee?—No, I should have an area committee which would be comprised of representatives of each of those sections within the area. Suppose for argument's sake the central committee were composed of three—food, furnishing, and hardware—then the area committees should be composed of those three.

3063. Would there be three committees in each area?—No, one committee, but sections again. There would be only one committee. Say for argument's sake the committee were composed of six persons, I should put two on each. If those two liked to come to the full committee with their recommendations, well and good; just in the same way as the sections of the chamber of trade are worked at the present time.

3064. *Chairman*: That is to say, the sectional area committee would report to its own area committee, that area committee would report to London, and then in London the principal Trade Board would probably refer the point to its own section?—Agreed; but the area might find it unnecessary even to appoint sections; they might come to a unanimous agreement without sections. If there is disagreement, I always think the better plan is that a small sub-committee should thrash the thing out and bring forward a definite recommendation.

3064a. You would leave that to the area committees to decide?—Yes.

3065. *Mr. Layton*: Would not that procedure be much more lengthy than the present procedure if the rate had to be discussed by the sectional body in the district, and then by the district committee?—I do not think it should be. It does not appear to operate disadvantageously to either side where observed at the present time.

3066. I thought the complaint was that it was not discussed in the districts?—It is not discussed in the districts.

3067. The rates are not first discussed?—That is so.

3068. But that adds another period of discussion, does it not?—It adds another discussion, but you must remember so far as the central committees are concerned they cannot meet so regularly as an area committee. An area committee can meet very quickly, and a time limit, if necessary, could be laid down by the central committee to the area committee: Let us have your decision or your comments within a fortnight or a month, or whatever time it may be.

3069. You do not include in your scheme any provision for making the rates effective if agreed upon by the district?—No.

3070. The rate-making authority is always to be the main, central Distributive Board?—Yes, it is comprised of representatives of the area committees, so that you have the knowledge from the whole of the country, and it does not matter how large the Board is which is set up in London, you do not get that feeling which you can get from discussions in areas.

3071. *Chairman*: Your proposal applies to a very

large body, and that is how you justify having the areas, because you are dealing with such a mass of traders?—Distribution is from the uttermost ends of the country, and the feeling is that they should have some say, and that it should not be a bureaucratic scheme set up by a dozen, twenty, or, in the case of the Grocery Board, seventy or eighty members sitting here in London, and in many cases not knowing the circumstances of the local area.

3072. *Lord Weir*: Do you agree that with an Area Committee dealing with an area which is both rural and urban, there is no chance of the rural representatives not receiving sufficient consideration? Might they be over-weighted by the arguments of the others?

—No. They would first of all have to set up their Committees and they would have representation on that Area Committee. The area representatives can consult in their rural area if they so desire, just in the same way as now if you take a Board of Guardians which has both an urban and a rural constitution, you will frequently find that the rural members consult together before going to the full Board.

3073. *Mr. Layton*: What size do you contemplate the Central Board would be?—That is a matter for investigation after looking into the thing very carefully. When setting up anything of this description it requires very, very careful consideration, because after it is set up we want to get unanimity.

3074. *Chairman*: You would divide the country into suitable areas?—Yes.

3075. That is a matter of detail, I suppose?—Yes, and it would be impossible for me to give it here.

3076. *Mr. Layton*: Is not this the position, that it would tend to enlarge the Central Board because it has to cover so many branches as well as areas?—It would be far better to have a large Board, because if we proceed on the lines of the Grocery Board that is purely a sectional Board, and I think there are somewhere about 80 members on it. If we have 200 Boards I am afraid we shall have to purchase more property than the Government has at the present time to house them all in, or else there will be tremendous delay in coming to decisions. What is more alarming to me at the present moment is the enormous expense that is going to be involved in these meetings.

3077. *Lord Weir*: Objection has been taken to the efficiency of representation on the Board. If you take a Board such as you suggest to cover all the distributive trades, surely that would be less representative than ever?—No, because they would be represented and their decisions would come from their areas.

3078. You mean not decisions, but recommendations, do you not?—Yes, recommendations.

3079. *Chairman*: Each area would nominate members for the Central Board?—That is so.

3080. Probably either one employer and one worker, or one employer from each section and one worker from each section?—Yes; it depends upon the number of Boards that you set up.

3081. *Mrs. Lyttelton*: I suppose the areas would so sift a question that when it came up to the Central Board it would be easier to make a decision?—Yes, I think so.

3082. *Chairman*: Your Central Boards need not be larger, and might possibly be smaller, than a single Trade Board to-day?—That is so. The way we are going on the expense is enormous. It is most interesting to read in Hansard what was said with regard to the cost by the Minister two or three years ago. In reply to an amendment that was moved that the cost should be, roughly speaking, £1,000 a year, he said he did not think the cost would be anything more than £300 to £500; so they voted £1,000. I should say that one Board is costing more than that to-day.

3083. *Sir Arthur Pease*: Is there not a strong feeling that if you had these Area Boards you would bring the employers and employed more closely into touch than they are at present?—Yes, I should have

30 November, 1921.] Mr. CHARLES AVELING, J.P., Mr. JAMES WALKER CLARK, J.P., [Continued.
and Mr. PATRICK HOWLING, F.I.S.A.]

said that. I meant it when I said that you would create that better feeling as between the individuals, because they would be brought closer into touch. To-day they say, and rightly, that there is no representation because in some instances the individuals are chosen by the Ministry of Labour, and therefore they are not selected by those who are engaged in the trade. In the other case they would be represented through a meeting which would be called to appoint their representatives, and you would get very much closer co-operation than you have to-day.

3084. The practical difficulty, whether on the part of the employers or the employed, would be much less and things could be thrashed out better if you could have free discussions in the local area?—Much better.

3085. Which is admittedly quite impossible in a Central Committee?—It is quite impossible in a Central Committee, and there is great trouble being created so far as Central Committees are concerned, because traders cannot keep on coming up to London for days and days. They get tired of it, and you will see that the attendance at some of the Trade Boards is very small on the one side while on the other it is nearly always up to full strength.

3086. *Chairman*: If you had District Committees would it be necessary to make an allowance for expenses? You know that in the case of a Trade Board an allowance is made to each member for his expenses: would that be necessary if you had meetings in the district?—So far as the district is concerned I cannot see there would be very much expense incurred, because at the present time, like the shop assistants, they all meet in the evening: neither side would have to give up time which to-day is very important to employers.

3087. *Dame Adelaide Anderson*: Are you assuming that in these District and Area Committees there would be no representation on the Government side, that is to say, there would be no Appointed Members?—There would be no Appointed Members.

3088. They would simply be meetings of the employers and the workers?—To my mind Appointed Members are unnecessary, I cannot see the necessity for Appointed Members.

3089. I just wanted to know your opinion about that.—I cannot see the necessity for them. Personally I prefer practical rather than theoretical people to discuss things with.

3090. Then locally there would be simply gatherings of employers and employed?—Yes, without Appointed Members. As I have said, personally I cannot see the necessity for them.

3091. *Chairman*: You would have to have a Chairman?—Certainly, but more likely than not we should agree that an employer should be Chairman at one meeting, and an employee at the next, but we do not want an outside Chairman.

3092. Suppose you had a District or an Area Committee equally divided?—I have so much confidence in them that I think they would come to agreement. I have so much confidence in the employees and the employers in areas and districts that I think that would be so. Of course you will have certain cases where they are divided when the result of their meeting will be sent to the Central Committee, but I have so much confidence in the employers and the employees that I think they would come to an agreement.

3093. *Mrs. Lyttelton*: You wish them to elect their own Chairman?—Yes, but I should not be surprised if it were an employer on one occasion and an employee on the next.

3094. On the question of expense you would have to have hundreds of District Committees unless you were going to pay expenses, because not only time would be lost, but there would be the expense of transport?—I agree, but even there I do not personally see there would be a great deal of expense, because after all is said and done it is part and parcel of the arrangements connected with their own business and

they can fix it up. I cannot see there would be much expense, and, in any case, in an area the travelling could not be over a great distance. (*Mr. Clark*): And in areas there are funds which can be used for the purpose, both by employers and employees.

3095. *Chairman*: In unorganised trades?—Yes, I think so; I do not know any area where it would not be so.

3096. *Mr. Layton*: You would have Appointed Members or Chairmen for the Central Boards?—(*Mr. Aveling*): I would not have Appointed Members. I cannot see the necessity for them.

3097. What would you do in a case of dispute? It is clear that in the case of the District Committee you could report the matter by both sides, but when you get to the Central Board, what would you do?—Assuming they were equal, we should have to take the decision like they do on the Grocery Board. When they have not been agreed, the Appointed Members have given their vote and it has gone to the Minister for confirmation, and the Minister has not confirmed it. In those circumstances if I were one of those Appointed Members, I should say, "I do not think I am wanted, I will clear off."

3098. *Chairman*: Take an extreme case; take a wage which is alleged to be a sweating wage; do you know what I mean?—Yes.

3099. I mean a wage which would have come under the old Act of 1909.—Yes.

3100. Supposing the two sides take contrary views on the Central Board, you must then, must you not, have some independent Chairman, or somebody of that kind, to give a decision?—So far as the Central Board is concerned, I am quite agreeable that there should be an independent Chairman.

3101. I thought you would say that.—In the case of Whitley Councils, of course they appoint their own Chairman, but in the case of the Central Board I would go so far as to say, if I may do so with all due respect, that he might be a gentleman with legal training, and so on, like yourself.

3102. At all events, someone who would be independent and would give a decision?—Yes. (*Mr. Clark*): And capable.

3103. *Sir Arthur Pease*: If you had an independent Chairman, would you have him sitting always on the Board, or would he only be called in when there was a question of difference; because it is possible that the discussion might be much more free if the independent Chairman was not there the whole time?—(*Mr. Aveling*): I think with the type of gentleman I have in my mind neither the employers nor the employees would mind discussing things very freely.

3104. He must be there at the discussion, otherwise you would have to discuss it all over again before him?—Yes. They would discuss it very freely.

3105. *Mr. Layton*: I forgot to ask whether the rate so fixed, whether by the vote of the Chairman or otherwise, would then be referred to the Minister, or would in your judgment become operative merely on the decision of the Board?—It should be referred to the Minister, I take it.

3106. And enforced by the existing machinery of inspection?—Yes, certainly. When there has been a decision of that sort, that would be the only fair thing. Failing that, of course, some would not pay.

3107. *Sir Arthur Pease*: If both sides were agreed without a decision, do you not think that it might be enforced at once?—Do you mean without time for objections?

3108. Yes.—I think a great deal of that machinery of the objections would be scrapped. It is just a debatable point as to whether it should be done without the advertising of it; that is, to give due notice to the people that it would be coming into operation. Now when you are advertising it for a month, everybody knows that at the end of that month they can make arrangements accordingly.

30 November, 1921.] Mr. CHARLES AVELING, J.P., Mr. JAMES WALKER CLARK, J.P., [Continued.
and Mr. PATRICK HOWLING, F.I.S.A.

3109. *Chairman*: After your Memorandum (which we have got), you sent up a deputation to the Ministry from the Chamber and the Shop Assistants' Union?—That is so.

3110. I will not go into it, but you had some reason for believing that your views would be favourably considered?—We had; and I think it would be interesting if the minutes of those proceedings could be presented to you by the Department.

3111. I do not know that that would be interesting to us now; it is rather ancient history. In the end it was not done.—In the end it was not done.

3112. Then as regards the distributive trades, the Trade Boards already set up are five in number, are not they?—Yes.

3113. They are the Hat, Cap and Millinery Trade Board; the Dressmaking and Women's Light Clothing Trade Board; the Retail Bespoke Tailoring Trade Board; the Milk Distributive Trade Board and the Grocery and Provisions Trade Board?—Yes.

3114. And notice has been given of an intention to form Trade Boards for four other distributive trades: the boot and shoe trade; the fish, game and poultry trade; the fruit, flower and vegetable trade and the meat trade?—That is so.

3115. Are there any other distributive trades which might be brought within the area of your Central Board?—Yes.

3116. What are they?—Of course there is the hardware furnishing trade and the soft goods trade.

3117. *Dame Adelaide Anderson*: What does "soft goods" cover?—Soft furnishing goods, household linens and things of that sort. I was a member of a committee which was set up by the Minister of Labour dealing with the training of disabled soldiers as regards the whole of the distributive trades. On that committee all trades were represented by equal numbers of employers and employees, and it always struck me that if we could come to an agreement, as we did in the distributive trades, for the training of disabled soldiers, we ought to be able to come to some unanimous conclusion when dealing with able-bodied people. The distributive trades report, I think, is No. 21, and on that committee every section of the trade was represented, and we came to an unanimous conclusion.

3118. *Mrs. Lyttelton*: How many were there on it?—The main committee was large. They appointed a sub-committee, and I was on the sub-committee sitting, practically speaking, weekly with representatives of the Shop Assistants' Union and others representing employees. In the end, after discussing this very fully, we brought forward a unanimous recommendation, and it was embodied in a report dealing with the whole of the trades.

3119. *Mr. Poulton*: How many were on the Sub-Committee; do you remember?—There would be about 20 of us.

3120. I take it that the Sub-committee would thrash out the whole of the details and come to a conclusion, and make a recommendation to the larger body?—That is so; they recommended to the larger body; and that Sub-committee again divided itself in this way: we had Hairdressing upon that, and when we required information so far as Hairdressing wages and conditions were concerned, or what would be a proper length of time for training, or what would be the proper rates of pay; we asked the representatives to get full information, and we dealt with it in that way.

3121. *Chairman*: You recommended the grouping of the distributive trades?—Yes, that is so.

3122. *Mr. Poulton*: You came to an agreed scheme for the whole of the country?—Yes.

3123. As representing all kinds of departments?—All kinds of departments. (*Mr. Clark*): Which was immediately accepted and has been acted upon ever since.

3124. *Chairman*: So far as the discharged soldiers are concerned?—Yes, I mean so far as discharged

soldiers are concerned. (*Mr. Aveling*): Dealing with the local areas, if I may refer to that for one second, in a letter which the Minister of Labour sent to the National Chamber at their last Annual Meeting occurs this paragraph, which is rather important: "The power to establish such Committees"—that is Area Committees—"rests, of course, with the Trade Board concerned, but I may say that I am strongly of opinion that particularly in the distributive trades District Trade Committees can play a useful part in focussing local opinion and keeping the Trade Board in touch with the special conditions in various districts."

3125. Who said that?—Doctor Macnamara, the Minister of Labour, in a letter which he wrote; because we, like many other organisations, were having great trouble over Boards. We can see that there may be the possibility of use in them and we did not want to come to foolish decisions in any way whatever; and we had this carefully worded letter from the Minister of Labour, and we read it to the conference.

3126. *Mr. Poulton*: What called for that letter—some representations made by the Board?—We had resolutions sent in from all over the country condemning Trade Boards, and we were so concerned about this that the General Secretary, Mr. Howling, saw the representative in the Department and placed this before him, and stated the difficulties which we were in at the present time; because we had been trying to help the Ministry earlier in every way possible, and we wanted still to be of assistance, so we placed all these difficulties before them. It was agreed that the Minister should be approached to see if he would send a considered letter, which he did, and it was very much appreciated.

3127. You stated some little time back that in connection with the Boards as Boards, happily the workers were quite with your side in regard to one Board?—That is so.

3128. But unfortunately certain organisations were opposed to that?—That is so.

3129. In connection with this matter, which I agree is a very important question, and a most important matter as to administration, were the workers alongside of you in your representations in that particular matter?—Yes; they attended with us. As a matter of fact you will find in the Minutes of Evidence which we have, and which I have no doubt the Department has, that I opened by agreement with the Shop Assistants' Union, and Mr. Turner led on behalf of the employees, and we both emphasised the same points; and I may say that the Memorandum presented to the Minister was got up by Mr. Howling, our General Secretary, and Mr. Turner.

3130. It was a joint memorandum?—It was a joint memorandum. (*Mr. Howling*): I have here the minutes of the proceedings of the Conference where we joined with the Shop Assistants' Union in coming before Mr. Wardle, if I may put them in. (*Same were handed in.*)

3131. Could you go a little further upon the point about which you were talking a little time ago, as to local areas? Have you got so far as to discuss with the Shop Assistants the setting up of local District Committees who would report to the big body in the same way as you did on your committee as to ex-servicemen?—(*Mr. Aveling*): No, we have not got so far as to consult with the local associations, but I think in the majority of the towns—I will deal with the Shop Assistants' Union—so far as the employers and the employees are concerned they are all on perfectly friendly terms, as you will realise when I tell you that personally I have taken the chair at the Shop Assistants' meetings when Mr. Seddon and various others have addressed them. We must not overlook the fact that the majority of us in the distributive trades were at one time assistants. I make no bones about it: I was an assistant, and I want everybody else to have the same opportunities

30 November, 1921.] MR. CHARLES AVELING, J.P., MR. JAMES WALKER CLARK, J.P., [Continued.
and Mr. PATRICK HOWLING, F.I.S.A.]

that I have had, without so much control. We can get too much control, and can be confined too much. For instance, if I had been under a Trade Board as an assistant, I doubt very much whether I should have been governing director to-day. There has been very great freedom so far as the distributive trades are concerned.

3132. *Mrs. Lyttelton*: You mean a commission salary?—Commissions and other methods which we have, so far as the distributive trades are concerned.

3133. I do not see how Trade Boards would prevent that splendid result?—Say we take the basic wage—although I have observed in the last issue of the "Trade Board Quarterly Gazette" that the opinion has been expressed by the Ministry that: "A Trade Board has no power to fix minimum rates for branch shop managers as a 'class' of workers or to fix minimum rates on the basis of the 'turn-over' of the shop as a piece-rate or otherwise." I observe that the Ministry has laid that down, and it is accepted by the Ministry as defining the legal powers of Trade Boards, but if you will remember, in the first proposals so far as the Grocery Board was concerned, they were dealing with everything. I thought they would have gone on to suggest how many times the shop windows should be washed.

3134. *Mr. Poulton*: Whilst it may be that you want to get away from a good deal of Government control, I do not gather that you wish to see absolutely abolished all methods by which these matters shall be regulated in a fair, reasonable, and just way?—I have no objection whatever to a minimum being fixed, but when that minimum becomes a standard, then I think objections would come in. We are liable to be discussing at the present time, not what a minimum wage should be, but almost what a standard wage should be; and there has been freedom in the past, so far as distribution is concerned, which I believe has been very beneficial to the assistants.

3135. But there is nothing in the regulations, is there, to prevent an employer paying a smart man or woman, as the case may be, not merely slightly above the minimum, but any amount above the minimum?—Nothing whatever, in fact the majority that I know of, I should say, are far above the minimum.

3136. *Lord Weir*: What do you really mean when you speak of a minimum wage? You mentioned two wages—the minimum wage and the standard wage?—A maintenance wage, we will put it. For instance, in the Report which I mentioned to you as to disabled men, we came to an agreed minimum wage—what we thought the man would be capable of earning, roughly speaking; and that was agreed to both by the Shop Assistants' Union and by ourselves.

3137. Was there any definition of it? Did you define what a minimum wage was?—On page 11 of our *précis* we state: "So far as we are aware no definite principles have been laid down as to what should constitute a fair minimum wage, except that it must be a living wage sufficient to provide a girl of 18 with independent maintenance, and to give a man of 21 the opportunity of contemplating and preparing for marriage. Reference has been made to considering the wage-paying capacities of even the smallest shops, but from the decisions reached we hardly think that this consideration has had much weight. No serious endeavour appears to have been made to establish some relationship between the value of the work done and the fixed minimum rates. We believe that the Industrial Court has laid down the principle that the wages of various classes of work-people should, in ordinary circumstances, depend upon the value of the work done, and this depends upon the condition of the markets and the demand for the products or services of the workpeople."

3138. It reads very nicely, but it does not seem to help us very much.—I take it that we are not really considering here as to what is a minimum wage; that is more for the Committee to do. If I have to enter into the question as to what is a minimum wage, it will be rather a big question.

3139. *Mr. Poulton*: In other words, you really mean to say that the trade itself is best qualified to set up its machinery, and to decide how it shall apply it?—That is so.

Dame Adelaide Anderson: And there is not in question only a flat minimum for everything, but different minima according to the strain of the work?

3140. *Lord Weir*: I want to go a little further. You have mentioned quite definitely two kinds of wage, a minimum wage and a standard wage. You have failed to define to me the minimum wage. Let us try the standard wage. How do you define the standard wage?—The rates which are fixed so far as many of the Trade Boards are concerned, I consider, will become more of a standard. I mean an employer will not be able to pay anything above that to the better class of worker. (*Mr. Clark*): The wage paid to a full average capable worker is the standard wage.

3141. *Mr. Poulton*: But surely that is not within the four corners of any of the regulations in the Trade Boards Acts?—(*Mr. Aveling*): No, but it might become a practice.

3142. *Chairman*: We are in danger of mixing up two things when we speak about the use of the word minimum.—Yes, I am afraid we are.

Mr. Poulton: And if we go into the question of a standard wage, that is entirely and absolutely an opposite method to a minimum.

3143. *Chairman*: You may judge of the minimum just according to what a man can live upon—that is the first part of your paragraph—or, secondly, according to what the trade can bear—that is the second part of your paragraph?—That is so.

3144. We are in danger of mixing up the two. Do I understand you to mean by "minimum" really the least wage that a worker can live upon?—That is so.

3145. And when you say a standard wage, you mean the wage which the trade, looking into the whole matter, can manage to pay for that work?—Quite so.

3146. Then, as you say, a rate, if it is fixed too high, has this effect, that instead of being able to raise a better worker above it, you cannot afford to pay even the better worker more than that standard?—That is so.

3147. That, as I gather it, is your meaning?—It is.

3148. It really comes to this, that the minimum rates have been fixed so high that the trade cannot afford to recognise merit as it otherwise would?—That is so: there is a danger of keeping that under when every encouragement ought to be given to bring it out.

3149. You pay so much to your poor worker that you cannot pay a good worker enough?—That is so.

3150. *Mr. Poulton*: Do you mean that to apply to the existing method by which the Trade Board and its procedure are governed, or do you mean that to apply, say, to a purely rural area as against a great district like London itself?—That is why I am so anxious that local committees shall be set up—so that they can discuss that thoroughly.

3151. So that they will go into questions of the detail of what their particular district can carry?—That is so.

3152. In other words, you believe that there should be differentiating rates?—I do.

3153. *Mr. Layton*: Do you consider that the Board should set up different minima for different classes of labour? I am not now talking about different minima as between adults and children, but among adult workers. Would you have a rate for every grade, or would you just have for a particular town, let us say, one minimum rate?—I should have one minimum rate. (*Mr. Clark*): For this Board, (*Mr. Aveling*): Yes, for this Board. I am only dealing with that.

3154. And not varying rates for different classes, let us say, as between shop assistants and porters, and other grades? You would regard any agreement between your side and the employees as a purely

30 November, 1921.] Mr. CHARLES AVELING, J.P., Mr. JAMES WALKER CLARK, J.P.,
and Mr. PATRICK HOWLING, F.I.S.A.

[Continued.]

trade matter, and not one which should come within the purview of the Trade Boards?—That is so.

3155. And you would not be in favour of legal sanction being given for such other additional standard rate, as you might call it, for that other class?—No, that is quite right.

3156. *Dame Adelaide Anderson*: Then you have to apply to that minimum some such standard as the Food Controller had to apply during the war, in the amount of food allowed according to the exertion necessary in the work? A porter, for instance, might need a larger consumption of food than a very light worker?—I think that is one of those things, which the local Committees would thrash out very thoroughly.

3157. Then the general minimum would have to be fixed so as to be above that highest amount?—I agree, but then that general minimum would be fixed after the various local Committees had thoroughly considered it, and then the Central Board would get the feeling of the whole of the country.

3158. *Mrs. Lyttelton*: You want a general minimum for all districts, but you want all the other rates variable by each district; is that it?—Yes.

Chairman: No, I think not.

Mrs. Lyttelton: I think that is what he meant.

3159. *Chairman*: Before we leave that, did you follow that question? *Mrs. Lyttelton* asked you whether you meant a general minimum for all districts?—No, I did not mean that.

3160. *Mrs. Lyttelton*: Then you meant a varying minimum—varying rates for all districts?—Yes. I beg your pardon.

3161. So that in the same county you might have three or four different minima and three or four different rates?—Yes, certainly.

3162. *Mr. Poulton*: May I follow that up? That has partly answered my point as to whether you meant one minimum or whether you meant a minimum for a distinct grade of work?—No, each separate.

3163. Each grade should have a minimum?—Each district might possibly have to have a minimum, because that is where the great number of objections is found at the present time. For instance, the minimum at the present time is set at the same for an agricultural district as it is for a borough.

3164. *Chairman*: A district minimum for a trade is what you mean?—Yes.

3165. Every wage above that would be a matter of agreement?—Yes.

3166. Before we leave this question of area, you know, I expect, that the proposal for a single Board for the distributive trades has been a good deal opposed by some of the trade organisations?—Yes, and I think if investigation were made it would be found that many of them have changed their opinion. At the time there were objections, but I know of two or three who have turned round completely after seeing the difficulties.

3167. *Mr. Poulton*: Is that as the result of the working of the existing Board?—I think so. (*Mr. Clark*): Perhaps the Chairman was meaning the evidence brought before this Committee?

3168. *Chairman*: I was thinking of that, and also of the opposition which I am told was made at the time to the proposal.—(*Mr. Aveling*): There was opposition.

3169. In 1919, for instance, I think that the Federation of Grocers' Associations was strongly opposed to it?—(*Mr. Howling*): The Grocers and one or two others. There was some compromise on two or three Boards for distribution; that is to say, roughly speaking, the food trades, the clothing trades, and those trades which deal in goods for the replenishment of the home, such as the hardware and ironmongery trades.

3170. *Mr. Poulton*: You think that now as the result of the experience which you have had since

then, they would be in favour of not only withdrawing their opposition, but of supporting the policy of one Board with local District Committees?—(*Mr. Aveling*): From what I have heard stated at various meetings I am convinced that many of them have come to that opinion. (*Mr. Howling*): Most of them, although they urged very strongly for a Board for themselves, now say that they want no Board at all.

3171. *Chairman*: I think you maintained your proposal at a Conference at Bournemouth in May, 1920?—(*Mr. Aveling*): Yes.

3172. We need not go into the terms of it; and again at a Conference at Cheltenham in May, 1921?—Yes.

3173. That was the Conference at which you received the letter from the Minister to which you have referred?—That is so. So far as we know we were the only people who pressed very strongly for an enquiry and not abolition, because we felt that it was one of those matters which should be deeply and thoroughly enquired into rather than going straight off and saying: "Wipe the lot out"; I will not use Lord Fisher's language, but that is how some of our members felt.

3174. That is the spirit of your Memorandum. Then you say something about the Dressmaking and Women's Light Clothing Board; that is at the bottom of page 8 of your précis. Is there anything special in that?—I think Mr. Clark might speak upon that particular matter.

3175. Is there anything in that, Mr. Clark, which we ought to take note of?—(*Mr. Clark*): There is the separation of the bespoke and factory production elements. We think that it very desirable. There is a distinct difference between the bespoke trade and factory work, and in our district there is a good deal of confusion arising between the different rates which are available for the different classes of work.

3176. You are not speaking now of the distributive trade?—Yes. You see, in many shops it is an ancillary department of the distributive trade. A man who is a tailor has a workshop, and part of the trade is wholesale and part of the trade is done for his retail business, and at present, provided he keeps the workers separate, he is able to have one section of workers who are working at the factory rates and another section who are working on the purely bespoke trade. The relationship of the two sections should be very clearly defined. That is a case where District Boards would be of very great advantage.

3177. Then I think you have a proposal to make, Mr. Aveling, as to suspension; that is on page 9 of your statement.—(*Mr. Aveling*): Yes. The difficulty at the present time is this. First, may I deal with the Boards from the point of view of expense? There is enormous expense incurred. I said what the original estimate was; well, that, of course, is far exceeded, and it would be far better that thorough enquiry should be made, especially in view of the effect of the decreased cost of living and the reducing of the index figure, and also in view of the fact that at the present time with the decreasing cost it takes so long for a reduction to become effective so far as wages are concerned. I think many of the traders during the war period were extremely generous to their assistants. It would be far better if there were a suspension and if the Government tried, as in the case of the coal mines, and so on, to take off their control. Instead of that they seem to be parting with it on one side and gathering it in on the other; everything appears to be gathered in. We shall be regulated to death by this building (the Ministry of Labour) unless there is some stop put to it for the time being. Let us get our breath a bit after this war. The distributive trades, so far as I am aware, have always been fairly happy working trades together, and I think myself that they could be safely left for a period of three years.

3178. Not to set up further Boards for three years?—Not to set up Boards for three years. When

30 November, 1921.] Mr. CHARLES AVELING, J.P., Mr. JAMES WALKER CLARK, J.P., [Continued.
and Mr. PATRICK HOWLING, F.I.S.A.]

I contemplate all the Boards that are set up I really do not wonder that people agitate for the closing down of the Ministry of Labour. See the cost which it is causing! Just think what it means if all these Boards are established! It really means the transference of a great amount of labour from one Government Department to another, and it means inspection right and left. If you have these you are bound to create a big army of inspectors to see that they are carried out.

3179. *Lord Weir*: When you speak of the cost, and criticise the cost of administration of this wage-fixing machinery, I presume you do not suggest that that cost is anything like the additional cost caused by the Boards in the industry itself?—Do you mean the lifting of the wage?

3180. Do you prefer to harp on the cost of administration or on what the Boards' decisions mean in the shape of higher cost in your industry?—It is a difficult thing to say, so far as the able-bodied worker is concerned, what cost it does involve in the industry.

3181. You do not wish to submit anything upon that point?—That is a very deep calculation.

3182. *Mrs. Lyttelton*: Your complaint as to cost is as to the cost of administration and not the raising of wages?—That is so. The cost of administration is extremely high; and assuming that it does raise the wages very much and that cost is again put on to the people, it is again the consumer who pays.

3183. *Sir Arthur Pease*: Are you complaining of the cost with regard to Government expenditure or the cost to the trade?—As a fairly heavy taxpayer I object strongly to what I conceive will be enormous Government expenditure if the whole of their scheme is carried through, that is setting up anything from 150 to 200 Boards.

3184. But what about the other part?—The other part, as I say, is a matter of very deep calculation as to whether it does mean a tremendous lifting so far as wages are concerned.

3185. No, whether there is a great cost to the industry in addition to what the Government pay in carrying on the Trade Board?—That is so.

3186. I was asking you.—If that is so—

3187. I want to know whether it is or not.—The Distributive Board not having been set up we do not know what the minimum of that Board will be, and we cannot say exactly what the cost will be so far as distribution is concerned at the present time. There are only a matter of three Boards. I believe that the Dressmaking Board—but Mr. Clark can give better evidence upon that—has been extremely costly to the employers.

3188. *Chairman*: We have had evidence upon that.—It has been extremely costly.

3189. *Sir Arthur Pease*: But that is not the point. Is the cost of administration of the Trade Boards to the trade expensive in addition to the Government expenditure?—It is bound to be, in the larger establishments, especially, and if there is going to be a great number of Boards, of course you have got to have special staffs to keep watching the whole of these matters. I mean, if you have one store which has got five, six, seven or eight Boards dealing with it, you are really bound to have a corresponding staff dealing with it.

3190. *Chairman*: But that is a trifle compared to the effect on carrying on the trade, is it not?—Yes, quite so.

3191. *Mr. Poulton*: You would agree, in view of the evidence from time to time secured when enquiries are held, that if you do away with the Boards you must have something in their place to see that they do not get back to those bad conditions again?—It is very difficult to say, so far as the distributive trades are concerned, that there were extremely bad conditions. From reading Hansard when the Act was passed, it seems as if they were really afraid that prices would decline tremendously,

and there would be sweating because so many munition workers would be coming back to the shops, and that would reduce the wages; and that would bring them down to a sweated wage. I do not think you would ever find that, so far as the retail distributive trade is concerned, but that would appear to be the fear, reading through the speeches.

3192. You would agree that if there is any justification for that fear, there should be some machinery to prevent that unhappy state of things occurring?—The tone of our evidence is to that effect. I cannot say that we are absolutely antagonistic to Trade Boards. I mean the whole tone of the précis, I think you will agree, is in accordance with your suggestion.

3193. I thought so, on reading it through—that whilst you criticise a number of things, on the whole you feel that there must be some machinery.—That there might be some machinery for the purpose, but it should not be elaborate machinery.

3194. You mean this is too elaborate, too slow, and too expensive?—That is right.

3195. If those matters could be dealt with, you are not opposed to machinery?—And it is rather too bureaucratic.

3196. *Dame Adelaide Anderson*: Is not three years rather a long delay to suggest?—We would press very strongly to put in five years.

3197. If it is on the whole a good thing, is it not rather a pity to leave it so long to chance?—We have to put in three years because the Ministry have evidently thought that it is such an extremely good thing that they are going to put up anything from 150 to 200 Trade Boards, according to the evidence of Mr. Humbert Wolfe.

3198. So that when they get that better organisation—?—Something more simple is what is wanted.

3199.—Is there any advantage in leaving it so long?—There is an advantage until we get some degree of stabilisation. There is so much fluctuation at present with the declining index figure.

3200. *Lord Weir*: Do you mean that you can imagine a set of conditions in industry three years from now when you would not object to Trade Boards? Is that what you mean?—To some machinery. No one can foresee for three years. Many things may happen in three years.

3201. You ask for suspension for three years?—We put in "Suspension for a period," and we thought we should be asked the question: "What length of time do you suggest?" You know how these suggestions are made. There was a suggestion of three years.

3202. *Chairman*: It is just putting off the evil day; that is what is in your mind?—No, it is getting to something more of stabilized conditions. Do not let us put it quite as putting off the evil day. It may not be an evil day.

3203. *Mr. Poulton*: Are not the Boards trying—not satisfactorily, perhaps, from your point of view, but really trying—to stabilize conditions and to bring your traders upon a fair basis the one towards the other in a competitive market?—Yes, but with the multitude of Boards—

3204. I quite agree from the point of view of the Board, because we have already dealt with that. Happily the workers and you are agreed that there should be fewer Boards in your particular industry?—It causes unrest.

3205. Supposing we suspended these for three years, would you not have to go over the ground again and have the position made infinitely worse?—(*Mr. Clark*): Our view was that the three years would give an opportunity of thoroughly thrashing out the matter between the workers, the employers and the Department and getting a satisfactory scheme into operation. That was really the point of view I had in mind when I suggested these three years to the Committee originally and got it through. We are to some extent the mouthpiece of the Committee.

3206. Could you not just as efficiently do that with the existing Boards? However inefficient the

30 November, 1921.] Mr. CHARLES AVELING, J.P., Mr. JAMES WALKER CLARK, J.P.,
and Mr. PATRICK HOWLING, F.I.S.A.

[Continued.]

Boards may be, at all events the individuals comprising the Boards, at any rate in your particular industry, are united in a good many things, and therefore, could you not discuss those points, not only with satisfaction, but I venture to think with advantage to the country?—(Mr. Aveling): As a matter of fact, meetings had been held and arrangements had been made, but then when the Ministry turned round in this way everything ceased.

3207. *Chairman*: There is a paragraph in your statement about learners. Is that Mr. Clark's point?—(Mr. Clark): Yes.

3208. What have you to say about the effect of Trade Boards upon learners?—The difficulty at the present time is that the learners' rates are so complicated and high, and the wages of the assistants are also so complicated and high, that it is not possible, I was going to say to waste time, but I will say to spend time, in teaching them their business, and unfortunately we are in the position that very few men are now taking learners at all. There has never been such a small number of learners employed. I am the Chairman of the Women's Sub-Committee in our district for Unemployment at the Labour Exchange, and we have quite a number of youths and girls receiving the dole who, in ordinary times, would be learning a trade; and that, unfortunately, is not peculiar to our district.

3209. What trades are you thinking of?—I am now dealing with distribution—dressmaking, tailoring and millinery.

3210. I think in those trades young people used to be taken in simply to learn their work and then go out of it altogether?—There were a great many of that sort, and there was also another class. The factory work in our neighbourhood is strenuous, and very often a girl would go to the factory for two or three years and she would find that she could not stand the strain of the heated atmosphere, and the noise of the machinery, and that sort of thing. She would then come to the shop, largely for a little help for the home in the way of wage, but much more for keeping the girl out of mischief—keeping her in pleasant employment under pleasant conditions. She did not get very much wage—perhaps 5s. or 10s. per week, or something of that kind—and you did not object to having half a dozen of that kind about you. You cannot afford it now; because of rates of pay; they must earn their money.

3211. *Mr. Poulton*: But having regard to the increased cost of living, are the wages so very much higher as really to put an embargo upon it, or is it not because many employers under the older method before the war were able to pay very small sums, smaller than those which you have named, and have not yet got out of that idea that they are entitled to have that class of green labour practically for nothing?—I am afraid that that is too true—I mean of some. It is not true of the average employer, and certainly it is not true of the well-managed establishment, but there are cases of that kind, and it is no use closing your eyes to it.

3212. *Dame Adelaide Anderson*: Difficulties are necessarily set up for businesses which are able to pay upon that basis by the introduction of a standard which prevents the wage falling down below at a time of economic strain?—A new element comes in altogether.

3213. *Mr. Poulton*: It upsets their old-accepted economic theory?—Yes.

3214. And until you get away from that you will have that difficulty?—Yes, you are bound to.

3215. Especially with trade in the state in which it is at the present time in the whole of the country?—Yes.

3216. I venture to say that that is one of the reasons why there is this objection, not so much to the wage as a wage compared with the cost of living, but because it has upset what in some industries had become almost an accepted theory?—I do not know whether I could quite accept the full meaning of that.

3217. But partially?—It is so, to some extent. We

are very anxious indeed that the system of apprenticeship should be more firmly established. It existed when Mr. Aveling and I began our careers, and we think that it would be to the advantage of the learners as well as to the advantage of the community as a whole. During the war largely there has been a great deal of changing about for an extra shilling, and very often it has ended in the young people not becoming thoroughly efficient in any industry at all. They have been a few months in one business and a few months in another, and have got high wages, and at the end of it they have learned nothing and are not settled.

3218. *Chairman*: How would you deal with that question?—Do you mean the question of apprenticeship?

3219. Yes?—The Trade Boards themselves could deal with that in the conditions of employment; and I think that in the grocery trade they have practically come to an agreement between the two sides.

3220. Do you mean that they should permit an employer to take an apprentice at lower rates than he would have to pay to a learner engaged by the week?—No, I would not say at lower rates.

3221. *Mrs. Lyttelton*: You mean that he is bound to work for a certain length of time for the firm?—Yes, continuous employment.

3222. *Mr. Poulton*: As to the point which you just now mentioned, was it not a matter of complaint before the Trade Boards as to the lack of that thorough training, which I agree was quite necessary?—Yes. We are advocating from that point of view more adequate machinery.

3223. I do not say that the present rates are perfect, because like many other things, when they are tested they are found to have mistakes in them, but will not these Trade Board regulations help you to train efficient workers, if carried out in the proper spirit?—With a proper apprenticeship scheme added, certainly.

3224. *Chairman*: If an employer cannot afford to pay a learner these rates for a year, how can he afford to pay them to an apprentice for three or five years?—He would not pay the same rates as are now suggested for learners, because the present rates pre-suppose a higher efficiency than the learner possesses.

Chairman: That is what I was putting to you.

3225. *Mr. Poulton*: In other words, you consider those rates are so high that they want revising?—They do, and not only do the rates want revising, but there wants to be continuous employment.

3226. But that is not necessarily condemning the system, but from your standpoint you think that the rate has been placed upon a wrong basis?—The learners' rate has. The learners' conditions are wrong. There should be apprenticeship. It should not be possible for a learner to come for six months to me and then go with that experience to somebody else.

3227. *Mrs. Lyttelton*: The point is that he or she must be bound to you for a certain length of time?—Yes, that is so.

3228. *Chairman*: I am accepting that, but I want to know how one is to bring it about by Trade Boards. The only thing is to say: "True, you cannot pay learners high rates; therefore take an apprentice to whom you can pay lower rates; take him for three or five years, or whatever the time is." I believe some Boards have done that and have fixed lower rates for apprentices than for learners of the same age?—I was not aware of that.

3229. That would be one way, would it not, of encouraging apprenticeship?—It would, and probably a wise one, too.

3230. *Sir Arthur Pease*: Is there any difficulty in your experience, through learners being refused because they stay at school until a later age, and want a high rate to begin with?—The only school difficulty which we have had in our neighbourhood has been that until, I think, last year or the year before the scholars from the secondary schools all left at one period of the year. Under the recent

30 November, 1921.] Mr. CHARLES AVELING, J.P., Mr. JAMES WALKER CLARK, J.P.,
and Mr. PATRICK HOWLING, F.I.S.A.

[Continued.]

Education Act they now leave at the conclusion of the term after which they attain a certain age, and therefore they are spread over the year, and that has been a very great easement.

3231. *Mr. Poulton*: But the age is raised, is it not?—Yes.

3232. *Sir Arthur Pease*: In the schedules which I have seen, these learners are paid according to age?—Yes. That is ridiculous.

3233. A girl not leaving school, say, until 16 years of age, would be of little more value than a girl of 14 years?—Not as good.

3234. I mean if she were only starting?—She would not be as good.

3235. Have you any suggestion for getting over that?—Apprenticeship would do that, because she would begin with the first year of her apprenticeship.

3236. *Mr. Poulton*: And not age?—Not age.

3237. That is your suggestion to get out of that difficulty?—That is our suggestion, yes.

3238. *Lord Weir*: With regard to these questions which we have been discussing, about learners and apprentices, you and the workers have made these arrangements yourselves on the Trade Board; they represent your agreed views, do they?—Is that so?

3239. I am asking whether it is so?—I thought you were saying that it was. It is emphatically not so.

3240. You have not been able to agree?—No, we have not been able to agree. (*Mr. Howling*): That would be one of the advantages of area committees.

3241. *Mr. Poulton*: How did the rates ultimately become operative?—(*Mr. Clark*): By the appointed members' vote—by the Minister's action, of course.

3242. I presupposed that, but I meant before then. You say that it was by the appointed members' vote?—Yes.

3243. In all cases?—Yes.

3244. Were there not any agreed rates at all?—No. I do not think there were any agreed rates. I cannot recall any—not so far as regards the particular industry with which I am concerned.

3245. *Chairman*: Which industry is that?—Drapery and dressmaking.

3246. *Mr. Poulton*: Do you think that is really due to the fact that knowing that the appointed members were there, both sides refrained from attempting to settle the rate, but put the obligation and the responsibility upon a third party?—So far as the employers were concerned that was not their case. I cannot speak for the others.

3247. *Lord Weir*: My point was this. I am speaking only of those particular rates governing learners and apprentices. I can readily understand a difference of view in connection with adults, but I did think that it might be possible for the workers and the employers to agree about learners and apprentices. You say no?—From the very beginning it has been a most difficult question. Conditions as to learners vary very much indeed in different parts of the country, and nothing emphasises the need for district or area committees so much as the learners' rate, because it is not only the amount of wages which you pay which is the important factor, it is the question of the class of work you do; that is to say, in some classes of business they are able to do the very best work in a very short period—the best work that is done in the shop—but in others, after very long training, they are not able to do it.

3248. You believe that an area committee comprising employers and workmen would be able to make more satisfactory arrangement for apprentices?—Certainly.

3249. *Chairman*: Now, Mr. Aveling, we will go to your more detailed suggestions upon the footing that the Boards are to be continued. You have something to say on page 10 about the duplication of membership of Boards?—(*Mr. Aveling*): Yes. It is not necessary for me to read the paragraph, I take it.

3250. Your point is that some persons are members of several Boards?—Many; and personally I think it is a very bad principle that people can be members of so many Boards. I mean it is impossible for a

man to be an authority on so many different subjects, and to switch across from one Board to another Board. I think the more that we can bring in actual employers and actual employees to meet, and the oftener they can face one another, the better it will be.

3251. You have something to say about the appointed members?—I should abolish them, that is, very quickly.

3252. *Mr. Poulton*: I notice that on page 11 you do suggest that although you would abolish them, there might be a case made out for someone taking their places, because you go on to say: "That there must be impartial members sitting in the capacity of arbitrators is fairly clear." And then you go on to say: "There is a suggestion that one from each side of the Board could be selected to sit with the chairman, in much the same method as obtains in a Court of Referees"; so that I take it you realise that there is some difficulty, and, after all, when you have abolished them you have not got rid of the difficulty?—Possibly I had better state that when I said "abolish them" it might be my own personal opinion rather than speaking from the précis, but it does seem to bring in what we will term the theoretical side to deal with the practical side. They do not always mix quite so easily. It should be possible to obtain Boards or a Court of Referees on the lines suggested here rather than on the lines of appointed members from the Ministry.

3253. *Chairman*: It rather comes to having a single chairman, does it not?—Yes, by bringing in a single chairman. (*Mr. Clark*): The idea of the Court of Referees, of course, is a panel. (*Mr. Howling*): I think what we had in mind was a single chairman who would call to his aid, should he so desire, from a panel, persons in an advisory capacity.

3254. From a general panel?—Yes, at his selection.

3255. *Mr. Poulton*: But that he should give the decision, and not the panel?—Yes.

3256. *Dame Adelaide Anderson*: Where would the panel be formed, and how would it be formed?—That is a matter of detail which would not be insurmountable.

3257. *Chairman*: It would be formed like other panels by the Ministry concerned?—Yes.

3258. *Dame Adelaide Anderson*: Of people conversant with the industry?—That is the whole point. (*Mr. Clark*): From both sides, employers and employees.

3259. *Sir Arthur Pease*: If you had a full Board such as you suggest, and the question was not one affecting that particular trade, you would naturally call up an employer and a workman specially conversant with that particular point?—(*Mr. Aveling*): That is so.

3260. *Chairman*: We have discussed apprenticeship and the minimum wage. What do you say about the limitation of the scope of the Boards?—That is limiting the scope of the Boards to dealing with the minimum rates rather than dealing with every class.

3261. It does not deal with scope, as I understood it. Then the procedure for fixing rates you think is too complicated?—Much too protracted. Now a reduction may take anything up to six months, the same as an advance can take anything up to six months.

3262. *Mr. Poulton*: You think it is too long a period, do you?—It is too long a period. It is very easily seen if you take the index figure showing the fall in the cost of living, and have the same fluctuations.

3263. If you are going to proceed strictly upon that as the basis for your wages, I can well understand it.—(*Mr. Clark*): In the dressmaking trade, variations—increases, at any rate—should not come into operation and be post-dated. There should be a fair margin allowed for a season.

3264. *Chairman*: You mean you would fix them to come into operation at some time?—Fix them

30 November, 1921.] Mr. CHARLES AVELING, J.P., Mr. JAMES WALKER CLARK, J.P.,
and Mr. PATRICK HOWLING, F.I.S.A.

[Continued.]

for six months or something like that, and they should operate for the six months, and the matter should be reviewed in sufficient time to afford ample time to get work out that has been accepted.

3265. *Sir Arthur Pease*: We have had evidence from one or two witnesses that when a rate has been proposed it has been given effect to by the employers, although it was not legally binding?—That is so.

3266. I wanted to know whether you thought that applied generally, or only to specific instances?—*(Mr. Aveling)*: I think many do it. *(Mr. Clark)*: It is general in dressmaking. *(Mr. Aveling)*: We should like to emphasise the last paragraph there. We have had examples of the receipt of new schedules some days after the rates have been in force, which has had very serious consequences in the bespoke tailoring trade.

3267. *Mr. Poulton*: It is a question of administration, is it not?—It is, but it has had very serious consequences. Suits have been booked at certain prices, and then the order has come into force and there has been insufficient warning.

3268. Still, there has been public notification, has there not, that the rates were coming into operation at such-and-such a date? That is the usual procedure—that the Minister gives notice to the trade as a trade that after such-and-such a date these rates will become operative. They may not have had it individually?—*(Mr. Howling)*: As I understand it, the obligation resting upon those who administer the Act is that every person should receive it.

3269. I am not saying that that is not so, I am only saying that there is a notification sent out that rates are coming into operation, although they may not have had their individual notices?—The point is that the notice of the confirmation by the Minister has not been issued. They have received a notice to say that a certain rate came into force, say, on the 19th instant, and we have known cases where the notification has been received on the 26th.

3270. I am afraid we are slightly at variance. I have repeatedly seen notices that after such-and-such a date in such-and-such an industry these rates will become operative. That is a public notice apart from the notification to the individual?—*(Mr. Clark)*: Yes, that is so.

3271. *Chairman*: Then you have something to say about the inefficient worker, *Mr. Aveling*?—*(Mr. Aveling)*: Yes; that is as against what we might term the sub-normal worker. There are certain individuals, especially of a certain age, who are not up to the minimum standard, but who would be prepared to stay, but yet you could not get a medical certificate that they were sub-normal workers.

3272. How would you deal with that problem?—*(Mr. Clark)*: The District Board would do that, because the shop steward knows them. *(Mr. Aveling)*: Everybody knows them in an area. Most people know them, and it would be dealt with in that form.

3273. Then you want to give to the District Board the power to grant certificates in those cases?—I think the District Board should have that power. The investigation should be by the District Board in a case of that sort.

3274. It would be a difficult investigation, would it not?—I do not think so.

3275. They would have to decide whether the man was slow or not?—*(Mr. Howling)*: If the worker himself made the application, would not that carry great weight? *(Mr. Clark)*: We have it now with the disabled soldier.

3276. But that is physical disability?—Many of these are physical.

3277. *Mr. Poulton*: You feel that the present clause in the Act allowing certain employees to have a less rate is not sufficiently wide; that is it, in other words, is it not?—*(Mr. Aveling)*: That is it.

3278. It is not wide enough to deal with a man who is otherwise a valuable servant, but who is abnormally slow?—You have very great difficulties. We have experienced it from a corporation point of view very much. You have a certain class of

man, and you could not absolutely define him as a sub-normal worker; it would pay that man to remain in, and he would wish to remain in rather than that he should be superannuated.

3279. You think, therefore, that machinery should be set up so that the Board can deal with that particular matter?—Yes. *(Mr. Clark)*: On the recommendation of the area. *(Mr. Aveling)*: Yes, it is one of those things that the area should consider.

3280. *Lord Weir*: Should it refer that to London, or should it settle it out of hand in the area?—*(Mr. Howling)*: In the area.

3281. It should not refer it to London?—No.

3282. *Mr. Poulton*: I take it that in the main they would settle it, and they would report it?—*(Mr. Aveling)*: And it would be confirmed. We all know how these reports are confirmed.

3283. *Dame Adelaide Anderson*: Why should not the District Board, of which we heard a little while ago, give the certificates? You now think that it should be the area?—*(Mr. Clark)*: The area committee should give the certificate under the authority of the Central Board confirmation. I think it is important that the central body should confirm it. You might have district boards which were not quite fair to one side or the other.

Chairman: We have three gentlemen expressing opinions upon this.

3284. *Mrs. Lyttelton*: You think that the area would be sufficient authority?—To recommend, but the central body should confirm, I think. *(Mr. Aveling)*: I think the central body should confirm in the same way that I think the central body should confirm the whole of the minutes of an area committee.

3285. *Chairman*: Are you all agreed upon that?—Certainly.

3286. *Lord Weir* suggested to you that this matter of certificates exempting people might perhaps finally be dealt with by the Area Board?—The Area Board would make a recommendation to the Central Board.

3287. *Lord Weir*: You think that necessary?—*(Mr. Clark)*: Yes.

3288. You do not consider that those certificates and the individuals applying for them could be dealt with locally, and finally disposed of without any reference whatever to London?—*(Mr. Aveling)*: I think in practice they would be. The only thing I was thinking of was that the whole of the recommendations would be confirmed by the central authority.

3289. *Mrs. Lyttelton*: What is the object of it?—I was thinking that then the minutes of the area authority would go up as a whole for confirmation by the central authority, without being in any way mutilated. It is purely one of those minor points which I should think the central authority might delegate to the area authority to do.

3290. *Chairman*: You would give power to the Central Board to delegate?—Yes, I would give power to them to delegate, if so desired, although the Central Board should have a fairly wide scope so far as that is concerned. If the Central Board thought that the area should do it, they should be allowed under their rules and regulations to delegate that.

3291. *Chairman*: Then you think that the application in this case should be made by the worker, and not by the employer?—It should be made by the worker.

3292. Now we come to scope, as I understood it just now; that is, the scope of a particular Trade Board.—The difficulties of the definition?

3293. Yes.—Yes. You see, even the Minister is somewhat bothered here, because he alters his decision with reference to a case about six or seven months afterwards.

3294. Of course, I understand that there may be great difficulties in a particular case, but how would you deal with the question of scope?—With the com-

30 November, 1921.] Mr. CHARLES AVELING, J.P., Mr. JAMES WALKER CLARK, J.P.,
and Mr. PATRICK HOWLING, F.I.S.A.

[Continued.]

prehensive Trade Board we should not have these same difficulties.

3295. That is quite true as regards the distributive trades.—Yes, that is so. I think it was in the evidence of Mr. Humbert Wolfe that it said that it took about three pages to define a grocer. I know it took a tremendous lot.

3296. *Chairman*: I think Dr. Johnson did it in less?—Yes. There would be no need for these definitions if there were a comprehensive Board.

3297. Except, perhaps, as between the sections?—Yes. I think they would very soon agree themselves.

3298. If you had one Board you might leave it to the Board to say whether a man came within one section or another?—Yes, the wider the regulations there, leaving it to the common sense of the Board themselves, the easier the working would be. It is only when individuals start to set a thing down on paper that difficulties appear to arise.

3299. This suggestion, you quite understand, only applies to a case where there is one Board. If you had disputes or differences between two Boards as to whether a particular worker came within one Board or the other, you must refer that to some third party?—Yes.

3300. *Dame Adelaide Anderson*: And there would need to be an alteration in definition of other Boards. I understand that dressmaking, in so far as it came into the distributive trade, would be under this one Board, and that would mean an exclusion from the Trade Board for Dressmaking and Light Clothing of any dressmaking that fell within the distributive trade?—Yes.

3301. Therefore there would have to be co-ordinating power there?—Yes; it is the co-ordination that we go for the whole time.

3302. *Sir Arthur Pease*: Would it not be difficult to distinguish between distributing trades and manufacturing trades, owing to so many distributors manufacturing as well?—I do not think there would be that great difficulty, because the distributors manufacture, you might say, for stock; it is not for the wholesale trade.

3303. Some do both?—I agree that some do both, but it is not a frequent practice.

3304. *Dame Adelaide Anderson*: If there were a difference between the wages for, say, seamstresses in a linen factory or a dressmaking factory and those for the same class of workers under the Distributive Trade Board, disturbances might arise; there would be a pull one way or another?—(*Mr. Clark*): It does now. (*Mr. Aveling*): That would be confined very much with the setting up of the comprehensive Boards. I think the difficulties arise now because of trying to set up a Board for everything. There should be more grouping than there is at the present time.

3305. *Mr. Poulton*: In addition to that you want to simplify it from the legal standpoint. You say that Mr. Humbert Wolfe takes three pages of foolscap because of the legal definitions. You want your legal definitions very much simplified?—Very much simplified. (*Mr. Clark*): And made sensible.

3306. *Chairman*: As to hours of labour, I do not know whether you have any suggestion to make about that?—(*Mr. Aveling*): It is very important, so far as distribution is concerned, that the hours of labour should be coincident with the closing of the shops. If not, you might set up a shift system so far as the distributive trade is concerned. There is a tendency at the present time to allow longer hours. Parliament appears to have pandered to that somewhat so far as two or three other trades are concerned, and we are watching it very carefully, and are very much alarmed lest it should spread to some of the other trades.

3307. The shift system?—(*Mr. Clark*): No, the longer hours. (*Mr. Aveling*): If, for argument's sake 48 hours is fixed for the assistant, or 52 hours, or whatever it is—it really does not matter—the shop hours should be the same.

3308. *Mr. Poulton*: That is they should be co-ordinated?—They should be co-ordinated.

3309. That, I agree, is a matter for the wider Board. You get back to your wider Board all the time?—(*Mr. Howling*): Our association attaches great importance to the hours being co-incident.

3310. *Sir Arthur Pease*: What would be the shop hours?—(*Mr. Clark*): 48 hours.

3311. Surely the shops are open longer than that now?—(*Mr. Howling*): 48 hours are the hours proposed by the Grocery Board. (*Mr. Aveling*): The hours of the shops in some instances are longer than 48 hours now, but whatever hours are settled so far as the employees are concerned by the comprehensive Board, that period of hours should be the same as for the opening and the closing of the shops.

3312. *Chairman*: Or rather you would put it the other way: Whatever hours are fixed by Parliament for the shop should be the hours fixed for Trade Board purposes?—Yes, that is so.

3313. *Sir Arthur Pease*: Surely in many districts you would have longer hours than 8 hours a day, or the people at work would not have any chance at all of shopping?—I think that can easily be worked out. It was found, during the war period particularly, that the shorter hours allowed the workers to shop.

3314. I am afraid I found exactly the opposite. I will say this, that the workers are the greatest sinners over early closing. They are the worst sinners out of the whole crowd.

Chairman: We are getting rather outside the scope of our inquiry.

3315. *Lord Weir*: One question as to hours: Who fixed the 48 hours, the Trade Board or custom before the Trade Board?—(*Mr. Clark*): The Trade Board fixed it.

3316. The Trade Board fixed 48 hours in the distributive trade?—(*Mr. Aveling*): I understand that the 48 hours' week was proposed by the Grocery Trade Board.

3317. Did it lead to a change of practice?—(*Mr. Howling*): It will do, if it comes in. (*Mr. Aveling*): It is the 48-hour week as proposed by the Grocery Trade Board. It has not been considered from the point of view of the closing of the shop, and we want to make the point that whatever the one is so the other should be.

3318. The point I want to put is this: The Grocery Trade Board have proposed a 48-hours week, and if that is agreed to it will represent a change of your present hours?—Yes, I should say it would.

3319. What are your present hours?—Fifty-two, I fancy, would cover the whole lot. Personally, so far as I am concerned, they are under 40.

3320. Surely a very important change?—(*Mr. Howling*): If you have a 48 hours' week you will have a tremendous deal of overtime, and you will inflict a great hardship on seasonal towns, which cannot come within the limits of 48 hours. (*Mr. Clark*): That is where the scope comes in again for the Area Committees. In dressmaking the standard period was 59½ hours per week until the Dressmaking Trade Board was established, and when that was established, 48 hours was the legal period for the flat rate of wages, and after 48 hours it became then a question of extra pay. We can still work the 59½ hours per week without working overtime according to the Factory Acts, but according to the Trade Board rates overtime wages commence at the end of the 48 hours.

3321. *Mr. Layton*: Does the Shop Hours Act limit the number of hours, or is it simply referring to the time of opening?—To the time of closing. (*Mr. Aveling*): The Shop Hours Act does not limit the number of hours. It is only limited by local orders.

3322. What is approximately the maximum number of hours that a shop could be kept open under the Shop Hours Act?—Under the new Act it is 8 o'clock every night, and nine o'clock on Saturdays.

3323. And there is a provision for an early closing day?—Yes.

30 November, 1921.] Mr. CHARLES AVELING, J.P., Mr. JAMES WALKER CLARK, J.P.,
and Mr. PATRICK HOWLING, F.I.S.A.

[Continued.]

3324. What does that in fact mean? What is approximately the maximum number of hours that you can keep open under the Act?—(Mr. Howling): Fifty-two hours would be the usual.

3325. That is the maximum number of hours that you could stop open?—Yes.

3326. But it can be very much bigger than that, surely; it can be between 60 and 70 hours, can it not?—(Mr. Clark): Yes, much more. (Mr. Howling): I thought you meant in practice.

3327. No, I want to know the maximum number of hours that you can keep open under the Act?—The Shop Hours Act does not fix the time for opening. You can open at 12 o'clock midnight and go on keeping open. (Mr. Aveling): Eight o'clock is the fixed hour for closing and nine o'clock on Saturdays, but there is no opening hour fixed, so that if you calculate your hours from eight o'clock or nine o'clock in the morning it varies according to that.

3328. But in practice it works out at about 52 hours?—Yes.

3329. Mrs. Lyttelton: Do I understand this, that you tell us that different hours for the workers might make different hours of employment and therefore unfair competition as between one shop and another? That is what is at the background of your mind, is it not?—Yes. I think what we wish to obviate is anything in the form of the shift system in the distributive trades.

3330. It is not so much a protection to the worker as a protection to the trader that you are after in this matter?—It is a protection to the trader against what we might term the multiple shop trader, where there may be a transfer, or there may be a surplus of labour transferred to various districts for the purpose of keeping those places open until a later hour, to the disadvantage of the ordinary small shop-keeper.

3331. Mr. Poulton: You are afraid that by that system they might keep open until 10 o'clock at night?—Yes, there are tendencies in that way already.

3332. Mr. Layton: Is the shift system worked to any substantial extent?—I do not think it is to any substantial extent, although I believe there is a commencement of it, and it is the commencement that should be nipped, in our opinion.

3333. Dame Adelaide Anderson: Even in manufactures carried out in connection with the distributive industries? I mean, does the shift system show any sign yet of appearing there?—Not in the manufacturing. I am dealing now purely with distribution.

3334. Chairman: With regard to representatives of co-operative societies on the Boards, they sit now?—As employers, and also as employees.

3335. Mr. Layton: Might I elicit one answer, going back for a moment? I do not think you gave the grounds for your objection to the shift system in the retail trade.—The objection is that if it is worked by the multiple shop the others will have to keep open late in self-protection. If the smaller shopkeepers have to keep open in self-protection, it is going to be very detrimental, both from a health point of view and from every point of view.

3336. Under the shift system?—Assuming that there is only one assistant, or that there are two assistants, in one of the smaller shops, and you have a ring of multiple shops—for instance, it is not unusual to have three or four branches of one particular shop in one district—it is very easy to get a surplus staff of labour for running the shift system in a shop of that description, whereas it is an impossibility, to be fair to the employers and to be fair to the employees, in a smaller shop.

3337. Mrs. Lyttelton: That is why you want the hours of work to be coincident with the hours of closing?—That is so.

3338. Dame Adelaide Anderson: That is the old argument for fixed hours in industry?—Yes, that is so.

3339. Mr. Layton: Do you think that the needs of the public can be met within a limited number of

hours such as 48?—I think so. At the place from whence I come we have had the Shop Hours Act in operation, and the hour is 7.30, so that we are earlier than the Government hours under their recent Act of Parliament, which has been extended to December, 1922.

3340. Lord Weir: It really means an impaired service to the community?—(Mr. Clark): Equal to the Post Office service.

3341. Chairman: Perhaps we can pass from that. You were going to mention the co-operative societies. —(Mr. Aveling): Yes, there is a question of representation so far as co-operative societies are concerned; that is, if they sit as employers they should be at least directors of the societies.

3342. Are there members of Trade Boards appointed to represent the employers who are really employees of co-operative societies?—Yes, in one sense. (Mr. Howling): We believe so. (Mr. Aveling): We believe that to be the case.

3343. What position would they hold in the shop belonging to the Co-operative Society?—I should say the position they hold would be manager.

3344. Mr. Poulton: Do you object to a manager sitting on a Board?—I think it should be at least a director.

3345. That would apply both ways, would it not?—(Mr. Clark): Certainly. It ought to do.

3346. Mr. Layton: Would you say that in industry, generally speaking, wage negotiations are not usually carried out on the employers' side by managers?—(Mr. Aveling): I should imagine it is mostly by directors.

3347. I should have thought that was an extremely open question?—(Mr. Clark): In distribution it would be so (by directors or proprietors).

3348. I was wondering whether there was a distinction between that and industry generally, because certainly on the Conciliation Board of which I have knowledge the manager constantly sits as a matter of practice?—That would be the position in distribution.

3349. Lord Weir: Do you mean that one of Harrods directors sits on a Trade Board?—(Mr. Howling): I think there are directors who sit there as representing big firms.

3350. Sir Arthur Pease: Does it not need to be defined what is meant by manager, whether general manager or manager of one department?—(Mr. Aveling): I think it should be defined as to who can represent a trade on the employers' side and on the employees' side.

3351. Chairman: The difficulty is that they are both employers and employees, in a sense?—Yes.

3352. It would be very difficult to deal with?—Yes.

3353. Mr. Poulton: I do not know, but I assume that they are asked as employers to send representatives, and within their own discretion they send those whom they consider to be the proper persons to represent them?—Quite so. I daresay that is how it has been done. I have no personal knowledge of how it has been done.

3354. Chairman: Have you any suggestion to make as to voting? If not, you wanted to say something about objections?—We know that in the Grocery Trade Board and in the Dressmaking Board there have been an enormous number of objections raised on account of the rates, and we think that some better arrangement should be made for considering these objections. At present, we think it is very unfair, and in fact it seems almost a waste of time advertising the fact that there are going to be certain rates, and I think the setting up of Area Boards, and so on, would save a good deal of present difficulty.

3355. We must leave that for the Boards?—Yes. (Mr. Clark): The point was this, that there were two thousand objections to the Grocery Board which were classified as to the kind of objection, and there was no weight given to the individual objector, that is to say, whether he came from a rural area or from a city area; and it has been felt that some of the men's objections were not fairly put.

30 November, 1921.] Mr. CHARLES AVELING, J.P., Mr. JAMES WALKER CLARK, J.P., [Continued.
and Mr. PATRICK HOWLING, F.I.S.A.

3356. That must be left to the Boards?—Yes.

3357. *Mr. Poulton*: That is a matter for the Boards, surely?—The Area Council would remove that.

3358. *Sir Arthur Pease*: Are you in favour of Boards being abolished altogether, or do you think that with the amendment you suggest they should continue?—(*Mr. Aveling*): With the suspension.

3359. No; I want to ask that particular question?—I think our précis points to the fact that it is not abolition. Properly worked, that is to say giving fair representation and fair hearings to all sides, they might be of benefit—I cannot say that they

will be, but I say they might be of benefit to the country.

3360. You think that that is practical?—I think it is practical.

3361. *Chairman*: Limited in the way which you suggested?—Yes, on the lines I suggested.

3362. *Mr. Poulton*: Limited on the one hand but widened on the other, because your Area Boards are very wide, surely?—They are very wide.

3363. *Chairman*: We are obliged to you, gentlemen, for your evidence.—I take it our précis will be taken as part of our evidence?

3364. Yes.—Thank you.

(The Witnesses withdrew.)

Mr. E. J. W. BUCKPITT, J.P., called and examined.

The Witness handed in the following statement as his evidence-in-chief:—

MY LORDS, LADIES AND GENTLEMEN,

At the outset I think it advisable to explain that the employers' side of the Rope, Twine and Net Trade Board is selected from members of the following nine associations (forming the Rope, Twine and Net Manufacturers' Federation), with the addition of a certain number of employers whose firms are not affiliated to an association or the federation:—

The British Hemp Rope Manufacturers' Association.

The Grimsby Net Manufacturers' Association.

The Cotton Twine Manufacturers' Association.

The Twine Manufacturers' Association.

The Scottish Net Manufacturers' Association.

The Binder Twine Association.

The Bridport Manufacturers' Association.

The Western Counties Twine and Rope Manufacturers' Association.

The Hemp and Tow Spinners' Association.

Meetings of all the associations have been held since the appointment of the Committee of Enquiry, and finally a mass meeting of the federation and unaffiliated firms in the trade was held on Tuesday, the 18th October, 1921. At this meeting it was unanimously decided that I should give evidence on behalf of the whole trade, and this information was conveyed to the secretary of your Committee of Enquiry by a letter dated the 20th October.

Two meetings have also been held between representatives from the workers' side of the board and from the employers' side of the board, and as a result there are many points upon which the workers' side of the board are in complete agreement with the evidence I propose giving.

In so far as enquiries go, the first intimation the trade received as to the intention of the Minister of Labour to apply the Trade Boards Acts to this trade was a small paragraph in the "Daily News" on Saturday, the 1st March, 1919, reading, "The Minister of Labour announces that he intends to apply the Trade Boards Acts to the rope, twine and net trade."

The British Hemp Rope Manufacturers' Association and the Binder Twine Manufacturers' Association received the first direct communication from the Ministry of Labour with regard to the Minister's intention under date the 7th March, 1919.

The Cotton Twine Manufacturers' Association held a meeting on the 25th September, 1918, on the question of forming an interim industrial reconstruction committee for that particular branch of the trade. Mr. Cardwell, the chairman of that association, at a meeting of the association held on the 29th October, 1918 (following a conference held at the Ministry of Labour on the 16th October), implied that he had reason to believe the Minister of Labour was intending to put the Trade Boards Acts into operation in connection with the rope, twine and net trade.

The Hemp and Tow Spinners' Association apparently about March, 1919, had an indirect intimation

that it was the intention of the Minister of Labour to bring the trade under the Trade Boards Acts.

The Twine Manufacturers' Association knew nothing until the 6th June, 1919, when the proposition to form two trade boards for the trade was before the Minister.

From records, therefore, it would seem that no other branch of the trade except the British Hemp Rope Manufacturers' Association on the 7th March, 1919, and the Binder Twine Association received any actual notice of the Minister's intention to apply the Trade Boards Acts to the rope, twine and net industry!

On the 12th March and 28th March, 1919, meetings of the various associations were held, and had it not been for the courtesy of an invitation from the British Hemp Rope Manufacturers' Association, not one net manufacturer in England or Scotland would have had any idea or would have received any notice relative to the proposed formation of the Rope, Twine and Net Trade Board!

Net manufacturers, particularly represented by the Scottish Net Manufacturers' Association and the Bridport Manufacturers' Association, were, from the very first, bitterly opposed to the netting trade being linked up with the rope and twine trade, and on the 28th March, 1919, the following letter was drawn up and sent to the Ministry of Labour:—

Bridport,
Dorset.
March 28th, 1919.

The Ministry of Labour,
Montagu House,
Whitehall, London, S.W.1.

"SIR,

Trade Boards Act, 1909 and 1918.

"Draft Special Order made in pursuance of Section 1 of the Trades Boards Act, 1918: With respect to the rope, twine and net trade we are instructed by the Bridport Manufacturers' Association and the Scottish Net Manufacturers' Association, whose interests are largely affected by sections of this order, to lodge objection to the inclusion of the machine-made fishing net trade in the above draft order with the rope and twine trades.

"The specific grounds for objection are:—

(a) That the trade is a textile one and has nothing in common with the rope and twine trades.

(b) That there is no similarity in processes or in working conditions.

We therefore request that the Appendix I be amended by the omission of (G) and that the succeeding paragraphs be amended accordingly. As neither of our associations were in any way consulted at any time, nor asked to join the conference held at your Ministry on the 16th October, 1918, in regard to the Draft Order, they have to-day met delegates of the Rope and Twine Trades Association which met at Leeds,

30 November, 1921.]

Mr. E. J. W. BUCKPITT, J.P.

[Continued.]

where notice of our intention to lodge this objection was given, and it was agreed that we had no interests in common."

Yours faithfully,

(Signed) E. H. BERTON.

Chairman, Scottish

Net Manufacturers' Association.

(Signed) EDWIN J. WOTTON BUCKPITT.

Hon. Secretary.

Bridport Manufacturers' Association.

Following this letter a conference was held at the Ministry of Labour, on Monday, 7th April, 1919, which was presided over during the first part by Mr. Leggett, of the Ministry of Labour, and afterwards by Mr. Besso. At this conference a definition was drawn up for the formation of a *Net Trade Board* as apart from the rope and twine branches of the trade, and it was made subject to the net trade agreeing with the rope and twine trade to this being done.

A very strong point was also made by the net manufacturers that net menders around the coast or beatsters should be included within the scope of the Special Order, and writing to the Ministry of Labour on the 15th April, 1919, in connection with this Special Order, emphasised this point as follows:—"providing the net members around the coast are either brought within the scope of the Order or brought under a separate Trade Board and be subject generally to the same conditions as the net trade itself." That the Minister of Labour fully understood this point is shown in a letter, dated 12th April, 1919, forwarding to the Scottish Net Manufacturers' Association and the Bridport Manufacturers' Association copies of the new definitions agreed upon on the 7th April, and saying: "I am to add that, in view of the opinions expressed at the conference regarding the mending of nets, the proposal to issue a further Draft Special Order to cover any mending of nets not falling within the scope of the present Draft Special Order, will be considered subject to the advice of the Trade Board for the net making industry when established." (This letter was signed by Mr. H. B. Butler.)

A meeting of all branches of the trade was held on the 8th May, 1919, when the following resolution was passed:—

"That this meeting approve of the formation of one Trade Board only and not two Trade Boards for the rope, twine and net industry, but would not object to the formation of a separate Trade Board for the one process of making and re-making and mending of nets."

The netting trade therefore considered that any objections of the Ministry of Labour to the formation of a separate Board for the net end of the trade had been overcome by the passing of the above resolution.

The Ministry of Labour however summoned representatives of the whole of the rope, twine and net industry to a conference on Wednesday, the 18th June, 1919, which was presided over by Mr. Leggett, and the trade was then told—in a perfectly courteous but absolutely final manner—that the Minister would insist upon one Trade Board for the rope, twine and net industry, but promised that, in order to avoid a public enquiry and to get over the valid objections lodged by the Scottish Net Manufacturers' Association, the Bridport Manufacturers' Association, two District Trade Committees should be formed for Scotland and one District Trade Committee for Bridport, and further, that when the minimum rates ultimately came to be fixed, the rates would be applicable to the districts concerned. On the above understanding the two associations named withdrew their objections, and as a consequence the *Rope, Twine and Net Trade Board* was duly constituted and held its first meeting on the 4th and 5th December, 1919.

Presumably the rope, twine and net trade had never been considered a sweated industry as there had been no mention of its inclusion under the

Trade Boards Act of 1909; under that Act the Board of Trade had to be satisfied that the rate of wages prevailing in any branch of a trade was exceptionally low as compared with that in any other employment. It would seem, therefore, that immediate advantage was taken of the passing of the 1919 Act on the ground that no adequate machinery existed for the effective regulation of wages throughout the trade, although there are no records of any serious disturbances in the trade prior to the establishment of a Trade Board, largely because it is a strictly localised industry, and in an industry so constituted there must be—for its very maintenance—co-operation between the employer and worker. And this fact, notwithstanding the scattered nature of the trade—that it is spread over the United Kingdom from Aberdeen to Falmouth and represents 671 firms (see attached list) employing according to the best information available:—

Men	...	...	...	6,668
Women	...	...	...	13,332
Boys	...	...	...	1,667
Girls	...	...	...	3,333
				25,000

and included in the above figures is a total of 1,580 home workers—over a thousand of whom are in the Bridport area.

A steady decline of male employees as against female employees is distinctly noticeable, namely in—

1891	there were	353 men to	100 women,
1901	"	212 "	100 "
1911	"	153 "	100 "

and it is estimated there are to-day 138 men to 100 women.

It is important, in view of the evidence which will be submitted under the heading of beatsters, to note the number of outworkers or home workers employed in the industry, namely, 11½ per cent. of the female employees.

The rope making and net making industries in particular are two of the oldest in the country, and as far as the employers' side of the *Rope, Twine and Net Trade Board* is concerned, every member is a working employer, and it is extremely doubtful whether there is any other trade in the country with so many heads of firms who are actually engaged in the business and consequently are conversant with every process of the industry.

A large number of firms engaged in this trade can produce trading records extending over the last 250 years, and there is a very big number with an establishment of from 100 to 150 years. Several of these firms are now owned by the 5th and 6th generations, and it is an accepted fact that in the country districts particularly, it would be impossible for these firms to have continued in business unless the relations with their workpeople had been amicably arranged and had been in accordance with local conditions.

To show the antiquity of the trade, Egyptian hieroglyphics describe the various process of hand spinning and topping of ropes, and the present methods do not substantially differ—in country rope-walks in particular.

On the Tyneside ropes were certainly being made considerably over 500 years ago, and there were scores of small rope works. There was a Guild of Ropers (the Arms of which can be produced) whose motto was "May hemp bind those that honour want," while in Bridport the borough coat of arms (produced) show much the same type of cog—this town holding a charter for the supplying of cordage to the King's Navee from King John's time, and the saying "May he be stabbed with a Bridport dagger," mentioned in Hutchin's History of Dorset, presumably originated about 1510. (This, of course, referring to the fact that the hangmen's ropes were made at Bridport.)

In the netting trade, until about 100 years ago, all nets were made by hand. The first netting machine was produced in the factory of Messrs. Smart's, who

30 November, 1921.]

Mr. E. J. W. BUCKPITT, J.P.

[Continued.]

are still in the netting trade and who are members of the Scottish Net Manufacturers' Association.

The situation of some of the smaller rope walks in the country districts may perhaps be best illustrated by the accompanying photographs (to be produced).

It will be noted that the works are usually situated in the middle of an agricultural neighbourhood, and practically the whole output of the smaller country ropemakers is absorbed by the surrounding agriculturists.

In view of the foregoing particulars of the nature of the trade, I am empowered by the trade to reiterate the protests that have already been made at a trade of this description being brought under the Trade Boards Acts—the result of which has been a complete dislocation and crippling of the industry during a time of extreme trade depression in all industries, and that, in as far as this particular trade is concerned, unless the country districts are divorced from the town districts and greater elasticity is given in the working of the Acts, it is the considered judgment of employers that it will be 'impossible to resuscitate it.

The employers' side of this Board has made a genuine effort to work the Act. The employers realised that in this trade, as unfortunately in other trades, there are disloyal and unscrupulous employers, and therefore, if unjust competition is to be eliminated, in the interests of the employer as well as the worker it is necessary that there should be some compulsory powers for the regulation of wages. Realising this, and considering the fact that the tree, as it were, of the Trade Boards Acts as applied to the rope, twine and net trade, is of but slender growth, they decided it would be better to proceed on the lines of pruning or amending, rather than uprooting and abolishing. Failing, however, amendment on the lines the employers' side through me are about to indicate, they would ask for a suspension of the Trade Boards Acts as applied to the rope, twine and net trade for a period of two or three years, or failing this, the employers unanimously ask me to press for the withdrawal of the trade from the operation of the Trade Boards Acts.

I now propose to deal with the formation or constitution of the Board itself.

As at present constituted the Board has no knowledge of how or why the appointed members are selected. It is quite easy to understand the Minister of Labour appointing an independent chairman to preside over a Board, but why there should be two additional appointed members is inexplicable.

With regard to appointed members, the employers and workers' sides of the Board are agreed that the principle of appointed members should be abolished, and they are further agreed that the Board should appoint its own chairman by agreement.

The workers' side add to this two assessors should be appointed, one to represent the workers' side and one to represent the employers' side, presumably to assist the chairman as and when required.

The employers' side suggest that where agreement cannot be reached the existing Industrial Court panels should be utilised, and that their decision should be final and brought back to the Board for legalisation.

At present, with the exception of Mr. Healy (the Secretary of the Rope, Twine and Net Manufacturers' Federation), the whole of the members of the Board on the employers' side are working employers.

On the workers' side there are a number of trade union representatives and a number of actual workers in the trade.

The Ministry of Labour at present lays great stress on the representation not only of rural as opposed to urban areas but also to the claims of the smaller establishments as well as the larger, and on more than one occasion has appointed to the Board on the employers' side a representative who is not a member of one of the associations comprising the Federation.

On the workers' side, however, apparently no provision is made for finding out how many *bonâ fide* workers in the trade are attached to the particular

union which has direct representation on the Board, and the employers consider that the trade union representatives of the workers should represent at all events an appreciable number of workers. The employers realise that the matter is very much complicated by the fact that there is no special union for the trade in question, and that the workers are covered by a number of unions, but the employers desire to emphasise the fact that unless the workers are in a union it is impossible for them to secure representation on a Trade Board, the workers' side of the Board flatly declining to sit with a non-union member.

An endeavour to reach an agreement between the employers' and the workers' side of the Board resulted in the following resolution being carried:—

"That in constituting any Trade Board care should be taken to see that both sides of the Board consist of a satisfactory number of members actually engaged in the industry."

With regard to appointed members—the present *modus operandi* on the Rope, Twine and Net Trade Board is as follows. In the case of the workers tabling a resolution asking for an increase in wages, or the employers' side tabling a resolution asking for a reduction in wages, the matter has been duly debated, but it has been evident on this particular Board from the first meeting that any decisions relative to wages would have to be decided by the vote of the appointed members, consequently the attitude of the appointed members is of particular interest to the employers' side, and in view of the foregoing remarks, a speech made by Professor Hobhouse (one of the appointed members on this Board) at Whitefields and reported in a paper bearing date, October 1st, 1921, might be noted; he said:—

"That the appointed members were in the position of jurymen rather than arbitrators. They could not give a decision on their own, they could only hear each side and say which they preferred. Sometimes neither side took up a position they felt they could support."

It will thus be seen what an impossible position might arise—and that a rate once established would never be altered (failing agreement) save by an appointed members vote. This is further illustrated by the following: At meetings of the Board held on the 22nd June, 1921, a deadlock was reached regarding a reduction of wages put forward by the employers. Notwithstanding the fact that a committee composed of members of both sides of the Board had reached agreement on a comprehensive system of grading for the whole trade, to which it was extremely desirable a fair working trial should be given, the employers (having as already stated, reached a deadlock with the workers) were in the position of having gradually to increase their proposals, and finally in order to secure the vote of an appointed member and thus carry the reduction, had to amalgamate two grades of workers, upsetting the whole balance of the arrangement.

Further, the appointed members have no knowledge of the actual working of the trade, and apparently in the case of the Rope, Twine and Net Trade Board, not even the inclination to examine closely the evidence submitted to them, and have so little knowledge of actual business conditions that at this same meeting (22nd June, 1921) when the employers' application for a reduction of rates was being discussed, Professor Hobhouse said:—

"That he was extremely reluctant to make large reductions of wages, particularly as he considered this particular trade was placed at the moment somewhat in the position of a tug boat that was being tossed about in the wash of a big liner, and that once business improved in the bigger trades a reflection might be expected in the fibre trade."

"He considered wages in relation to the cost of living, and was cognisant of the fact that rents would be raised in July and consequently he was not certain that in the forthcoming months the cost of living would continue to come

30 November, 1921.]

Mr. E. J. W. BUCKPITT, J.P.

[Continued.]

down at the same ratio as it had during the past few months, and that the appointed members vote given that day might not be the same four months hence, when the proposals came up for confirmation.

"Mr. Buckpitt, as Chairman of the employers' side, immediately pointed out to Professor Hobhouse that it was absolutely useless going any further if this was the action to be taken by the appointed members. He had already on behalf of the employers given a pledge that if agreement were reached with regard to the proposed reduction of wages, employers were prepared to commence costing at once on the basis of the proposed reduction in the hope that some business might result.

"Professor Hobhouse said he appreciated the point, and both he and his colleague withdrew the remarks previously made in connection with the appointed members' vote."

I would refer again for a moment to the system under which the appointed members bargain, as it were, between the two sides of the Board in the endeavour to reach an agreement. It is a method entirely devoid of dignity and extremely repugnant to the employers' side of the Board, and emphatic protests against this bargaining method have been made on more than one occasion.

District Committees.
